# Appendix

The Philip S. Ogilvie Story

EXTENSION OF REMARKS

## HON. LISTER HILL

OF ALABAMA

IN THE SENATE OF THE UNITED STATES

Thursday, 1144 28, 1959

Mr. HILL. Mr. President, as my colleagues know, I have always had a deep personal interest in improving and expanding library facilities and library services for our people. I am proud to have been the author in the Senate of the Library Services Act and to have played a part in helping to create such library programs as that today serving the community of Tifton in the State of Georgia, the immediate and esteemed neighbor of my home State of Alabama.

The town of Tifton is a fine, progressive municipality in the center of a large rural trade area. Tifton and the surrounding five counties are served by the 30th regional library to be created in Georgia under the Library Services Act. More than 100,000 books were circulated in the first 2 months after this library was established and the facility has made possible a fuller life for thousands in this section of the South.

A major part of the credit for the outstanding success of this regional library has been the energetic efforts of one man. Mr. Philip S. Ogilvie has performed an unusually effective service to the people of Tifton, Ga., by teaming the magic medium of radio with the public library in a campaign to encourage the use of library facilities.

The story of Mr. Ogilvie's outstanding service has been effectively told by Mr. Ralph Edwards, president and general manager of radio station WWGS in Tifton, and Mrs. Edwards writing in the ALA Bulletin of May 1959.

I ask unanimous consent that this story be printed in the Appendix of the

There being no objection, the article was ordered to be printed in the RECORD, as follows:

"MIGHTY MIKE" HELPS THE PUBLIC LIBRARY-A RADIO STATION MANAGER REPORTS ON ONE LIBRARY'S USE OF HIS MEDIUM

(By Evelyn and Ralph Edwards)

(Reports of library radio programs are usually written by librarians. One of the values of this article is that it is written from the point of view of the radio station manager and assesses library programing in his terms. Mr. Edwards is president and gen-eral manager of radio station WWGS, Tifton, Ga. He is president of the Georgia Associated Press and vice president of the Georgia Association of Broadcasters. The coauthor of the article is his wife. The librarian whose work is described here is Philip Ogilvie, formerly librarian of the Coastal Plain

Regional Library with headquarters in Tif-ton, now librarian of the Roanoke, Va., Public Library.)

The effectiveness of radio in assisting publib libraries to reach the people whom they both seek to serve has reached a new peak, if our experience in the heart of south Georgia is any criterion. What has happened and continues to happen in Tifton, Ga., should be known to every public librarian who faces the problem of bringing the public library and its services to those people who, for one reason or another, do not visit and borrow from the local library. The kinds of radio programs which were developed by the former director of our local library system and are described in this article can be used effectively in almost any situation.

As radio people who believe that nothing can replace good books and good radio in their roles as instruments of cultural advance, we have been pained to hear some librarians say that television has radio and the public library with their backs to the wall. In truth, television has entered the pattern of civilization as just one more useful means for the dissemination of knowledge and entertainment, and now that the novelty is wearing thin, it is settling into a shared role as an educator and entertainer of the masses. Certainly it plays an important role in a great field of public service that cannot become overcrowded in an age that demands more and more information for intelligent citizenship. Nevertheless, television complements rather than competes with the othermedia for the communication of ideas, for each of the several media has its place in modern life. In some instances there is overlapping; in others there is a certain exclusiveness; and in all there is a vast poten-

tial for service not yet plumbed.
As illustrations of exclusiveness, radio is ideal for keeping up with what is going on in the world while one is driving, doing housework, etc.; and nothing can take the place of the freedom of choice of specific subject matter at a particular time that is provided by a book thoughtfully selected at a public library. Our librarian used his awareness of these two exclusivenesses to develop the effective library radio programs that brought him a radio audience and increased library

NEW USERS WON

The fact that these programs brought new users and broader use to the libraries of our area will interest zealous librarians immediately, but the importance of a program being beneficial to both the users of public service time and the station donating it also deserves consideration by librarians. Most radio stations exceed the minimum requirements of the Federal Communications Commission for providing time for public service programs. Meanwhile, radio stations must support themselves with commercial programs and spot advertisements if they are to continue to operate, and it is to the advantage of a station to have a high level of listener appeal maintained throughout the broadcast day if it is to obtain adequate support. A single unappealing or limitedappeal program induces numerous listeners to change stations, and no advertiser wants his program or his spot advertisement carried in an unproductive period immediately following such a program. A station is obliged to strive, therefore, for economic as

well as esthetic reasons, to sustain listener appeal throughout its succession of programs.

It had been our experience that book reviews as such had limited appeal. Although some librarians responsible for producing these programs are capable and creative, others have a singular devotion to one special hallmark of their profession, one favorite means of relating themselves and their libraries to the adult public whom they seek to serve-the tried and true book review program.

#### A PEOPLE-ORIENTED LIBRARIAN

When a new director came to our local library in the summer of 1956, we were impressed with his approach to all things relating to librarianship. He went at his tasks in a manner unlike that of any other li-brarian we had known. His thinking was, first, people-oriented and then book-oriented, rather than vice versa.

We interviewed him on the air shortly after his arrival in Tifton. "What is the work of a public librarian?" we asked. "I like to think of it as a mission," he replied, "for to be successful in it one needs a real sense of dedication. The librarian's role is that of educator, and his mission is to bring people and books together. The public librarian, particularly at the grassroots level, must be dedicated to the dissemination of culture in the broad sense of the word, not in the narrow sense that culture is the possession of a select few who mouth the word as though it were wrapped in mink-rather in the sense that it includes facts and figures and homey, everyday things as well as poetry and the other arts. Basically, the public librar-ian must love people, all people, and must have the conviction that books can mean something in their lives. There is a right book for every potential reader, so the public librarian strives to bring them together. Everyone needs to be informed these days, for the absence of knowledge can lead to the corruption of democratic ideals and the breakdown of human relationships socially, and drabness and boredom can lead to mental debilitation personally."

This philosophy of librarianship found its logical expression in a new type of library radio program. The librarian immediately understood our difficulties with straight book reviews, which appeal normally to a group particularly interested in the particular book being reviewed. Such a group varies in size with the subject interest of the book, and individual books appeal more often than not to persons of a certain class, or level of edu-cation, or sophistication. This tends to elim-inate a portion of the listening audience, and we believe that it also led many people of our area to feel that the library had nothing to offer them if they were not especially interested in the best sellers, both fiction and nonfiction.

Our new library director has had no previous experience in radio, but his conviction that the primary task of the public library was to meet all of the people of the area at their own level of interest and only then lead them to other things gave promise of a creative type of radio program with broader appeal and more definite results. Our only disappointment in that original contact was his request for time to accomplish certain things of more immediate importance be-

June 1

fore he undertook to develop a new kind of library radio program.

Before the summer had gone, he had or-ganized the five-county Coastal Plain Regional Library serving Berrien, Cook, Irwin, Tift, and Turner Counties from a headquarters established on the campus of Abraham Baldwin Agricultural College in Tifton. He found and employed a competent staff and inaugurated bookmobile service to rural areas. Observing those successes, we doubly anxious to have him get to the business of the radio programs, and doubly confident that he would create something worthwhile when he did

#### SUBJECT-CENTERED PROGRAMS

We were justified in our expectations, for the first of his subject-centered programs, January 2, 1957, was an immediate success Subject-centered programs are closely related to book reviews, but instead of being confined to a single, recent book that might appeal to some listeners, the subject-centered radio program correlates a number of books, old and new, around a specific subject of general interest. The first such program was, for example, on the subject of happiness in marriage, a subject of almost universal ap-It began with the question: "Is your marriage working?" and the question followed with some pertinent remarks about the increase in marital difficulties as manifested in the divorce rate. The fact that marital difficulties seemed to be found in all levels of society led logically to the conclusion that they are the concern of all members of society. The library was mentioned as a source of help in such difficulties, and several titles, among them Van de Velde's "Ideal Marriage," Geiseman's "Make Yours a Happy Marriage," and Sheen's "Three To Get Married," were mentioned. The aspects of marriage problems these books might help to avoid or solve were brought out with decorum and tact.

Even the station personnel assigned to monitor this first subject-centered program were interested throughout, and it surprise to us that all the titles mentioned and others relating to marriage and family life were borrowed from the library within a few days and that reserve lists grew on some of them. It was obvious that our librarian had built his program around a subject of general appeal, and equally obvious that many in our area had never before considered the library as a source of help and information about such personal problems as are involved in happy marriage. Fiftysix new borrowers registered at the local library within the month, and most of them made reference to the radio programs and asked for books mentioned on the air.

Subsequent programs followed the same general pattern. All were on subjects of broad interest. There were programs on soil stewardship, on education, on child care, on special holidays and religious observances, on places in the news, and on national and regional heroes. This is not to say that books of more limited or specialized interest were excluded. Late acquisitions of such a nature were usually mentioned at the conclusion of a program, but no program was given over to

Confederate Gen. Robert E. Lee was the subject of one program that began with ques-"Is Robert E. Lee a name or a personality to you?" "Have you ever wondered what his thinking would be about some of the problems we face today?" As the program progressed, titles of Lee biographies on all reading levels were mentioned, and more than one, indeed many, South Georgians celebrated Lee's birthday in 1957 by reading a book about him.

The program built around Brotherhood Week was very well done, and during the Pascal season both the Jewish Passover and the Christian Easter were covered in the

same program, which included discussion of several books which would enable readers of each faith to understand better the ceremonies and beliefs of the other. Meanwhile, the successful launching of Russia's earth satellite inspired some outstanding programs on the space age and the air age; Alaska's bid for statehood led to two programs on that northernmost outpost of our Nation; and the explorations in Antarctica suggested some cool reading for warm days. Local persons, usually in the armed services, were mentioned in connection with some of these geographical subjects to increase local

#### IT WAS NOT REVIEWING

The librarian did not attempt to review most of the titles he mentioned, and what reviewing he did was limited to a few sentences. He went to the card catalog when he had selected a subject for the next series of programs. From the catalog he went to the shelves and examined appropriate volumes briefly, making a few short notes. He came to the radio station with the list of titles and the notes and proceeded from there to arouse audience interest in the subject and to stimulate that interest gradually so that many listeners resolved to stop in at the library and pursue the subject further. Usually the daily programs were tape recorded chronologically all at the same time or sitting, so that a daily trip to the studio was avoided. Most radio stations are agreeable to such an arrangement for a worthwhile program.

Subject-centered programs brought excel-lent results, but we feel that the real peak of our librarian's rapport with the radio audience was attained in his other series of programs, the "think sessions." All men, even those who insist in playing the buffoon in public, like to be assured that they have a share in that precious human ability to think constructively about serious and important things and to arrive at intelligent conclusions. The think session was designed to give that assurance.

Each think session began with the librarian's statement of his conviction that all his listeners were interested in the ideas and ideals that make our country great, that they were eager to give more thought to these things, and that they could arrive at some conclusions that would make them better neighbors and better citizens. The remainder of the program was spent in thinking with them about those things that are the heritage of every American, about the principles upon which our Nation is founded and the heroes of those principles through the ages.

It goes without saying that the listening audience was left with pride in its heritage and convictions about the duty of protecting and preserving it and, even more important, about building a better future upon its sound foundation. "Tradition is not a tomb in which to hide from progress," said. "It is rich ground well tilled and warm with the sunshine of hope for an even greater future. Into it we drop the seeds of our aspirations for a better world, and from it they grow strong and well nourished and bear fruit and become new traditions to nourish others as time passes."

Station personnel marveled at our librarian's easy manner on the nights of the think session. He usually arrived casually dressed. He chatted briefly with our staff, and then, at the right time, would retire to a dark studio, where, without notes, loafers off, feet propped up, and the microphone cradled in lap, he would begin, at the signal from controls, to talk from his heart, slowly, meditatively, revently, about matters close to the hearts of all loyal Americans. For 28 minutes, without a single awkward pause, he would ponder verbally with his audience such vital subjects as our American freedoms,

JIRS st our debts to our forebears, our obligations to our descendants, the wonders of creation and the laws governing nature, the joys of family life and the bulwark happy life is against delinquency. He did not preach, although he mentioned God in appropriate instances. He held his audience captive and left them at the end conscious of their own thoughts only and rededicated to ideas which are not new, but are neg-lected in the hustle of daily duties.

The telephone calls and letters about this program were indication enough of the size of the radio audience and the regularity with which they participated in the think session. There could be no doubt that the library director had sold himself to his listeners, his listeners to themselves, and the library and its services to all. We had a good

program, and we knew it.

An increase in power and the assignment of a new frequency in the fall of 1957 restricted our broadcast day to the hours be-tween sunrise and sunset. The change eliminated the library programs which were scheduled in the evening, and there were no 30-minute periods open to offer as a substitute. We put the problem before the librarian, who asked for and got a daily 5-minute period at 10:25 a.m., a time he figured to coincide with the normal coffee break time of the average busy housewife (and a time that is, incidentally, commercially valuable). This new arrangement meant briefer but more frequent contacts with the radio audience, and the new time meant a more limited audience. Both factors indicated changes in the manner of programing. librarian worked out the new presentations as a series of informal daily packages, all complete in themselves and brought together at the end of the week to accomplish over several days a combination of "subject-centered" and "think session" program, with the same unity, and eliciting the same or greater response than had the 30-minute weekly program. If 10:25 a.m. had not been break time for most housewives, it soon became so. The program became a conversation topic when women got together on the streets or at club meetings, correspondence and calls about it increased, and library usage showed a proportionate increase. One store manager reported that women would interrupt their shopping to drop into his place of business to listen to the library program. When advertisers began to request spots on either side of this strictly noncomnercial library program, we knew that we had something special in a radio program.

#### A PLAN TO BE SHARED

Undeniably the personality of the Ilbrarian had something to do with the success at the start, but the fact that the program continues to be a success under a new library director indicates that the idea or plan of presentation itself is a vital factor.

We cannot share the director of libraries who created this programing with other libraries. We could not even keep him here. We can, however, share the plan, and because of our own deep interest in public libraries and good reading, we want librarians everywhere to examine the possibilities of "subject-centered" and "think session" programs.

Basic to this type of programing is the conviction that the library must go out to the people and meet them on the level of their own everyday interests. They can be led to broaden their fields of interest once they become regular library users. The habit of reading grows. The problem, we believe, is to get them into the library the first time. that can be done by catching their interest by offering help with the problems of daily living. A book review will, no doubt, stimulate the regular to ask for the book, but the percentage of habitual readers in our country is not large. The librarian must address himself to those who vegetate when

work is done. They are the folk who need what the library has to offer. They are the equivalent of the unchurched in religious parlance, and the librarian, we think, has an obligation born of his vocation to reach out for them and enrich their lives, to make those who must stay at home armchair travelers, to give those who are lonely the companionship of literary characters. It can be done; we have seen it.

Address by Hon. Stuart Symington, of Missouri, at Annual Dinner of Chamber of Commerce of Winston-Salem, N.C.

EXTENSION OF REMARKS

## HON. SAM. J. ERVIN, JR.

OF NORTH CAROLINA

IN THE SENATE OF THE UNITED STATES Monday, June 1, 1959

Mr. ERVIN. Mr. President, on May 21, 1959, the able and distinguished junior Senator from Missouri IMr. Symington) made a notable address at the annual dinner of the Chamber of Commerce of Winston-Salem, N.C.

I ask unanimous consent that the address be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

ADDRESS BY SENATOR STUART SYMINGTON AT THE ANNUAL DINNER, CHAMBER OF COM-MERCE, WINSTON-SALEM, N.C., MAY 21, 1959

It is a great pleasure to be with you in

Winston-Salem tonight.

I am glad to be with that nationally known statesman, a great businessman before he became a great Governor, my friend Luther Hodges.

It is my privilege to serve on the Senate Armed Services Committee with your senior Senator Sam Envin-and on the Senate Agriculture Committee with Senator Evererr

Together, these two able and dedicated public servants give North Carolina a representation second to no State in the Union.

May I also pay my respects and my tribute to your able Congressman RALPH SCOTT.

In a way, coming here is like going home, because there is so much similarity between North Carolina and my own State of Missouri.

Many Missouri families came from North Carolina, crossing the Alleghenies to the Middle West.

Some of our towns were given your names. Winston, in Daviess County; and Salem, in Dent County in the Ozarks.

Your great chamber of commerce has as its goal the commercial, physical and social betterment of this outstanding city; and you all can be mighty proud of what has al-

ready taken place. Through tobacco, textile, banking and other interests, you are now a leader of the

industrial Southeast.

Through Salem College, Teachers College, and Wake Forest, you have pioneered in the educational development of that greatest of all our national resources—the youth of America.

Although it still retains its southern charm, Winston-Salem has now entered the age of space.

Restoration of the homes of Old Salem runs parallel with work at Western Electric on the guidance systems for Titan missiles.

The growth of Winston-Salem is well illustrated by lines from the Greek poet Alcaeus: "Not houses finely roofed or the stones of walls well-builded, nay nor canals and dockyards, make the city; but men able to use their opportunity."

And when we speak of civic-minded men, all of us think of that superb American, your former President Robert Hanes, whose death was a serious loss to North Carolina

and America.

Although known better nationally as a banker, Bob Hanes was an able business-man. His entire life was dedicated to the public good and built around the importance of sound management as the best road to progress.

It is the management of our Government that I propose to talk briefly about tonight.

There are few subjects more important to me as a legislator and former businessman than the amount of money the Federal Government spends-and, at least equal in importance, how that money is spent.

We hear much debate these days about

whether our Government should spend

more or less.

But I do not believe enough attention is being paid to the way this money is being

All of us here are opposed to waste.

With about 18 percent of our national income now going to Federal taxes, the people have every right to demand that their money be expended with wisdom, under principles of sound management.

When the operation of any business be-comes infected with waste, that business

does not prosper.

The same is true of Government.

May I present a few illustrations of what

has developed in recent years.

This analysis is not political. Many of the practices which worry businessmen today have existed for some time.

It is not political doctrines, or a particu-

lar political party, which produce waste.

It is the gradual accretion of shoddy practices by a Government grown too complex to check itself.

In today's Federal Establishment, there 104 agencies which either lend money or insure investments.

There are 28 departments and agencies

engaged in health services.

There are 29 engaged in research and development.

Surely we all realize the unnecessary overhead expense involved in such duplication of functions.

It is growing all the time-like a jungle in the monsoons.

To be more specific: If we look at the President's budget for fiscal 1960, we see that more than 5 of every 10 tax dollars are scheduled to be spent by the Defense Department.

Large expenditures for security have been with us for many number of years; and will remain with us as long as strength is the price of freedom.

Partially because it handles so much of our money, the Department of Defense can claim the questionable distinction of being the greatest source of waste in the Federal Government.

I say partially, because every informed person knows that the unwillingness to reorganize our Defense Department on the basis of progress-our willingness to let it continue to drift in tradition—is costing the American taxpayer billions of dollars each

In addition, unbusinesslike procurement causes heavy unnecessary expense.

As example, a contract was awarded to an aircraft company whose existing plant capacity could produce approximately three times as many of the planes in question as was the maximum schedule.

But the administration put a ceiling on expenditures for these bombers, a ceiling tailored to a previously decided upon budget figure.

In order to keep down the amount of money spent on these planes in any one year, the Defense Department decided not to buy on a volume basis; and spread the program out.

As a result, the Government paid millions of dollars more for each of these planes than it would have paid if the program had been scheduled for completion in a shorter period of time.

This one action on this one plane cost American taxpayers over a billion dollars more for the same number of bombers.

Similar illustrations are in the planned programs for some of our missiles.

By purchasing missiles at a rate which utilizes but half of the plant capacity of the producer, the cost per missile is far greater than necessary.

It is a fact that the present organization

of our defense structure in itself compounds waste.

Why do we have six separate Air Forces?

Why do we have four independent procurement contracting agencies?

All of these compete for personnel, for private contracting facilities, for scientists and engineers.

In the case of the latter, the competition at times is almost unbelievably expensive.

Out of this comes the duplication of personnel, the duplication of administrative staff, the duplication of office space, the duplication of paperwork, the duplication of general overhead, and all the thousands of other duplications which every businessman knows come in once the gates are opened.

This waste is more than a loss in money. It presents a serious loss in security.

In this nuclear-space age, time is of the essence; and if we are attacked, under the present setup our capacity to retaliate quickly would be seriously affected.

Let us look now at the farm program.

That program is now 8 percent of the total Federal budget.

For some years, I have been a member of the Senate Agriculture Committee.

Since the present Secretary took office, and including estimates for the coming fiscal year, total spending of the Department of Agriculture amounts to \$34.9 billion.

That is more money than was spent by all previous Secretaries of Agriculture since the Department of Agriculture was created.

In 6 years, the administrative cost of the price support program has increased ten-fold—from \$34.6 million in 1952, to \$364.9 million in 1958.

In these 6 years, Agriculture Department personnel has increased from 66,000 to 84.000.

The value of the Government investment in farm inventory is now \$9 billion. It is growing daily.

Any businessman knows the grave dangers inherent to excessive inventory.

As but one illustration, let us take corn. In 1956, the Government spent \$179 million to reduce corn production through the soil bank.

But corn production increased 224 million bushels.

Nevertheless, this year the Government has recommended and obtained approval for a new corn program which not only removes all controls, but actually raises the price support.

And this is true despite the fact you and I already own a \$3 billion inventory of corn and other feed grains.

It is totally unnecessary to have such an expensive and ineffective farm programthe current tobacco program proves that to be true.

At least as much as any other commodity group, the tobacco industry has displayed the unity and discipline necessary for a sound program.

The tobacco industry keeps its production in line, refuses to compromise its quality, and reacts flexibly to changing conditions.

The result has been what everyone interested in farm legislation dreams about-a workable program at little expense to the taxpayers.

Only last Friday, under the able leadership of your distinguished Senator, EVERETT JORDAN, the Senate Agriculture Committee approved a tobacco bill which was supported by the tobacco industry. And just this afternoon, under the leadership of Senator JORDAN, the Senate approved the bill.

The industry voluntarily asked that the price of tobacco be stabilized at a point which would not cause loss of export markets.

This type of leadership is a powerful answer to those who believe the farmer should receive no support from a Government which heavily supports other segments of the economy.

A final illustration of unbusinesslike management: Our Government is not collecting the taxes it could collect.

Only a few weeks ago, the Commissioner of Internal Revenue estimated that each year \$25 to \$26 billion of taxable income is going unreported.

This is a tax avoidance on a massive scale; and if we could stop only part of it, we could obtain billions more in revenue without any tax increases.

The Internal Revenue Service is complaining that today it does not have enough people to see that each teturn is added up right; and states that each new enforcement agent brought in in turn brings in additional tax revenue from 10 to 15 times his salary.

Is it not logical to spend \$1 in order to obtain \$10 to \$15? Wasteful revenue collection would seem as unfortunate as wasteful

Waste should not be taken for granted in Government any more than it should be taken for granted in private business.

Government, too, must use sound accounting principles under good business manage-

Today our country faces the greatest challenge in its history.

With our free enterprise system, under our representative form of government, I have full confidence we can meet that challenge.

Such success will not be automatic. We must work at it.

Through hard work and wise leadership in the past, we have built the most secure and prosperous nation in history.

With earnest effort and wise management we can continue to lead the world as its No. 1 nation, toward a just and lasting peace.

Youth Parley Like Breath of Spring

EXTENSION OF REMARKS

## HON. WILLIAM S. BROOMFIELD

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 28, 1959

Mr. BROOMFIELD. Mr. Speaker, those of us who are trying to cope with the problems of the world today sometimes lose sight of the fact that there is a world of tomorrow opening up for our children or our grandchildren.

These children are facing problems, too, many of them brought about by the rapidly increasing complexity of our everyday lives, of our dealings with other people and the world around us.

Next spring, the White House Conference on Children and Youth will make a number of recommendations to our President and our Nation. They will be recommendations based on fact, on observation and on expert appraisal of our children. These recommendations should be heeded by all of us who are looking out for the welfare of our future generations and our Nation's future

Recently, the Detroit Free Press published a series of articles on the coming Conference and the problems which our youth face. The first three of these articles follow .

YOUTH PARLEY LIKE BREATH OF SPRING (By Warren H. Stromberg)

In every 10 years a duty comes to the man who occupies the White House quite unlike the other duties he has to face.

The occasion is the decennial White House Conference on Children and Youth.

The President traditionally issues the call about a year and a half before the event. He is honorary Chairman of the Conference.

The Conference has a threefold purpose. 1. Take stock of the times and its effects

upon children: 2. Examine achievements since the prior Conference, and

3. Determine what steps should be taken in the future.

For the "Golden Anniversary" Conference, March 27 through April 2, 1960, President Eisenhower gave a charge to his 92-member

national committee on December 16, 1958.
"Before such a group as this," the President said, "I am not going to be bold enough to make any very ponderous statements or any that are by any stretch of the imagination to be interpreted as erudite.

"But I do like children-I have some grandchildren-and so I think I can talk a little bit before we disperse."

President Elsenhower urged that the first concern of mothers should be to follow "an active career of real motherhood and care for the little child."

He said schools were a local problem requiring national leadership. He expressed the view "we have to put at least 1 or 2 more years in our educational system before we say a man has graduated from high school."

Ephraim Roos Gomberg, University of Michigan educated national executive director for the Conference, recalls that the first conferees were summoned by President Theodore Roosevelt at the behest of James E. West, a young Washington lawyer, and Theodore Dreiser, the author. This was in 1909

Early records show poverty was very much on the conscience of the Nation. The major purpose of the Conference was to determine how dependent children could be cared for. Subsequent conferences to an extent had

similarly specific aims.

"Our modern-day conferences are almed at helping all children," says Gomberg, who now resides in Rydal, Pa. "Actually, the word "conference" is a misnomer. It's a 11year program, 1 year getting ready and 10 following up."

Gomberg, who was in Detroit recently, claims this is the most far-reaching, citizen sponsored undertaking in the history of the

In Michigan, Governor Williams selected the Michigan Youth Commission to be in charge of State planning for the 1960 White

House Conference.

He stated: "The Michigan Youth Commission originally was established to foster Michigan's participation in the 1950 White

House Conference on Children and Youth. .
"The excellence of the commission's performance at that time and, subsequently, has earned for it an enviable reputation for devotion to the cause of youth."

Williams charged the youth commission with looking into the emerging problems of the State's children and to seek the views of all Michigan citizens in their solution.

Under the direction of Miss Clarice Freud, professor at the University of Michigan School of Social Work and chairman of the Michigan Youth Commission, 11 regional committees are at work in preparing for the 1960 Conference.

These groups will hold area conferences in late April and May this year. Facts and recommendations then will go to the youth commission for the Michigan evaluation and report.

County and community subcommittees also have been set up to help the regional committees.

Teenagers and college students have an important part in the regional and county groups. In this respect, Michigan leads the

Hundreds of community groups are carrying out study projects.

"I'd estimate that shortly 10,000 persons in Michigan will be involved in these intensive preparations," says Sam Rabinovitz, executive secretary in Michigan.

"The regional committees have a triple objective. They are working toward recommendations that will result in local, State, and National action.

"For example," Rabinovitz said, "I just heard from Corunna that an inventory of child services in Shiawasee County is underway. They have wanted to get this done for a long time. Preparing for the White House conference gave them the chance to get it

"Certainly these findings will become part of the Michigan report to the White House conference. Equally important is that the people in Shiawasee County will know what they have for children and what they haven't.

"They, and other counties, are making practical use of what they are finding out in their own localities," Rabinovitz added.

The Michigan group already has the benefit of an important report, "Children and Youth in Michigan, 1900-57," compiled by State agencies of the Interdepartmental Staff on Children and Youth.

There is also a recently completed PTA educational analysis based on the sampling of 200,000 persons.

Formal purpose of the forthcoming national conference is to promote opportunities for children and youth to realize their full potential for a creative life in freedom and dignity.

This is the theme: "The rapidly changing times in which we live and the increasingly fast pace of change make it incumbent upon us to do everything we can to plan ahead so that we can prepare today's children well for life in tomorrow's world."

Rabinovitz says, "If we ever had a challenge and opportunity, this is it.

"Dawning on us is the age of science and discovery. Greater and greater speed and mobility. Vast changes in how and where mobility. Vast changes in how and where we live. Complex changes in how we earn a living.

"It's a far greater transition than the one from the horse and buggy to the automobile.

"How do we chart a course that takes all these into account, yet one that is rooted in our basic way of life-our moral and religious beliefs, our democratic principles?

"It should be of concern to everyone to try to plan now so that our children are ready for this new world." (By Warren H. Stromberg)

Mary will graduate from a commercial course at Cody High School this June.

Bill graduated from Mumford in February. He hopes to go to college this fall and, after 12 years, become a specialist in medicine.

Mary and Bill also plan to marry this summer.

They find themselves caught between a number of pressures and conflicting de-

Is this typical of youth today?

The case of Mary and Bill is one of many being processed in Michigan for a forthcoming event.

It's a national appraisal of all the millions of Marys and Bills that takes place every 10

years.

Called the White House Conference on Children and Youth, it will be held in Washington March 27-April 1, 1960.

It's the sixth one since President Theodore Roosevelt started the project in 1909.

Each State makes a report. Delegates assemble. Past conferences have made definite contributions.

Today's catapulting events make next year's conference even more significant.

How can today's children be prepared for tomorrow's world? This is the theme set by President Elsenhower.

Michigan will reach into every community for ideas and actual cases that tell the story of today's children.

The Michigan Youth Commission is coordinating these efforts through 11 regional committees.

The case of Mary and Bill falls into one of six categories set up by university experts headed by Ronald Lippitt, University of Michigan social psychologist

It is an actual case taken from the files at the Merrill Palmer School, with only a few details altered.

Here are more facts. Mary is nearly 17. Her father is a shop foreman. Her mother also works. She has several brothers and sisters. One brother, now in service, wants to go to college.

Bill's father is a doctor. His mother has never worked. They have a maid. Bill is He has been going with Mary 2 years.

If Bill goes on to college-and the family background demands it-he faces 9 years of study and training before he becomes a doctor. Three more years could make him a specialist.

Then he will have his military stint. If Bill is drafted he would be 32 before he gets

Against this is the plan for early mar-rlage—favored by the times and by all except Bill's parents.

Who would pay for Bill's education? His

ife? His parents?
What if the young couple become parents themselves? And if they don't-what will others in their own age group think?

Commenting on this, John Hudson, a specialist on family counseling and leader of the family life program at Merrill Palmer, Bald:

"In addition to social conflict and the demands for a professional education, there's the matter of putting aside a lot of nice things that young people want."

"There's the long period of male depend-ency on the wife. What are essentially male responsibilities? What of the needs and desires of his wife?"

Supposing Bill accedes to his parents' Wishes and defers the marriage?

"They might figure love will carry them through," Dr. Hudson said.

"But if the marriage is postponed any great length of time, intimacy will probably in-

Dr. Hudson sees adjustment problems for the young couple no matter which way they

turn. He and other experts call them negative attitudes.

It is from cases such as this that Michigan will construct its presentation at the White House conference.

#### (By Warren H. Stromberg)

"Lost ages" are the years between 9 and 13. Even the experts get lost trying to explain why boys and girls do what they do at this age.

For her family, Janie's sudden announcement she didn't want to go to a picnic was a

calamity.

Father almost dropped the lunch basket. Her older brother and vounger sister were awed. Mother was dumfounded.

"Why?" demanded father icily.

The answer was that "all the other girls" were staying home to watch a baseball game on television.

At the picnic Janie declined when asked to join in a ball game with other children and some adults. She treated all such overtures as of little concern.

Noting this, Janie's mother, on the way back in the family car, pointed it out, ending with, "And it doesn't make us very proud

of you."
"I told you I wanted to stay home and watch TV." Janie said in final justification of her position.

This was an actual incident-a matter of a case history.

It happens in every family. It's a ball game in itself; relationship of parents to child versus relationship between child and other children her own age.

Scholars in human behavior call the second relationship peer-centered or the peer relationship.

It is very important with all children, particularly those who don't want to be called children any longer. And when it is not present the situation is far more serious.

But there's still another factor-the influence of the times. Do the patterns of conformity among youth today compare with those of the past? Or have complications been added?

No doubt Janie's role in the preadolescent period is much like that of your own daughter and your neighbor's daughter.

By attempting to analyze this role, are there any benefits to be gained for Janie's younger sister and the others who will be the Janles of tomorrow?

This is one of the basic purposes of the 1960 White House conference on children and youth.

Michigan's preparations are already under way. Through groups in every community it is hoped information can be gathered for regional conferences to be held before the general conference.

Recommenactions will be part of the report that will tell the story of Michigan's children. How children relate to other children with-

in the context of today's modes of living is one of six suggested areas for discussion. Why does Janie want to wear flimsy sneak-

ers in the rain? When should she make decisions of her own? When is parental guidance necessary?

Fritz Redl, in an article called "Preadolescents-What Makes Them 'Tick," explains that during this period it is normal for youngsters to drop their identification with adult society and establish a strong identification with a group of their peers.

He advises:

"No matter how much you dislike it, every preadolescent youngster needs the chance to have some of his wild behavior come out in some place or other.

"For example: Johnny needs the experience of running up against some kind of adventurous situation where he can prove he is a regular guy and not just mother's boy.

"Cut him off from all life situations containing elements of unpredictability and he may have to go stealing from the grocery store to prove his point,

"Give him a free and experimental camp setting to be adventurous in and he will be happily preadolescent without getting himself or anybody else in trouble.

"All youngsters need some place where preadolescent traits can be exercised and even tolerated.

"It is your duty to plan for such places in their life as skillfully as you select their food or vocational opportunities.'

Miss Flo Gould, child-development specialist at the Merrill Palmer School, adds:

"We want youngsters to achieve depend-ence but we still want to be parents. The adult world sets up models of conduct and then gets mad when the preadolescents ape

"Is this fair? There are more diversions today than ever before. If children are to live in their times these must be taken into consideration.

From his office in room 1003 of the Cadillac Square Building, Sam Rabinovitz, is executive secretary of the 35-person statewide Michigan Youth Commission heading up Michigan's preparations for the White House conference next year.

Full community participation is sought through subcommittees and discussion groups. Information can then be filtered to the top for inclusion in the final report.

"This is a meaningful job," Rabinovitz declared. "What better resource do we have than our own children? What is more important than their future in our fast changing world?"

Address by Hon. Gordon Allott, of Colorado, Before Episcopal Diocesan Convention, Denver, Colo.

> EXTENSION OF REMARKS OF

## HON. BARRY GOLDWATER

OF ARIZONA

IN THE SENATE OF THE UNITED STATES Monday, June 1, 1959

Mr. GOLDWATER. Mr. President, on the occasion of the Episcopal diocesan convention at Denver, Colo., on May 6, the distinguished senior Senator from Colorado [Mr. ALLOTT] delivered the banquet address. The remarks of the Senator from Colorado on our religious heritage are especially significant in these days of uncertainty. I compliment him on his insight and understanding of our spiritual need.

Mr. President, I ask unanimous consent that the text of the address delivered by the Senator from Colorado be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD. as follows:

ADDRESS BY SENATOR GORDON ALLOTT BEFORE EPISCOPAL DIOCESAN CONVENTION, DENVER, COLO., MAY 6, 1959

All of you at this moment are probably thinking of one or two things. First, how can I best settle myself to endure the next half-hour with the least discomfort; or, second, what is this politician going to say for this time and occasion that will be of interest to me? For those in the first category, I can promise little, because life is,

for them, essentially a passage of time and the best and easiest way through it is to tranquilize themselves. To the second group, I would say that it is my intention to avoid, out of deference to the occasion, the thicket of partisan politics. Yet, I intend to invade just a little the theologian's field and, in that, too, they will have their own reward by reason of this invasion of a field which more rightfully is theirs.

The old fashioned tithing man of our Puritan ancestors might well be the subject of this speech. You will recall he stalked the church with a long rod with a knob on the end of it, and soundly rapped those over the head who nodded during the course of a sermon which went to 2 or 3 hours. The first group I mentioned have a better way of doing this. No closed eyes or nodding head marks their semiconsclous state. After years of practice, they have learned to go through anything—Board meetings, church speeches, luncheons—with eyes wide open, giving all the outward appearances of being awake while they have long since lapsed into a mental world of nothingness. It is their defense against boredom. Spiritually, too many of us are doing the same thing.

The tithing man has long since gone the way of the lamplighter and the surrey, along with the precentor who lined out the hymns. Yet, Sunday after Sunday, our priests, over and over again, try to perform spiritually the functions of the tithing man in the hearts and minds of the people of their parishes throughout our country. Every human ingenuity has been utilized by them to awake their parishioners to the living, vibrant qualities of the Christian religion and, sowehow or other, to pull them out of this deep lethargy into which they have fallen.

On the one hand, we point to the great numbers of churches being built day after day in each community, the greatly increased attendance at each of these churches, the higher percentage of people attending churches than ever before. On the other hand, we see the gradual deterioration of respect for our institutions, our beliefs, our laws, and our courts. We see the specter of young mobs running our cities. The disclosures of the McClellan committee, after a period of 2 years, encompassing every known crime, now hardly causes a ripple of moral indignation among us.

At the same time, we see abroad, and throughout the world, a new religion—a vibrant one, communism—thrust out its jaws to gulp down one country after another. For, make no mistake, though it may not have a God, or Gods, it is a religion. It repudiates the ancient religion and calls them, as Marx called them, "The opium of the people."

Communism is a faith, a burning faith, which develops with amazing speed many of the structural outlines of a church. Its faith proclaims the arrival of man here and now, and his conquests and achievements over the material things of life, these being poverty, ignorance, and evil (as defined by them), and, with it, man's entrance into paradise. In its churchlike structure, it has its revelers and prophets in Marx and Lenin. It has its orthodoxy, its heresy, its martyrs, and its apostates. It also has its holy office, its initiation rights, and its consecrated burial It certainly has its missionaries and its hierarchies. The only thing it lacks to compare it with a religion today is divini-

In such a paradoxical world as this, just where does our religion fit?

Most of the men who designed the Government of the United States—many of them were in their thirties—were a talented and influential group of joiners. They were joiners in the sense, not that they belonged to

any band or group, but rather that they were the kind of working joiners who sought perfection through an integrated wholeness. These young American giants knew how to put men and ideas together. They connected spiritual beliefs to political action. They saw no walls separating science, philosophy, religion, or art.

Never before in the history of the world, and perhaps never again, will such a group of complete idealists associate themselves in such a work of complete reality. To them, it was unnatural for a man to fail to develop anything inside of him capable of growth. Man's rights were not limited to the political. His natural rights had something to do with his place in the world and the stretching power of his own spirit and talent. The end of government, therefore, was to translate freedom into creative growth. The gov-ernment that understood this was a wise one and the whole men it helped to develop were fitted to understand the difficult business of operating a complex society. It conferred, in political terms, human dignity for the first time upon each and every man within this country.

To place all this in its proper context, it must be remembered that the constitutional freedoms of Americans are not the exclusive result of the reaction against the tyrannies in England and Europe which American settlers left behind. There was hardly a form of persecution known in the Old World which had not been transplanted to the New. The Bill of Rights came into being not so much as a reaction to the oppressions in Europe as a specific means for preventing the human indignity and the abuses of the kind of freedom experienced here in colonial America.

These young founders did not overlook European history. If anything, they took into account all of their common historical experience and they did not have to look very far for big and bold examples of persecution and denial of human freedom. These abuses existed all about them. Especially was this true in the field of religion. After utilizing the time-tested philosophy of Christendom, blending with it the hope of Hebrew prophecy, the sanity of the Roman law, and the resort to legal action guaranteed by the common law, they emphasized a new kind of philosophy called the common good. This is not the mere good of the state; it is more generous of the mere good of the individual. It is both personal and public, being not individual on one hand nor merely political on the other. It is what the scholastic philosophers of Christendom and the Founding Fathers of America sought for this common good.

As a result, it becomes impossible to examine the history of our country for its first 150 years without coming into constant references to the debt and obligation we owe to our Creator for the creation and preservation of our country.

Washington said, "No people can be bound to acknowledge and adore the invisible hand, which conducts the affairs of men, more than the people of the United States. Every step, by which they have advanced to the character of an independent Nation, seems to have been distinguished by some token of providential agency." This, then, is the first great tenet of our country: Faith in a deity.

The second one must be a response to realism. Our great believers in God have not been fatalists. They have not said, "Let the Lord do it." On the contrary. They have been men like Moses, St. Paul, Mohammed, St. Francis, Martin Luther, Ignatius Loyola, George Washington, Thomas Jefferson, William E. Gladstone, Stonewall Jackson, and Abraham Lincoln. All of these great figures in religion, in war, and in statecraft have been realists.

If we are to accept our own position of leadership in the world—a leadership, a position not desired by the American people in the sense that it has been thrust upon us—we also must be realists. We have been realists in actual war. What we have so far failed to accept is the fact that cold war is not peace, but war itself, and that it is being fought upon a broad field of basic religions. The new religion, communism, competes with all of the ancient religions of the world.

I speak of America's leadership in this world because, by virtue of the gifts that the Lord has given us, we have assumed that leadership. But political leadership is what we in America make it. Real leadership does not rest in an individual in the name of the Presidency, nor in the individual members of the Supreme Court, nor in the individual Members of its Congress. It is what the people make it—it is what the people people wish—it is what they want, and this is what it will be.

The political patterns of our country, the political patterns of the world, will always yield to the pressure of the people who constitute the countries of the world, if they are vigorously exerted. I speak primarily of America's responsibility, because our present position of leadership throws upon us the responsibility of the direction of the world of the future.

In our long, tortuous, tedious search for peace since the commencement of the cold war, we have almost entirely overlooked the power of the individual human being to create peace. Imagine, for a moment, what would happen in this world if all of the people of all faiths lived up to their faiths and their philosophies for even a short few weeks. Conceive, if you can, of the pressure that would be put upon statesmen, generals—yes, and even upon Communist leaders-for a real peace. Think what could be done if these human demands were backed with earnest prayers of all freedom and peace-loving human beings for divine strength to assure peace in the world—even though we grant that these might not be the same God in each case.

Earlier this spring, I thought of introducing a resolution in the U.S. Senate to propose the idea of a summit meeting of the religions of the world, and to request our President to take a leading role in bringing about such a meeting. I must say that it was a frustrating task to approach this proposal. In my discussions with leaders of our church and others, I heard anew all of the reasons that the religions of the world could not join together in such an undertaking. I heard again of the political differences, of the variances in their tenets and in their creeds, the relationship in the various churches in the various states of the world. I heard, too, of the problems that the State Department could foresee in the possibility of this group or that group seizing control of such a meeting and using it selfishly.

I still believe that there is a great need in our age for such a meeting. Perhaps it will have to come from people like ourselves assembled here, seeking to do the ways of God as we see them, and seeking to put into effect, on a world scale, the creation of a world in which each human being may walk the world with full human dignity and grace as one of God's children. As against this, I see a world in which material success and material well-being is the sole guidepost; and subservience to the state the only intellectual criteria; and where the moral good and the human dignity of man is subjugated to the material well-being of the state.

So far, I have avoided saying what must need be said here at this time. That is whether or not, in this country, our materialism has not so far exceeded our sense of spiritual values that we are in danger ourselves of becoming a materialistic democracy.

Are we guided more by so-called economic rights that personal ones?

In the 15 years since the end of the last World War, we have been more generous, both to other nations who are our allies and to those whom we defeated than any other nation has been on the face of this earth. And, like bewildered children, we ask, "Why do these people not love us, for whom we have done so much?" You have heard: "We cannot buy friendship in the world, and the last few years are the proof of it." You have heard these, and a hundred similar sayings, all growing out of the frustration of our inability to cope with the great Communist drives of the past year.

In my sessions with the members of the congresses and parliaments of some 51 countries, in the Interparliamentary Union first at Bangkok and then in London, I have had similar questions posed to me by the representatives of many parliaments. They are convinced of our productiveness; they are convinced of our wealth; they are convinced that we have more automobiles, more bathtubs, more TV's, more radios, more of everything than any other nation in the world. But they are not convinced that the great moral fiber and strength which created this country out of an adversity, and which maintained it through a Civil War and through World War I, is still here.

Many of these leaders have said this to me, not only in effect but in these exact words, "What is the difference between the materialistic philosophy of your country today and the philosophy of the Russians?" This is a hard question to answer, particularly when we must face the fact that in the 100 years which have elapsed since the Civil War, we have still failed to basically solve the racial problems of our country.

We can say that all men are created free and equal, but how do we convince three-fourths of the world who are not members of the white race that we mean it, when we can not show that it this country all men have the right even to vote equally? When we add to the fires of skepticism a few examples of Faubus, Little Rock, and lynchings, we need little more fuel to start a fire which consumes in the minds of other peoples all of the remainder of the great moral fiber, strength, and equality which we believe to be ours.

Jesus spoke at Nazareth and said, "The spirit of the Lord is upon me because he hath annointed me to preach good news to the poor; to proclaim release to the captives; to set at liberty those who are oppressed." In doing this, he challenged his own people to apply their religious faith to human relationships. He knew that religion without practical application and without ethical concern is mere superstition.

Here, then, we reach the heart of the American problem. The problem lies not in our economic progress, or our scientific progress, or our advances in these fields. It lies not in sputnik, nor yet in Atlases or Titans, nor in other missiles. It does not lie in the field of nuclear energy. All of these things we can cope with, all of these things we can do and will learn to do as fast as any other nation in the world learns to do them. But in simply doing these things and proving to the rest of the world that we can do them as well or better, or have more of them, we cannot convince the world of our leadership. The Russians will promise the world these things also.

To the man who has never had his stomach full, who has never known the uncomfortable feeling of having eaten too much, political ideology is meaningless. And so, the Russians' promises of full stomachs and a better life are as good as ours, and, un-

01 -

fortunately, we are associated in the minds of many of the newly formed, undeclared countries in the world with colonialism—a colonialism which was exerted primarily by the Caucasian race. If we were to place ourselves in the same position of some of these people, who for several hundred years have been under the bonds of an unenlightened colonialism, we, too, would look askance at the friends and the allies of those from whom we had recently broken these same bonds of colonialism.

Aside from the beliefs of our church, and as Americans, if we believe in anything we must believe in the essential dignity of the human being. And this is the fact with which we must face the world, and with which, ultimately, we will win our cold war: not by science, not by production, not by missiles, but by convincing the rest of the world that we do have a deep religious faith which makes each man upon the face of the earth a peculiar and particular product and concern of God. With it, we must believe that it is the desire of each and every human being upon the face of the earth to have the same dignity, the same freedom from oppression and from slavery.

This is what we have overlooked in this country, and this is why so many of the nations stand askance at this time, and succumb to the blandishments of the Russians. The heart of our own shortcomings lies in the fact that, somehow or other, we have failed to keep in our everyday life and in our normal outlook in this country the basic quality and fiber of the precepts which established our country.

We need—not a literal—but a figurative tithing man to awake us to the fact that our religion, whether it be Hebrew or Christian, is a daily part of our lives—and that it must become an active part of our national life, if we are to convince the other countries of the world that we are indeed their friends. We need it as a daily part of our lives so that these outstanding examples of injustice and lack of freedom in our own country will not be a glaring defect to which the Communists may point each and every time we are less than we should be as Christians.

This is the real task. A single misstep can set us back years. The world is looking for real moral leadership. We can supply it, with the spiritual strength of each of us. The sum total of this spiritual force of 170 million Americans is a force that will not be denied—if the temptation to compromise it away to material values does not become overwhelming. This is our job. This is our challenge.

Address by Hon. Vance Hartke, of Indiana, to the State Convention of Young Democrats, North Carolina

EXTENSION OF REMARKS

## HON. SAM J. ERVIN, JR.

OF NORTH CAROLINA

IN THE SENATE OF THE UNITED STATES

Monday, June 1, 1959

Mr. ERVIN. Mr. President, on April 30, 1959, the able and distinguished junior Senator from Indiana [Mr. Hartkel addressed the State convention of Young Democrats of North Carolina at Raleigh, N.C.

I ask unanimous consent that excerpts from the address be printed in the Appendix to the RECORD,

There being no objection, the excerpts were ordered to be printed in the RECORD, as follows:

EXCERPTS FROM SPEECH OF SENATOR VANCE HARTKE, DEMOCRAT, OF INDIANA, TO STATE CONVENTION OF YOUNG DEMOCRATS, RAL-EIGH, N.C.

It is my first trip here, but I feel right at home here in North Carolina. The welcome has been warm. And I am among young Democrats.

Of course, I am aware that the Young Democrats Clubs of this Nation spring from the first such organization in North Carolina.

In more recent times, your good Governor, the Honorable Luther H. Hodges, has gained a wide reputation for his effective, forward-looking administration. In every facet of government and development North Carolina shines as an example of sound administration tempered with moderate good judgment.

During my few months as a Member of the U.S. Senate, I have come to know your own two U.S. Senators quite well. I like them. I think everyone in North Carolina can be proud of SAM ERVIN and EVERETT JORDAN. Both are distinguished public servants who have made a great mark in military, partisan political and governmental fields. Both are fine gentlemen, sincere and capable. I am proud to sit among them and other distinguished colleagues.

Of course, you all know that the triumph of the labor-management relations bill about which I will have more to say soon is due in a great measure to Senator ERVIN. The bill carries his name and that of Senator JOHN F. KENNEDY, of Massachusetts.

May I add also that both your Senators asked me to extend their greetings and good wishes to you?

Let me dwell for a moment on some other recent history. I am myself not far removed from Young Democrats politics. Ten years ago I was neck deep in them myself. I was president of a congressional district young Democrats organization. I consider it the threshold to full organizational politics and I take great pride in the fact that I was able to step over the threshold at a rather young age. I take great pride also in the fact that I was able to work my way up in organizational politics to run for the U.S. Senate.

Too many men and women in this world look down their noses at organizational politicians. Why should we Americans respect organizational success and efficiency in big business and deplore it in politics?

The fact is, politicians have made our country great and will continue to do so.

Politicians are a special breed. We eat, sleep, talk and live politics and government. We work long hours for comparatively little pay. We travel long distances at the drop of a hat. We see little of our wives and children. But we love it.

Politics is for the young. Even the oldtimers in politics are young in spirit and must live the lives of young men. This is why the experience and the enthusiasm of Young Democrats is so important.

And, when the backbone of our party needs stiffening, it must turn to new faces, new blood. It happened in Indiana last year and in other States as well.

We had had quite a dry spell in our State. Not in 20 years had Indiana voted for a Democrat to represent her in the Senate. It had been a decade since we had a majority of congressmen, a decade since we had a governor, 22 years since we voted Democratic for President.

Last year we trotted out a new Democratic Party. In it were some oldtimers. In it were many faces new to the State political scene, many of them like myself veterans of Young Democratic training grounds.

We beat six incumbent Republican Congressmen and held two seats of our own. We swept every State office at stake. I was 39 when elected. A law school friend of mine was one of the new congressmen. Another is 31. The others, with one exception, are in their forties or thirties. Most of our new State officials also are in their thirties or

The speaker of the house of representatives in my State this year is 31 years old. The majority floor leader, a Democrat, is close to his 30th birthday.

We are building for the present and the future. This is the job of our whole party \* \* \* in every State \* \* \* in the Nation as a whole.

Why is this important in a State where Democrats usually win?

First, because our party must grow, must progress, or it will slide backward, even in North Carolina

Second, and more important, because our

job is only partly done today.

When I campaigned in my home State, I told the people of the problems as I saw them. I told them some possible solutions. But I also told them I was no miracle man and that we could find no magic solutions. I told them that Democrats were concerned about their problems and would work to try and solve them.

And we are working.

In the Senate in less than 4 months we have passed:

new labor-management relations bill which should end hoodlumism and racket-

A housing bill that will help clear slums and help millions of Americans to become homeowners if they wish.

Extension of the draft. An airport aid plan that should help the cities of our nation expand for the jet age

that has already arrived. Educational television assistance.

A measure setting up a thorough and fast study of unemployment and how to solve it.

An international monetary bill. We are in the midst of a formula for the

taxation of life insurance companies. We will take steps to solve the farm problem. We will strive to provide our Armed Forces with the tools they need to keep up with and pass the Russians,

We will tackle the problems of recession, of world peace, of world trade, the problems of the aged and the inflation-hit people of

every age.

We Democrats will do these things while remaining financially responsible because we dare to do things, because we are a national party. As Speaker Sam Raysuan said when he came to Congress, "I want to work within a party that knows no North and knows no South, knows no East and knows no West."

Today, we in the Senate follow the leader-ship of another great man from Texas, a man whose grandfather carved a chunk out of the wild West. The philosophy of this leader, Lyndon B. Johnson, is that the policy committee he heads seeks to find the common ground from the extremes of the party.

The record that has been written and the record we will continue to write is the best testimony of the success of this program. In the meantime, we can do only part of the job.

Our real job is just beginning.

Able leadership, young blood, these are only part of the necessary ingredients for a real national program because we do not control the administration. This remains in the hands of the Republican Party and will through next year.

Republicans still have charge of financial management, foreign affairs, carrying out They have failed to lead for 6 years and there is no indication there will be any great leadership in the coming months they have left.

Less, and not more, leadership is on the horizon as far as the administration is concerned.

We are threatened at this moment with vetoes in several fields and over several bills. The current party line of the pro-Republican columnists is that we Democrats are afraid of the vetoes and that the President really controls Congress through threats of

We have had stumble, study, and stall. And we have had brinkmanship. Now we have vetoship, Government by threat of veto.

I know of no Democrat in the Senate losing sleep over threats of vetoes.

But I do know that this sort of talk does no one any real good, especially not the United States of America.

I know this will not change until we elect a President of the United States who is a Democrat capable of providing the leadership that so many Americans seem to have forgotten ever existed.

When we were elected to the Senate, class of 1958, we promised we would work with our President to strengthen our defenses, to rebuild sagging relations with other countries, to bring back prosperity and help find jobs for nearly 5 million unemployed, to help wipe out slums, restore dignity and profits to the small family farmer, halt runaway high prices.

The administration has responded with attacks on "wild-eyed radicals." It has called us spenders. It has threatened the veto as a dictator threatens war. It has continued the same lack of concern for the problems of the people that helped us win the elections of last fall

The administration is selling a campaign for something which does not exist at this moment-a balanced budget.

This budget that was sent to us for consideration proposes seven new revenue-raising measures. It is based on an expected rise of some 30 percent in business. And then it is balanced only 4f we do some of next year's spending this year and throw this year's Republican budget even more out of whack than it is,

The administration's economic message did not even mention the specter of the unemployed, which have placed 13 cities in my State alone on the distress list.

But it has asked for 50,000 new Federal employees and more than \$300,000 additional for White House expenses over this year and some \$15 million more in new airplanes for the President and his staff.

In the first place, I resent the notion that a balanced budget is the goal of government. Government is to serve, to help solve national problems, to protect the citizens and to help keep the peace. It is wise, perhaps necessary, at this time to do so within the framework of a balanced budget. But the goal is peace, prosperity, progress.

Second, I resent the notion that we are spendthrifts if we so much as disturb a period or a comma in this budget we have been handed. In other words, this Republican administration is by threat of a veto attempting to control the legislative as well as the administrative branches of the Government. especially resent being labeled as wild-eyed or spendthrift. This is especially true when this Republican administration has spent more money than any other administration in history and I point out to you that the budget submitted by the President this year is a record high budget. In other words, the biggest spender of all times is attempting to hide his own spendthrift activities by calling responsible Members of Congress spendthrift Cuts are already being administered to budget items submitted by the administra-

The last Congress, led by Democrats, cut \$617 million from the Republican administration's budget for this fiscal year. The fiscal year before that our party chopped more than \$5 billion from the budget: And in the 2 fiscal years before than Democraticled Congress lopped \$2.334 billion from the budget. President Truman in his first 6 years showed a \$3.7 billion surplus. President Eisenhower in his first 6 years showed a deficit of \$19.8 billion.

The conclusion must be that we Democrats are financially responsible.
On the other hand, it was the Republican

administration that slapped on the so-called tight money policy which has increased the interest of the national debt 90.5 percent in 6

It is the Republican administration which has ignored the problem of rising unemployment, of sagging employment in manufacturing, which today is below that of 1952 even though 5.6 million more persons are in the total labor force today than there was in 1952.

It is the Republican administration which has added troubles upon troubles for the Nation's farmers. Since 1952 prices received by farmers have dropped 15 percent while prices to the consumers have risen 5 percent. surpluses are four times the size they were 6 years ago. Farm employment is down 14 percent, farm expenses are up 10 percent. It is going to cost our Government about \$7 billion to give the farmers a \$13 billion income this year.

I predict this Congress will move toward the solution of the twin problems of our national economy-unemployment and farm depression. I predict we will attack the causes of rising living costs and not just the symptoms. I predict we will balance the budget and provide that which is necessary to give America peace, prosperity, and progress.

But will we face vetoes? Will the people learn who is responsible and responsive and who leads? Will you let them be fooled?

The job of complete leadership, of a real program rests not alone with Congress. We also must have the same kind of thinking in the Republican administration.

The job of getting this done rests not alone with those in the National Government. It rests to a greater extent even among you people who fight in the trenches.

To do this job means we must begin now to inform the people fully, to select carefully the candidates we will send into battle next year. \* \* \* Straight talk. \* \*.\* Honest and sincere candidates.

The cause of freedom, of good government, of peace and prosperity, of progress demands that this be done. The welfare of our party demands that you and I and our friends do it.

Will you help finish the job? I hope and think you will.

#### Foreign Aid-A Proposal

EXTENSION OF REMARKS

## HON. THOMAS H. KUCHEL

OF CALIFORNIA

IN THE SENATE OF THE UNITED STATES Monday, June 1, 1959

Mr. KUCHEL. Mr. President, I ask unanimous consent that an excellent editorial comment, entitled "Foreign Aid—A Proposal" appearing in the Real Estate News Letter for May 11, 1959, be printed in the Appendix of the RECORD. The editorial is written by Mr. Eugene P. Conser, a very estimable and able

citizen, the executive vice president of the association, and a longtime friend of mine. Comments with respect to the problems of home ownership and home financing in underdeveloped countries merit, I feel sure, the consideration of my colleagues.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

FOREIGN AID-A PROPOSAL (By Eugene P. Conser)

In our foreign aid program it is time for us to face up to the fact that we either must effectively extend our principles of individual political and economic freedom into countries that still are non-Communist or find them later yielding to Communist subversion. Why? Because worldwide the people are awakening to the call of personal freedom. The Communist exploit it to gain political control

People everywhere yearn to obtain-and to exercise—the right to own land. They are restless under a monarchy, a feudal lord, a sultan, or a dictator who denies it. They have learned that human freedom cannot exist without exercise of the human right of property ownership.

Communist propaganda cleverly stresses land reform, elimination of the hated landlord, and return of the land to the people. To teeming landless masses of many areas, this is a potent rallying call. Given lead-

ership, they respond to it.

Yet, in our foreign aid program, we all too frequently find ourselves in support of a regime that embraces policies directly op-posite to those for which our country In our efforts to strengthen our own defense we are cast in the role of antagonist—not protector—of the people's rights. We fall directly into the well-oiled propaganda machine of our waiting adversaries.

The administration of our foreign aid program is open to criticism. Some overhauling this year is warranted. True, we have given aid unselfishly, without strings attached. We have taught modern agricultural methods-and provided the machinery to practice them. We have built highways, dams, irrigation systems, airports, factories, opened health clinics, provided medical care. We have done good deeds. But we have falled to capture the imagination of the individualor create understanding of our purposes.

The landless serf who tills his master's fields doesn't get excited over the wonders of scientific farming. He cares little about a new highway if he has no vehicle to travel it. Of what interest is a new factory if he merely views it as evidence that the rich will get richer while he and his handwork are denied

employment?

In every underdeveloped nation the lack of homes is a major political and social problem. It is a principal cause of unrest, especially in the cities, where congested populations best serve the cause of Communist subversion. In our aid program we have paid little attention to housing. Our meager efforts at no time have reflected either the great need in the countries we are trying to help or the importance of a healthy construction industry to their economies. have failed miserably in recognizing (1) the innate desire of the family to own a home; the importance of finding a way to satisfy that yearning if a nation is to become politically stable; and (3) the economic value of developing a strong private con-

struction industry.

One cause of our failure is the opposition of governments that do not want to extend private ownership. The question is whether we are justified in giving economic aid to such a regime that could so easily be subverted to communism.

Another impediment is the opposition of commercial banking interests in these countries. Invariably mortgage credit is extremely limited, if not nonexistent, and costly. Homeownership for other than the wealthy few is imposible until reservoirs of savings can be created that are earmarked for

The opposition will not be overcome until program aimed at helping create within these countries a system of savings and mortgage finance for the purpose of underpinning land ownership and home construction program is made a major objective. There is no sense in attempting to buttress an economy that refuses to accept it. We can supply the technical knowledge and part of the capital. Let us start these countries on a long-term program that offers some hope to the American taxpayer that they will one day be able to stand on their own feetand on the side of freedom. It's up to our foreign policymakers-in Congress or the State Department.

#### Peddling a Forgery

EXTENSION OF REMARKS

## HON. JAMES E. MURRAY

OF MONTANA

IN THE SENATE OF THE UNITED STATES Monday, June 1, 1959

Mr. MURRAY. Mr. President, one of the key propaganda weapons employed by Hitler and the Nazis was the so-called Protocols of Zion, a crude forgery that libeled the Jewish people. One would have thought that the protocols would disappear into the ashcans of history with the Hitler gang. However, this does not appear to be the case, since President Nasser, of Egypt, is now popularizing them. This ominous fact is exposed in the No. 53—winter-spring 1959-issue of Prevent World War III, under the title of "Peddling a Forgery."

I ask unanimous consent to have the editorial printed in the Appendix of the

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

#### PEDDLING A FORGERY

The society has never subscribed to the devil theory of history. Nevertheless, it does not underestimate the role of key personalities who, with evil intentions, helped shape the fate of mankind. It is in this connection that we read with interest an evaluation of the President of the United Arab Republic by Richard D. Robinson of the Harvard Center for Middle Eastern Studies (Foreign Policy Bulletin Oct. 15, 1958).

Under the title of "What Is Nasser Like?", Mr. Robinson cautions his readers "we must assume a man innocent of evil intent until proved guilty." As a general principle, Mr. Robinson's admonition is sound. However, does this mean that we do not have sufficient evidence at this time to judge Nasser's role and objectives? Mr. Robinson believes this to be so. Yet he declared in categorical terms that "programs of social and economic development are Nasser's stock in trade." Thus while Mr. Robinson pleads for patience before making final judgment, he seems to have already jumped the gun himself. Indeed, he goes so far as to compare Nasser's achievements with those of the founder of modern Turkey, Mustapha Kemal Ataturk.

In short, by giving Nasser a clean bill of health enveloped in his warning against premature criticism, it would appear that Mr. Robinson has placed Nasser's critics in a rather invidious position.

Fortunately, there is sufficent material on hand to assess Nasser's role so that we can keep within the bounds of the principle which Mr. Robinson so eloquently advocates.

On September 29, 1958, Radio Cairo broadcast the text of an interview between President Nasser and the chief editor of the Indian magazine Blitz. For those who are not familiar with Blitz, let it be said that it has achieved notoriety through the publication of alleged official documents purporting to show the conspiracies of American im-perialism. "I do not know," Nasser told the Blitz editor, "if you have seen a book called 'The Protocols of the Elders of Zion' or not. but I consider it to be an important book. I will give you a copy of it in English. What is published in it will show clearly to you that the fate of the European Continent is in the hands of 300 Zionists, each of whom knows all the others, and that they chose their followers from their followers.

The protocols to which President Nasser refers has a shady history. During the reign of Napoleon III, an obscure journalist named Jolly wrote a satirical dialog between Machiavelli and Montesquieu, which was directed against the regime. Basically it was a study in the mechanics of power and dictatorship. For several decades it gathered dust until the Czarist police combined it with a novel called "Ziarritz" written in 1868 by a German named Goedsche.

The novel told of a fantastic plot by rabbis to seize control of the world. The combination of Jolly's satire, which, incidentally, made no mention of Jews or a Jewish world state, with the German novel served the purposes of the pogromizing Okhrana. At the behest of the Czar's secret police, this monstrous fable was put into final form and published in 1903 as an authentic document. It's short title was "The Protocols of the Wise Men of Zion."

The protocols became an instrument of Czarist persecution, resulting in the whipping up of pogroms when the occasion warranted them. Its long-range purpose was to distract the peoples living under Czarist despotism from their wretched lives and vent their anger upon a helpless minority.

The protocols received a new lease on life with the emergence of the Nazi movement in Germany. From Hitler down, the Nazis, repeated the cry that the Jews were determined to conquer the world through an in-

sidious conspiracy.

To give this fable a degree of authenticity, the Nazis realized that they would have to provide appropriate documentation. In this respect they were thankful to the Nazi ideologist, Alfred Rosenberg, who had obtained the protocols in Riga and brought it to Berlin, Rosenberg was born in Reval, Estonia, and was an ardent worshipper of the German Herrenvolk idea. Following the end of World War I, he offered his talents to the German High Command. It seems that his services were not accepted at once and it was only when he pulled out of the hat, so to speak, the protocols that he was welcomed into the elite circle of Nazis, Pan-Germans, and the industrial war lords of the Ruhr. From then on the protocols became the bible of the Nazi Party and its preachings.

That the protocols had been proven to be crude forgeries did not inhibit the Nazis at all. On the contrary, Hitler wrote in "Mein Kampf" that just because the authenticity of the protocols was questioned, it was the 'best proof that they are genuine after all."

Millions of human beings were exterminated under the banner of the protocols, but with the complete defeat of the Nazis in World War II, it was thought that the forgeries would go down with the Master Race gangsters. But lies, especially of the tall variety, have an unfortunate resiliency. Apparently they do not die as easily as the liars,

Nasser and his henchmen have now become the carriers of the Baccilli. To well meaning people who resent the charge that Nasser is another Hitler, let them ponder his statement to the editor of Blitz. There are certain implications attached to it which are significant. Thus, Nasser has personally placed himself on record as one who favors the popularization of the forgery. Furthermore, he considers it to be an important book which does not reflect on the scholarship or intelligence of the Egyptian dictator. Moreover, he admits to having copies of the book for English speaking people. This certainly means that his propagandists are not only saturating the Middle East with the protocols, but also circulating them abroad.

Finally he mentions 300 Zionists who are planning to take over Europe, although the protocols do not speak of Zionists but Jews. In other words, Nasser has compounded the forgery himself. As if to emphasize his hopes of violence against the Jews who support Israel are the real danger which threatens the establishment of a new Hitlerism.

How does this tally with Mr. Robinson's assurance that "Nasser himself has repeatedly expressed personal repugnance for violence?" Can anyone think of a more potent incitement to mass violence than the circulation of Hitler's big lie under the official sponsorship of the Nasser regime?

The Nasser propaganda machine has laid emphasis on the employment of violence. The King of Jordan has been a special target and calls for his assassination ring out from Cairo Radio with increasing regularity.

The fact is that Nasser's political career has had strong links with the agents of Hitler's high command and the Nazi Party. As a young officer, Nasser worked diligently for the Nazi cause during World War H. Following his seizure of power he surrounded himself with an assortment of Nazis and Hitler supporters, including one of Goebbels' chief lieutenants, the notorious Johannes von Leers.

The activities and hate-inciting propaganda of Radio Cairo and its affiliated networks, bear all of the earmarks of Goebbels."
"Deutsche Rundfunk," while Egyptian officers are indoctrinated with Nazi literature, including Hitler's "Mein Kampf."

Nasser is no Hitler, but he has dragged out

Nasser is no Hitler, but he has dragged out of the sewers of Nazi propaganda the same filth which putrefied the political atmosphere of the world several decades ago.

It is a fact that the Arab masses bear no animosity toward the Jewish people. This is precisely the thorn which plagues Nasser's propagandists who are striving to create an atmosphere for new pogroms.

Mr. Robinson may plead for patience, but Nasser's advocacy of the protocols sums up his role in no uncertain terms. One can cite the paper achievements of Nasser, but when all is said and done, his leadership is built on the same big lie which spawned Hitlerism and turned Europe into a vast crematorium.

#### Bonneville Power Corporation Bill

EXTENSION OF REMARKS

## HON. RICHARD L. NEUBERGER

OF OREGON

IN THE SENATE OF THE UNITED STATES

Monday, June 1, 1959

Mr. NEUBERGER. Mr. President, in the Oregonian of Portland, Oreg., May 28, 1959, appears a thoughtful and informative editorial entitled "Bonneville Corporation Fair to All."

This editorial analyzes S. 1927, which I introduced on May 13 as the culmination of many years of study concerning permanent legislation to replace the temporary act creating the Bonneville Power Administration. This bill subsequently will be the subject of hearings by the Senate Committee on Public Works, under the chairmanship of the distinguished senior Senator from New Mexico [Mr. Chavez], and I commend to my colleagues a reading of this editorial, which so thoroughly discusses legislation of vital importance to the Pácific Northwest and to the Nation.

Mr. President, I ask unanimous consent that the editorial from the Oregonian of May 28, 1959, be printed in the Appendix of the Congressional Record.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

BONNEVILLE CORPORATION FAIR TO ALL

A sound pattern for self-financing of Federal power generation and distribution in the Pacific Northwest now has emerged. The measure introduced May 13 by Senator RICHARD L. NEUERGER, Democrat, of Oregon, as S. 1927 is a logical and vastly improved successor to earlier proposals. It was drafted chiefly by counsel for the Department of Interior (although the Eisenhower administration has not yet given the bill its blessing).

S. 1927 is a substitute for S. 3114, which was introduced by Northwest Senators last session by request of the Northwest Public Power Association. It also replaced a committee print drafted by the staff of the Public Works Committee on which hearings were held in Oregon, Washington, Idaho, and Montana last December.

The new bill, on which hearings are expected in late June or July, would change the Bonneville Power Administration, an agency of the Interior Department which sells at wholesale the power generated at Army Engineers and Bureau of Reclamation dams, into the Bonneville Power Corporation.

Bonneville Power Corporation could use its own revenues and could self up to \$1,100 million in revenue bonds to the U.S. Treasury to provide the power financing for new hydrdelectric projects to be built, as now, by the Army Engineers and Reclamation Bureau. It would thus reduce the need for appropriations from Congress. The Corporation also would provide its own financing for transmission lines and substations. It could build its own thermal plants to help balance the hydropower load. And, when nuclear power becomes feasible, it could build these reactors.

The most important change in S. 1927 from the earlier versions is to give the Bonneville Power Corporation a utility responsibility to meet the net wholesale electric power needs of all distributors or consumers within the Pacific Northwest who desire and are willing to enter into contracts to purchase power from the Corporation.

Thus, the Corporation would be obligated to anticipate and provide for serving the requirements of private utilities as well as public-owned utility preference customers and industries. But in pledging to meet the net wholesale needs of utility customers, the Corporation would in no way inhibit their right and obligation to provide for themselves, in their own projects, as much of their needs as feasible.

The "utility responsibility" clause goes a long way to counteract apprehension in Oregon, Washintgon, and Idaho—in which private utilities dominate—that eventually

the regional power system will become a State of Washintgon system, in effect, through operation of the Bonneville "preference and priority" clause. The latter gives publicly owned utilities, which dominate in Washington, first and last call on Federal power. But S. 1927 not only requires the Bonneville Power Corporation to meet all net wholesale needs, it gives it the revenue-bond financing to make good on the obligation.

As an additional obligation to achieve regional distribution of Federal power, S.

1927 adds this language:

"In order to promote the diversified agricultural, industrial, and economic development of the several States of the Pacific Northwest it is hereby declared to be the policy of the Government to distribute electric power equitably throughout the States of the Pacific Northwest so that there will be no unreasonable geographic concentration thereof."

This may be considered a slight modification of the preference clause, and as such his stirred some opposition among public power spokesmen. But like the preference clause, it would come into play only if the corporation failed in its obligation to meet the net wholesale requirements of the region. It is some assurance to Washington's neighboring States of fair treatment in event of a power shortage. But it is far outweighed in importance by the public utility responsibility the new corporation would assume.

It just does not make good sense that public power advocates should stand rigidly on a law which would permit a public agency monopoly of Federal power. The preference clause was designed to prevent a private utility monopoly of Federal power, and it did. But neither should seek monopoly. The Northwest could unite on this bill if the competing elements in the power industry are willing to give a little. The result would be a firm guarantee of plenty of power at the lowest possible cost for all consumers.

# The "Wheat King" Looks at the Farm Problem

EXTENSION OF REMARKS

## HON. WILLIAM LANGER

OF NORTH DAKOTA

IN THE SENATE OF THE UNITED STATES

Monday, June 1, 1959

Mr. LANGER. Mr. President, I ask unanimous consent to have printed in the Appendix of the Record the GTA Daily Radio Roundup of May 28, 1959. It is of unusual importance, and I hope every Senator will read it.

There being no objection, the broadcast was ordered to be printed in the RECORD, as follows:

GTA Daily ROUNDUP OF THURSDAY, MAY 28, 1959

Seventy-seven-year-old Tom Campbell is called the wheat king of the world. In Montana he farms over 45,000 acres. Tractor fleets plow and plant a thousand acres a day. At harvest, 52 combines advance into a sea of wheat that reaches for 28 miles to harvest 700,000 bushels of wheat in 14 days.

The farmers who own GTA do not favor the big corporation-type farm operation, like Mr. Campbell's, because they are contrary to everything that family agriculture stands for in American tradition. But Tom Campbell is probably more aware than most family farmers of what farmers are up against in today's revolution of mechanization and science in farming. He is keenly aware of the

need for farm legislation and effective Federal programs that stabilize prices and con-

trol production.

U.S. News & World Report magazine sent reporters to interview Mr. Campbell, because he's the "wheat king" and wheat is in the headlines as the Nation's biggest agricultural surplus problem. Here are a few highlights from that interview as published in the June 1 issue of U.S. News.

When asked if he thought Uncle Sam ought to wipe out farm programs and let farmers produce all-out, taking their chances on the free market, the wheat king answered: "No. We went through that before. If we didn't have a Government program today wheat would be 50 cents a bushel, corn 25 cents and all other farm products would be down, too. We would all be bankrupt again."

How much does it cost Mr. Campbell to grow wheat? We hear a lot about how corporation farms produce cheaper. Sixty cents a bushel, some say. But Campbell nalls down this nonsense by bluntly stating that he can't do it for less than \$1.10 to \$1.50 a bushel. He even admits that it costs corporation farms more to grow crops—than it does family farms. What's the reason? He says that he has to pay his workers industrial wage rates while family farm labor is free, with the wife and kids in the fields.

Campbell sticks by his acreage allotment and has put his whent under Government loan every year since the program started 26 years ago. Most always he redeems the loans, but he says that a fair loan price makes for orderly marketing. "Until the crop loans came along," he told reporters, "the farmers didn't have any sense of security."

Mr. Campbell acknowledged that the wheat problem is serious. It is time for something drastic to be done. He recommends giving wheat to China and India and other countries that need it. In his words, "there's no surplus of wheat in the world when you put it within reach of hungry people."

That would cost a chunk of money, he admits, but as a bid for good will and peace it would be small compared to the "billions and billions of war surpluses that were given away or dumped in the ocean after World War II. And don't forget," he told the reporters, "business and industry made a profit manufacturing those war machines."

That brought up the subsidy question and Campbell pointed out that most so-called farm subsidies help others as much or more than farmers. "What I'm saying." he added, "is that farmers don't like to be blamed for this whole subsidy thing. The Government has paid in subsidies to industry 39 times as much as it has ever paid to farmers."

What is Mr. Campbell's recommendation to work out the wheat problem? He proposes a drastic cut in acreage and in return a price support high enough to give farmers an American standard of living.

So that's the way the Nation's "wheat king" looks at the farm problem. It's worth keeping in mind when you vote in the 1959 wheat referendum.

## Critical Lag in Oceanographic Research

EXTENSION OF REMARKS

## HON. A. S. MIKE MONRONEY

OF OKLAHOMA

IN THE SENATE OF THE UNITED STATES

Monday, June 1, 1959

Mr. MONRONEY. Mr. President, a most interesting story began to unfold before the American people yesterday in the columns of Hearst newspapers across the Nation.

Chairman Warren G. Magnuson, of the Senate Interstate and Foreign Commerce Committee, undertook, at the request of Dave Sentner, chief, Hearst Headline Service Bureau in Washington, D.C., to report factually, fully, and most interestingly, how our Nation lags in the vital field of oceanographic research.

Both Chairman Magnuson and the Hearst newspapers are to be commended for this well-written series of articles, published in the public interest.

I ask unanimous consent that the article, taken from the New York Journal-American of Sunday, May 31, 1959, be printed in the Appendix of the Record.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

SENATOR WARREN MAGNUSON WRITES: "AND NOW WE'RE LOSING THE WAR OF OCEANS"

(While America looks into space, says a leading U.S. Senator, we're losing a war with Russia right on our shores: In the following article Senator Warren G. Magnuson tells why, and what he thinks must be done about it. Senator Magnuson, Democrat of Washington, is chairman of the Senate Committee on Interstate and Foreign Commerce and a member of the Committee on Aeronautical and Space Sciences.)

#### (By Senator WARREN G. MAGNUSON)

Soviet Russia is winning the struggle for the oceans.

Scientists call it the wet war, and say the outcome can determine the fate of nations and the human race.

Without firing a missile, a rocket or a gun, Soviet Russia has been winning in the Atlantic, the Pacific and the Antarctic. This year she is invading the Indian Ocean.

Had it not been for the stubborn persistence of wiry little Adm. Hyman Rickover, father of the atomic submarine, Russia also would be winning in the Arctic, where she has bases 2,200 miles from Seattle and within 3,550 miles of Detroit and Chicago.

Russia has been winning the wet war with more and bigger ships; more, if not better, scientists; more, and in some instances superior, equipment, and more aggressive government encouragement and action.

The United States cannot permit Russia to achieve a global conquest that would give her control of 95 percent of the earth's surface. We must meet Russia's challenge. We can meet it without sacrificing a drop of American blood if we start now, but if we walt for tomorrow it may be too late.

Soviet Russia has between 450 and 500 submarines and a capacity to build 100 more each year; the United States has 109.

Soviet Russia has 29 icebreakers, the world's biggest and heaviest, and is building more including an atomic icebreaker almost completed. The United States has eight.

Soviet Russia has the world's largest oceanographic research fleet with four times as many ships capable of deep sea work than we have. Her ships are modern, new; ours old and obsolete.

The Soviet is conducting intensive offshore explorations for oil beneath its continental shelves, and minerals research in all oceans. Three hundred miles off Lower California Soviet scientists have taken sharp deep-sea photographs of the mysterious manganese-cobalt-nickel-copper nodules which thickly carpet the ocean floor in that and some other oceanic areas.

REDS LEAD WORLD IN OCEANIC STUDIES

Russia has more ships and scientists in the polar regions than all other countries combined.

Russia has more ships and scientists assigned to deep ocean studies than any other nation. She has 800 professional oceanog-

raphers compared to the 520 in the United States.

Soviet Russia aspires to command the oceans and has mapped a shrewdly conceived plan, using science as a weapon, to win her that supremacy.

Should she be successful she would control commerce, weather, communications, much of the world's food supply, and ultimately earth's resources, health and climate. The human race, if it survived, would be in permanent bondage to Soviet masters.

"Soviet effort in oceanography is massive, of a high caliber, and is designed to establish and demonstrate world leadership," states Rear Adm. John T. Hayward, Assistant Chief of Naval Operations for Research and Development.

The wet war Russia is waging may be more dangerous to free world security than

her space war or her polar war.

Supremacy in space would permit Russia to shower rockets on us from her continental domain four to six thousand miles away.

Conquest of the Arctic would shorten these distances 2,000 miles.

Victory in the wet war would enable Russia to blanket our coastal areas to a depth of more than a thousand miles with nuclear-headed missiles fired from hidden submarines a hundred miles or less offshore.

MISSILE-CARRYING SUBS POTENT WEAPON

"The submarine armed with long-range missiles is probably the most potent weapon system threatening our security today," states the recently formed committee on oceanography, composed of 11 eminent scientists, all civilians, selected from six universities and three private institutions.

Admiral Hayward says:

"It goes without saying that a complete understanding of the oceans and ocean bottom and the atmosphere above must be obtained if the Navy is to wage modern war successfully. The true submersible requires a precise method of navigation while under water. Ocean currents, bottom topography, magnetic and gravitational fields are all important in this respect."

Russia is making such studies. She is making them along our coasts, along her coasts, in midocean, along the continental shelves, and beyond in the North Atlantic, the South Atlantic, throughout the North Pacific, and in the Mid- and South Pacific, the Indian Ocean, and the Arctic and Antarctic Oceans. To make these complex investigations she is using the finest scientific ships affoat, the most laboratories, the most equipment, and the most professional oceanographers.

Scientists on these ships have discovered submarine mountain chains previously unknown, ocean canyons five times the depth of the Grand Canyon, and have plumbed the ocean to the deepest depths ever recorded. Her huge white research ships have visited the ports of west Africa, South America, the South Seas, the Antipodes. The Vityas, showboat of the Russian research fleet, also has called at San Francisco; Vancouver, British Columbia; and Honolulu.

# Law Day, 1959—Address by Ross L. Malone

EXTENSION OF REMARKS

## Hon. EVERETT McKINLEY DIRKSEN

OF ILLINOIS

IN THE SENATE OF THE UNITED STATES

Monday, June 1, 1959

Mr. DIRKSEN. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address delivered by Ross L. Malone, president of the American Bar Association, before the Illinois State Bar Association, on April 30, at Peoria, Ill.

There being no objection, the address was ordered to be printed in the RECORD,

as follows:

Law Day, 1959—Address by Ross L. Malone, President, American Bar Association, Before the Illinois State Bar Association, Hotel Pere Marquette, Peoria, Ill., April 30, 1959

I am especially pleased to have the opportunity to address the Illinois State Bar Association on what might be referred to as Law Day Eve. Tomorrow, across the length and breadth of this country, and in all 50 of the States and States to be, ceremonies will be occurring and addresses will be delivered in courtrooms, schoolhouses, on college campuses, in civic clubs, churches, and in many other places. These ceremonies will have in common the fact that each is devoted to an increased appreciation of the place of law in our lives and emphasizes the importance of respect for law and legal institutions on the part of all of the people of the United States. As you know, this will be the second Law Day to have been celebrated in the United States. Both have been proclaimed by the President of the United States and call upon the legal profession, the educational institutions, and the media of public information to cooperate in appropriate observances. The President's proclamation this year specifically calls upon us to observe Law Day, "with appropriate public ceremo-nies and by the reaffirmance of our dedica-tion to our form of Government and the supremacy of law in our lives.

Charles S. Rhyne, my distingiushed predecessor, rendered a great service to the legal profession and to the country when he conceived the celebration of Law Day last year. The extent of the observances of the first Law Day, estimated at something over 10,000 last year, exceeded the expectations of everyone who had any part in planning the celebra-

tion.

This year, with the success of the first Law Day on which to build, and taking advantage of the experience gained in it, we set out to make the second observance of Law Day an even more significant occasion in the lives of the people in the United States. During the last 8 months I have talked to many, many people, ranging from the President of the United States, the presidents of national television networks, and national publishers; down to men on the street about Law Day and the celebration of it which will occur tomorrow. I have been impressed by the enthusiasm of all of these people for the basic philosophy of Law Day and their very real interest in contributing to effective observance of the occasion.

None of the people to whom I refer was a lawyer. It would not have been surprising if some of them had been under the misconception that on May 1 we are celebrating "Lawyers Day," rather than Law Day. Hence it would have been understandable if, in some cases, jealousy of the legal profession had resulted in reluctant support. I encountered no such misapprehension. It is a great tribute to the legal profession, that the perverison which might result in such misapprehension has not occurred. Should the profession ever undertake to appropriate Law Day to its own use and benefit, it will have become Lawyers Day and will have lost its significance so far as the country at large is concerned. I am confident that will not occur.

As Law Day, it is significant, not only to lawyers but to all of the people of our great Nation, Why is that so? What is it about

the place of law in our lives that commands the respect and interest of the public in spite of the fact that some of them may not have the same feeling about lawvers? The anthe same feeling about lawyers? swer, it seems to me, is clear. There is a personal relationship between every citizen of the United States and the law. or not he has ever had to have recourse to it, he consciously or subconsciously recognized the law, and the courts which administer it as his final hope for the vindication of his individual rights as a citizen. He may have the utmost confidence in the President and the executive branch of the Government. He may feel that the legislative branch should be paramount because it reflects the views and wishes of the majority of our citizens and is responsive to them through the elective process. Nonetheless, he realizes that it is to the judicial branch of the Government he will turn in the final analysis for the vindication of his rights, regardles of who may threaten them. He realizes also that the enforcement and protection of his rights which he expects from the courts is not going to be dependent upon whether he is in the majority or in the minority in the assertion of his rights. Whether the opposing party be the Government of the United States, a tremendous corporation, or everyone else in his neighborhood he knows that his opponent or opponents must meet him on equal terms at

No doubt there are other factors as well, but I believe that it is true that the average citizen of this country today regards the courts as in a special category so far as his respect and confidence is concerned. It is of vital importance that he continue to do so.

One of the most important aspects of Law Day is the opportunity which it provides to increase confidence in the courts through increasing understanding of the people of this country as to their functioning and their vital place in our governmental framework.

One aspect of the functioning of the

One aspect of the functioning of the courts, as to which this is especially needed today, is the necessity that in a Federal Government composed of three equal and coordinate branches, the judicial branch of the Government must be independent. Most lawyers understand that fact. They realize that so long as courts are presided over by human beings, there is great danger that judges will become subservient to any agency or branch of government on which they are dependent in any respect.

Only through the existence of independent courts can the rights of our citizens be protected. To accomplish that protection, the courts must be independent of both government and private influence. In a democracy, public appreciation of that necessity is essential to the maintenance of the independence of courts and of the governmental system of which they are a part.

If Law Day should accomplish nothing more than to contribute to a public appreciation of the necessity for independent courts in this country it will have served an invaluable purpose—but—its objectives are far broader than that.

May I offer an example of what happens when courts are not independent? summer I had occasion to be in the U.S.S.R. where a small group of officials of the American Bar Association spent 2 weeks talking to judges and lawyers of that coun-We were particularly interested in their system of justice, the functioning of their courts, and in learning the status of lawyers in the Russian society. We found to our surprise that there are in Russia today some 16,000 lawyers who make their living in the practice of the law. Two thousand of them are located in Moscow, a city of 5 million people. These private practitioners are not working for the government as everyone else is Russia is, but are still working for their clients and are dependent upon the fees paid by their clients for their livelihood. The system of peoples courts with appellate courts leading finally to the Supreme Court of the U.S.S.R. was a more complete judicial system than we had anticipated finding. The trials which we observed were conducted reasonably well and the judges to whom we talked appeared to be conscientious in their desire to administer justice fairly.

While in Russia I purchased a copy of the Constitution of the U.S.S.R. Interestingly enough it is for sale in all of the cities in Russia, not only in the Russian language, but in English and just about every other language that can be found in that country. A person reading that constitution who had no knowledge of life in the U.S.S.R. today might well conclude that the rights of Russian citizens are recognized and protected to a greater extent than anywhere else in the world. The Russian Constitution so provides. It spells out in detail the rights of their citizens and the protection to be afforded to them. It reads beautifully. Yet the world knows today that no one has fewer rights or less protection against the government of its country than the citizens of the U.S.S.R.

Why is this true? What makes the difference between a country where citizens rights guaranteed by their constitution are protected and a country where citizen's rights guaranteed by their constitution are nonexistent? Every lawyer knows the answer. It is the existence of independent courts. Not just the existence of courts. Courts exist in Russia. Courts function in Russia. Lawyers represent clients in Russia. Cases are decided by courts in Russia. The distinguishing feature between that country where the individual citizen is the pawn of the state and subject to its-every whim and our country where liberty under law actually exists is found in those two words "independent courts." It takes both words to provide the difference, not "courts" alone.

In the U.S.S.R. the courts and judges are under the complete domination of the Communist Party, which is actually the Government of Russia, just as is every other facet of Russian life. The army is controlled by the political commissar assigned to its units. The industry of the country is controlled by the plant representative of the Communist Party who sits at the elbow of the plant manager, (both employees of the government) and second guesses him in the op-eration of the plant. The manager of the plant is responsible for its operation, and for its meeting the quotas assigned to it. yet he is constantly under the surveillance and domination of the party representative assigned to the plant. The same domination exists in every aspect of Russian life and it is true of the courts as well. True, we did not find a political commissar assigned to the staff of the court, though I should not be surprised if some exist. did find adequate proof that if a member of the party is charged with crime the party chairman might well call up the judge before whom the case was trying and instruct him either to dismiss the charge against the party member, or to convict him and throw the book at the accused. Whatever the instruction may be there is no question that it would be followed by the court, just as the direction of the Communist Party is followed in everything that occurs in Russian life today. A citizen seek-ing to protect himself, his family, or his property against the abuse of his constitutional rights in the U.S.S.R. receives only the protection which the government, by sufferance, elects to grant him. I know of no more graphic illustration of the necessity for complete independence of the courts.

It is important on this Law Day that we reawaken our appreciation of the necessity for independent courts if liberty under law as enshrined in our Constitution and Bill of Rights is to continue to have significance in the lives of our citizens.

As a corrolary of this necessity of public appreciation and support of independent courts it is vitally important that we have good judges. It is vitally important that we have judges who appreciate the necessity for the independence of courts. It is vitally important that we have judges who realize that there is a difference between independent courts and independent judges, and it is equally important that we have judges who do not abuse the independence of the courts on which they sit.

on which they sit.

Lawyers in the United States have a great responsibility growing out of the necessity for public support of the courts. Lawyers are the handmaidens of justice, and as well the high priests of its temple. In the final analysis the effectiveness of the functioning of our courts is dependent upon lawyers and the legal profession. Sometimes we are prone to think of the practicing bar separate and apart from the courts and to relegate to the courts the responsibility for the solution of problems which, in fact, are the problems of the profession as a whole. We cannot divorce ourselves from responsibility for the functioning of the courts. There is no problem in the administration of justice Which cannot be solved, and solved readily when the bar is willing to accept its re-sponsibility and to make use of the facilities at its command—and I do not except the dangerous problem of court congestion.

Public support for the courts cannot be divorced from public confidence in the courts. The function performed by lawyers is a necessary ingredient of such confidence. Law Day affords lawyers an opportunity for rededication to the performance of that function in the highest traditions of our profession.

May we turn now to what might be called Law Day's fourth dimension. In his proclamation establishing Law Day this year, President Elsenhower said "in paying tribute to the rule of law between men, we contribute to the elevation of the rule of law and its application to the solution of controversies between nations." The hope that law provides for the peaceful solution of controversies between nations has captured the imagination of an increasing number of people in public and private life throughout the United States. It has met an equally responsive reception in many places throughout the world.

The threat of nuclear warfare in the space age has given to this hope an urgency far greater than it ever before has had. As unthinkable as a nuclear war today would be, we see ourselves on the brink of one with increasing frequency as diplomacy encounters problems which it cannot settle. With increasing frequency, the people of the United States are asking the question: Why cannot these problems be submitted to, and settled by, independent courts just as they would be litigated and disposed of between States of the United States today? More and more people are asking why the Berlin controversy, the Matsu and Quemoy problems and others which threaten the peace of the world cannot be submitted to courts for adjudication.

Everyone knows that the removal of a subject of disagreement from the street corners and newspaper headlines to the relative calm and orderly processes of the courtroom inevitably results in a cooling off period which in itself contributes tremendously to a peaceful solution of any problem. More and more people are coming to realize that the adjudication of controversies by an independent court provides

a face-saving means of withdrawal from an untenable position which frequently is an important aspect of the peaceful solution of an international problem. Finally, they know that the adjudication of controversies by an independent court in the light of established principles of law and morality is a fair means of resolving them, whatever the ultimate decision may be.

This increasing consciousness of the potentialities of law for the solution of world problems has been reflected in public statements of a number of prominent Americans recently.

President Eisenhower has said on several occasions that there can be no peace without law. A portion of his state of the Union message to the current session of the Congress was devoted to the consideration of the means for promotion of the rule of law between nations.

In his last public appearance our "fallen giant" and great Secretary of State, John Foster Dulles, said "We in the United States have, from the very beginning of our history, insisted that there is a rule of law which is above the rule of man. That concept we defived from our English forebears, but we, as well as they, played a part in its acceptance \* \* We now carry these concepts into the international field."

In an address to the Fellows of the American Bar Association at their mid-year meeting in Chicago, Henry R. Luce, the distinguished publisher, posed the question "Peace on what terms, based on what principles, sustained by what purposes?"—and answered it:

"The answer—I submit—Is not obscure. The answer is: Peace through law—and freedom under law. For surely without law, there can be neither peace nor freedom. And what is a more meaningful, a more authentic definition of a just cause than—law?"

In a significant address delivered to the Academy of Political Science in New York on April 13, Vice President Nixon said:

"I am now convinced, and in this I reflect the steadfast purpose of the President and the wholehearted support of the Secretary of State and the Attorney General, that the time has now come to take the initiative in the right direction of establishment of the rule of law in the world to replace the rule of force."

He then proposed as tangible steps through which this Nation might provide leadership in elevating the rule of law and applying it to problems between nations, that this country modify the so-called Connally Reservation by which we reserved the right to make a unilateral decision as to the domestic character of any question submitted to te International Court of Justice. By that reservation we, in effect, reserved a veto power insofar as the adjudication of any dispute submitted to the Court is concerned. Elimination of the Connally amendment would constitute tangible evidence of the good faith of this country in its determination to elevate the rule of law and apply it to the solution of problems between nations.

The Vice President further proposed that in future international agreements, entered into by the United States, a provision be included that any disputes that may arise as to the interpretation of the agreement should be submitted to the International Court of Justice and that the nations signing the agreement would agree to be bound by the decision of the Court in such cases.

These two steps would constitute real progress on the road to world peace through law. Their espousal by the United States would constitute the type of leadership which we owe the world in this field. Our public officials who have demonstrated this appreciation of the potentialities of law in

world affairs are entitled to the support of the public in their efforts to further this concept. Lacking that support these and other proposals which would constitute appreciable progress toward world peace through law may be lost. The legal profession of the United States could make no higher contribution to the welfare of the world than by giving strong support to these and every effort made to provide the solution for world problems through law.

The lawyers of this country have a very special obligation and responsibility in both of the areas which I have mentioned today; in the promotion of, public understanding of the necessity for an independent judiciary, and in taking the lead to provide public support for all national efforts which will lead to the appreciation of law to world problems. I hope that on this Law Day—U.S.A, you will join me in resolving that our performance in both areas will measure up to the best traditions of our profession.

Resolution of Camp Bowie Barracks of Fort Worth, Tex., Veterans of World War I, Relating to Pensions

EXTENSION OF REMARKS

## HON. RALPH W. YARBOROUGH

OF TEXAS

IN THE SENATE OF THE UNITED STATES

Monday, June 1, 1959

Mr. YARBOROUGH. Mr. President, I ask unanimous consent to have printed in the Appendix of the Record a resolution by Camp Bowie Barracks No. 1636 of Fort Worth, Tex., Veterans of World War I, adopted May 24, 1959, urging a revision of non-service-connected disability allowances.

There being no objection, the resolution was ordered to be printed in the RECORD, as follows:

Whereas since the days of the American Revolution, it has been the traditional policy of our country to provide pension in the declining years of their lives, to those of its citizens who have been called upon to serve in the Armed Forces in defense of the Nation in time of war; and

Whereas such pensions have been provided

Whereas such pensions have been provided in recognition of a debt of gratitude, and a measure of equalization owed by the Nation for sacrifice and services rendered above and beyond that required of other citizens during wartime; and to insure that those citizensoldiers who have offered the sacrifice of life, limb, health, financial well-being, and hardship generally, shall not become involuntarily pauperized, and objects of charity in their old age; and

Whereas those citizens called to the colors during World War I some 40 years ago in 1917 and 1918, did render outstanding service, and at a great physical, financial, and personal sacrifice in the common good, in defense of the Nation, and although largely untrained in the practices of war, performed feats of arms that surprised the world, remain unsurpassed and seidom equaled, and in victory, prevented foreign aggressors from ever touching American soil; and

Whereas now these citizen-soldiers of World War I have reached the average age of 65 which, for the most part, of itself, and aside from the normal infirmities of advanced age, precludes them from following gainful employment, thus relegating them to a category of being totally disabled and unemployable; and

Whereas these veterans of World War I have penetrated this no man's land of old age, they are by all rights of morality, tradition of the past, and the implied promises inherent therein, entitled to the dignity of financial assistance from the great and glorious Nation which their service and sacrifice has preserved and maintained; now,

therefore, be it

Resolved, That Camp Bowle Barracks No. 1636 be and is hereby recorded as urging this 86th Congress of the United States of America to enact appropriate legislation revising non-service-connected disability ances to conform to H.R. 1181 as presented by Congressman Van Zandt, of Pennsylvania, which limits the payment of disability allowances to those eligible veterans whose earned incomes do not exceed \$2,400 annually (if single), or \$3,800 annually (if married or have dependents), and in determining such incomes the Veterans' Administrator shall disregard payments to the veteran in social security, railroad retirement benefits, and/or other pension annuities and retirement benefits whether payable by law, contract, or otherwise, and that copies of this resolution be sent to the President, the Vice President, the Speaker of the House, and to all Members of Congress from this State.

Approved and adopted on this 24th day

of May 1959.

R. J. McKINNEY, C. A. WOOD, Quartermaster.

## Newspaper Coverage of Racial Disturbances

EXTENSION OF REMARKS OF

## HON. JOHN SPARKMAN

OF ALABAMA

IN THE SENATE OF THE UNITED STATES Monday, June 1, 1959

Mr. SPARKMAN. Mr. President, a very close friend and a very fine citizen sent me an article pointing out the unfair treatment by some publications of the racial disturbances in the South. My friend asked that I place the article in the Appendix of the RECORD, and I ask unanimous consent to do so.

There being no objection, the article was ordered to be printed in the RECORD,

as follows:

It'S A SMEAR THING (By Westbrook Pegier)

New York .- For about one hundred years, States of the northern tier have heaped supercilious abuse on the States of the South. This unnecessary and dangerous conduct continues nowadays in agitation over integration.

Even in the Civil War days the northern population was largely immigrant and still allen by contrast with the patriotic native quality of the South and this remains a

nasty fact today.

Actually the hostile propaganda comes not from the people of the North but from a few hundred clever individuals in command of letterhead societies, notably the National Association for the Advancement of Colored People, and from a few slick paper magazines. The Luce and Cowles groups have been called an axis, a reference to the Hitler-Mussolini combine and their brash contempt for the niceties of truth.

Yellow journalism is an old idiom and

seems to have been a native American product, but the daring of these publications in their general attacks on the culture and moral character of millions of southern citizens is breathtaking.

About 2 years ago, in Shreveport, a group of local business men, including bankers, aroused over misrepresentation of the Little Rock matter, directed from New York City, thought about reprisal. They thought of organizing a neighborhood movement in small centers which contain most of the population, to warn magazine dealers to quit selling certain magazines. Otherwise neighborhood customers would refuse to spend money with them for cigaretts, cosmetics, soft drinks-for anything.

In principle, this is an effective method, but there was no organization, no skill, no common determination. So the South is still the victim of a hateful propaganda which hurts the people of the North, too, because it deceives and misleads them and inevitably foments mutual hatred.

Actually, the deportment of the southern tier toward Negroes is at least as good as that of New York, Chicago, Detroit, and Philadelphia. The two rare examples of lynching in Mississippi which have been used to arouse fury against the South have been no worse than many more brutal assassinations of nonunion workers on picket lines in the North. All mob action against lone individuals is lynching. But the North, speaking in the voice of the entities which I have mentioned, condones union lynching in its own domain as rub-of-the-green.

## Census To Study Farm Financing

EXTENSION OF REMARKS OF

## HON. WILLIAM PROXMIRE

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES Monday, June 1, 1959

Mr. PROXMIRE. Mr. President, the Bureau of the Census will make a study of farming in this country this fall that could be enormously important to to American farmers.

A prime reason for the dismal failure of farm programs to provide steady and adequate farm income, is that they have been unable to provide genuine and widespread bargaining power strength for farmers. A number of us have at various times proposed legislation that would improve the opportunities for farmers to combine-through cooperatives-a more ambitious use of marketing orders, Government loans and various other means.

The Bureau of the Census is going to use 30,000 enumerators to make a comprehensive study of how farmers finance their operations. Because of the very practical interest this study will have for the Nation's farmers, I ask unanimous consent that an excellent summary report of it by William Blair in the May 30 New York Times be printed in the Appendix of the RECORD.

There being no objection, the report was ordered printed in the RECORD as

CENSUS TO STUDY FARM FINANCING-30,000 U.S. ENUMERATORS TO EXPLORE POSSIBLE SHIFT TO VERTICAL INTEGRATION

#### (By William M. Blair)

Washington, May 29.—The Government will explore for the first time this fall an

agricultural development that farmers have been considering as a means of gaining greater bargaining power.

As a part of the 17th countrywide census of agriculture, the Bureau of the Census will make a survey of how farmers finance their crops and farm operations. Census officials hope the survey will shed light on vertical integration.

Vertical integration, common in industry, means control of production, processing, and The most widespread example marketing. today is in the broiler industry although in various forms, it is used in eggs, fruits, vegetables, sugar beets, and other speciality crops. One form is contract farming, by which farmers produce to specifications set down by dealers or food processors.

#### SEEK STABLE INCOME

It has been extended in a small measure to hogs and cattle as farmers seek to get a collective bargaining power to stabilize their incomes and avoid boom and bust cycles.

By being able to control the disposition of their products through vertical integration, farmers can bargain for better prices and thus stabilize their income. At present they are at the mercy of the market.

The survey on vertical integration will be just one facet of the census that officials expect will record a 5-year period of the greatest change in American agriculture.

The Census Bureau will ask farmers in a sample survey about the terms of a contract they may have with wholesalers, feed dealers, processors or others on all kinds of crops and livestock. The questions will include whether a contract is exclusive, whether a feed dealer supplies all feed and other necessary materials, and what the profit margins are under such arrangements.

#### DEBTS TO BE SURVEYED

Another new feature of the agriculture census this year will be the collection of figures on nonreal estate debits of farmers. This will cover for the first time money farmers borrow to finance machinery, seed, fertilizers, and other farm equipment.

The census will start in October and continue through November and early December following harvests. The last census was taken in 1954. An act of Congress provides for a census of agriculture every 5 years.

The census is expected to show a continuing trend toward larger land units and more mechanization. In 1954, the census showed the number of farms had declined more than 1,300,000 since 1940. It counted 4,728,000 farms compared with 6,100,000 in 1940 but the total production of farm products continued to increase.

Further changes in off-farm work also are expected to be shown in the new census, reflecting the need of farm persons to sup-plement income with nonfarm jobs. In 1929, one of nine farm operators worked off their farms 100 days or more. In 1954, three of ten farm operators worked 100 days or more off the farm and one of five farmers 'worked 200 days or more in nonfarm

All of the 30,000 enumerators will be local residents. Already, Members of Congress are trying to line up enumerator jobs for constituents. Each enumerator will get at least 12 hours of training, the Census Bureau said. Each will count farms in his or her area. An area usually contains 100 to 200 The enumerator will be expected to complete his job in about 3 weeks.

#### CREW LEADER HEADS 15

The enumerators will work under 2,000 crew leaders, who in turn will be responsible to 100 field assistants scattered throughout the country. This means each crew leader will supervise 15 enumerators and a field assistant will supervise 20 crew leaders. The crew leaders will receive 5 days' training.

The questions to be asked in 3,000 counties will seek 3 kinds of information:

1. A count of farm resources-number of farms, acres of cropland, acres used for pasture, numbers of each kind of livestock and poultry, number of persons working on farms, number of various kinds of equipmeht, and similar information.

2. A record of farm products produced

and sold in 1959.

3. A count of selected farming activities. This information will cover how much fer-tilizer was used, land practices used, such as contouring and terracing as soil and water conservation measures, amount of gasoline and oil used, and number of persons employed by farm operators, including hired workers and family labor.

The questions also will cover methods of paying rent for rented land, farm mortgages, value of land and buildings and such home facilities as telephone and freezers.

About 2 weeks before the census starts, post offices will be asked to distribute the questionnaire. Farmers will be asked to give the completed form to the enumerators when they call. The Census Bureau already has urged farmers to start keeping simple records on harvests, products sold and major expenses so that the census report can be easily and accurately filled.

## Ashland Daily Tidings Supports Further Funds for Cancer Research

EXTENSION OF REMARKS OF

## HON. RICHARD L. NEUBERGER

OF OREGON

IN THE SENATE OF THE UNITED STATES Monday, June 1, 1959

Mr. NEUBERGER. Mr. President, the menace of cancer hangs over all mankind-from the cradle to the grave and in every nation of the earth. Everywhere, men and women are determined to mobilize the resources of this great country so that medical research can ultimately find the answer to the grim riddle of cancer. What challenge is greater?

Progress has been made because, despite the deadly nature of the peril, some 34 percent of cancer victims are being cured. But further progress depends on adequate funds for Federal agencies like the National Cancer Institute and for private organizations like the American

Cancer Society.

In the Ashland Daily Tidings of Ashland, Oreg., of May 29, 1959, a most stirring and informative column on the entire cancer-research cause has been contributed by Rudi Korn-Mann, city editor of that publication. Mr. Korn-Mann supports unequivocally the need to make available for skilled cancer researchers all the funds, facilities, assistants and equipment to do the job-if indeed the job can be done.

I ask unanimous consent that the article be printed in the Appendix of the

RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

> ON THE SUNNY SIDE (By Rudi Korn-Mann)

"I doubt if ever again I could be wholly Partisan," declares Oregon Senator Richard L. NEUBERGER. A life-threatening cancer attack—the lawmaker says in the June issue

of Harper's magazine-convinced him that he had more friends than he knew.

"The response of the people in Oregon to my illness reflected no party lines," NEUBERGER remarks. He continues "The Republican State chairman wrote a glowing letter about what a good Senator I had been," and lists numerous non-Democrats who exerted themselves to show their concern for his illness.

Our junior Senator has happily learned a heartening lesson through an unhappy, almost tragic experience. It would be worse than superfluous to repeat here the old saw that some good may be found in everything; to perpetuate this truthless Pollyanna sentiment would be criminally stupid.

Mr. Neuberger and-to note another cancer battler who won his fight-Arthur Godfrey are exceptions. As listed in yester-day's Tidings, the Nation has lost some of its greatest leaders to cancer in recent years. We have not yet recovered from the shock of John Foster Dulles' death by this enemy of humankind. Robert A. Taft, Kenneth Wherry, Arthur H. Vandenberg have all been cut down, their usefulness to our country crully terminated, by this disease.

And, though perhaps only their families and associates will miss them, thousands of other Americans, each year go to untimely deaths when cancer strikes. Their passing leaves an irreparable loss.

No, despite the fact that Senator Neu-BERGER can live to be grateful that friendly hands reached out to him in a dark hour, and that Godfrey can weep to reporters that he was moved by their concern, there is nothing good about cancer.

Senator Neuberger and Senator Lister Hill, of Alabama, who has endorsed the Oregon solon's plan for a living memorial to Dulles, forcefully realize cancer is a merci-

less killer of men and women.

Like a sinister army, this illness sets up a beachhead in the body and then sends out invading cells; these in turn infect tissue, turning healthy and thriving organs into headquarters for death. Death by cancer is not a peaceful falling asleep. Its inroads are attended by agonies which sometimes even our strongest oplates cannot diminish.

Many have supported the annual drive against cancer with donations and thousands of Americans have given hours of their lives to pushing this commendable campaign. But now, all of us who are on the side of humanity in its fight against cancer can, by investing a few minutes time and a few cents postage, strike a blow against this enemy.

Senator Neuberger is fighting for Federal appropriations to extend research for a cancer cure or possibly a preventative. He says, "Our total investment in cancer research— Federal and private—falls short of what we spend on permanent waves, or even parimutuel wagers.

'It is less than 2 percent of what we'spend on cigarettes and barely more than 1 per-

cent of what we spend on liquor.

"Two out of three American families will be afflicted by cancer; yet the Federal Treas-ury pours out 65 times as much money on price supports for six favored crops as it spends for cancer research.

## The Quest for World Peace

EXTENSION OF REMARKS OF

## HON. WILLIAM PROXMIRE

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES IN THE SENATE OF THE UNITED STATES Monday, June 1, 1959

Mr. PROXMIRE. Mr. President, perhaps no legislative body anywhere can do more to achieve world peace than the

U.S. Senate. Every Senator knows, I am sure, that there is much we could do that we have not done. Of course, everyone wants peace, but as in any other human endeavor, success is in large part a matter of how truly genuine-how burning-how great is our desire for it, how much we are willing to do to achieve

The Capital Times of Madison, in a brilliant and blunt editorial, typical of that newspaper, on Memorial Day sharply reminded its readers of the need for dedication. I ask unanimous consent to have the editorial printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD,

as follows:

WILL WORLD'S EPITAPH BE "THESE DEAD LIVED IN VAIN"?

This is the day set aside for honoring the dead of our wars. It was first established to honor the dead of the Civil War and has been extended to include subsequent warsthe Spanish American, World Wars I and IL.

It is customary at many Memorial Day ceremonies to read Lincoln's Gettysburg Address with special emphasis on the line that "these dead shall not have died in vain."

Presumably this means that unless man can find some way of settling his disputes without resort to death and destruction the war dead have died futilely.

But though we have been reciting these

words of high aspiration through the decades, our wars have continued and the list

of the dead grows longer.

The hallowed words will be recited again today at the perfunctory services across the Nation. But most people will pay little or no attention to the purpose of the holiday. They will rush off to the baseball games or in other pursuits of pleasure and, as the National Safety Council warns, will take another heavy toll of lives on the highways.

Today is a good time to ask how much we really want peace. How dedicated are we to the ideal of assuring that "these dead shall not have died in vain?"

In the hope of fulfilling the ideal, man has established an organization called the United Nations whose purpose is to resolve international problems short of violence.

It is a noble dream and it struggles valiantly to fulfill its purpose. But its work is ignored and even derided by the great

majority of people.

The result is clear. War threatens on virtually every continent of the world. The situation is so serious that the United Nations is being bypassed by the great power foreign ministers who are meeting at Geneva. Plans are being made for a so-called "summit" meeting between the heads of the great nations later this summer.

If these efforts fail and war comes in this nuclear age, there will be a fitting epitaph for the seared and lifeless world that will be left:

"These dead lived in vain."

#### Power for Peace

EXTENSION OF REMARKS

## HON. HENRY M. JACKSON

OF WASHINGTON

Monday, June 1, 1959

Mr. JACKSON. Mr. President, early this month all over the United States we celebrated Armed Forces Day with the theme "Power for Peace." Our citizens were given every opportunity to visit our military bases and to view the scientific equipment and highly trained personnel in this annual tribute to our military preparedness. Some of us were also fortunate to hear our military leaders explain the concepts and philosophies on which our power for peace rests. One of those speakers, known to all of us, was Gen. Curtis E. LeMay, Vice Chief of Staff of the U.S. Air Force. On May 16, 1959, he addressed the Spokane Chamber of Commerce at its Armed Forces Day banquet. His speech is a fine summary of our military strength and philosophy. recommend it to each Senator, and I ask unanimous consent that the address be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

REMARKS BY GEN. CURTIS E. LEMAY, VICE CHILF OF STAFF, U.S. AIR FORCE, BEFORE THE SPOKANE CHAMBER OF COMMERCE ARMED FORCES DAY BANQUET, SPOKANE, WASH., SATURDAY, MAY 16, 1959

#### POWER FOR PEACE

Mr. Chairman, ladies and gentlemen of Spokane, and distinguished guests, General White has asked me to express his regrets at not being able to be with you today. His loss was my gain. I have seen many Armed Forces Day celebrations, but I must say that I have been most impressed by the way Spokane goes about the job. All of you can be justly proud of the results of your imagination and hard work. I want to add that it was a great honor for me to participate as grand marshal of your parade this morning. This was a privilege I thoroughly enjoyed.

Combining your Lilac Festival and the observance of Armed Forces Day is a most unique way to express power for peace. Possession of military strength to deter war—so that we can enjoy the benefits of peace—is the goal of all Americans. Here in Spokane, this goal has been more eloquently portrayed.

Spokane, as the hub of the inland empire, long has been the center of peaceful pursuits. Its resources, wealth, and beauty add up to a remarkable bounty. But Spokane and its surrounding area also have been and continue to be important contributors to the total military strength which serves this country. In the Air Force, we are particularly aware of this. Nearby Hanford has been of sigular importance in the development of our nuclear forces. Fairchild Air Force Base is one of the key elements of our B-52 strike force. As many of you know, Fairchild has also been selected as one of the launch sites for our new Atlas intercontinental ballistic missile.

#### Deterrence

On this tenth observance of Armed Forces Day, it is appropriate to take stock of our total military strength—to examine its capabilities—and to discuss whether it can indeed continue to serve successfully as the strong right arm of world freedom. All Americans are entitled to know whether their defense team provides sufficient strength to counter the military threat of world domination by the Communist bloc. A primary desire of all free people everywhere is the deterrence of war—keeping the peace. But if deterrence fails, we must possess the means to win the war we hope never happens.

Our national ability to deter war and to prevail if deterrence fails depends upon several factors. First, the possession of military strength with the capacity to destroy an enemy's military forces and warmaking potential. Second, the national will and determination to use that strength if necessary. Third, the credibility of our military strength and our national will in the eyes of a potential enemy. Let us examine each of these in turn.

#### Our military forces

Today, our National Defense Establishment is a \$40 billion business with over 2½ million men and women in uniform and over a million civilian employees. It comprises significant strength on land, at sea, and in the air.

During the coming fiscal year, the Army will maintain 14 regular divisions and 23 other major combat units totaling 870,000 men. Eight of its divisions are deployed overseas. Here at home, the Strategic Army Corps, comprised of three divisions, provides a combat ready force particularly designed to meet initial requirements for limited war situations. Additional battle groups, regiments, surface-to-surface missile battalions, and air defense missile units make up the remainder. Backing up the Regular Army Forces is an Army Reserve Force of 630,000 men.

Constant attention is being given to the continued modernization of ground force equipment. Within the current budget now before Congress, funds are included for tanks, trucks, small arms, and ammunition, electronics, and engineer equipment, as well as for a variety of missiles for employment by troops in the field. Additional Army helicopters as well as observation aircraft and light transport aircraft are also being provided.

In fulfilling its main responsibility for improving land combat weapons and equipment, the Army's major effort is going into increasing its firepower, into better mobility and communications, and into improved methods for acquiring combat intelligence.

A battle area surveillance R. & D. program is directed toward improving radar, infrafed, sonic, meteorological, drone reconnaissance, photographic and television methods of surveillance—the object being to keep continuous watch over thousands of square miles of battlefield in any weather to locate targets and to determine the results of strikes.

Greater firepower will be provided chiefly by new nuclear weapons, such as the Little John, Redstone, and Sergeant missiles, improved nuclear artillery and atomic demolition munitions. Better high-explosive weapons will also be provided, among them the Lacrosse, a missile to replace and supplement conventional artillery.

The Navy will maintain 864 ships, approximately 7,200 aircraft and 175,000 marines in fiscal year 1960. Two of the Navy's four fleets are now maintained in home waters with one in the Mediterranean and the other in the Far East.

Three hundred and eighty-nine of the Navy's active ships will be warships with a very marked increase in combat effectiveness as modern vessels from new construction and conversion replace older ones. By June 30, 1960, five Forrestal class attack carriers will have replaced Essex class carriers, and three more will be under construction including the first nuclear-powered carrier. By the same time, eight cruisers also will have been converted to guided missiles ar-mament. Five more will be under construction or conversion. One of these will be the first nuclear powered cruiser. Five guided missile destroyers and frigates will be in commission, with a large number still under construction, including the first nuclear powered frigate. The first five sub-marines equipped to fire the Polaris solid fuel ballistic missile are well along in construction. Work has already begun on the

sixth submarine and procurement of the seventh, eighth and ninth submarines has been authorized.

The Navy's antisubmarine warfare capabilities are receiving particular attention. New antisubmarine warfare ships and aircraft and nuclear powered attack submarines with greatly improved capabilities are joining the fleet. Antisubmarine surveillance has been strengthened. Personnel and ships have been assigned to the antisubmarine task forces and other killer groups on a more permanent basis to increase their efficiency. Research and development on new techniques and equipment has been intensified, including work on antisubmarine missiles, nuclear depth shots, homing torpedos. drone helicopters and special aircraft for antisubmarine warfare use.

The U.S. Marine Corps will continue to maintain three divisions and three air wings in their traditional state of combat readiness. The value of these forces in limited war situations, as well as for general war augmentation, is well known.

Another force which should not be overlooked in discussing the Navy's capabilities is one with a specialized peacetime mission—the U.S. Coast Guard. In peacetime, it functions under the Treasury Department and is our foremost agency for the advancement of maritime safety. But in time of war, or on the direction of the President, it becomes part of the Navy. As a matter of fact, even in peacetime, Coast Guard men and ships work closely with the Navy in the accomplishment of many important tasks related to national security. For example, during the summer of 1958, two Coast Guard icebreakers served as part of a Navy task force by clearing the way to Arctic ports for delivery of supplies to our distant early warning radar stations. At the present time, the Coast Guard has a total strength of approximately 40,000 officers and men.

Air Force strength stands at about 850,000 men and women in uniform with over 100 combat wings. It contains the most formidable strategic striking power in existence—forces which have the ability to strike any target in the world. More specifically, they possess the capacity to destroy an enemy's military forces and warmaking potential. This they can do through selective application of firepower against enemy air-dromes, missile sites, radars, communication networks, and other military targets—wherever they might be. Through constant progress in equipment, tactics, and training, Air Force capabilities, in this respect, are being continually improved.

The new B-52G's now entering operational units provide us with increased range capabilities. A growing jet tanker fleet further improves the range and flexibility of our bomber force. Additional operational versatility will be provided as B-52H's and supersonic B-58's enter our strategic inventory. In the near future, our bomber capabilities will be further improved through the use of Quail air-launched decoys to confuse the defenses and through employment of Hound Dog supersonic air-to-surface missiles which will be launched hundreds of miles from enemy targets.

The operational assignment of the intercontinental ballistic missiles, Atlas, Titan, and Minuteman, to the Strategic Air Command will greatly augment our combat capabilities. Furthermore, when used in conjunction with our bombers, missiles will be able to serve a double purpose. Strikes by our manned bombers would be preceded by missile impacts on enemy targets. The resulting destruction and confusion will reduce enemy defense capabilities and thus assist our bomber force to achieve its objectives. The results of our long-range ballistic missile test firings thus far, indicate

that we are making great strides toward obtaining effective ballistic missile systems.

Protecting our strategic forces are the air defense forces which will provide the warning, the active air defense, and the precise direction and control required to fight a successful air battle. Our present supersonic manned interceptors will soon be augmented by long-range Bomarc surface-to-air missiles. The Bomarc has undergone many successful tests and is now in production.

You may recall that earlier I mentioned the strategic forces located at Fairchild and the fact that Fairchild has been selected as one of the new ICBM bases. This area, and in fact the entire Northwest, for obvious reasons, is also the home of many air defense units. Nearby Geiger Field, for example, houses the 498th Fighter Interceptor Squad-ron and the Air National Guard's 116th Fighter Interceptor Squadron. Although not located in the immediate vicinity, a semi-automatic ground environment (SAGE) direction center is now under construction at Larson Air Force Base near Moses Lake. It will serve as a focal point for the control of both offensive and defensive operations in a large area including Spokane. In the not too distant future, further air defense protection of this area will be provided by the long-range Bomarc missile.

Another element of our combat airpower is the tactical air forces—here at home and overseas. The tactical air forces deployed overseas are assigned a general war mission, but they can be used, if necessary, in lesser conflicts. Here in the United States we have the Tactical Air Command's Composite Air Strike Force. Its special qualifications lie in its mobility, flexibility, and striking power—of particular value in limited war situations. It is immediately on call to support the unified commanders throughout the world. It can be tallored in size and composition to meet any particular situation where a show of force, an application of force, or a general war augmentation is required.

Backing up the combat forces of all services are those supporting units and organizations so necessary to get the job done properly. The Navy's Military Sea Transport Service and the Air Force's Military Air Transport Service are but two examples of these important organizations.

Any complete picture of our military strength also must include the research and development activities in all services—the Army arsenals, the Navy shipyards, and the missile ranges and proving grounds where weapons are developed and tested. In addition, are the scientific and industrial skills and experience of countless individual Americans and civilian organizations. day, more than ever before, the military services depend upon the talents and cooperativeness of U.S. science and industry. The continuation of a strong militarycivilian partnership is a most important factor in achieving the security we all seek. Those of you who may have observed various forms of military construction now under-way have seen, firsthand, what civilian skills, imagination, and experience can do.

The combined forces of our allies comprise another very substantial addition to the overall free world defense posture. In 1958, these forces consisted of 5 million men, 14,000 jet aircraft and 1,700 combat vessels. A large portion of these forces are tangible examples of the value of this Nation's economic and military assistance programs to other countries. Mutual security program funds help provide the ground, air and sea forces for many countries—countries which today and every day stand face to face with the Communist threat. Many of these countries have the manpower but not the materiel resources to defend themselves. Mutual security—military and economic—is

one way in which we can help them and by helping them we help ourselves and free people everywhere.

From this brief resume of our own forces and the forces of our allies, I think you must agree that free world strength represents formidable power. All in all, the combined forces we have available pack a tremendous wallop—and a variety of punches.

#### National will and determination

The existence of the forces I have discussed in concrete evidence of the will and determination of the American people to provide military strength for their security—and for this country's position of leadership of the free world. However, this same national will and determination must go one step further. We must possess the will and determination to use these forces—if ever required.

Military strength which is not backed by strong national will cannot be fully effective. Today, when time is so critical—and decisions so far reaching—our national determination must never waver. Just as imporant, it must not be hidden. Its existence in direct support of national policy must be there for all to see.

During the last decade there have been many instances of American determination to oppose the encroachments of communism upon free people. An excellent example was our success in breaking the Berlin blockade which occurred 10 years ago this month. Another example was our active participation with United Nation forces in Korea. Last year military forces of all services were used to contain further Communist aggression in Lebanon and Talwan. More recently this national determination was again expressed by the President with regard to the situation now existing in Berlin when he said, "We will not retreat 1 inch from our duty. To assure our continued existence-in a world of freedom and peace-this same national determination must continue.

The third factor of deterrence I mentioned—credability—although somewhat intangible and difficult to measure, is most important. If a potential enemy believes in the capibilities of our forces and in our national determination to use them if required, deterence will be effective. He must fear the results to him if he should make an aggressive move. There must be no doubt in his mind that what we have is good, that we can and will use it if necessary, and that if we do use it—we will prevail.

#### Conclusion

The free world margin of military superiority today exists in our long-range striking force composed primarily of manned bombers and our numerous aircraft carriers. These forces will soon be augmented by land- and sea-based ballistic missiles. However, there is no question that this country and its allies have a difficult job ahead—on all fronts. The Communist threat is a manifold threat—one that is growing rapidly in many areas. It is becoming a very personal thing to all of us—civilian and military alike—as Soviet scientific, economic, political, and military successes continue.

As far as the military threat is concerned, breakthroughs in science and technology are occurring so rapidly that we cannot afford to relax for a moment. The combined efforts of the scientific, industrial, and military potential of this country must continue to be used to their maximum capacity to meet the requirements of the future.

There is no question that our continued security—and the premium we must pay to maintain this security—will be expensive. But if we value our freedom—if we want enduring peace—we must continue to pay the

Neither our towns and cities, the future of individual Americans nor our freedom can

remain secure without the power for peace we have today and must continue to have in the years ahead. The military services are pledged to provide that power. With your help and the efforts and determination of all Americans we can do it.

Tribute to Miss Arabella H. Prall, 44 Years a Schoolteacher in Linden, N.J.

EXTENSION OF REMARKS

## HON. CLIFFORD P. CASE

OF NEW JERSEY

IN THE SENATE OF THE UNITED STATES

Monday, June 1, 1959

Mr. CASE of New Jersey. Mr. President, high on the list of blessings which providence has showered upon America is the quality of its teachers. Is there any among us who has not known the influence of at least one outstanding teacher, a person for whom teaching was not a job, but a high calling, a person whose service went far indeed beyond the call of duty, who served for the love of service and whose imprint was deeply felt by several generations throughout an entire community?

Such a teacher was Arabella H. Prall, who taught for 44 years in Linden, N.J.

Recently a tribute to Miss Prall, composed by Mrs. L. E. Cowell, a former student of Miss Prall and later a fellow teacher in the same school, was presented at the annual ingathering of the Linden Needlework Guild. I ask unanimous consent that this tribute be printed in the Appendix of the Record.

There being no objection, the tribute was ordered to be printed in the Record, as follows:

A TRIBUTE TO ARABELLA PRALL

Perhaps a good many of you don't need to be told about Arabella H. Prall (the "H" stands for Harrison—she was related to Presidents). You could probably tell us many more things about her.

Last year when we had our first Miss Prall Day, we were fortunate to have with us, her sister Miss Lou Prall. Our Miss Prall had taught so many Lindenites in her 44 years of teaching, that in her latter years, she'd gather and photograph children of children she had taught, then proudly display a picture of her grandchildren.

I had Miss Prall for my third grade teacher. When I taught in school 1, whom should I be next door to but Miss Prall. Picture the brandnew, very green teacher—trotting through the cloakroom ever so many times that year, and plenty more during the next 12 years.

Perhaps you remember her teaching you your three R's. Perhaps she started you on your stamp collection. But any child who had ever been in her class, came away with a knowledge and love of nature, which no other teacher in the system has ever been able to instill. We learned names of wild flowers, leaves, trees, insects, and birds. She taught us to see what we looked at. Even now when we have a glorious fall day, don't you think of that poem she taught us, "October's Bright Blue Weather."

Then there were the nursing episodes. Someone was hurt. Go to Miss Prall. Someone was walling. Get Miss Prall. And teeth. Whenever a child had a loose first tooth, he begged to go to Miss Prall's room

to have it pulled. We once asked her if she'd kept a record of teeth pulled-she only laughed. We guess it must have been hundreds. Once I remember Miss Ebert telling about our Miss Prall holding on her lap, a small child who had all the symptoms of measles, patting and comforting her until her mother came for her.

Up to here, I've made her sound like all sweetness and light, which she was, but much more. After all, she had spent her childhood on the plains of Kansas where prairie life was hard and rugged. Those of you who went to her funeral, could see in her much thinner face, the fine, strong

features of her pioneer forebears.

This next episode I didn't see-I was told. It seems that a long while back before the era when parents objected to discipline, Miss Prall saw fit to shake one very unruly boy. In the process, his shirt was torn (notice I didn't say she tore it). Reaching into her contains-everything drawer, she took needle and green thread and sewed it up. The story ends many years later, when the fireman (or policeman) who had been that boy, came to her and thanked her for setting him on the right path.

I could go on and on, but my sister said to give a thumnall sketch. About now, you'd like to see the thumbnail this sketch could fit on. In closing, let's relate her to our needlework guild. For many years, she invited us to participate in her Rahway ingathering. Then in 1949, with the help of Mrs. Daneke and others, she helped us launch our own Linden branch. Now, year by year, on our ingathering day, we have a living memorial. We'll recall and honor the name of Arabella Harrison Prall.

## American Legion at San Antonio Urges Equalized Retirement Pay for Military Personnel

EXTENSION OF REMARKS OF

## HON. RALPH W. YARBOROUGH

OF TEXAS

IN THE SENATE OF THE UNITED STATES Monday, June 1, 1959

Mr. YARBOROUGH. Mr. President, like the clergyman who continually preached the same sermon, explaining his congregation had not acted on it, I would like again to point to a serious inequity in this Nation's method of paying retired service personnel.

At the present time, personnel who retired after a given date receive more money than other people with the same rank and time in service, but who retired earlier. I submit this cannot be termed proper or just in any sense and should be changed as soon as possible since this retirement pay is the sole income of these

people in many instances.

Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a resolution adopted May 20, 1959, by the American Legion Business and Professional Men's Post No. 10 of San Antonio, Tex., urging a change in the retirement pay method.

There being no objection, the resolution was ordered to be printed in the

RECORD, as follows:

Whereas there is now pending before the U.S. Congress legislation tending to equalize the retirement benefits now granted to the

members of the Armed Forces of the United States, and to grant to those members who retired prior to June 1, 1958, the rights and privileges guaranteed them by the Founding Fathers of this great Republic, and further guaranteed them by the conduct of public affairs over the past 150 years; and

Whereas Public Law 422 of the 85th Congress has created gross discrimination against certain retired members of the Armed Forces, thereby creating a breach of faith with members of the Armed Forces, past, present, and

future: and

Whereas this false distinction violates the basic precepts of fair play, and further violates the promise of the people of the United States to provide fair, equal, and impartial treatment of all persons who may become members of and/or retire from the Armed Forces of the United States; and

Whereas many members of the Armed Forces now on active duty consider Public Law 422 of the 85th Congress to be breach of faith and are actively seeking other ways of life and plan to resign from the service at a great loss to the people of the United

States: Now, therefore, be it

Resolved by American Legion Business and Professional Men's Post, No. 10, San Antonio, Tex., in executive session this, the 20th day of May 1959, That the Congress of the United States is requested to enact legislation equalizing the retirement benefits of members of the Armed Forces who have or may retire, irrespective of date, past or future, and promising to future generations that the his-torical relationship between active-duty pay and retired pay shall be continued as the law of the land, and promising that the people of the United States shall keep the faith with her members of the Armed Forces of the United States.

ROY A. PENNYCUICK, Commander, American Legion Business and Professional Men's Post, No. 10, San Antonio, Tex.

## McGill University Spring Convocation Address by Adlai E. Stevenson

EXTENSION OF REMARKS

## HON. WILLIAM PROXMIRE

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES Monday, June 1, 1959

Mr. PROXMIRE. Mr. President, last Friday the Honorable Adlai Stevenson addressed himself to what this wise man called the most important and fateful fact in the world today. This is the vast disparity of living standards between a comparative minority of well-to-do nations of the West-Western Europe and North American—and the hovels of the hungry millions in the rest of the world.

Stevenson challenges the Western World with the assertion, "The precondition of any effective world policies in the West is an imaginative understanding of the implications of this race between resources and population; of this growing gap between a small wealthy white Western minority who have modernized and the vast majority of mankind who have not."

Mr. President, I ask unanimous consent that this stirring, humanitarian speech by Adlai Stenvenson be printed in the Appendix of the RECORD, and that an editorial from last Saturday's New

York Times entitled "To Have and Have Not," commenting on Stevenson's speech, also be printed in the Appendix.

There being no objection, the speech and the editorial were ordered to be printed in the RECORD, as follows:

ADDRESS BY ADLAI E. STEVENSON, SPRING CON-VOCATION, MCGILL UNIVERSITY, MONTREAL, MAY 29, 1959

I am grateful beyond measure for the honor this famous university has done me. And, as an American, I am the more flattered to be awarded this degree in the company of such distinguished Canadians.

The degree of doctor of letters pleases me

very much. And it will doubtless confound some of my countrymen very much. But I solemnly promise, Dr. James, that, in spite of the temptation, as a doctor of letters, I will never confuse my own prolific writings

with literature.

Speaking of temptation, I think Bernard Shaw once said that he never resisted temptation because he had found that the things that were bad for him did not tempt

I wish I could say the same. But I can't. I find honorary degrees always tempting, and often bad for me: Tempting because we all-especially expoliticians-hope to be mistaken for scholars, and bad because if you then make a speech the mistake is quickly exposed.

This is my predicament here today. I am honored, and you have to listen to a speech.

It hardly seems fair.

I thought—as all visiting Americans do to talk about Canadian-American relations which are in one of our cyclical periods of But I reconsidered because, like irritation. most family relationships, ours are so intimate, so involved, that analysis is difficult. I found Canadian confirmation in some words of Bruce Hutchison, editor of the Victoria Times. Not long ago he wrote:
"All the current wrangles of the border-

trade, investment, seaway tolls, Columbia River electric power, farm surpluses, and the rest—represent for us Canadians only one thing, precious beyond economic calculation. So far we have been unable to articulate that

thing clearly.
"We know what it means just the same. The whole problem of the border today-as always since the American Revolution-is that our neighbors don't know what it means

and won't bother to find out."

I think Mr. Hutchison is right. We Americans mostly don't know and we ought to find out about our closest friend and neighbor and biggest customer. But I wonder if Canadians know as much about the United States as they should, too? Perhaps we ought to appoint a joint commission of international psychoanalysts to help us. And if they started to work today, I would like to make two or three suggestions for better understanding of the United States in Canada.

In the first place, it seems to me that Canadians, like other friends abroad, sometimes speak as if they thought the United States should always act promptly and decisively to satisfy their needs and com-plaints, regardless of the needs and wishes of American voters. They don't expect their own governments to behave the same way. and are fully aware that domestic political pressures limit the actions of their governments abroad. For our Government to behave as they suggest it would have to be, in effect, a dictatorship, unresponsive to the opinion and desires of its own voters and able, therefore, to take prompt, decisive action abroad. But would Canada prefer that kind of a neighbor rather than the present one with all of its faults and weaknesses?

Another point I would ask our friends, and especially our neighbors, to remember, is that the American system of government was designed primarily for the efficient compromise of conflicts between the States and the various sectional interests—economic, racial, religious, etc. At that time an effective scheme for composing internal differences was not only sensible but essential to the unification and survival of the sprawling infant country. It was not designed for rapid, decisive action in the realm of foreign affairs. In those days we had few and wanted less. But now our internal differences are perhaps less urgent, while our external problems have become infinitely complex and acute.

Our system may be obsolete, but, as Canadians will understand, any social-political system, especially in a democracy, is subject to a constant timelag. It can adjust to new circumstances and demands only gradually and painfully. Yet in the United States we have made many adjustments in the past 25 years—some very farreaching—and I think it could be argued at least that no other nation has shown greater flexibility and capacity for growth.

It remains true, however, that we are not adjusting as rapidly as we should, and must, in this period of bewildering and fast change in the world, and to match the swiftness, certainly and secrecy of the dictatorships. But is it unreasonable of us Americans to expect, on this score, some of the patience and understanding which you Canadians expect of us?

I would like to suggest, too, that sometimes our friends ask too much of us. Some Canadians, for instance, sound as if they would like us to solve their surplus wheat problem for them when we can't solve our own. The fact is that even if our political system were not hobbled by built-in structural and historical defects we could hardly meet the political and economic demands upon us from all sides, no matter how much we want to be helpful. We are neither that wise nor that rich. We cannot supply, for instance, the massive capital investment which has been so essential to Canada's growth and is now needed so badly by all the underdeveloped countries.

And that brings me to what I really wanted to talk about: the things we will have to do together, the things that unite us, and the great unfinished business of this generation of Canadians and Americans who share the values of Western society, of which McGill University is one of the great repositorles.

In free nations, where no strict ideology is imposed from above, there are recurrent times of ferment and questioning. These are always times of turmoil and confusion. Old ideas are discarded, new directions sought, and sometimes in the midst of it all, it is not altogether easy to perceive the main areas of decision and the proper scope of the debate.

Little more than a century ago, such a phase of questioning and revaluation was in full swing in Britain. The first onrush of the industrial revolution had changed the face of the land. It was a world of inhuman working hours, of child labor, of poverty herded into vast insanitary cities. And all this coexisted with wealth and comfort for a Tew. "Two nations," wrote Disraell, live side by side, of "privilege and the people," of "wealth and poverty." Dickens gave these two nations life and breath in his great novels. Reformers-Lord Shaftesbury, the Christian Socialists, the free churches, the dogged forerunners of the labor movementfought the widespread idea that no reform or intervention was possible since laissez faire had been preordained by an all-seeing Providence. And, ominously, Engels fed the evils of infant industrialism into the incendiary imagination of Karl Mark. Some decades afterward a similar ferment was at Work in America, sparking the reforming

energies of William Jennings Bryan, Theodore Roosevelt, and Woodrow Wilson.

What the reformers finally did was to create the conviction that no decent society could tolerate so wide a gulf between the "two nations". In a hundred different methods of analysis and reform, they sought to establish reasonable methods of dealing with the vast problems—and opportunities—unleashed by industrialism and by the wealth it created but did not fully share.

I believe a comparable period of questioning and concern has opened in the West in the last decade. We face the end of the period of unquestioned Western supremacy. We face the rising claims of the vast majority of mankind. Some of the results of modernization have spread now to the whole human race, and once again the consequence of industrialism, undirected by broader aims of public policy, has been to recreate Disraeli's "two nations" in the world at large. One, a small minority of comparative wealth and privilege, lives in the main around the North Atlantic. Its per capital annual income is from \$600 to \$2,000 here in fortunate North America. But the per capita income for two-thirds of humanity is not more than \$100. In India, the greatest single demo-cratic community in the world, the average is not much above \$60 a head.

Here, then, repeated on the world scale, are the riches and poverty side by side of 19th century England. And we would need the pen of a Dickens to paint the contrast between the comfortable suburban homes of a thousand Western cities and the hovels of the hungry millions I have seen from Hong Kong to Johannesburg.

In my judgment this disparity of living standards is the most important and fateful fact in the world today. And the worst of it is that instead of getting better it is getting worse. The rich are getting richer and the poor poorer as population grows faster than production in the poor areas. The precondition of any effective world policies in the West is an imaginative understanding of the implications of this race between resources and population; of this growing gap between a small wealthy white Western minority who have modernized and the vast majority of mankind who have not.

Once again I believe our situation resembles the 19th century. Then our forebears discovered that charity by individuals was not a complete answer. Government action, financed by the community as a whole, was needed to put in the basic improvements in health, housing, and education without which the poorer members of society would lack the strength to raise themselves. A wider sharing in the wealth created by private industry—through better wages and working conditions—had a part to play.

Many anxious debates on the practicability of ever helping anyone to help himself accompanied the working out of these principles. Yet the outcome of the debate was the decision to achieve the general welfare and from it has arisen a society which, no doubt, has its flaws and blemishes but which in scope, opportunity—and, let us add, consuming power—has no equal in human history.

This outcome should encourage us now that we are involved in a new and much more complex version of the old debate. We must see that the problem of wealth and poverty in the world at large cannot be solved by handouts from individual States, Charlty, with all its uncertainty and intermittence, is not the issue. Our task, as the wealthy members of world society, is to link our resources to a systematic, long-term program of education and basic development which will give the world's masses the opportunity to help themselves and bring them

into effective social and economic partnership with the more developed communities,

In this process I believe the basic test must be need and ability to absorb capital usefully, just as need, not virtue, has been the test inside Western society. India, for example, is close to the economic takeoff point of self-sustaining investment. It is well provided with trained administrative and technical staff and has in addition an expanding, enterprising, private sector. All this gives the hope that a really imaginative effort there would be successful. And nothing, I think, would be more appropriate than that the beneficiaries of the Marshall plan 10 years ago should now join with America and Canada in a comparable effort for India.

I would like to add that the problem is not one of Government policy alone. Nowas in the 19th century debate—private enterprise has a pivotal part to play. It is concerned, rightly concerned, for the security of its investments and its returns in It seeks reasonable underdeveloped areas. guarantees, but I would like to see those guarantees worked out so that, in return for security, private firms working abroad give assurances of worker training, promotion to managerial responsibility, local directorships and the building up of a body of local equity holders. I do not believe all American companies have been as alert as they might be to these preconditions of responsible operation abroad. Yet they are the chief means by which private industry can do more than simply contribute to economic development.

So, our new and common task is to assist in the search for internal stability, economic growth and external security—without interventions which outrage national feelings and lead to a greater vulnerability to Communist agitation. It is a task of immense delicacy and immense urgency and on it turns, I believe, the future of the uncommitted world. We will have to think of it with the same or a greater sense of urgency than we think of our military defenses.

The passing of the old colonial age has been so sudden and the emergence of the new postcolonial phase so fraught with new risks and dilemmas that it is not surprising to find the Western Powers uncertain and fumbling in this first decade of the new era. The changes in thought and habit which it demands of both sides of the Atlantic are vast. In the normal rhythms of history they would have demanded scores of years, even centuries, to emerge. Now they must be learned overnight. Small wonder, then, that we blunder and hesitate.

In the United States we shall have to recover from the illusion of effortless security and wealth which a fortunate 19th century, shielded by British power, has taught us to regard virtually as a natural right. We have to learn that there is no safety now in isolation, no safety in drift or self-deception, that no single solution or formula or declaration will rid us of the need of having a foreign policy at all.

All of us are involved. All the nations enlisted in the cause of freedom must, I fear, face years of joint responsibility, of working patiently with each other in pursuit of joint solutions, not despairing at early setbacks, not rejoicing too soon, but recognizing that world order is not made in a day or sustained with half thoughts and half measures.

Canada is uniquely endowed to set the issues in their right perspective—both on the side of the donors and of the recipients of assistance. I think it essential that our efforts should be international and multinational. Few nations are better placed to set that ideal consistently before us. Canada has its part in every international grouping of consequence. Its role in the

United Nations has been outstanding. It is a respected member of the Colombo Plan group, an elder daughter of the Commonwealth. Its links with the United States are—in spite of or perhaps because of recurrent conflicts of interest—the model of neighborliness. And its two cultures—English and French—give it special links with the European community. The channels of communication open to Canada thus branch out in every direction and the influence it has exercised through all of them has, I believe, been outstandingly generous and constructive.

All this makes me hope that, in the debate ahead, Canada will not be slow to use its influence, particularly in Washington and London where its voice is so eagerly attended to, to remind the statesmen of other wealthy and fortunate countries that good fortune is a responsibility, not a right

or privilege.

But, equally, Canada has a vital word to say to the underdeveloped nations. It too still has vast untapped resources and needs outside capital to advance. It can underline to others the fact that capital assistance from abroad, public, or private, does not destroy independence or lessen dignity or weaken in any way a nation's essential right to be itself and to speak its mind.

Equally, its membership in a commonwealth of nations drawn from every creed and color has not lessened its effectiveness. On the contrary, this association gives it contacts, understanding, and sympathies not open to nations who have thrown off or never known the Commonwealth's friendly association between equal powers.

I pray therefore that Canada will make its contribution to the world's great debate tirelessly and generously. I pray that the vision it has shown in so many of its postwar policies will continue to give light to all of us as we grapple with the hazards and the opportunities that lie ahead for the whole family of man.

## [From the New York Times] To Have and Have Nor

Now and then, and even often, we should stop to think in these hectic times of the broad underlying developments that are affecting our world. Adlal Stevenson did just that in his thoughtful address at McGill Universty, Montreal, yesterday on receiving an honorary doctor of laws degree.

The "most important and fateful fact in the world today," he said, is the contrast of wealth and poverty between the white Western nations and most of the rest of the world. The U.S. per capita income of more than \$2,000 a year contrasts with an income of \$100 or less for two-thirds of humanity. Moreover, as Mr. Stevenson rightly said, this disparity is getting worse, not better, because the rate of population growth is higher in the underdeveloped countries than in industrialized nations with their high standards of living.

This, he pointed out, is an extension of the great social conflict of the 19th century to reduce the gap between the wealthy and the masses. We in the United States, Canada, Western Europe and a few other countries, such as Australia and New Zealand, have licked that problem for the present. But Mr. Stevenson is optimistic in taking it that the social and economic inequalities of the 19th century are generally being ironed out. The fact is that within most other nations—in Latin America, Africa, the Middle East, Asia—the gap within each country is also increasing.

It is still true that the contrast between

It is still true that the contrast between what Mussolini and Hitler used to call the "have and have not" nations is more acute than ever. In the case of the Axis we know how that led toward a world war. One of the wise statesmen of the postwar era, the late Premier Liaqat Ali Khan of Pakistan,

said on a visit to the United States in 1950:
"As I let myself ponder over this, I suddenly see the United States of America, as an island—a fabulously prosperous island. And round this island I see the unhealthy sea of misery, poverty and squalor in which millions of human beings are trying to keep their heads above water. At such moments I fear for this great nation as one fears for a dear friend."

This is not a state of affairs that can be easily or quickly solved, and Mr. Stevenson did not try to do so in his brief talk. However, he put his finger on the key to the problem when he called for "a systematic long-term program of basic development" to give the masses in underdeveloped countries an opportunity to help themselves. For the United States, with its traditional reliance on short-term, specific plans, this would be a departure, but it is one that the stresses and perils of our times are unlikely to permit us to avoid very much longer.

#### Tax Rebates to State Governments

EXTENSION OF REMARKS

### HON. RICHARD L. NEUBERGER

OF OREGON

IN THE SENATE OF THE UNITED STATES

Monday, June 1, 1959

Mr. NEUBERGER. Mr. President, I believe that one of the few measures which offers financial relief to our hard-pressed State governments is my bill, S. 1776, which would provide 5 percent rebate by the Treasury of individual income taxes to the States.

In its issue of May 26, 1959, the Coos Bay World, of Coos Bay, Oreg., has published a thoughtful editorial analyzing my proposal. While this editorial does not entirely endorse or approve S. 1776, it does recommend that the proposal receive thoughtful and continued study as a potential remedy to a serious dilemma. The author of the editorial is Forest W. Amsden, executive editor of the Coos Bay World.

I ask unanimous consent, Mr. President, that it be printed in the Appendix of the Record.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

INCOME TAX CUT BACK TO-STATES?

A proposal by Senator RICHARD L. NEU-BERGER, of Oregon—his Senate bill 1776 would see the Federal Government return 5 percent of the individual income taxes it takes out of any given State, to that State.

It is an interesting proposal. It does not merit snap judgment one way or another. It does merit consideration and study.

NEUBERGER has done some serious thinking about the problems which he thinks can be corrected by his bill. Chief of these problems is the fact that nearly every State in the Union is starved for revenue with which to meet rising demands for services from a rapidly increasing population. (For instance: the need for more schools to educate the multiplying child population—a population which pays no taxes.) And as Neuberger has pointed out, almost all the States have exhausted their sources of potential revenue.

Having 5 percent of the U.S. income from individual income taxes, he believes, will ease the States' plight. It will also serve as an answer to the constantly expressed desire by conservatives in Washington and elsewhere to give some of the power back to the States.

On this point, Neuserger made an interesting comment at the time he introduced his bill in the Senate. He said:

"In the past 6 years we have heard repeated expressions by the administration of its desire to abandon Federal responsibilities to the States. These statements are always accompanied by exhortations to the States to assure the functions discarded by the Federal Government and the assertion that Federal taxes would be reduced more than State taxes would be raised. When we get down to cases, it is always the Federal programs in the fields of human welfare and social needs which would be abandoned to the States, and rarely those which are of financial importance to business and industry."

NEUBERGER'S proposal follows, then, the truth that the U.S. Government is the only government large enough, all-encompassing enough, powerful enough to finance national needs. If the States are to keep from shoving more administrative responsibility to Washington, they need more financial help. The help—unequal help, however—would come from the Senator's 5-percent rebate idea.

Unexplained, though, is what the Federal Government would do to make up for the revenue loss. The States are at the end of the string, taxwise. But we have heard no sentiment expressed that U.S. taxes are too low. Federal budgets appear to spend all that is collected and, in the current fiscal year, \$12 billion or so more than is being collected.

This is the point on which Senator Neumercer's bill will hang up in this session of Congress and for many sessions to come. The Federal Government would have to find new revenue sources to replace the cash lost in rebates. It might be easier for the U.S. Government to do this than it is for the State governments individually.

NEUBERGER'S idea will be discussed by wiser economic heads than the author of this column and, we hope, will be the subject of earnest study over a continuing period. It is worth such consideration.—F.W.A.

Inaugural Address by Dr. Charles J. Armstrong, President of the University of Nevada

EXTENSION OF REMARKS

## HON. ALAN BIBLE

OF NEVADA

IN THE SENATE OF THE UNITED STATES

Monday, June 1, 1959

Mr. BIBLE. Mr. President, last April 19, at ceremonies held on the campus in Reno, Dr. Charles J. Armstrong was inaugurated as president of the University of Nevada. As an alumnus of that institution, I have always taken a great deal of interest in its progress. In accepting the mace of his office, Dr. Armstrong delivered a thought-provoking address which has a relevance far beyond the borders of my native State. I ask unanimous consent, Mr. President, that Dr. Armstrong's inaugural address be printed in the Appendix of the Record.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

INAUGURAL ADDRESS

Mr. Chairman, Mr. Governor, distinguished guests and delegates, members of the board of regents, members of the faculties, and ladies and gentlemen, in accepting from the hands of the vice chairman of the board of regents the mace which symbolizes the authority and responsibility delegated to the president by the regents of the university, acting in the name of the people of Nevada, I pledged myself to the devotion of the best that is in me to the temperate use of that authority and the faithful discharge of that responsibility. I now reiterate that pledge to you all. I would add that I am deeply aware of the gravity of the trust which has today been formally given into my care, and of the challenging opportunity for service in a high cause which it embodies.

The mission of a State university such as ours in today's and tomorrow's world is a complex and challenging one; similarly, the task of its chief executive is equally complex, and one that could easily become discouraging or even impossible. Yet I am able to enter upon this task with a feeling of confidence and enthusiasm, for one very good, very important reason. Since coming to the university last September, it has been my privilege to work with the regents, with the faculties, with the administrative officers and staff, and with the students of the university, on both its campuses; to come to know their quality and temper; similarly to work with and to come to know our State officials and members of the legislature; and to travel fairly widely in our great State and to meet many of its people. The interest and concern for the University of Nevada and its welfare which all of these people, all of you, have displayed, and the quality of the cooperation and support which have been so unstingly afforded me, constitute the reason for my confidence and enthusiasm. For this I am deeply grateful; and it shall be my most constant concern and hope that I may be able to merit such confidence in the days ahead.

Our task is one that can be met only through the cooperation of all members of the university community and of the wider community of the State, working together in mutual confidence and understanding. The number of things which we have been able to accomplish even in the past few short months is the most convincing proof of this fact, and it augurs nothing but good

for the university in the future.

What, then, is to be the nature of our task in the days to come? As a land grant university we must continue to carry out to the best of our ability our historic responsibility, as set forth in the language of the Morrill Act of 1862 which created the land grant institutions: "The leading object shall be, without excluding other scientific and classical studies, and including military tactics, to teach such branches of learning as are related to agriculture and the mechanic President Lincoln signed the Morrill Act into law on July 2, 1862, and it is thus Deculiarly appropriate that in this year 1959, which marks the sesquicentennial of the birth of Abraham Lincoln, we should rededicate ourselves to our historic purpose.

As a State university, supported by tax funds, we have a second responsibility, to provide instruction in other appropriate areas of knowledge, to meet the total educational needs of the people of the State; and as Nevada's only institution of higher learning, we have a third mandate to extend the university's educational services to every part of the State where needs exist.

In assuming this triple role the university has already achieved a distinguished record, through its programs of resident instruction, now on two campuses, in its various schools and colleges; through its research and public

services programs, as in agricultural experiment and extension, the Bureau of Mines, the mining analytical laboratory, the Bureau of Economic and Business Research, and others; through its statewide services program, radiating from the Reno and Vegas campuses, including evening division, off-campus and correspondence courses. It must be our continuing responsibility to strengthen and improve to the best of our ability these complex functions; to grow with the State, extending our services and expanding our programs in accordance with developing needs and upon a carefully planned pattern of reasonable, measured growth. At the same time the university must be in the forefront of growth, in a position to provide leadership in indicating new directions for the development of the intellectual, cultural, social, economic, industrial, and scientific potential of the

This is indeed a challenging task, and one that will try the best that is in all of us. As we concern ourselves with it, we must constantly keep before our eyes the basic objective of the university, as the undergirding of the entire process, which is "to strive, above all, to develop in its students, at all levels, those qualities of mind and body and spirit which are necessary for life as a worthy human being in a democratic society." The central idea in this purpose, I would have you note, is, and must continue to be, the student himself, as an individual, as a human being.

There is nothing new in such a statement. I know, and we have all heard it many times before. Yet it must be said again, and it must not be forgotten. Above all else, we must maintain our fundamental purpose, which is, in John Stuart Mill's phrase, the development of "capable and cultivated human beings." We must never lose sight of the fact that each student is an individual, with his own particular abilities, ambitions, purposes, and creative potential; one who must learn to live and to work effectively in the society of his fellows and yet preserve his own individuality; one who comes to us for instruction in the ways through which he may earn a better living and live a better life. And so our educational program must maintain a measured balance between the vocational and the liberal, the practical and the theoretical, the ivory tower and the marketplace; and by this properly balanced diet it must satisfy the intellectual, the emotional and the spiritual hunger of those who come to us.

The core, and at the same time the foundation, of the educational process has been, and must continue to be, the liberal arts, those studies which both by derivation and definition are appropriate and becoming for free men and women in a free society. They are the studies which, as they seek out the truth, make men free, in the highest sense of the word. Upon and around these central studies in the humanities, the social sciences and the natural sciences, are built the programs of specialization leading to careers in a variety of vocations and professions. They are the common heritage of educated men and women, and they provide the means of communication, in its fullest sense, between the various components of our social and economic structure.

It has been the peculiar genius of the land grant institutions, in their historical development, to give new meaning and vitality to the liberal arts in their relation to the broadened curriculum and the new fields of study introduced by those institutions, which in turn have brought about the democratization of educational opportunity now so characteristic of American higher education.

In their highest and best form, the liberal studies provide for all students a distillation of our Western cultural, intellectual and spiritual heritage, coming as it does from the two great sources of our civilization, the Greco-Roman and the Judaeo-Christian traditions. The record of the past is important not as the dry and dusty bones of things long dead, but because it illumines the present, and casts what light there may be upon the future. We are what we are, and to a large extent we will be what we become, because of what mankind has said and thought and done before. In the Greco-Roman and Judaeo-Christian cultures, the focus was upon man as an individual; intellectual man, spiritual man; and upon his essential dignity and worth. We cannot be competent citizens or capable and cultivated human beings if we do not know the purpose of the humanities, which is to enable man to understand man in relation to himself, leading to that essential knowledge of self that is the beginning of wisdom, as the Greeks so well knew; similarly, for human competence we must have knowledge of the social sciences, for understanding of man in society; and of the physical and biological sciences, for understanding of the physical world, which in many respects controls and governs man's activities.

The creed of humanism was expressed more than 2,000 years ago by the Roman poet Terence when he said "I am a human being; no human interest do I consider alien to myself." His words were echoed 1,800 years later by the English poet John Donne: "No man is an island entire of itself. Every man is a piece of the continent, a part of the main: If a clod be washed away by the sea, Europe is the less, as well as if a promontory were, as well as if a manor of thy friends or of thine own were. Any mans' death diminishes me, because I am involved in mankind; and therefore, never send to know for whom the bell toils; it tolls for thee."

Here, then, is the very essence: the ultimate goal of civilization is man as an individual. Society exists, governments are instituted only to protect the rights, the dignity, the sanctity of the individual. In todays' world such a concept assumes a new and pressing urgency; we shall forget it at

our peril.

Herein too, in the concept of the dignity of the individual, lies the true dynamic of Greek thought, that which caused the Greek culture to have more direct influence upon the development and the course of Western civilization than any other. For this very reason, no other culture lives so completely in our own today as does theirs. The Greeks realized the strength of the human spirit, and the power of its product, ideas-the things by which men live, and for which, if necessary, they are willing to die. Greeks knew that the greatest powers in the world are truth, beauty, excellence, freedom; and that only through knowledge of can freedom come, the truth that, in St. John's words, "shall make you free." Through that freedom, and the knowledge of the obligation and responsibility which freedom places upon its recipients, has America grown into the Nation which is ours today, and which shall be our children's tomorrow, only if we never lose sight of the source of our freedom, and of what it demands of us. A free America has grown to strength, because education has been kept free. Education must be kept so, unshackled by any controls which would suppress truth, or the pursuit of it.

In the training of their youth, the Greeks

In the training of their youth, the Greeks emphasized above all two qualities: andreis kal arete. We may translate manilness, or maturity; and excellence. So too must we emphasize these qualities of mind, spirit, and body in all that we do. Excellence in all its forms must be our constant concern, so that we may exemplify now and in the future the challenging Socrates, whose most famous single statement is contained in these words: "I say again that daily to discourse about

excellence, and of those other things about which you hear me examining myself and others is the greatest good of man, and that the unexamined life is not worth living."

I would fervently hope too, that in our educational task we may never overlook what can and should be the most important outcome of the Socratic process of selfexamination, self-understanding, and selfknowledge which leads to wisdom; namely, recognition by the student of the basic truth that only through ultimate reliance upon himself, not upon others, only through his own vigorous initiative, can he come to full realization of his creative potential as an individual human being. He must be ready to assume big risks, economic, intellectual, spiritual; to gamble on himself and on his own ability to make a good life; to recognize that something for nothing is a false and stultifying philosophy. He must understand the uses of conformity, and its limitations; that as a member of a society, he must live in it conformably, work with it effectively, yet never submerge his individuality in it or take refuge in the anonymity of it to subdue the urgings of his own conscience. He must recognize that the world will always have desperate need of the creative nonconformist who, possessed of a measure of the Socratic divine discontent which will not let his spirit rest, refuses to accept the status quo, and breaks through the shell of stagnation and complacency to urge civilization on to ever high levels of human achievement.

Such a man will spurn the concept of security as the ultimate goal of life, because he knows that life itself is a series of risks, that there is no real security this side of the grave. He will know that security and freedom in the final sense are incompatible, that absolute security is the death of freedom. He will see that the captive peoples of the totalitarian states have a form of security which is specious: a security, a "nothing to worry about," because their governments do everything for them, including their thinking. Finally, he will know that security thus means the end of hope and ambition, and that conversely, freedom means the opportunity, the obligation, for him to go on striving and working toward his highest goals.

Herein, I am deeply convinced, must lie our most abiding and unswerving concern, one which will give purpose and meaning to all that we do. Herein, I know with equal contiction, in men and women thus educated and thus committed, resides our best, and possibly our only hope for the preservation of freedom and human dignity in a fretful world. Such must be the ultimate mission of the university.

In helping to make possible the carrying out of such a mission, I conceive that it must be my most urgent and continuing responsibility to do all within my power to maintain a certain atmosphere both within and without the university. Within the university this means an atmosphere of freedom, and of the responsibility inherent in freedom; an atmosphere in which all members of the university community, students, faculty, and administration, may work toward our common goals in mutual confidence and respect; an atmosphere in which research, pure and applied, the life-giving catalyst of our entire instructional and service program, may flourish; an atmosphere which will hold to us our best faculty talents and will attract to us in the future equally talented teachers, scholars, and researchers; an atmosphere, in sum, wherein the concept of human dignity and worth is practiced as well as preached.

Without the university, if we are to succeed in our task, we must have an atmosphere of public confidence, understanding, and support, and it is our responsibility to

see to it that this exists. It is our obligation to keep the people of the State, and their representatives in the legislature, continuously informed of what it is that we are trying to do, what we hope to do, and why. Nor can we hope to win and maintain public confidence and support unless we are able to demonstrate that we are making the most of what we have in terms of the economy and effectiveness of our total operation, that our increasing expenditures are fully justified by desirable growth and development, and that we are responsive to public needs and interest.

A long step in this direction has already been taken by the creation, during the past year, of citizens' advisory committees for the various schools, colleges, and major administrative units of the university, composed of representative, interested citizens of the State. Through their generous contribution of time and talent to the study of problems and programs within the university are coming significant benefits to us and to the State in the strengthening and improvement of all our undertakings.

Yet the university must not confine itself, in its relations with its public, to this kind of communication and liaison only, essential though it may be. As the university grows with the State, we must not merely follow along, but rather, we must be in the forefront of progress and development, so that we may be able, through study and research, to point new directions of growth. A university such as ours will survive and go on to greatness not simply because of its material resources in faculty, physical plant, and equipment, but rather by the uses which we make of these resources. I would hope that this university might emulate some of the spirit of the Athenian democracy in its golden age, which was, in the words of its greatest statesman, Pericles, "to build soundly upon the traditions of the past, but always to be ready to discard the outworn."

always to be ready to discard the outworn."

Pericles went on to say: "We are lovers of the beautiful, yet with economy, and we cultivate the mind without loss of manliness. Wealth we employ, not for talk or ostentation, but when there is a real use for it. \* \* \* To sum up: I say that Athens is the school of Greece, and that the individual Athenian in his own person seems to have the power of adapting himself to the most varied forms of action with the utmost versatility and grace."

Within the university such a policy implies a constant process of self-examination and self-criticism, as we seek new ways to improve the quality of our instruction, new ways to extend to the utmost the effectiveness of our resources, new ways to serve more competently existing needs and anticipated new ones. Just as we strive to develop in our students a quality of openmindedness and receptivity to new ideas, so must we maintain this same spirit within ourselves.

We must explore the many new avenues now opening for the extension of faculty resources in teaching ever-increasing numbers of students, including a variety of instructional aids in the audio-visual areas, closed-circuit television, and so on; we must experiment more fully with varying class size and its effect upon the outcomes of instruction; we must find ways to place more effective responsibility upon the stu-dent for his own education. We must consider the value of introducing into our already existing educational framework a wider variety of programs, including some of less than 4 years or of less than standard degree length, so as to be in a position to serve the increasingly various needs of our students and the increasingly complex demands of our expanding technological and industrial structure. In a word, we must do the best that is in us for today, and at the same time give thought to tomorrow.

A few years ago James Bryant Conant, then president of Harvard University, said on such an occasion as this, "During the next century of academic history, university education in this Republic will be largely in the hands of the tax-supported institutions. As they fare, so fares the cultural and intellectual life of the American people."

This is the challenge, this is the opportunity, of the University of Nevada. What I said at the outset, I repeat at the conclusion of these remarks, that if all of us, members of the university community and of the wider community of the State, will continue to work together in the spirit, and with the conviction and devotion which we have already so well developed, then I am deeply confident that our university will well and truly consummate its high obligation to the future.

Trinity River Power Development Introduced by American Public Power Association

EXTENSION OF REMARKS

## HON. THOMAS H. KUCHEL

OF CALIFORNIA

IN THE SENATE OF THE UNITED STATES

Monday, June 1, 1959

Mr. KUCHEL. Mr. President, for the past 5 years there has been under discussion in California a proposal to have private development of the power facilities on a division of California's great Central Valley project. I have vigorously opposed this arrangement because engineering testimony by California engineers show this plan would not be in the best interest of the taxpayers.

For one thing, private construction of the powerplants in lieu of Federal construction now authorized by the Congress would not help develop power for pumping California's water plan.

Appropriations must be made this year for power development or the dam now under construction will be finished and water will be wasted. I am pleased to see that the American Public Power Association adopted, at its meeting on May 27 in Seattle, a resolution urging this appropriation and supporting my position in the matter.

I ask unanimous consent that the text of the resolution be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

Whereas the American Public Power Association has repeatedly endorsed the construction of the Trinity River division of the Federal Central Valley project as a fully integrated part of the Central Valley project; and

Whereas the Trinity River division as now authorized by the Congress provides for Federal construction and operation of power generation and transmission facilities, and studies of the Department of the Interior show that Federal construction and operation is economically feasible and sound, and

Whereas the Congress of the United States has not approved proposals which have been under consideration for more than 5 years permitting a private utility to develop the power facilities on this Federal development; and

Whereas, the American Public Power Association believes development of Trinity power by a private utility is not in the best interest of the Nation's taxpayers and would be detrimental to California's statewide water program; and

Whereas, immediate construction of the power facilities at the Trinity River division sites is imperative in order to avoid the wasting of a valuable public resource and a loss in revenue to the Federal Government: Now,

therefore, be it

Resolved, That the American Public Power Association reaffirms its position that power facilities of the Trinity project be con-structed and operated by the Federal Government as an integrated part of the Central Valley project, and urges the Congress to appropriate funds in the amount of at least \$2,500,000 for fiscal year 1960 in order to permit immediate design and construction of these power facilities; be it further Resolved, That certified copies of this reso-

lution be sent by the Secretary to the Appropriations Committee and the Committees on Interior and Insular Affairs of the U.S. Senate and the House of Representatives and particularly to all members of the congressional delegations of the Pacific Coast States.

#### Labor Reform Legislation

EXTENSION OF REMARKS

#### HON. WILLIAM PROXMIRE

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES Monday, June 1, 1959

Mr. PROXMIRE, Mr. President, I think it is immensely important for the people of this country, particularly the millions who belong to unions, that the Kennedy-Ervin bill be enacted into law and signed by the President-the sooner the better.

With every vested interest now on record against the bill it is in serious danger. An excellent editorial recently appeared in the Wall Street Journal discussing why this bill should be enacted, and I ask unanimous consent that it be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered printed in the Appendix of

the RECORD, as follows:

### A THIRD VIEWPOINT

House Majority Leader Halleck reports. rather dolefully, that there is only a foriorn hope that the House Education and Labor Committee will report out a labor reform bill this year. The reason given by Mr. HALLECK is that too many people are opposed to Sen-ator Kennery's bill, the only major labor legislation earlier given very much chance.

The AFL-CIO is opposed to the bill on the ground that it is much too harsh. Mr. Lewis, of the United Mineworkers, and Mr. Hoffa, of the Teamsters, are opposed to any labor reform measure on the ground that any

would be too harsh.
The National Association of Manufacturers and the U.S. Chamber of Commerce are op-Posed to the bill on the ground that, as passed by the Senate, it is too weak. It doesn't really grant union members the bill of rights its sponsors say it does.

The reason not much, if anything, will come out, Mr. HALLECK says, is that all these views are well represented on the 30-man committee and the members don't see how they can ever agree on anything that will satisfy everybody.

Now far be it from us to ever suggest that the views of any group should be ignored when legislation affecting them is under consideration by Congress.

But now that the viewpoint of some employers, as represented by the NAM and the Chamber of Commerce, and the viewpoint of the unions, as represented by the leaders, are on the record and pretty well cancel each other out, the thing to do is to begin looking at a labor reform bill from a third viewpoint.

So we'd suggest that Congress should now start to consider labor reform legislation from what should have been the viewpoint of Congress all along-that of the public interest.

## Kansan Sows Capitalism in Underdeveloped Lands

EXTENSION OF REMARKS

## HON. ANDREW F. SCHOEPPEL

OF KANSAS

IN THE SENATE OF THE UNITED STATES Monday, June 1, 1959

Mr. SCHOEPPEL. Mr. President, recently there was published in the New York Herald Tribune an article entitled "Kansan Sows Capitalism in Underdeveloped Lands," written by Mr. Max Forester

Mr. President, it is all too easy for us to assume that the economic advancement of underdeveloped countries can only result from unlimited foreign aid, which imposes ever greater burdens on the American taxpayer.

It gives me great satisfaction as a senior Senator from Kansas to commend the efforts of William L. Graham, a Wichita, Kans., oil man, who has enough belief in what free private enterprise can accomplish to endeavor to promote it in foreign lands.

I ask unanimous consent that the article which was published in the New York Herald Tribune of February 12, 1959, by Max Forester, relating Mr. Graham's efforts, may be printed in the Appendix of the RECORD.

It is with some degree of satisfaction, Mr. President, that I offer the article for printing in the Appendix of the REC-ORD, because of the efforts of William L. Graham, of my home city of Wichita in my home State of Kansas.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

KANSAN SOWS CAPITALISM IN UNDERDEVELOPED

#### (By Max Forester)

Helping to create capitalists through partnership ventures with aspiring small businesses in underdeveloped nations is showing what you can't tell people about capitalism, William L. Graham, a Wichita, Kans., oilman whose travels turned him into an international investor, asserted here last week.

It's the prescription for an ideologically disturbed world which intense, restless Bill Graham has evolved and clothed with corporate substance in Private Enterprise, Inc., a firm he has formed to expand his interest in making partnership deals with foreigners. He sees this as the surest means of eliminating Communist infiltration which is engulfing us in many areas of the world.

With an aside to press representatives at a meeting of the American Management Association, where he addressed 300 businessmen in the Biltmore last week on the necessity for stepping lightly in precincts pa-trolled by the Securities and Exchange Commission, he gave these details of his project:

About a third of the company's nominal capital of \$300,000 is invested in a dozen companies, including a stapling-machine manufacturing concern in India, a surgical-thread plant in Turkey and others in Australia and South America.

The company expects to show a profit by making a kind of partnership loan, which should yield Private Enterprise about 2 percent on its investment, and possibly more, as local entrepreneurs are able to "buy out" the businesses thus established.
Right now the business is long on en-

thusiasm and short of the success stories which Mr. Graham feels will be rather slow to materialize, since it takes time to make much of a showing from the type of deals

we are making.

But he is determined to make a go of it, and believes his main stumbling block just now is the problem of finding others who will join him in the effort. Some of his listeners-mainly middle-echelon executives still fairly dependent on their salaries-were startled when he asserted his greatest need was the cooperation of "any one who can show he has already earned his first \$250,000, and who can spend 6 months working with me on this without pay."

If there are any likely candidates thus qualified, they may reach Bill Graham in care of the Graham Building, at Wichita.

Wichita, which knows Bill Graham as a man who wears his capitalist spurs with a flourish-he lives in a revolving Buckminister Fuller house on a street he has named Easy Street—is only the home base, how-ever. "We will make loans abroad wherever we can find people to talk with us," he asserted.

Convinced that the United States, too, needs more capitalists, Bill Graham has also organized television shows in Wichita and Minneapolis, on which he offers to lend up to \$25,000 to the budding entrepreneur who comes up with the best money-making idea on each program.

Ford Motor Co. took over the sponsorship of his Wichita show and may use it in other

While in New York, Mr. Graham intended to show a kinescope of the latest in the se-

ries to Ed Murrow.

He hopes that eventually a nationwide show can be launched which can bring bids from foreigners for loans of up to \$100,000 before the cameras.

#### Cancer

EXTENSION OF REMARKS OF

## HON. CLIFFORD P. CASE

OF NEW JERSEY

IN THE SENATE OF THE UNITED STATES Monday, June 1, 1959

Mr. CASE of New Jersey. Mr. President, the Washington Post and Times Herald yesterday began publication of what I think will prove to be a significant series of articles on cancer. This subject, of course, has been given a great deal of attention through the years, and particularly so in the last few months. The author of the series, Mr. Nate Haseltine, has received several awards for his outstanding work in the field of medical reporting.

I read the first article with a great deal of interest, and I ask unanimous consent to have it printed in the Appendix of the PECORD

There being no objection, the article was ordered to be printed in the RECORD, as follows:

(From the Washington Post and Times Herald, May 31, 1959]

WHAT IS THIS CANCER THAT KILLS HIGH AND Low?

(First of a series of battle reports in the war on cancer.)

(By Nate Haseltine)

Read the roll:

Brien McMahon, 48, Senator, died July 28, 1952, lung cancer.

Robert A. Taft. 63, Senator, died July 31, 1953, kidney cancer.

Enrico Fermi, 53, atomic scientist, died

November 28, 1954, stomach cancer. Mildred "Babe" Didrikson Zaharias. versatile athlete, died September 27, 1956, rectal cancer.

John von Neumann, 53, mathematician, died February 8, 1957, cancer unspecified.

Gen. Claire Lee Chennault, 67, commander of the Flying Tigers, died July 27, 1958, lung cancer.

Dr. Francisco Duran-Reynals, 58, cancer scientist, died March 27, 1958, intestinal

And now—John Foster Dulles, 71, Secretary of State, died May 24, 1959, colon cancer.

All made the headlines when they died; all helped spread a dread name which once was only whispered-cancer.

#### A MAVERICK CELL

What is this disease which appears to be gaining a death hold on humanity, or is it gaining? What does science know about it, and what not? What causes cancer, and what is being done to fight it?

This series will attempt to answer some of

the questions.

Cancer is uncontrolled growth. More specifically, it is uncontrolled immature growth, uncontrolled immature cell division. The cancer cell is a young cell which always grows, but never grows up.

In its beginning, cancer is composed of a few microscopic cells much smaller in sum than the point of a pin. These cells are nourished by the tissues they will eventually

Depending on the type of cancer, these cell masses may grow in a few months to the size of a grapefruit or may take years to reach the size of a pea.

Cancer cells resemble in some ways the embryonic cells of the unborn child. But unlike healthy embryonic cells, they never quite mature past the stage of unspecialized, unspecified tissue cells.

The pathologist, studying a removed cancer under a microscope, often can't identify exactly the originating cells, the source of the spreading cancer.

Fortunately, for statistical value at least, the true identity of the cancer can be established by study of the course of the disease or by autopsy. Sometimes only postmortem examination of the organs involved, such as the pancreas, the ovaries, or the thyroid gland, give the final answer.

It is perhaps the sustained youth of cancer cells which makes them win out against normal tissue cells. They compete for body nutrients without ever growing up into functioning tissues.

#### A GLUTTONOUS THING

And as the cancer grows, it spreads out, choking, cheating, starving the healthy body. Sometimes cancer kills by choking off a vital bloodway; sometimes by crushing, as in the

brain; sometimes by causing massive hem-

Generally, however, the terminal cancer patient dies of a process called inanition, a pathologic state of the body caused by failure of food, including water, to reach the healthy tissues. The malignant growths take it all.

Against this insidious form of cancer, medical science is most helpless.

Despite years of research, today's doctors have only two real weapons against cancer, surgery and radiations such as X-rays or ray-emitting atomic sources. And both become mere pain easers after cancer breaks out of its originating confines and spreads throughout the body.

If still self-contained when discovered, most cancers can be removed by surgery and the patient spared. Self-contained cancers in less accessible sites can be bambarded with X-rays or other radiations aimed to reach all the cancer cells and as few as possible adjacent healthy cells. Frequently, both surgery and radiations are employed.

Curiously, surgery itself can cause cancer's spread, and radiations are known to cause cancer.

The surgeon's scalpel, cutting out the tumor, may miss a cancer root, an offshoot of the tumor mass, or nick the capsule which contains the expanding mass. releases once-confined cancer cells into the body fluids in the surgical area. The free cells spread to other body parts to grow and eventually kill.

The fact that radiations are carcinogenic (cancer causing) is of little concern in a doctor's choice of their use for cancer treatment. The cancer is already present, and he is using the rays to slow down or halt its growth. But too liberal use of rays in some diagnostic tests has caused concern.

A special aspect of this will be discussed in a later article in this series.

Not all tumors, of course, are cancer. Some are just large growths of body cells. They reach a self-limiting size and stop Their only danger is their neargrowing. ness to vital organs or bloodways, and they can cause disfigurement when they develop close to the skin.

Called benign tumors, they can easily be removed by surgery. The surgeon does not risk seeding such growths to other body parts because they do not contain cancer cells

The surgeon may not know whether the growth he plans to remove is malignant or benign. To make sure, he cuts off a tiny bit and sends it to the pathologist.

The specimen is quick-frozen and sliced for microscopic study to see if it contains characteristic cancer cells. The study is made while the patient is still on the operating table and the decision is relayed to the waiting surgeon.

That decision spells the difference be-tween major and minor surgery. And a good pathologist is almost unbelievably accurate in such diagnosis. Only rarely do postoperative studies show the pathologist

#### WHEN IT'S TOO LATE

But not all cancer operations are performed to rid the patient of his malignancy. In some operations the surgeon knows on examining the scene that the cancer has spread beyond surgical control.

Here, the tumor parts cut out are those which are causing pain, or those parts whose continuing growth will press on nerves or diminish blood flow. The operations are purely palliative.

In operations for lung cancer, for example, the surgeon may remove only the most diseased lobe of one lung-and hope against dismal hope that later radiations or other treatments will do what he couldn't.

Total removal of one lung is done chiefly when the surgeon believes the cancer is confined to that lung.

This does not mean, however, that every sectional, rather than total, operation for lung cancer is performed solely for palliation. In some cases the tumor is apparently so well contained in that part of the lung that the surgeon will cut into only that affected lobe.

The many varieties of cancer are classified according to the tissues from which they

originate.

Cancers which begin in the skin, or epidermis, are classed as epitheliomas; those which originate in glandular tissues are called carcinomas, and those arising in muscles, fibrous tissues, tendons, or bones are called sarcomas.

All cancers look like lumps of body material. They have no roots, in the common functional sense of the word, but they do grow outward through body spaces to give that appearance.

In fact, the word "cancer" meant crab, and the disease became so-named because its appendages gave some of the malignant tumors a crablike appearance.

### Another Appraisal of Castro

EXTENSION OF REMARKS OF

## HON. CHARLES O. PORTER

OF OREGON

IN THE HOUSE OF REPRESENTATIVES Wednesday, May 20, 1959

Mr. PORTER. Mr. Speaker under leave to extend my remarks in the REC-ORD, I include the following article by Leon Dennen in the Washington Daily News of June 1, 1959. The Daily News characterizes Mr. Dennen as an authority on communism and student of revolutions for more than 30 years:

A FAIR APPRAISAL: SIX MONTHS AFTER CASTRO CAME DOWN THE MOUNTAIN

#### (By Leon Dennen)

HAVANA.-How goes Fidel Castro at halftime through his first year as Cuba's lead-The bearded savior, who strode out of . the Sierra Maestra Mountains at the head of his victorious barbudos, still holds high favor with the mass of Cubans. But leaders in business and intellectual life see immense perils strewing the path he must cover in the immediate months ahead.

Cuba faces complete economic distress and disorder.

The island fumbles weakly for a way out of political chaos as Castro puts off the prospect of free elections and dabbles in sketchily-drawn policies.

Communists will try to undercut his revolution in a hundred and more places and make ready to try to capture it when disorder dictates the moment.

I found Red Chinese and Russian agents already on the scene.

America has a big stake in Cuba. The U.S. Naval Base at Guantanamo, Cuba, anchors our Panama Canal defenses.

In hard cash terms the island represents for the United States \$850 million in investments, \$546 million in annual exports, and \$528 million in yearly imports.

Castro, the mercurial 33-year-old idealist who must stand off the rising danger, confronts the job with most of the deep-set popular support he had when he emerged from the hills in January.

He continues the great liberator, genuinely loved and respected. Everywhere, in homes and store windows, on trucks, pushcarts, and the windshields of Cadillacs, signs proclaim 'gracias Fidel' (Thank you, Fidel).

Nearly all the Cubans I have spoken toordinary people, bankers, industrialists, labor leaders, politicians, members of the rebel force, President Manuel Urrutia himself—agreed that Castro holds his country's future in his palm.

On the credit side they mark up these

achievements:

He has given Cuba's 6 millions the smell and feel of liberty, and with it a real sense of independence and dignity.

He has virtually wiped out the chronic sicknesses of Cuban public life—graft and

bribery.

Prostitution, smuggling, the drug traffic, illegal gambling, all have been drastically cut or brought near a standstill.

He has reopened the doors of the University of Havana, shut by Batista in 1956.

#### BELIEVERS

Among his sturdy backers are many who believe these gains are an earnest of the future, that Castro will find the big answers. Said wise, soft-spoken Pepin Boach, head

of the Bacardi Co.:

"Fidel is an idealist who will go down in history as a liberator. Given time and a little more experience, I am convinced he will face up to the problem of Communist influence in his regime."

(Last week Castro showed his awareness of the Communist activities, by denouncing the Reds and their disruptive tactics. "Our revolution was not a Red revolution," he told them. "It was an olive drab revolution." The Communists replied to his TV denuclation by calling him unfair in their newspaper, Hoy. The Communists have also been consistently losing in the union elections now being held, although their influence in many of them is undoubtedly strong.)

The Reverend Eduardo Boza Masvidal, rector of Villanueva University, joined in: "Castro is a convincing man and a sincere idealist, but very emotional."

#### SOME WONDER

Yet others, more than just a few, have begun seriously to wonder whether he has the makings of solid, stable leadership or if he is an instinctive revolutionary who can neither produce nor enjoy orderly government.

Said a sugar magnate who backed Castro's

revolt with money:

"Castro must understand that to govern a country like Cuba one needs more than a handsome personality, a beard, and a machine gun. \* \* A man who aspires to direct the destinies of a nation must have more than good intentions—and Castro falls utterly when scored by his ability to measure political realities."

Countless of his loyal followers put the questions over and over. "What are his real plans? Where is he leading Cuba?"

They remember that in 1933 Batista led a sergeants' revolt in the name of democracy and freedom, only to become an iron-fisted dictator. Will Castro fulfill his promise? Or will he become a new Batists, or, even worse, see his country stagger and fall under Communist rule?

#### NO VIOLENCE

The answers lie with the man, in whose heart the revolution lingers. No sign of it, no show of violence mars Havana's streets today. The heavily-armed barbudos are the only reminder that bloody civil war gripped the island 5 months ago.

Looking like bearded longhaired U.S. beatniks, the barbudos, the elite of the revolution, range everywhere. They saunter through the sun-drenched city, their shiny pistols stuck, gunman style, in their belts. Some lounge in the luxury hotels, toying with loaded submachineguns as American youths brandish baseball bats.

A 14-year-old shoeshine boy, thinking I doubted he was one of Castro's mountain soldiers, pointed a wicked Mauser my way and asked: "You want proof?"

But the barbudos are not so savage as they look. Many are idealists like Castro. They know they live in a deadly serious world. They wait to see whether their leader can avoid political chaos from which only the Reds could profit.

## The 86th Congress Must Pass Labor Reform Legislation

EXTENSION OF REMARKS

## HON. GEORGE S. McGOVERN

OF SOUTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES Monday, May 25, 1959 .

Mr. McGOVERN. Mr. Speaker, at the close of the 85th Congress, I said that the two greatest failures of that otherwise successful Congress were the failures to pass adequate labor reform legislation and a constructive farm bill.

I hope and pray that the 86th Congress will not adjourn before we have rectified these two aspects of the unfinished business before the Congress.

In this morning's Washington Post an editorial appeared which pretty well states my own position on the matter of labor reform. As this editorial states—

The representatives of both labor and management know that neither side is going to get precisely the kind of bill that it deems desirable.

The Kennedy-Ervin bill is not a perfect bill, and neither was the Kennedy-Ives bill of last year a perfect bill. Senator Kennedy, the chief sponsor of labor reform legislation, has said repeatedly that this legislation is a compromise bill not entirely satisfactory either to labor or management. It is, however, legislation in the public interest. Both labor and management ought to be willing to accept those parts of the bill that may be somewhat irritating to achieve the larger purpose of ending corruption in the labor-management field.

Only the labor racketeers will have cause to rejoice if the Kennedy-Ervin labor reform bill is blocked by opposition on the part of management and labor. If we wait until the perfect bill is written in the field of labor-management reform, we will be granting a permanent license to the hoodlums and the racketeers.

I hope that every Member of the Congress will read thoughtfully the following editorial from the Washington Post of June 1:

#### How To KILL LABOR REFORM

The opposition of the U.S. Chamber of Commerce and the National Association of Manufacturers to the Kennedy labor reform bill is as shortsighted as the condemnation by the AFL-CIO. Why is it that businessmen and labor leaders seem to be unable to rise above their narrow preoccupations to support labor reform legislation which is unquestionably in the public interest?

The representatives of both labor and management know that neither side is going to get precisely the kind of bill that it deems desirable. Is it then asking too much for constructive businessmen and decent union leaders to put aside their differences on a matter of national interest?

Without the support of either labor or management the House counterpart of the Kennedy bill is not likely to get out of the Labor Committee despite the 90-1 vote by which the legislation was approved in the Senate. The committee does not plan to try to reconcile the conflicting views of its members until late in June, which means that it will be practically impossible to put a labor bill through the House at this session of Congress in the unlikely event that the committee agrees on one. Such temporizing by the committee is an indication of disgraceful failure to rise above petty political and labor-management squabbles.

We do not like some parts of the Kennedy bill—particularly the sections of the so-called bill of rights which, it seems to us, try to regulate union activities in stifling detail. Furthermore, we should like to see the legislation strengthened to get at the serious abuses of some organizational picketing as well as secondary boycotts. Despite its defects we believe that the measure is a good beginning. The enactment of the Kennedy bill surely would be a vast improvement over the present prospect of yet another round of cynical blame calling by both labor and management.

## National Bellamy Flag Award

EXTENSION OF REMARKS

## HON. WALTER M. MUMMA

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Monday, June 1, 1959

Mr. MUMMA. Mr. Speaker, it was indeed a pleasure for me to participate in the Francis Bellamy Flag Award presentation to John Harris High School in Harrisburg, Pa., on May 18, 1959.

The Bellamy Flag Award, a national honor, was won by John Harris High School for its strong emphasis on academic achievement and for its outstand-

ing guidance program.

David Bellamy, son

David Bellamy, son of Rev. Francis Bellamy who wrote the Pledge of Allegiance to the Flag, and Miss Margarette Miller, Portsmouth, Va., donor of the award made the presentation.

There is hardly a public meeting held in America today that the Pledge of Allegiance to the Flag is not repeated. My thought about this pledge is that it beautifully tells in so few words the heritage of our country.

Patriotism, inspired in one way or

another is a wonderful thing.

I want to include herewith a newspaper article that tells about the presentation and a copy of my telegram congratulating the California designate of the 1959 award.

The newspaper article and telegram follow:

[From the Harrisburg (Pa.) Patriot, May 18, 1959]

HARRIS HIGH SCHOOL GETS AWARD TODAY IN BELLAMY FLAG COMPETITION

John Harris High School will receive the Francis Bellamy Flag Award today with pupils, educators and dignitaries taking part in ceremonies in the school's auditorium. The program will begin at 9:30 a.m.

David Bellamy, Rochester, N.Y., son of Francis Bellamy who wrote the Pledge of Allegiance to the Flag, and Miss Margarette Miller, Portsmouth, Va., donor of the award, will make the presentation of the prize for the national competition.

The Bellamy Flag Award, a national honor, comes to John Harris for its strong emphasis on academic achievement and for its outstanding guidance program.

George A. Huber, president of the John Harris student body, will accept the award for the high school, and Miss Nancy M. Wickwire, of the class of 1943 at John Harris, prominent stage and television actress for the

Representatives of 6 of the 17 previous Bellamy Award recipients will extend greetings, as will Dr. Charles H. Boehm, head of the State department of public instruction, Mayor Nolan F. Ziegler, and Walter M. Mumma, Congressman from this district.

Among others who will participate in the program are Miss Helen J. Graeff, principal of John Harris High School; Rear Adm. John W. W. Cumming, USN (ret.); Miss Marcy Wilkins, Mary Washington College of the University of Virginia; the Reverend F. C. Thorne, pastor of Little Falls Baptist Church, New York; the Reverend Daniel H. Lewis, pastor of the First Baptist Church of Harrisburg: the Reverend Aaron M. Sheaffer, assistant pastor of Derry Street Evangelical United Brethren Church; Judy Ann Nicholas, governor of the Firls' State at John Harris; and Richard M. Warden, senior class president.

JUNE 1, 1959.

Mr. J. ELWIN LETENDRE, Principal, Berkeley High School, Berkeley, Calif .:

Congratulations to all at Berkeley High School for being the State of California designate of the National Belalmy Award for 1959. Just recently had the honor of participating in Francis Beliamy Flag Award presentation to John Harris High School in my congressional district at Harrisburg, Pa.

Upon learning of your school's selection for such award just wanted to join many others in extending warm best wishes.

WALTER M. MUMMA, Member of Congress, 16th Pennsylvania

#### Christopher Baldy

EXTENSION OF REMARKS

#### HON. THADDEUS J. DULSKI

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, June 1, 1959

Mr. DULSKI. Mr. Speaker, last week in my home district there passed from the scene suddenly a prominent attorney who held a place of importance in the Buffalo legal profession for nearly a half century, Christopher Baldy. Mr. Baldy's passing will leave a great void in our city.

I wish to include the following editorial from the Buffalo Evening News, Buffalo, N.Y., May 27, 1959:

#### CHRISTOPHER BALDY

Citizens like Christopher Baldy do credit to every Buffalonian. He was a distinguished lawyer, a devoted churchman, an untiring worker for higher education, an unselfish participant in every worthy cause, self-effacing and modest.

The quality of his services is attested by the many honors that came his way: The presidency of several legal organizations; designation in 1958 as Church Warden of the Year by the Episcopal Diocese; the University of Buffalo's Samuel P. Capen Alumni

A loyal Democrat and party worker, he transcended narrow partisanship as a member of various city and State boards. He served with equal dedication in a variety of fraternal, sporting, and social activities.

Astute, courtly, unassuming, he leaves the memory of a fine citizen whom Buffalo was privileged to call its own during a lifetime of outstanding civic contribution.

#### Unknown Soldiers

EXTENSION OF REMARKS

## HON. FRANCES P. BOLTON

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Monday, June 1, 1959

Mrs. BOLTON. Mr. Speaker, many of us have been home over the Memorial Day weekend, sharing with our constituents the remembering for which this day stands. I have brought back with me to share with all who read the Con-GRESSIONAL RECORD a very thoughtful poem by a Clevelander, D. Mills Walser, which I include in my remarks:

UNKNOWN SOLDIERS (By D. Mills Walser)

He sleeps through countless years, in many

a clime:

He sleeps within the basom of our time; He sleeps with youth forever in his heart; He sleeps unknown, in dignity, apart From all the things he died for, good or ill. He sleeps beside a river; on a hill-Or in some tranquil valley, far away; He sleeps, forever sleeps, is all we say.

Still, there persists a deep, a firm belief— That somewhere out beyond the "Gates of

He does not sleep at all, but rather, stands And looks with anxious eyes across the lands And sees an age, chaotic and too soon A "Khrushchev rockets" zooming to the

And knows, while all the ancient evils cling. The price he paid, just didn't buy a thing!

And who is he, this unknown one, who stands,

And look so anxiously across the lands? He is the youth who carried bravely on And perished with the hosts at "Marathon." Or there, beside Metauro, that "small stream"

Laid down his life for Hannibal's great dream.

From Hastings, even on to Waterloo, His image flashes brightly into view.

Across the world we see him, still and pale. The proud, young brave, beside "The Mohawk Trail."

At Valley Forge-we see his bleeding feet, Again at Gettysburg, with Lee's retreat. We see him, in the Argonne, at Bataan, Or lying, where the Yalu River ran. And, who is he, this anxious one, unknown? Perhaps the boy next door, perhaps your own.

He is the youth, who right or wrong,

through time, Stands forth.

We owe him more than just a thought a

We owe him more than just a passing tear, More than a sacred duty to be done. The laurel for his tomb at Arlington Should gleam with glory, and our lives be made

Worth all the fearful, shining price he paid.

Award. He served as a member and secretary of the university council. Sale

> EXTENSION OF REMARKS OF

## HON. JOHN R. FOLEY

OF MARYLAND

IN THE HOUSE OF REPRESENTATIVES Monday, June 1, 1959

Mr. FOLEY. Mr. Speaker, I feel certain that all Members of the House of Representatives join with me in my feeling of elation over the success of my constituent, Mr. Deane R. Beman of 8420 Woodcliff Court, Silver Spring, Md., in winning the British amateur golf championships this past weekend. Deane Beman is only 21 years of age. He joins 11 other Americans in winning this great title. Since he is such a young man to win one of the four great golf titles and his victory is a tribute to his own self discipline and perserverance, I am including in the RECORD today a brief description of the "Deane Beman Story," by Shirley Povich, an honored and distinguished sports reporter for the Washington Post:

BEMAN'S SUCCESS TOOK ROOT AT BARGAIN SALE

(By Shirley Povich)

The whole Beman family was taking up golf, Delmar W. Beman announced one morning in 1950 at his Bethesda, Md., home. Daddy unloaded six new sets of clubs from the family car.

He had bought them at a bargain, Mr.

Beman said, \$34.95 a set at a downtown department store sale, for two woods, four irons, a putter, and a plaid cloth bag. The youngest of the four Beman kids, 12-

year-old Deane, blond and on the skinny side, didn't know which end of a golf stick to grab, and cared less. He was too busy being the hero of Montgomery County's 100-pound football champions and scoring 128 of their 158 points that season.

Besides, he was a baseball pitcher in the Bethesda Little League. Was ambidextrous, in fact, pitched both left and right handed. Also, he was a switch hitter. Anyway, golf was for rich kids.

Yesterday, a Pan American jet swept Deane Beman back from England in 6½ hours to a tumultuous reception at the National Airport. The new British amateur golf champion was being acclaimed.

He had waded through seven match-play opponents at Sandwich, England, and de-feated another American, Bill Hyndman, in the final, 3 and 2, to earn the trophy won by only 11 other Americans in the 60-odd years of British amateur golf.

At 21, he has become the most precoclous young amateur on the American golf scene, a winning member of the U.S. Walker Cup team before going on to the British title.
Is he heady with his triumphs?

"I wouldn't say that," Father Beman said yesterday. "Deane is excited but he is modest sort, too. Besides, he knows he isn't always the best golfer in his own family."

That is because his older brother, Delmar III, was beating him on occasion, head to head, on the Bethesda Country Club course before Deane took off for England. But the club handicaps say Deane is the better golfer and, anyway, Delmar doesn't bother with tournament play.

If American observers and the British golf fans at the Walker Cup matches at Muirfield, Scotland, and the Amateur at Sandwich, England, were surprised at the skill with which young Deane handled British conditions, the Beman family was Young Beman in effect created British conditions on the Bethesda club links before he fiew to England. He doted on the windy days that would be comparable to the blows in Scotland and England. He leap-frogged about the course, finding winds that were in his face, hunting for crosswinds, and not forgetting to play with the winds at his back.

"Since Deane picked up his first golf stick, he has always been determined about this game." said Harry Griesmer, the Bethesda club pro. "He hit more practice balls than any kid I ever knew. He has made every part of his game methodical."

Deane combed every source of supply in the area to find the smaller British ball that would be used in England and Scotland. From Freddie McLeod, pro at the Columbia Country Club, he turned up the only dozen British-size balls available and McLeod made a gift of them. For weeks at Bethesda, Bemen used only the small ball.

From England during the matches, young Deane was dally being quoted as saying he was pacing himself in his early matches, unwinding slowly until he could reach the semifinal round. It was rare restraint in a

youth.

"Deane has always had the perfect golf temperament," his father said. "I saw it displayed when I followed the reports. The stories told me how he was reacting. He was four up on Hyndman in the final when Hyndman cut him down with a deuce on the 16th. Hyndman won the 17th, too, and Deane was only two up.

"The stories told me what happened on that 17th. Deane clubbed two shots badly in the rough. Then he simply picked up and said to Hyndman 'Your hole.' Deane wouldn't aggravate himself. He's bright that way. He had temper control when he birdied the 18th hole with a 12-foot putt

and won it."

There were 18 college athletic scholarships awaiting Beman when he graduated from Bethesda-Chevy Chase High School in 1956, all with full tuition, board and room, because of his junior golf fame. At 15, he tied the 25-year-old Chevy Chase Club record of 67, and his score was the lowest in the United States for the national junior golf qualifying.

Beman chose Maryland University and its business administration course. But in his sophomore year he married Miriam Orndoff and forfeited the board-and-room benefits of his scholarship by living off campus. Their

daughter, Amy, is 7 months old.

He decided to forego the last semester of his junior year to take a shot at the big tournaments. An invitation to the Masters at Augusta came his way because he was a semifinalist in the National Amateur. He had hoped for selection on the Walker Cup team and it had come. The British Amateur was also in his plans.

He was a homesick kid when the British Amateur started last week and told his wife by transatiantic phone. "I miss you and Amy very much and I want to come home. I would, if I wasn't so sure I'm going to win this thing."

## The Farmer Gets Less of the Food Dollar

EXTENSION OF REMARKS

## HON. GEORGE S. McGOVERN

OF SOUTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Monday, May 25, 1959

Mr. McGOVERN. Mr. Speaker, 10 years ago the farmer was receiving 51 cents of the consumers' food dollar. Today he receives 39 cents.

In 1957 the American people consumed 11 percent more of the farm-produced foods than they did in 1952. For that larger volume of food production, the American farmers received \$600 million less than they received in 1952. Food processors and other middlemen, on the other hand, received \$6.1 billion more in 1957 than they did in 1952.

Nowhere is the trend of higher prices for consumers and lower prices for the farmer illustrated any more clearly than bread prices. The following editorial from the Sioux Falls Argus-Leader of Friday, May 29, makes this point so well that I include the editorial at this point in the Record.

BREAD COSTS MORE; FARMERS GET LESS

A U.S. Department of Agriculture bulletin about bread prices contains some facts so significant that we of this farm country should review them with care.

The average retail price of a 1-pound loaf of bread in the United States in 1948 was 13.9 cents. Of this amount the farmer

received 3.4 cents.

The average price of the same loaf in 1958 was 19.3 cents. And the farmer received 3 cents as his share.

So it is that, though the price of bread has advanced on the average 5.4 cents in the past 10 years, the farmer's share of the price has decreased by four-tenths of a cent.

What this means is that the consumer pays more and the farmer gets less. This is not to say, however, that there has been an improper advance in the price. The forces of inflation have left their mark on the various steps involved in the processing and the distribution of the bread.

But it should be noted with emphasis that the farmer is not sharing in this phase of inflation even though he is compelled to pay higher prices for what he is required to

buy.

Examples such as this demonstrate one of the reasons why the farmer has occasion to be annoyed about the trend of economic events. He is, in fact, on a stationary or descending basis while all around him are swinning higher prices.

#### Poison in Your Water-No. 88

EXTENSION OF REMARKS

## HON. JOHN D. DINGELL

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES
Monday, June 1, 1959

Mr. DINGELL. Mr. Speaker, pursuant to permission granted, I am inserting into the Appendix of the RECORD an article appearing in the Chicago (Ill.) News of July 26, 1958, an article entitled "Ah! Nature Is Wonderful!—County Streams Full of Filth."

AH! NATURE IS WONDERFUL!—COUNTY STREAMS FULL OF FILTH

(By Jack Mabley)

There was a time when a river in this county was a place in which to fish, swim, go boating or canoeing, or on whose banks one could lie and soak up the beauty.

Yes, it wasn't long ago that kids swam in Des Plaines River. Today it would be like jumping into a tank at a sewage treatment plant.

The fish are long gone. The water that was blue and clear now has the color of black coffee and the consistency of syrup and the smell of an abandoned outhouse.

These streams that flow through most of the suburbs and through the city itself have changed from places of beauty and recreation into dangers to public health and safety.

Stream poliution comes from many sources. Worst is raw sewage—the waste from tollets, bathtubs, sinks, laundries, hospitals, garages—that flushes directly into the streams.

Industrial plants put oils, greases, acids, and chemicals into rivers.

People put things-anything into them.

#### A SMELLY TOUR

A nose-holding tour of the west fork of the north branch of the Chicago River Thursday revealed an old tire, a spittoon, trees and iron pipes at the Walters Avenue bridge.

Near the Shermer Avenue bridge were beer and pop cans, rocks, steel tubing, logs, cement blocks, and grass clippings.

At other places in this waterway there have been observed oil drums, a washing machine, baby buggles, garbage, railroad ties, a dead cat, and garbage cans.

A restaurant, a trailer camp, and a subdivision have been piping sewage into this

stream just north of Glenview.

This is probably the most polluted stream in the country, but it is by no means unusual. Thorn Creek, the Des Plaines River, Salt Creek, the Skokie River have been depositories for filth.

(The problem isn't unique to Chicago.

(The problem isn't unique to Chicago. Illinois towns below St. Louis have to contend with 300 tons of ground garbage dumped into the Mississippi every day, plus St. Louis' raw sewage.)

The problem of Cook County's streams extends far beyond offenses to the eyes and

nose.

They are causing floods. At the same time that the streams are becoming more choked with debris, the amount of surface water after heavy rains is increasing.

#### FLOODING ON INCREASE

Every home that is built in the county eliminates one more plot of land where water could stand or soak into the ground. Flooding increases constantly. New storm sewers are overloading the streams.

When storm water floods, it seeps into sanitary sewers, and is a major factor in sewage backing up into basements during heavy rains.

Cook County's Clean Streams Committee has been waging a valuant holding action against further water pollution. The sanitary district is working on plans for the rivers.

But action is long overdue, and we will have many floods, and immeasurable menace to health, before the rivers are clean.

#### We Hold These Truths-

EXTENSION OF REMARKS

## HON. ARCH A. MOORE, JR.

OF WEST VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Monday, June 1, 1959

Mr. MOORE. Mr. Speaker, there is no more appropriate time than Memorial Day, when the Nation pauses briefly in its mundane living, to look to a Higher Being in memory of those who have preceded us to a better life and the promise of eternity—both in war and in peace.

I was immeasurably impressed on Sunday last when I sat with the congregation of St. James Evangelical Lutheran

Church in Wheeling, W. Va., and heard Dr. John F. Streng, the church's revered and distinguished pastor, deliver a Memorial Day sermon which was notable for its simplicity and its capacity to move the congregation to a feeling of total concentration upon the great mysteries of life and death.

Under unanimous consent, I include Dr. Streng's sermon for reprinting in the

Yesterday's solemn National Memorial Day ceremonies are today augmented in fitting fashion by Sunday religious services throughout the Nation. From sea to shining sea and far beyond our cherished borders we join in the familiar American prayer "Our Father's God to Thee, author of liberty, to Thee we sing. Long may our land be bright with freedom's holy light. Protect us by Thy might great God our King."

It is meet for us to pause in public ceremonial, in the family circle and religious observance to remember the gallant sacrifices others have made for us. It is our duty to build a nobler society on the ashes of those who dwell in honored glory. They served faithfully on farflung fighting fronts and sealed their pledge of allegiance in their Their imperishable example own blood. must be indelibly inscribed that our generation may not facetiously neglect its solemn responsibilities to God, to our children, and these missing comrades. Their fortitude under fire is a challenge for which there is no surpassing similarity in his-

Our text is framed in holy memories on the pages of time. Today we focus the spotlight of history upon an ancient nation on the warpath. After 400 years of slavery, under conditions approaching those of our modern concentration camps, K-rations, and no-man's-land in faraway places, we see a volunteer army of Israelites finally break camp one night under their temporary commander in chief, Moses. He launched Operation Homeward Bound. Hearts beat heavy but spirits rang high as the ancient reconnaissance battalions of wandering Jews inched forward over desert terrain and through mountain passes. One of their chief problems in logistics was the crossing of the turbulent River Jordan, since they were neither organized nor equipped for mass evacuation.

At that point the Lord God Jehovah dem-onstrated His miraculous almighty power. Through his creative force in nature, He walled up the roaring rapids, so that both military and civilians could cross the sandy river bottom. With this maneuver com-pleted, Joshua, the new leader into the Promised Land, issued orders for a mass convocation. In solemn ritual he supervised the construction of a riverbank stone altar as memorial to God's providence, and for future generations to admire. He closed his memorial address with this dedication: "These stones shall be for a memorial unto the children of Israel forever." And his historic challenge has echoed through the centuries.

Memorials large and small, costly and simple have since identified every generation. Primitive and civilized peoples have engraved and perpetuated memorial messages in museums of memory, in monuments of mystery, and in mansions of marvel. Every national frontier ultimately dovetails into a keystone triumphal arch of conquest somehow linked to the past. Beneath each sacred strata of soil lie buried layer upon layer of long-perished and forgotten civilizations whose chivalry and patriotism were equally worthy to be remembered.

Each Memorial Day burdens our minds anew with sad memories. The simple

searching ceremony in Arlington's National Cemetery symbolizes America's annual act of adoration. It is repeated in hundreds of wayside shrines in city and country the length and breadth of our blessed land. It is echoed on many battlefields where little crosses glisten row on row.

It is to the lasting honor and credit of our leading military veterans organizations- and auxiliaries that they so nobly stand shoulder to shoulder keeping watch over our freedom. Among other studies in good government a liberal education can be gotten out of the 10 objectives enunciated in the preamble to the constitution of the American Legion. Let me recall five of them here: to uphold and defend the Constitution of the United States of America; to perpetuate 100 percent Americanism; to inculcate a sense of individual obligation to community, State and Nation; to promote peace and good will on earth; to safeguard and transmit to posterity the principles of justice, freedom, and democracy. What more stirring challenge could anyone bind upon the American conscience? Freedom is God-given and includes all phases of life. When man splinters it into political, religious, or economic segments, it loses its full power.

Today, representatives of all, cultures and creeds reverently invoke peace upon all people of the world. Out of Israel's fierce struggle for freedom comes one of the world's most famous benedictions: "The Lord lift up His Countenance and give thee peace." The Prince of Peace himself ended His famous Upper Room valedictory with the words: "Peace I leave with you. My peace I give unto you."

This season, dedicated by those under arms to those who have laid down arms to protect those yet in arms, urges upon all citizens a patriotism pure and noble, obedience to the Constitution, the Declaration of Independence, and the Bill of Rights. These hallowed documents are the difference between freedom and slavery. Little flags on a hundred thousand military graves symbolize worldwide that 170 million Americans have not forgotten their defenders.

Ours has been a vigilant Nation for 183 years. America has fought in 11 wars and mobilized some 30 million people. Two million have been officially listed as dead, wounded, or missing in action. Five hundred billions of dollars have been spent in direct war effort. Americans need to digest this resounding record of blood-bought his-

tory and freedom.

Let those who live up Memorial Day for personal pleasure only be reminded that once again freedom is in jeopardy. The greatest enemy is cancerous, contagious indifference among American citizens to Godgiven privileges and responsibilities. Faded honor rolls in city squares are not exemplary memorials anymore. Names are blurred and bronze scrolls have become green with age. Thank God for watchful comrades who decorate earth and sky and sea with appropriate

We need aroused citizens who believe that it is treason when malicious mercenaryminded men mock the fifth amendment or turn into overnight superpatriotic conscientious objectors. Let us reassure wavering citizens that the stars and stripes are guaranteed not to run. Whether we stand amid Arlington's 420-acre breathtaking stillness where at the current rate of 80 burials a week the 100,000th veteran's body has just been interred; or whether search parties stumble upon a hitherto unknown knoll on some barren atoll, our tribute of gratitude should be the same, namely, "Peace with honor." Whether we recall Joshua's ancient prophecy: "These stones shall be a memorial"; or remember the citation on the Unknown Soldier's cenotaph: "Here lies in honored glory an American soldier known but to God"; or whether we read the inscription on

the memorial at Bastogne, Belgium: "Seldom has so much American blood been shed in a single action. O Lord, help us to remember."-words cannot express America's appreciation.

Freedom is a divine imperative. God give us alerted citizens willing to evaluate today's sinister dangers. The church is just as guilty as the state if America loses freedom's holy light. World leadership has been bought with human blood. There is no light. World leadership has more priceless sacrifice. We walk amid the ruined rubble of rumored races who trusted in the promises of allies to bring them victory. Our atom-active world shrinks daily. A babel of voices fills the air. Charges and countercharges contaminate politics, press, and pulpit.

Will we be worthy of the liberty we enjoy? Will American parents teach their offspring respect for the Holy Bible, the Constitution, the flag, and help them memorize at least the first stanza of our national anthem?

What is Americanism? It is many dialects blended into one language. It is a hundred ways to prosperity converging into one way of life. It is a thousand services linked to one loyalty. It is the sacred trust that all men are created equal and endowed by their Creator with certain inalienable rights. It is the conviction that government rests upon the consent of the governed, that free-dom is every citizen's business, that selfishness must not triumph. We hold these truths to be self-evident.

Let us meet destructive criticism squarely. Who are these self-appointed foreigners to come to our shores and gripe about what is wrong with America? There's nothing wrong with our Nation that good standpat Americanism cannot cure in a hurry. Under the vigilant eyes of the double eagle we can detect falsehood beyond the rocket's red

From the Memorial Day services outlined for veterans' organizations we quote: "Let us grasp with fearless hands the flag so nobly borne before, and like these others plant it always on the battlements of right-eousness. \* \* \* Will you not consecrate your selves with us to emulate their sacred service that those who rest in heroes' graves may not have died in vain?".

John Stuart Mill said: "A people may pre-fer a free government. But if from indolence, carelessness, cowardice, or want of public spirit, they are unequal to the exertions necessary for preserving it, if they will not fight for it \* \* \* if they can be induced to lay their liberty at the feet of even a great man, or trust him with powers enabling him to subvert their institutions \* \* \* in all these cases the people are more or less unfit for liberty." Jesus of Nazareth, Prince of Peace, said: "Greater love hath no man than to lay down his life for his friends." May God bless our people, our vigilant veterans, our officials, that in His Providence government of the people, by the people, and for the people may not perish. Amen.

### A Eulogy to Lincoln

EXTENSION OF REMARKS OF

## HON. FRED SCHWENGEL

IN THE HOUSE OF REPRESENTATIVES Monday, June 1, 1959

Mr. SCHWENGEL. Mr. Speaker, on Memorial Day, I was privileged to attend the ceremonies at the Lincoln Memorial in Washington, D.C., during which the Post Office Department dedicated another of the commemorative postage

stamps to mark the sesquicentennial year of Lincoln's birth.

Among the remarks delivered on this occasion was "A Eulogy to Lincoln," by John B. Fisher, a member of the Abraham Lincoln Sesquicentennial Commission. In my estimation this address rates next to the historic speech which Carl Sandburg delivered at the joint session of Congress on February 12, 1959.

Because I was so impressed with the substance of this eulogy, I include it in the Appendix of the Record so that those who did not attend the ceremony will have an opportunity to acquaint themselves with its excellence:

#### A EULOGY OF LINCOLN

(Address of John B. Fisher, member, Abraham Lincoln Sesquicentennial Commission, at the Lincoln Memorial, Washington, D.C., Memorial Day, May 30, 1959)

Gen. George Pickett, a fighting Confederate commander, was to remember all the days of his life that third afternoon at Gettysburg when he led his long, gray lines against the Union barricades on Cemetery Ridge in the bloodlest assault of the war. And Mrs. George Pickett was to remember always that afternoon at the war's end when, in answering a knock at the door of her Richmond home, she opened it to find a tall stranger standing there in the shadow of the porch, asking her if George were at home, m'am?

She replied that George wasn't and wouldn't be for some time, but might she ask in turn who the visitor was. The tall man in the frock coat, stovepipe hat in hand, said simply "Just an old friend of George's, m'am; just an old friend from before the war." With that he turned and stepped out into the sunlight and walked slowly down that Richmond street, leaving Mrs. Pickett to the startled realization that the President of the United States had come to call.

The President of the United States. Abraham Lincoln was that, of course he was, but really a great deal more, too. For this was a man of many parts, all of them human and most of them great.

This was the politician who in 30 long years of devoted service in his party's ranks came to realize that politics, like life, is the art of achieving the possible and who learned, with the decay of the Whig Party, the turbulence of the Mexican War period, and the onset of the Missouri Compromise, that he had nothing whatever in common with political platforms whose planks were platitudes and with men of no discernible principle.

This, too, was the husband and father whose home life was torn by strife and dissension and the tragic death of children. Yet it is not for us, now or ever, to judge Mary Todd Lincoln. The heart of a wife and the heart of a husband can best be known only to themselves and what a woman says to a man or what a man says to a woman should often, as the ancients knew, be written on the wind. It will become us better to remember that Mary Todd and Abraham Lincoln sat fondly holding hands in a darkened box in Ford's Theatre on the night of Good Friday, 1865.

night of Good Friday, 1865.

But this, too, was the President—the President and Commander in Chief—devoted above all else to preserving the Union with the dignity, equality and rights of the several States unimpaired. So he said; so he did.

And in so doing, he brought freedom to the enslaved. As he wrote in his annual message, following the Emancipation Proclamation: "In giving freedom to the slave, we assure freedom for the free, honorable alike in what we give and in what we preserve."

Supported in this objective by the Abolitionists, yes, but fought by them every step of the way, for moderation was a word they

never knew. He counseled with them patiently when he could; he blocked them ruthlessly when he must, fondly hoping that in time they'd learn, fervently praying that they'd learn in time.

Meanwhile, the war went on, with Jackson and Lee defeating the Union forces at almost every turn, crushing the northern armies between them like a steelhard finger and thumb, until at last the President came to put his trust in Grant—Ulysses S. Grant, who astonished everyone in Galena, Ill., by turning out to be somebody after all.

Agreeing completely with Grant's objective of smashing victory and peace, he occasionally questioned Grant's method but remembered from the old days at Hodgenville and New Salem that you never cuss a good ax. To keep up with Grant, studying tactics late into the night, but, night and day, studying human nature as well; taking time out for needed laughter and humor; writing with a wry smile to a woman who had asked him for a sentiment and his autograph:

"Dear Madam: When you write to a stranger for something which is of interest only to yourself, always enclose a stamp. There's your sentiment and here's your auto-

A. LINCOLN."

Then, at long last, the tide of the battles and of the war turned under Grant's sledge hammering—stubble-chinned, stubborn-jawed Grant, in whom the President had such faith—and the President was enabled to think beyond the war to the time of reconstruction, to the binding up of the Nation's wounds, when the road to reunion with the South would, he knew, have to be paved with justice and generosity and good will.

Blocked again in this because of his policy of moderation—not alone by many of the Northern States and their leaders, not only by many members of his party, but often violently, profanely, by his very closest advisers and friends—yet knowing, as few men have ever known, that wisdom as to ends must equal skill as to means or the work would be lost forever.

This, finally, was the martyr, the martyr to union, to freedom and to peace. Lincoln had a presentiment of death all his life but never more strongly or clearly than on the morning of April 14. Yet he knew that death was not the worst of life, that defeat was not the worst of failure, that not to have tried was the true failure and his ceaseless trying to preserve this Union, for us and forever, achieving one of the greatest successes in all recorded time.

It was America's darkest hour since Valley Forge when they carried him out of Ford's Theatre and into the little Petersen House across 10th Street and Dr. Charles Leale, 23 years old, assistant surgeon, U.S. Volunteers, who had been the first to attend him when he fell, sat through those long, black night hours and the long, gray morning ones that followed holding tightly to the President's hand, knowing, as he was to write later, that reason and recognition occasionally returned to the afflicted at the moment of departure and wanting the President to understand in his blindness that he was in touch with humanity and had a friend.

So it was that George Pickett's old friend from the war himself had a friend at hand when the long war years were over.

This was Abraham Lincoln, politician, husband and father, President and Commander in Chief, martyr for all mandkind. He was a man of such dimensions that he made all others seem small, though he would have been the very last to wish to do so. Those dimensions were not merely physicial, not just the 6-feet-4 of him or the gaunt, bony frame of him, but the great soul and heart of him as well.

For this was the Bible-reading lad come out

of the wilderness, following a prairie star, filled with wonder at the world and its Maker, who all his life, boy and man, not only knew the 23d Pslam but, more importantly, knew the Shepherd.

Now, in 1959, it seems possible that we shall never see his like again. This is a sobering thought, but it should be a kindling one, for upon us now, as a people, has been laid perhaps the greatest responsibility any nation was ever asked to shoulder, yet certainly not greater than we can bear. Our days are no longer than were Lincoln's, our nights are no darker, and if there is any difference between his time and this it lies in the tremendous advantage that is ours, that he stood so tall before us.

In such a time and at such a moment we surely can say then, from hopeful, brimful hearts:

"We are coming, Father Abraham, devoted millions strong, firm in the faith that was yours and is ours, secure in the conviction bequeathed by you to us that right does make might and that if we but dare to do our duty as we understand it, we shall not only survive—we shall prevail.

"We walk beside you now, long-striding, our feet firmly on the ground in this most practical of worlds but with an eye always on the heavens that we might never—never—lose sight of the stars."

#### What We Have Given Away

EXTENSION OF REMARKS

## HON. ARCH A. MOORE, JR.

OF WEST VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Monday, June 1, 1959

Mr. MOORE. Mr. Speaker, there is not a Member of this body who is not acutely aware that since the start of the Marshall plan this country has been pouring out its treasure and substance across the globe.

We have reached the ridiculous from a position of sublime humanitarianism which prompted the original aid program.

Today we have such absurdities as the donation of a teakwood sawmill plunked down on a beach in Iran to rust for 3 years. That is, until some of our aid people became interested in the facts and brought up the stark conclusion that there is no teak grown in Iran; and further, the nearest source of supply of this valuable wood lies some 1,900 miles away in the jungles of southeast Asia.

Thus it should be informative to our membership and to our citizens to read the following editorial appearing in the Wheeling (W. Va.) Intelligencer, which spells out in facts and figures just what we have accomplished and at what cost in our various aid programs to foreign countries—the sum total of which has been an increase in our inflationary trend and the actual loss of many of our former stanch allies.

I might add that I am indebted to Mr. Thomas O'Brien Flynn of the Intelligencer for presenting such a clarifying picture of the situation, and I commend his editorial to my fellow Members of the House for their consideration:

WHAT WE HAVE GIVEN AWAY

This week the House Foreign Affairs Committee voted to cut \$226,800,000 from the administration's foreign aid request for the new fiscal year.

The cut is trivial, relatively speaking. Indeed, its modesty is considered a victory for the President who had asked for \$3,930 million. The total approved is only slightly less than \$3,656,400,000 actually authorized last

Considering the fact that the U.S. Government already has amassed a public debt of approximately \$285 billion, still is spending more than it takes in and probably will fail to balance next year's budget, the question of whether or not we are in position to give or loan money to any other country for any purpose arises again as it has arisen before. It becomes a particularly pertinent and pressing question at this time in view of the history and the results of our foreign aid operation.

The current issue of U.S. News & World Report contains a revealing analysis of this American enterprise in rejuvenating and protecting other nations. It is a startling presentation which justifies examination in some detail in view of pending congressional action on another foregn aid appropriation.

Since 1948 according to this report, the Government of the United States has extended, in gifts and loans, \$74,200 million to other countries. Of this amount \$59,200 million have been outright gifts.

During the same period, individual American citizens, through the CARE relief organization and other means, gave an additional

\$6,700 million.
With recovery abroad, largely generated by this assistance, has come renewed interest in foreign investment. Since the war, American business interests have put more than \$27 billion into foreign operations, a flight of capital deliberately encouraged by the Government through a liberal import policy and otherwise.

These dollars have gone to build the cities and industries of other lands, to acquire the latest in American machinery and skills, to make foreign industry competitive with our own, to add \$11 billion to foreign financial reserves in gold and in dollars, to otherwise improve conditions abroad. To what pur-

"Today," says U.S. News & World Report,
"more and more high officials of the U.S.
Government are beginning to wonder if the
great success that Americans brought to their
foreign friends isn't actually too great for
comfort." And with good reason. "The
American dollar," to quote further, "once a
proud currency—the strongest in the world—
now is selling at a discount in terms of some
foreign currencies. \* \* \* The dollar scarcity that alarmed planners not many years ago
has been turned by U.S. generosity into a
superabundance of dollars in Europe.

"Gold is flowing away from the United States as some countries turn their immense reserves of dollars into gold. Foreigners at this time hold claims to \$12.7 billion of the \$20.3 billion of gold in the U.S. stockpile. If these foreigners ever exercise those claims this country could find itself in a severe financial squeeze applied by those who enjoyed so much U.S. generality.

"Goods from abroad are coming into the United States to capture more and more markets. The industry that the United States spent billions to revive and that U.S. industry helped teach efficient mass production is able now to undersell its teachers in a growing number of fields."

Statistics tell the story. In 1948 we bought foreign goods of all kinds to the value of \$7,100 million, and sold abroad \$12,600 million worth. During the first quarter of 1959 our import purchases were

at the rate of \$14,300 million a year and our sales abroad at the rate of \$15,400 million. The \$5½ billion gap of 1948 has been closed to a billion, 100 millions and is narrowing every day.

Foreign manufacturers now are crowding American producers, not only in the world market, but in our own domestic market as well. So Americans are becoming more and more interested in foreign operations. They now are investing more than \$3 billion a year abroad. Why not? They can take advantage of lower production costs there and thus compete with the natives on their own terms and, thanks to our progressive destruction of the protective tariff, ship their wares back home at a nice profit. Why build or enlarge a plant in West Virginia or Ohio or Illinois when you can make more money doing so in a foreign country?

Military aid tells something of the same story. Not only have we undertaken the economic rejunevation of our friends abroad, but we have assumed a major share of the burden of defending them. The American people are devoting more than 10 percent of their total effort to defense. Our forces are in every part of the non-Communist world. None of our allies—now economically strong—is doing as much. Great Britain, the best of our associates in this respect, is devoting 7.5 percent of her total national effort to defense. Next comes France, with 6.8 percent, followed by Canada, with 5.6 percent and West Germany with 3.4 percent. Japan's defense effort is negligible.

It is idle to speculate on what the world situation might have been today had none of this American aid been provided. The very success of the foreign recovery may constitute an eloquent testimonial to its value. But it would seem to bear equally persuasive testimony that it has more than served its purpose; that we have helped others to the point where we already have damaged ourselves and that any further effort in this direction can be expended only at our mortal pertil

In the light of the record as revealed by the U.S. News & World Report survey, what conceivable justification can there be for any further extension of foreign aid at any level or for any purpose, much less at the rate contemplated in legislation now pending in Congress?

## Placing of Trophy in Memorial Amphitheater at Arlington National Cemetery

EXTENSION OF REMARKS

# HON. GORDON CANFIELD

IN THE HOUSE OF REPRESENTATIVES

Monday, June 1, 1959

Mr. CANFIELD. Mr. Speaker, on Memorial Day a trophy from mothers whose sons were killed in the Nation's wars was placed in the Memorial Amphitheater at Arlington National Ceme-

The tribute to the Unknown Soldiers was conceived and designed by Mrs. Mabel C. Troy, national president of the American Gold Star Mothers and a resident of my home city, Paterson, N.J.

dent of my home city, Paterson, N.J.

The original sketches of the trophy were made by Mrs. Troy with the insignia of the American Gold Star Mothers being used as the basis of her design. The trophy is in the form of a plaque.

The idea for such a tribute occurred to Mrs. Troy during last year's Veterans' Day ceremonies in the white marble amphitheater behind the Tombs of the Unknown Soldiers. She noticed that among all the tributes displayed there was none from the mothers to America's Unknown Soldiers.

Saturday afternoon's presentation was made possible by the cooperation of Lt. Col. John J. Flynn, chief of the cemetery branch, Memorial Division, Department of the Army; John G. Metzler, superintendent of the cemetery; Frank Lockwood, assistant superintendent, and Gen. John G. Van Houten, commanding general of the military district of Washington.

I commend Mrs. Troy for her thoughtfuness in reminding us that there are some things which cannot and should not be forgotten. She was truly performing her function as president of the American Gold Star Mothers.

#### The Big Splash in Manmade Lakes

EXTENSION OF REMARKS

## HON. WAYNE N. ASPINALL

OF COLORADO

IN THE HOUSE OF REPRESENTATIVES Monday, June 1, 1959

Mr. ASPINALL. Mr. Speaker, in our efforts to conserve the Nation's water supply to meet rapidly increasing demands and control disastrous floods, we have, in the past few decades, created a great number of huge reservoirs or manmade lakes across the country. The planners and builders have appropriately concentrated their energy toward constructing facilities for serious use of the impounded water, primary of which is irrigation for farmland.

However, a feature of our manmade lakes, which may at times be overlooked by the planners but which is very apparent to the public, is the recreation bonus these lakes provide. This is aptly pointed out in the article from Parade magazine of May 17, 1959, entitled "The Big Splash in Manmade Lakes," by Michael Frome. The reservoirs, while serving so well the cause of agriculture and industry and flood control, serve at the same time the need of the people for respite from agricultural and industrial endeavors.

Also, in addition to the esthetic value derived by the public from manmade lakes, there is a further boost to the economy from the demand for services and equipment connected with leisure-time activities. It is therefore not amiss in our planning of multiple-purpose water projects, from which we intend to obtain the maximum benefit possible, that we give recognition to the worth-while byproduct of recreation.

I include, for the information of my colleagues, the article by Mr. Frome:

THE BIG SPLASH IN MANMADE LAKES (By Michael Frome)

At manmade lakes across the United States, the outdoor season already has be-

gun for throngs of boating enthusiasts and hopeful fishermen. And from the coming weekend until Labor Day, Americans in search of a swim and a breeze will join them at dammed-up, land-locked waters that have gushed onto the map only within the

last few years.

Without a doubt, artificial lakes, large and small, are the fastest growing vacation areas in America. By one estimate, 50 million visitors will use them in the next few months. The Army Engineers estimate attendance at their projects alone has sextupled in the last 8 years. On the TVA lakes 40,000 privately owned boats now manages. neuver where 25 years ago there were only 600.

Manmade lakes now represent nearly a third of the Nation's fresh-water bodies, and additional projects already authorized will double that amount. Each vacation season, several new ones are added. Most important this year are:

Lewis and Clark Lake (Gavins Point Dam), on the Missouri River above Omaha, Nebr., a part of the Missouri River Basin

project.

Table Rock, on the White River, Mo., 80 miles long and 41/2 years in the building. This is expected in time to be one of the best U.S. trout-fishing spots.

Palisades Dam, largest earthfill dam ever built by the Bureau of Reclamation, a jewel set in beautiful Targhee National Forest on the Snake River, Idaho.

#### A WATER-HAPPY COUNTRY

So water-happy is the United States today that new projects cannot be built or opened fast enough. In Florida, where a system of flood-control canals is being developed from the Everglades to the headwaters of St. John's River, sportsmen are complaining that boat ramps and fishing spots near Lake Okeechobee already are "congested"—and the project is not even finished.

Water also is a factor in Florida's latest land boom. Wise developers have gouged out artificial lakes, centered new colonies around them and capitalized on the appeal

of "boating in your own backyard."

The big splash in mandmade lakes has given some strange twists to the Nation's recreation picture. Oklahoma, the old Dust Bowl State, accounted for almost 20 percent of attendance at Engineers' lake last year. Land-locked Iowa bought more outboard motors than ocean-washed and lakespeckled Maine, and Kansas bought more than seacoast Delaware.

Despite the tremendous use of the Nation's 2,800 principal reservoirs and thousands of lesser ones, most were designed for purposes having little to do with recreation. The objectives were flood control, hydroelectric power, irrigation, and improved river navigation. Over the last quarter of a century, great concrete and earthfill structures have been built amid deserts, parched plains, and impoverished hill country.

Where are these lakes? The map on these pages [not printed in RECORD] introduces you to the major ones from coast to coast. Many smaller ones, developed by power companies, industry and States, also provide for recreation. The big projects, inci-dentally, are so costly only the Federal Government could afford to construct them.

In the South, the Tennessee Valley Authority's regional development project has transformed vast areas of seven States.

TVA's 30 lakes have developed into a firstrate tourist center with accommodations for 9,000 persons a night. Kentucky Lake, biggest of the 30, floods 184 miles across Kentucky and Tennessee. Ringed around the lake are modern lodges, housekeeping cottages, campgrounds, more than 100 boat docks and four State parks. The lake has fine bathing beaches, tennis courts and golf

courses, and fishermen swear by the bass catches.

The Bureau of Reclamation operates in the west, with such massive projects as Hoover Dam, Grand Coulee, and Shasta. It has 254 recreation areas, the biggest of them Lake Mead, a cactus-country playground with a 550-mile shoreline backed up behind Hoover Dam. The surrounding desert and mountains are so spectacular that the area once was considered as a possible national monument. Now visited by 3 million persons a year, Lake Mead, in an area deserthot by day and cool at night, is a particular favorite of water skiers and hydroplaners.

The engineers maintain 120 principal lakes and 200 smaller ones across the country as flood control and river navigation projects. Largest and most popular is Lake Texoma, in the once arid, dusty Red River Valley between Texas and Oklahoma. Recently opened Texoma State Park is Oklahoma's showplace, with lodge and cottages, golf course, campgrounds, boating, water skiing, riding and fishing.

Since their original purpose was not recreation, these lakes have had their growing pains. Groups like the Izaak Walton League and the Sport Fishing Institute believe serious attention must be directed to

several problems, including:

Shoreline blight: Where lakeshores develop without control, they often succumb to ragged, honky-tonk treatment. Experts fear that unless they are zoned and pro-tected, shorelines will lose their basic natural attraction.

Recreation access: Because dams usually are built with only a minimum of border land, the public in some cases is shut off from areas it has paid to construct. Additional access points would make possible

the greater use of the lakes.

Measure of values: Dams have been proposed for natural areas priceless in their own right for scenery or fishing purposes. In Oregon's Rogue River country and Dinosaur National Monument, such plans have been defeated. Today's major concern involves proposals for high dams in the Idaho mountains that might shut off chinook salmon from their spawning grounds.

But today there is more emphasis on recreation planning before a dam is built. The U.S. Fish and Wildlife Service, the National Park Service and State conservation agencies are getting a voice in plans for man-

And more dams and reservoirs are on the The Missouri River Basin project eventually will have 100 multipurpose dams. Just beginning is the \$760 million Colorado River project in the deserts and mountains of the Southwest. The mammoth construction job at Gien Canyon, Ariz., will create a 186-mile-long lake comparable to Lake Mead when completed in the early 1960's. And a scenic short boat trip will open the way to Rainbow Bridge National Monument, reached now only by pack trip and arduous hiking.

These new lakes will be opened not a moment too soon. Fishermen alone are expected to double in number by 1975 or 1980. The boating boom has been so phenomenal that it is almost impossible to gage its rate

But you need not wait to dip into the fun offered by manmade lakes. Among those you might consider for this year's travels are Washington's Franklin D. Roosevelt Lake, behind Grand Coulee Dam; Shadow Mountain National Recreation Area, Colo., a trout fisherman's paradise; Lake Ouachita, Ark., largest of a 100-mile chain of lakes, and Clark Hill Reservoir, S.C., with its hundreds of secluded coves.

All these offer fishing, boating, swimming, lakefront camping and virtually any other

water sport you can name. But be sure to study your map before you start on your vacation. At the rate manmade lakes are being added, there may be a brandnew one right on your course.

### Lung Cancer and Cigarettes

EXTENSION OF REMARKS

## HON. RICHARD E. LANKFORD

OF MARYLAND

IN THE HOUSE OF REPRESENTATIVES

Monday, June 1, 1959

Mr. LANKFORD. Mr. Speaker, many statements have been made concerning the cause of lung cancer-many of them without foundation. Tens of millions of dollars are being spent through research to find the cause and cure for cancer. We all hope and pray that the answer can be found-let the chips fall where they may.

In that connection, I offer for the RECORD an article in the Baltimore Sun.

dated May 15, 1959.

LUNG CANCER EXPERT PLAYS DOWN LINK WITH CIGARETTES

#### (By Weldon Wallace)

After operating on nearly 800 cases of lung cancer over a period of 25 years, Dr. William F. Rienhoff, Jr., declared yesterday that he has found no scrap of evidence to indicate that cigarettes are more likely to cause cancer than are the air pollutants that everyone breathes-such as exhaust fumes.

Dr. Rienhoff, who is associate professor of surgery at the Johns Hopkins University School of Medicine, performed the first operation for total removal of a lung. The patient, who had this procedure done in

1933, is still living.

Dr. Reinhoff reviewed his cases of lung cancer at the annual meeting of the South ern Society of Clinical Surgeons, held at the Hopkins Hospital.

He made his comments on cigarettes in an

interview.

#### MICE SHOULD NOT SMOKE

It is true, he said, that tobacco tars put on susceptible mice can cause skin cancer, "but since one cannot argue from mouse to man, the only conclusion I can draw from this is that mice should not smoke."

Dr. Rienhoff added, however, that he certainly would recommend moderation smoking, "as in everything else—eating, drinking, or even driving a car."

"Presumably any severe irritant could cause lung cancer in susceptible persons, he explained, but he said he feels cigarettes should not be blamed any more than the fumes from motor vehicles.

#### BRING SOLACE TO MANY

"Cigarettes bring solace to many people," he went on, "and I see no reason to scare them to death."

In his opinion, the only bases for the view that cigarettes are the cause of lung cancer are "coincidence and suspicion."

Dr. Rienhoff, incidentally, does not smoke. In regard to dealing with lung cancer, he said that surgical treatment offers the only hope of cure "in our present state of ignorance."

He said the malignant tumors that offered the greatest hope of cure were those of a slow-growing type which had walled themselves off with fibrous tissue.

He urged immediate exploration of the chest if a shadow should appear in an X-ray

film and warned against delay in removing

all lung tumors, even benign ones.

Others speakers on yesterday's program—
all of them members of the Hopkins faculty -included:

Drs. Henry T. Bahnson, Edward S. Stafford, I. Ridgeway Trimble, Frank C. Spencer, Mark M. Ravitch, David C. Sabiston, and Worth B. Daniels, Jr.

#### Poison in Your Water-No. 91

EXTENSION OF REMARKS OF

## HON. JOHN D. DINGELL

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES Monday, June 1, 1959

Mr. DINGELL. Mr. Speaker, pursuant to permission granted I am inserting into the Appendix of the Congres-SIONAL RECORD an article appearing in the Bluefield (W. Va.) Telegraph of July 13, 1958, entitled "Buchanan Water Supply in Danger-Contamination Is Spreading":

BUCHANAN WATER SUPPLY IN DANGER-CON-TAMINATION IS SPREADING

The widespread contamination of domestic water supplies in the Buchanan County-Tazewell County, Va., area is causing increasing anxiety, Dr. Derek Robinson, of the health department, announced.

Too, the area is endangered by the widespread gross contamination of streams and rivers by untreated sewage. Parents of children swimming in the streams should be fully aware of the dangers involved, the doctor sald.

#### UNFILTERED DRINKING WATER

"Unfiltered drinking water is only as clean as the area from which it was obtained," the doctor said, "and especially when this is from the ground surface the position is far from satisfactory.'

Dr. Robinson pointed out that the jurisdiction of the health department in the area extends only to the water supplies of public eating places.

Only one of the large communities in the area has both a satisfactory filtered water supply and a sewage disposal system.

Polio is also another problem, although not yet large, in the area, the doctor said. In the last few days the dread disease has

broken out in Lee County and Wise County, and just Thursday a case was diagnosed in Cedar Bluff in Tazewell County.

#### NO POLIO EPIDEMIC

Although there is no sign of an epidemic. conditions are right for pollo to spread rapidly through the thousands of Tazewell-Buchanan children who have had no antipollo serum, the doctor said.

All persons who have not received the shots should visit their family physician immediately, Dr. Robinson said. Those without the preventative shots should be discouraged from getting overtired, playing games requiring vigorous muscular exercise, and should keep away from crowds.

Rabies also presents a problem to the area. Dr. Robinson said the disease was confirmed in one dog during last month and four children who came into contact with it have received the antirables treatment.

### South Carolina "Climate" for Business Given Praise

EXTENSION OF REMARKS OF

#### HON. JOHN L. McMILLAN

OF SOUTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Monday, June 1, 1959

Mr. McMILLAN. Mr. Speaker, under leave to extend my remarks in the Rec-ORD, I include the following article by Mr. A. L. M. Wiggins who formerly served as Under Secretary of the Treasury.

This article appeared in the May 18 issue of the American Banker and in my opinion contains a great deal of food for thought.

I hope that every Member of Congress will take a few minutes of his valuable time to read Mr. Wiggins' statement:

SOUTH CAROLINA "CLIMATE" FOR BUSINESS GIVEN PRAISE

(By A. L. M. Wiggins, chairman, the Bank of Hartsville)

An industrialist seeking a location for a new plant requires an answer to the main question, "What location will provide the best opportunity to convert my operations and products into the most satisfactory return on the investment?"

South Carolina was the answer. This answer is rooted in the character and the conservative philosophy of its people which, in turn, are reflected in the policies and programs of State and local government.

Summarized before the general assembly by South Carolina's progressive young Gov-ernor, Ernest F. Hollings, said:

"Let us look at the features of our business climate: the right-to-work law, the good tax structure, the stable State government, our workmen's compensation law, our good labor-management relations, the spirit of a day's work for a day's pay, the healthful working conditions, the spirit of cooperation and participation in community and State endeavors, they were all created by the working people and existing industry. Industries have come, they have invested, they have expanded. The best salesman of the new South Carolina is the established businessman who can tell first hand of the fair treatment he has received and how his operation has been profitable."

#### SOUND BUSINESS CLIMATE

A leading industrialist with several plants in South Carolina and other States, Richard R. Higgins, president of the Kendall Co., stated:

"The foundation of any business development program is a sound business climate, first on the State level and then on the local level. Land sites, cooperation, water, electric power, labor supply, reasonable taxes, all of these tangible things are necessary, but a basically sound political climate will be the thing that brings economic expansion. That, my judgment, is what lies behind South Carolina's rapid progress."

The governmental climate under which industry operates in South Carolina is reflected in the unanimous action of the general assembly last year in revising the system by which income taxes of foreign corporations are determined so as to provide the corporation with more equitable alter-

native bases. There is no State property tax in South Carolina and the assessments of industries for local property taxes are made by the State tax commission on a fair and uniform basis. Appeals may be made on assessments to the State tax board of review but not a single appeal has been made to this board in more than 10 years. The State constitution requires a balanced budget.

#### LEGISLATIVE POLICIES CONDUCIVE

The progressive cooperative policies of the State legislature are shown in a recent report of a special joint committee to the general assembly which recommended expansion of the work of the State development board with additional appropriations to support it. This recommendation has been adopted.

The committee also recommended the establishment of nonprofit corporations to finance industrial buildings; creation of local planning boards; and, a program of increased cooperation between State and local development boards.

In addition, the committee recommended the expansion of vocational, educational, and research programs in both economic and technical-scientific fields.

It endorsed the program of the recently established Business Development Corp. which was set up by bankers and other businessmen to finance small business.

#### DEPENDS ON PRIVATE ENTERPRISE

However, the committee, in an expression of a basic philosophy generally held in South Carolina, called on private enterprise to provide the needed developmental capital and stated: "We do not believe that the State should be pledged to provide capital for private business." South Carolina's lawmakers do not believe in using public funds to subsidize private enterprise. They believe in giving private enterprise a healthy environment in which to operate.

An expression of legislative attitude toard business and industry in South Carolina is in a resolution adopted by unanimous vote of the general assembly which pledged support of the vigorous industrial development program of Governor Hollings; officially welcomed new industry and en-couraged expansion of existing industry; and specifically stated:

"That we hereby pledge that we will maintain in South Carolina a stable, conservative government under which industry and business can grow and prosper in ac cordance with the American tradition; and that we hereby pledge that we as a government and as a people will reject socialistic programs and radical influences which are constantly threatening and destroying the American way of life which the citizens of South Carolina still appreciate, enjoy, and are determined to perpetuate and pass on to our posterity."

#### FAILURES ARE FEW

Proof of the good business and industrial "climate" in South Carolina is the fact that in recent years the State has had fewer business failures, fewer removals, and fewer vacant industrial buildings than practically any State in the Union. Evidence of excellent employer-employee relationships is the almost complete absence of strikes or lockouts. In 1958, total man-hours lost in strikes in South Carolina was only three ten-thousandths of 1 percent of the total man-hours of industrial employment.

The population of the State is almost entirely native born. Two-thirds of the people live on farms or in rural-urban areas. The excess of farm population growth above farming requirements furnishes a continuous supply of intelligent, competent, trainable workers available to industry. The high efficiency and productivity of these workers in jobs requiring skills has been proved by numerous industries having plants in South Carolina and other States. Unit costs of production in South Carolina are uniformly lower. Housing for industrial workers is not needed because most of them live in rural areas and ride to work over the State's network of splendid paved roads. Available in numerous areas throughout the State are 3,000 or more potential industrial workers, male and female.

South Carolina is not only a good place to work but a delightful place to live. It has excellent educational institutions, equable climate and recreational resources unsurpassed: fresh water lakes for boating and fishing, good hunting in many areas, and splendid ocean beaches that are quickly reached from any part of the State.

#### STATE OF YOUNG PEOPLE

South Carolina is a State of young people. The median age of the population is 23.6 years, the lowest of any State in the Union. Young people are running things in South Carolina—its banks, its industries, its government. Governor Hollings is 37 and Lieutenant-Governor Maybank is 35.

Under such youthful, dynamic leadership, the State is moving ahead at an increasing tempo. If there is an industrialist anywhere that is considering building a new plant and wants a location that offers the most favorable "climate" for successful operation, he should investigate South Carolina. All he needs to do is to pick up the phone and call the Governor's office or the State development board and ask for any information he wants. The information will be forthcoming quickly. It is significant that the two offices adjoin.

Likely, someone from South Carolina will be sitting on his doorstep the next day—and it might even be the Governor himself. Governor Hollings has the rather unique and refreshing idea that the Governor is elected and hired to work for South Carolina and to go anywhere and do anything he can to promote the economic growth of the State and the welfare of the people. With that kind of leadership, progress in South Carolina is a one-way street—straight ahead.

#### Memorial Day

EXTENSION OF REMARKS

## HON. EDITH NOURSE ROGERS

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Monday, June 1, 1959

Mrs. ROGERS of Massachusetts. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Lowell Sun:

#### MEMORIAL DAY

"If other eyes grow dull and other hands slack and other hearts cold in the solemn trust, ours shall keep it well as long as the light and warmth of life remain to us."

With these words Gen. John A. Logan, commander in chief of the Grand Army of the Republic, inaugurated the first official observance of Memorial Day in 1888. Even before that, families in the North and in the South lovingly took flowers to military and private cemeteries to decorate the graves of those who had fallen in battle. Today

Memorial Day has become a part of our national heritage.

Since 1919 no group of Americans has done more to preserve the spirit of this day than those millions of former fighting men and women who constitute the American Legion. They who returned home from the battles of the two World Wars did not forget those who fell in herioc death at their side.

Memorial Day is an occasion for sober thought and contemplation. It is a time to measure our contribution to our country and our fellow men against the supreme contribution made by those whom we honor today. If their sacrifice has any meaning at all, it is because there are certain principles, certain values, certain eternal truths more precious than life itself. In fighting and dying they have enacted a paradox of heroism. They faced death to defend man's right to live in freedom. They obeyed orders to preserve man's right to liberty. And they gave up the comforts and consolations of home family life itself to safeguard another of man's inalienable rights—the pursuit of happiness. It is ever thus that American independence is won anew in every generation.

The foregoing thoughtful Memorial Day message is part of an address prepared by Rt. Rev. John J. Twiss, national chaplain of the American Legion, for delivery at exercises in Omaha, Nebr. It would be difficult to improve on such a moving presentation of the spirit and meaning of this national holiday.

#### Memorial Day 1959

EXTENSION OF REMARKS

## HON. JAMES E. VAN ZANDT

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Monday, June 1, 1959

Mr. VAN ZANDT. Mr. Speaker, it was my privilege to deliver the following Memorial Day address at Fuoss Mills, near Tyrone, Pa., Philipsburg, State College, and Greenwood Cemetery, near Altoona, Pa.:

MEMORIAL DAY ADDRESS BY REPRESENTATIVE JAMES E. VAN ZANDT, MEMBER OF CONGRESS, 20TH DISTRICT OF PENNSYLVANIA, MAY 30, 1959

Memorial Day is the most solemn and sacred of our patriotic holidays.

It is a day of reverence when Americans assemble all over this broad land to pay tribute to those who have fallen in battle or who have served their country in the Armed Forces of the United States.

There is no greater honor than to be asked to participate in rendering homage to our departed comrades who gave the last full measure of devotion to the cause of freedom.

We the living, owe them an everlasting debt of gratitude for it can never be repaid.

They died in advancing the ideals of liberty and freedom which are responsible for the spiritual and material blessings which all Americans enjoy.

all Americans enjoy.

On Memorial Day when springtime with blossoms and song arrives once more to spread her mantle over the good, green earth, the thoughts of the American people turn to the herioc past and to those who have left them the legacy of freedom.

This day of memory is a time for meditation when with humility and reverence we salute the heroes of our Nation's wars.

Memorial Day or Decoration Day as it is still called in some sections of our land contributed greatly to temper the bitterness of the Civil War. It recalls the fact that the forces of the North and South fought for the cause they believed to be just.

It brings realization that through their blood was welded a union of States.

A union of States which has had the strength to survive all international storms and to emerge as a republic, yes, republic, that has become the most powerful and richest nation in the history of civilization, with the result that today as a nation we lead the free world.

It is appropriate to express our gratitude to divine providence for the blessings we enjoy as citizens of this great Republic.

All of us should be mindful of the fact that the United States of America was founded upon a spiritual base and that to a major degree it still today rests upon that base.

We are reminded that our ancestors fied the intolerance and oppression of Europe with its strict class distinctions.

They left the Old World in order that they and their descendents might have greater opportunity to carve out an existence without being deprived of the Godgiven rights of liberty and freedom.

Our Founding Fathers fashioned this

Our Founding Fathers fashioned this Nation from a vast wilderness by toil and sacrifice.

In so doing, they yearned for freedom of religion and freedom of expression.

They were firm in their conviction that a

They were firm in their conviction that a government should be the servant of a people—not the master.

To perpetuate this concept of government in a span of 42 years we have engaged in two world wars and a third conflict in Korea with a godless, communistic horde, bent upon world domination.

During this Memorial Day period we honor those who fell in defense of our ideals of liberty and freedom which we are eager to, see prevail throughout the world as a living symbol of international justice.

As we salute our departed comrades we realize that not only did they do their duty but they added to the glorious tradition of our Armed Forces that commenced at Concord and continued over the years every time our national security has been threatened.

By their victories our military forces made it possible for the United States to become a world power and to shoulder great international responsibilities.

Many historians agree that the Spanish-American War gave to our country international prestige accompanied by international problems that projected our Nation into the arena of major powers.

our entry into World War I was the result of the threat of militarism seeking to engulf the world.

We came to the aid of war-weary England, France, and Italy.

That great conflict brings to many the stirring memories of such historic battles as the Meuse-Argonne, St. Mihiel, and Belleau-Wood.

Yes, for the first time in World War I we fought in the Old World from whence our forefathers came.

Time marches on; many veterans of World War I have died and although their deeds have been recorded in history their memory lives, especially in the minds of those of us who were their comrades in 1917-18.

They, too, in the American tradition performed deeds of valor that have enshrined them in the hearts of all liberty-loving Americans.

Following the Armistice of 1918, in the short span of less than 25 years we found ourselves engaged in World War II, in a deathless struggle against militarism and fascism—in short—against those whose sole aim was world dictatorship.

In that Titanic struggle we recall among the many bloody conflicts the Bataan death march, Anzio Beachhead, Iwo Jima, Okinawa,

and the Battle of the Bulge.

In the historic struggles that marked World War II, many veterans of the first World War returned to active military service as they joined the millions of younger servicemen and women who comprised the personnel of our armed forces on nearly 100 World War II battlefronts.

When victory in World War II was achieved it was the prayerful hope that at last peace would be restored to a weary and heartsick

world.

Unfortunately, the goal of universal peace was not within our grasp because in the short period of four years American youths were following the stars and stripes in the ricepaddles of Korea in a struggle against the forces of world Communism.

We are all familiar with the heroism of American servicemen on Pork Chop Hill, Old

Baldy, and Heartbreak Ridge.

Today those heroic dead in Korea join Americans who made the supreme sacrifice in the two world wars, for the whole earth is girdled with their graves.

We who fought with them shall never forget them and throughout our lives we will carry an imperishable memory of their devo-

tion to our country's case.

A profound, heartfelt devotion to the memory of the defenders of this Republic is expressed in sincere, dignified ceremonies observed throughout the land on every Memorial Day.

In reality they are ceremonials that bind

the dead to the living, and the living to the

unborn.

Such observances contribute to the spirit-

ual unity of our people.

Particularly this program today manifests the imperishable brotherhood of our countrymen that transcends race, religion, and status.

It is in a spirit of humility, and gratitude that we stand shoulder to shoulder to salute across the years those Americans who brought deathless glory to our arms.

It is customary on Memorial Day to readas it is always read at Gettysburg-site of one of the most decisive battles of all timesthe immortal address of Abraham Lincoln.

Looking out over the graves of the heroic dead, the brooding Lincoln said ". . . That we here highly resolve—that these dead shall not have died in vain—that this Nation under God-shall have a new birth of freedomand that the Government of the people-by the people—for the people—shall not perish from the earth."

In these trying days when world communism has thrust the cold war upon us. Americans—and all free men everywhere would do well to ponder the noble words of Abraham Lincoln, which provide the best definition of a republic ever given-"a government of the people, by the people, for the people."

We may not realize it, but our conduct as a Nation in the cold war is the basis for a momentous new chapter of history that

is being written.

The result is-that the quality of America and of the American people is being subjected to a more rigid test than we have ever witnessed.

The heavily armed, resourceful, and ruthless communist tyranny is aimed at destroying the foundations of our civilization.

In fact, the menace of communist aggression has cast a shadow of darkness over the whole earth, dimming our ray of hope-that universal peace can be achieved among the nations of the world.

For over 40 years the architects of the Communist conspiracy from Lenin to Khrushchev have openly boasted of their intention of destroying everything—includ-ing the United States—which stands in the way of bringing about-the complete dominance of Communist imperialism throughout the world.

To attain their diabolic objective they have made it crystal clear that they will employ every resource at their command.

A review of world events reveals that the maters of the Kremlin have been pursuing such a course with fanatical zeal and ruthless determination.

Lenin preached the dogma of "permanent revolution" against every non-Communist country.

Since they are dedicated to the cause of Lenin, in like manner, the Chinese Reds are committed to unrelenting efforts to subdue the world for communism.

Although the Communists speak of peaceful coexistence, they are guilty of doubletalk, because they operate on the doctrine that there can be no lasting peace between communism and freedom-that the revolution must go on until one or the other perishes.

The permanent revolution advocated by Lenin is not only a reality, but it has many different forms.

One moment the Communists with honeyed words preach peace, while in the next breath they brandish their ballistic missiles and H-bombs in the hope of frightening and blackmailing free nations into a fatal compromise with tyranny.

The record shows that Communist leaders seek to keep the free world off balance and in a state of constant tension and turmoil in order to uncover any weaknesses which

They seek to create critical situations which they can profitably exploit by propaganda, infiltration, subversion, or the ulti-mate appeal to military force.

At this moment we have a dramatic ex-

ample of the "crisis technique" in the

situation prevailing in Berlin.

The Communists have stirred up the Berlin situation with the expectation of obtaining information regarding the military defense of the free world, and at the same time test our moral armament.

While the Berlin crisis may be viewed as a testing ground, military observers realize that it would be dangerous to under-estimate or scoff at the seriousness of the Berlin problem.

is painfully true because of our This knowledge of Communist technique and that the chief stock in trade of the Soviets is that of deceit and treachery.

We know that the Soviet leadership is

wholly without moral scruples.

know that it is absolute in its authority and since it is answerable to no one-it is able to put into split-second operation any plan of action.

We know that it is dedicated solely to the advancement of the Communist dictatorship and will go to any extreme to achieve its goal.

We know, finally, that the Soviet leadersship has at its command the largest mobilized armed forces on the face of the earth.

When all these factors are taken into consideration, it should become clearly evident to the most wishful thinker that any complacency or indifference on our part is a plain invitation to disaster.

While we must avoid being led astray by the Communist-manufactured crises, we

cannot afford to become panicky. To the contrary, we gain renewed confi-

dence in the fact that our Armed Forces and those of over 40 allied nations stand shoulder to shoulder with us in defense of the free world.

Yes; a mighty host is arrayed on the side of right and justice.

On this Memorial Day it is incumbent upon us to guard against the Communist campaign to confuse, delude, and conquer.

For example, they make the baseless charge that the people of the United States are warmongers, while the Soviets yearn only for peace.

In short, we Americans are charged as being the main cause for continuing the cold war.

In this connection it is imperative that we as a nation zealously guard against any shortcomings of memory which might obscure the truth.

The record of the cold war speaks for itself and should be kept before us at all

Frankly, no amount of Kremlin doubletalk can change the fact that every aggressive move in the cold war has been made by the Communists themselves.

Did they not, for example, incite civil war in Greece in 1946?

Did they not blockade West Berlin in 1948? Were they not responsible for the invasion of South Korea in 1950 and the 3 bloody years of war which cost the lives of more than 33,600 Americans?

Did they not brutally crush with overwhelming military might the patriots of

East Germany in 1953?

Did they not likewise crush Hungarian patriots in 1956 when they bravely arose against tyranny and sought to reestablish free government of their own choice?

Did they not bombard the Quemoys in

I ask in all sincerity, who persistently and maliciously meddles in Asia, Africa, and the Middle East in attempts to stir up unrest and to undermine young and struggling nationalist governments?

And I ask you, who makes a practice of wantonly shooting down unarmed aircraft in peacetime holding the citizens of other countries for ransom and violating every principle of fair dealing among nations?

Finally, everyone knows who at the present time is bluntly threatening open warfare in order to force the guardian troops out of West Berlin.

Ladies and gentlemen, in every case the accusing finger of truth points directly at Soviet Russia and Red China.

By way of contrast, the record of the United States reveals that it has never coerced nor attempted to dominate any peaceful nation but has respected the integrity of all and sought to uphold it.

We as a Nation have sat down with the Communists at numerous conferences in a patient effort to explore all avenues leading to a just and lasting peace.
We have sought to reunify divided Ger-

many, Korea, and Viet Nam on honorable

We have taken the lead in the "atoms for peace" program and advocated a comprehensive system for the limitation and control of armaments together with any effective system of international military inspection which would prevent surprise attack by any aggressor.

All in all, our efforts with the other free nations of the world to negotiate with the Communists have been fruitless.

In addition, we have learned the bitter lesson that the Kremlin regime lives by the frankly stated philosophy that "promises are like pie crusts-made to be broken."

We have always regarded international agreements as sacred.

The Communists on the contrary regard such covenants as mere scraps of paper which may be thrown into the wastebasket when it suits their pleasure or convenience.

In trying to achieve the goal of universal peace, it is a significant and deplorable fact that Russia as a government lacks national integrity as evidenced by her long record of broken promises.

Ladies and gentlemen, on this Memorial Day of 1959 the need for national unity must rise above partisan politics-for every American must stand shoulder to shoulder-to let the Red rulers and the World know we are standing firmly against Communist agression that has plagued the world for 40 years.

By standing united not only can we resist Communist designs for world conquest, but we will uphold the cherished principles of liberty and freedom for which millions of Americans made the supreme sacrifice.

We dare not do less.

Although we earnestly seek peace, we cannot afford to merely dream about it—not in this day of coldly calculated unfriendliness.

We should keep in mind that those who died fighting for our country in time of war were realists.

They faced facts bravely when they plunged into battle—and certainly they would not have us falter today.

So it is in tribute to them that we translate our debt of gratitude into terms of practical thinking and positive action.

On Memorial Day we fulfill three obligations:

We strengthen our appreciation of the men whose sacrifices made secure, in large measure, the freedoms we have inherited.

We pay tribute to those men through our spoken word, our floral tokens, and our prayers.

Furthermore, we reaffirm our courage and determination to carry on our defense of the cause for which they fought.

Finally, we declare again that our honored dead shall never be forgotten.

dead shall never be forgotten.

And we quote these words from Theodore
O'Hara's "Bivouac of the Dead":

Nor shall your story be forgot,
While fame her record keeps,
Or honor points the hallowed spot
Where valor proudly sleeps.

## Utah Is Ready for Visit USA Year

EXTENSION OF REMARKS

## HON. DAVID S. KING

OF TTAIL

IN THE HOUSE OF REPRESENTATIVES

Monday, June 1, 1959

Mr. KING of Utah. Mr. Speaker, Visit USA Year, proclaimed by the President, will bring thousands, perhaps millions, of visitors to our land, and I am confident many of them will remember Utah as the highlight of their American

Utah is well prepared to receive them. Utah abounds naturally in two ingredients which makes memorable vacations—scenic splendor and friendly hospitality.

I wish that every other State might be as well prepared. Visit USA Year will give Americans a marvelous opportunity to show the world what American life is truly like, and to win innumerable new friends for that way of life.

Utah is always well prepared for visitors. The Utah Tourist and Publicity Council and its very able director, D. James (Jim) Cannon, see to it that the welcome mat always is out. The National Association of Travel Organizations has praised the council for a superb folder which it has prepared for worldwide dissemination to advertise Utah in Visit USA Year.

The beauty of the folder, entitled "Utah: Land of Color and Contrast," is its simplicity. It gives a charming picture of the scenic contrasts of the State, which embraces 2 of America's 29 national parks, 8 of its 83 national monuments, and some of its most historic trails and sites. I commend to your attention the written content of the folder, which is as follows:

West of the Continental Divide of the Rocky Mountains, where the still-rugged peaks of the Wasatch and the Uintas and the LaSals begin giving way to the Great Basin, there lies the State of Utah. Midway between Canada and Mexico, a land of scenic contrasts almost beyond belief, Utah is the center of scenic America and one of the most remarkable areas of natural and manmade wonders in all the world.

Within its borders, Utah holds areas of rich historical interest. At Promontory near Great Salt Lake the golden spike joined the Nation by rail in 1869. Pony express stations (one of them now a Utah State park) mark the trail from St. Joseph to Sacramento. Four imposing Mormon temples, monuments to a great faith, are located at Logan, Salt Lake City, Manti, and St. George. So, too, are the Mormon Trail, the route of Father Escalante and the Old Spanish Trail.

Utah is many things at once. In natural resources it is a mountain of copper deepdug at Bingham, natural gas and oil in expanding production, mining and fabricating of iron and steel, coal and minerals, and virgin timber and water contributing to a stable economy and holding rich future promise.

Within this bustling atmosphere, however, the greatest interest of the visitor is in Utah's endless variety of vacation pleasure. More than 90 percent of the State's area still is untamed, a natural playground offering adventure and excitement, sports and exploration in endless skein. Utah is the land of scenic contrasts, and this, probably, is its greatest claim on the millions of visitors who annually seek pleasure within its borders.

Utah's kaleidoscope is the green-carpeted Heber and Cache Valleys, the remote solitude of Pine Valley. It is the coral pink sands of southern Utah. It is the tall and snow-painted Uinta Mountains with their 2,000 lakes, the rushing white water of upper Provo River. It is the heart-stopping thrill of shooting the rapids of the Colorado River's Cataract Canyon or the sheer joy of water skiing on Bear Lake.

In the spring the flowering desert is alive with a surpassing loveliness. In summer the cool canyons and mountain country draw the city dweller. In autumn a wild profusion of color chokes the canyons, paints the hills. And, with winter, Utah's world-famous powder snow in the rearby mountains provides incomparable sport out-of-doors while, below in the nearby cities, cultural activity attracts its own society of devotees.

Utah's wealth of natural wonders is reflected in the high percentage of national parks and monuments established here. Of the Nation's 29 national parks, Utah has 2: Zion and Bryce. Of the 83 national monuments, 8 are located here: Dinosaur, Hovenweep, Timpanogos Cave, Capitol Reef, Arches, Rainbow Bridge, Cedar Breaks, and Natural Bridges. The newly created Utah State Park Commission also has several State parks in operation and has blueprinted development of other natural and historical wonders and recreational opportunities.

In this land of contrast, you can visit the world's largest bird refuge, float on Great Salt Lake's buoyant waters. Elk will eat

from your hand on the winter range of Hardware Ranch, or you can ski in some of the world's greatest snow and ski terrain at Alta, Brighton, Snow Basin, Beaver Mountain, Timp Haven, and 15 more areas.

Utah is a land of moods and moments of soul-stirring thrills, the crimson fire of a Utah sunset, the majestic silence of Monument Valley, the unbelieveable vista from Dead Horse Point, the weird shapes and upflung architecture of arches and natural bridges, the total grandeur of Zion, the riot of color and shape of Bryce and Cedar Breaks.

Utah is the breath-taking surprise of emerald lakes bursting into view at a highway's turn, the sudden charm of a country town framed in green countryside and nestled against gentle-sloping hills, the flash of a smile from the naturally hospitable Utah people, the quiet peace of long twilight.

All this—and more—is Utah. For Utah truly is unique. It is one of America's last great frontiers, much of it unmapped and little-known. It is small wonder that this exciting country, almost 2 centuries ago explored by Father Eacalante, followed by a trade route of the Old Spanish Trall, later a haven for the trappers and mountain men and finally settled by the Mormon people, should become a 20th century wonder.

Here, too, is a proud and distinct culture, an industrious and well-educated people, presenting drama and pageant and music in settings that distinguish them from performances anywhere else in the world. There is room to dream and to learn, an unhurried hospitality eager to share this land of contrasts with you.

## Events Compel Enactment of Strong Civil Rights Laws

EXTENSION OF REMARKS

## HON. NEWELL A. GEORGE

OF KANSAS

IN THE HOUSE OF REPRESENTATIVES

Monday, June 1, 1959

Mr. GEORGE. Mr. Speaker, the failure of swift justice to bring the perpetrators of the recent Mississippi lynchmurder before the bar of justice constitutes a mockery upon the criminal judicial system of our country.

When punishment is certain in those cases where the facts of guilt are evident, an even greater crime is committed by those who contemptuously disregard, the processes of law and orderly judicial procedure by resorting to mob action. What a terrible example and what powerful ammunition is thrust into the hands of our enemies at a time in our history when America is fighting to maintain freedom and democracy throughout the world.

Must this heinous crime be repeated and repeated again, Mr. Speaker, before the Congress enacts a law that would bring to justice those who violate the civil rights of others? The demand for such legislation is developing into a crescendo throughout the country and most certainly this command by straight-thinking Americans should be met.

To complain of the manner of treatment of the accused in this case is not to lessen the magnitude of the crime with

which he was charged. Punishment in cases of rape and murder should be swift and direct, but should be accomplished according to law and within the

guarantees of our Constitution.

Mr. Speaker, I know of no Member of this House, especially among my friends from the Southern States, who does not abhor and detest the occurrence of such an abominable crime as the one committed by the mob at Poplarville, Miss. I believe the sentiment of all Americans is clearly set forth in an editorial published on Thursday morning, May 28, 1959, in the Wichita Eagle, an outstanding newspaper of the Middle West.

Under leave to extend my remarks, Mr. Speaker, I ask that this editorial from the Wichita, Kans., paper, of which R. M. (Dick) Long is the managing editor, be printed in the Congressional RECORD so that it may be read by each

Member of this body:

#### ANTILYNCH LAW NEEDED

When the FBI announced it was pulling out of the investigation of the lynching murder of Mack Parker at Poplarville, Miss., the thought occurred immediately that this underlined the need for a Federal antilynching law. The same idea occurred to Members of Congress.

Various Northern Senators have declared the need for such a Federal law; Senator Jacob Javirs of New York introduced amendments to pending civil rights bills providing

for penalties against lynching.

The last serious attempt made to pass an antilynching bill was in 1956. At that time, the bill was ditched in the House in favor of the compromise civil rights measure (which passed the House and then passed the Senate in a changed form in 1957); in the Senate the antilynching bill was quietly pigeonholed.

These bills would have provided severe penalties against anyone for harming or attempting to harm persons because of race. color, religon, or national origin. If a death occurred, the penalties would go up to 20

years in prison and \$10,000 fine.

Southerners have fought this bitterly. time after time. It as difficult to understand why, knowing that most responsible persons in the South shun violence; perhaps they feel it reflects unfairly on the kind of justice in Southern communities.

Certainly there would seem to be a need for Federal authorities to take cases like the Parker lynching out of local and State hands when an obvious crime has been committed and State officials are either unable or unwilling to solve it.

#### National Maritime Day

EXTENSION OF REMARKS OF

## HON. SAMUEL N. FRIEDEL

OF MARYLAND

IN THE HOUSE OF REPRESENTATIVES

Monday, June 1, 1959

Mr. FRIEDEL. Mr. Speaker, in connection with the national observance of Maritime Day, May 22, a representative meeting of citizens interested in the maritime industry was held in Baltimore and presided over by my able colleague, Congressman EDWARD A. GAR-MATZ. As one of the best-informed Members of the Congress on merchant marine affairs, the distinguished Congressmany portrayed the situation in the United States in connection with our fourth arm of defense and reviewed developments which have come under his observation as one of the ranking members of the House Merchant Marine and Fisheries Committee.

His role was also to present Mr. Ralph E. Casey, president, American Merchant Marine Institute, which he did in an eloquent manner. Mr. Casey, as one of the foremost spokesmen in the country on maritime matters, delivered a most interesting and challenging address. Its relevance to present-day issues is so apparent and its importance so related to the interest of the general public that I believe it should have the widest reading, and I therefore include it in the Appendix of the Congressional Record:

AN ADDRESS BY RALPH E. CASEY, PRESIDENT, AMERICAN MERCHANT MARINE INSTITUTE, BEFORE THE PROPELLOR CLUB OF BALTIMORE, NATIONAL MARITIME DAY, MAY 22, 1959

It is a great pleasure to be here in Baltimore on this National Maritime Day. Traditionally, this is the day when praise the merchant shipping situation, analyze how we stand and where we're going. Well, no one who has even the slightest connection with this business needs to be told that shipping generally is in a slump. Incidentally, someone asked the other day if shipping men were always discouraged and always complaining. The fact is that shipping people are never happycontented, yes-but never happy.

Well, even to be contented, I would have to be able to tell you here today that our Government really appreciates the value of a strong American merchant marine and is prepared to spend the money necessary to build and maintain it; that our friends abroad really appreciate what our industry accomplished in two world wars and in Korea, and are helping us attain a fleet large enough to protect the free world: that labor is really cooperating with management and the Government to accomplish the principles of the Merchant Marine Act of 1936; and, lastly, that the various segments of the industry have finally learned to live and work together in unity to solve the serious problems which constantly arise. Unfortunately, however, none of this is true.

Now each of these areas could well be the subject of separate speeches. Today, however, I will discuss particularly some of the current problems on the governmental level. In January, the President called for a new study of American transportation policy, including that pertaining to the merchant marine. This was unfortunate for a number of reasons: In the first place, everyone of these studies creates uncertainties in the minds of ship operators as to the permanence of Government standards, Government procedures, and fundamental Government attitudes. Doubt on any of these points could effectively wreck the industry-Government cooperation which is indispensable to the survival of American-flag shipping under 20th century conditions.

The Merchant Marine Act of 1936 is, by its nature, a long-range measure. For almost a quarter of a century it has furnished a goal and a set of norms on which the shipping industry has relied in good faith. Our current fleet replacement program is also long-range in nature, and can be successfully executed only under depend-able long-range legislation. The most vital element, that of financing, could be so affected as to defeat the entire program if Government commitments take on even a shade of uncertainty.

These are merely the chief governmental studies. In addition, there have been numerous industry projects along the same lines. With all these microscopic analyses, you will see why I question that another survey at this time could tell us anything new.

Another reason which makes this pro-posal regrettable is the effect it has had Nothing could have been better calculated to encourage the maritime powers of Europe in their campaign against our merchant marine. The President's language must have suggested to them that somewhere in Washington there existed doubt about our maritime policies. Certainly, I know from conversations with many Europeans in London last month that the request for talks with the State Department to be held in Washington from June 8-12 is definitely linked to the President's call for a new study of merchant marine policy.

Make no mistake about this. We are faced with the heaviest frontal attack yet made from abroad on our maritime subsidy laws and our cargo preference legislation. The British, Norwegians, Dutch, and others have made it clear that they regard these mer-chant marine supports as discriminatory

and unjust.

Fundamentally, the European position is that our merchant marine should be reduced to a bare minimum to be maintained solely for the defense of our own shores. believe our foreign commerce should be carried in their ships. The argument for this is that shipping for many of their countries contributes a great part of the national income, whereas here it does not; that if we really want to strengthen and develop the economies of Western Europe, we must help their merchant marines; that unless they carry the freight, they can't earn the dollars to buy our goods; and that, for defense, we should rely on the NATO pool of shipping rather than our own ships.

Since the European governments will soon be presenting their case in Washington to the State Department, an agency that in the past has not been wholly unsympathetic to this kind of argument, it is of crucial importance that this new attack on the American merchant marine be met head on.

While the real objective will be to undermine all our principal methods of merchant marine support, certain narrower targets will be highlighted as a starting point. With regard to subsidy, one target will be the speed of our new ships and particularly of the Mariner type. It will be alleged that the Government has subsidized speeds, in the interest of defense, which cannot be justified commercially, and has sold these ships to private owners at knocked-down prices computed without regard to the defense element. The consequence, they will claim, is that these ships are unfair competition in the various world trades where the Europeans are operating with much slower vessels.

The real facts are these: Every steamship company that purchased Mariner-type vessels either paid for the use of the design speed or made an agreement with the Government to pay for the defense speed if it subsequently were used for private opera-tion. Fourteen Mariners have been sold on the basis of a 20-knot speed and the companies acquiring them paid for the speed in the purchase price. Fifteen Mariners were sold on the basis of their being used as 18knot vessels, and in the contracts of sale. there was a provision authorizing the Maritime Administration to examine the logs and other pertinent documents of the vessel, every 3 months, in order to ascertain whether any of the defense feature speeds were being used. Where it has been used. it has been paid for.

Under the new replacement agreements of the subsidized lines, a speed clause also have been included whenever there has been a national defense allowance for speed in excess of commercial requirements. And in some cases the Government has prevailed, in fact, insisted on higher speed vessels without additional allowance than the company itself thought was necessary for the trade. Here, again, the company is, in effect, making an out-of-pocket contribution for defense purposes. It is also pertinent to comment that the tanker trade-in-and-build program, which was authorized by Congress about 5 years ago, resulted in a dismal failure largely because the Government asked private tankship operators to build ships

with speeds in excess of commercial needs.

Another issue which will be raised by the Europeans is of extreme importance to this great shipbuilding area which includes Sparrows Point, Curtis Bay, and Key High-way. It will be claimed that the selection of Japan as the foreign shipbuilding center for use in determining a proper construction differential subsidy is unfair. You may re-call that in recent years the Federal Mari-time Board has used West Germany, the Netherlands, and Great Britain, but in the case of recent ships has selected Japan.

This decision is in line with the basic philosophy of this section of the Merchant Marine Act. The construction subsidy is designed to offset the difference in cost between building a ship in this country, and what it would cost to build it abroad. In arriving at this differential, the Board takes the cost data from that foreign country where the operator would be most likely to go to have his ship built—price and other factors considered—if he were free to build in a foreign yard—which, of course, he is not. It just so happens that at the time of the Board's determination Japan was the place where at least these particular ships would be built. The truth is, however, that as of this moment there is little, if any, difference in building costs between Japan and several centers in Western Europe.

Foreign antipathy to our 50-50 law is well known and of long standing. Nothing new has developed except that with the slump in business all over the world our Government ald shipments look even more enticing to European shipowners. While they will attack the legislation, generally, again they will concentrate their immediate efforts on certain cargoes which they claim are really commercial in nature as distinguished from

Government sponsored.

Specifically, the cargoes to be questioned will be those financed with Export-Import Bank loans. Strangely enough, these shipments are not directly covered by the cargo preference law which requires 50 percent to go in American-flag bottoms, but by a 1934 law which could be administered as a 100 percent American shipping requirement.

Need I remind our foreign friends that

business is bad everywhere. And American shipping intends to fight for every ton of cargo that is rightfully ours. We do not intend to concede one inch of ground to this attempt to hack away at the cargo preference principle. This policy was found fair and equitable at a time when it was much less essential to the American merchant marine than it is today. The Europeans have called our 50-50 law fiag discrimination. I suggest it more appropriately should be called flag salvation.

The third phase of our shipping policy to be discussed in the June talks involves those ships, American-owned, which are operated under the flags of Panama, Liberia, and Honduras. On this issue the Western European shipowers, governments and unions are lined up on the same side as the American unions but for different reasons, The position of our unions, however, is clear and understandable; they want these ships under the American-flag manned by American seamen. In other words, they want the jobs. However, the European govern-ments, speaking primarily for European shipowners, do not want jobs for American seamen, nor for that matter jobs for their own seamen. They want these ships off the seas altogether. Of that, I am convinced. But since there is this fundamental difference in objectives, it will be interesting to see what develops in Washington.

In a speech delivered before the International Chamber of Commerce recently in Washington, I questioned the propriety of talks between foreign governments and our State Department concerning matters of policy which are crystalized in the form of laws on our statute books. I was subsequently happy to see somewhat the same position taken by the chairman of the two congressional committees on maritime matters. In a letter signed by both Senator Magnuson and Congressman Bonner the State Department was cautioned against any commitments on these matters. You may be sure we will be watching every move down there in the next few weeks. The industry is fighting mad. We do not intend to let the Europeans dictate our national maritime policy any more than they would want or permit us to dictate theirs.

## Public Cools to U.S. Highway Program Because of Taxes

EXTENSION OF REMARKS OF

## HON. ALBERT H. BOSCH

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES Wednesday, May 6, 1959

Mr. BOSCH. Mr. Speaker, I have been very much disturbed by the proposal to again raise the Federal tax on gasoline to finance the U.S. highway program. I sincerely believe that there should be a reappraisal of the entire project with a new basis worked out for Federal and State participation. It appears that there are a great number of people in the United States who agree that this should be done.

Under leave to extend my remarks, I include an article from the Long Island Sunday Press of May 31, 1959:

THE TRENDEX NEWS POLL: PUBLIC COOLS TO U.S. HIGHWAY PROGRAM BECAUSE OF TAXES

(By Jack Boyle, director, Trendex News Poll) Considerably less than half of the public wants the Federal highway program to go ahead as planned.

Resistance to taxes is the major reason, Suspicion of irregularities and graft are a minor reason.

These facts emerged from this week's Trendex News Poll, in which a scientifically selected cross section of the public was asked for opinions on the highway program.

Trendex interviewers recalled that President Eisenhower had asked for an increase in Federal gasoline taxes to help pay for the program, and that a majority of the toll thruways had not been doing as well as expected. Then they asked, "What is your at-titude toward the Federal highway program? Do you think it should go ahead as planned? Be reexamined? Be curtailed or elimi-

Here are the answers, by regions and in percentages:

A Charles Indian	East	Mid- west	South	Far West	
Go shead	30. 2	37.7	42. 9	53. 1	38. 4
Reexamine	39. 6	36.2	29. 2	26. 5	35. 9
Curtail or eliminate	17. 4	14.5	13. 8	6. 1	14. 1
No opinion	12. 8	11.6	4. 1	14. 3	11. 6

The figures show exactly half of the people think the program should be reexamined, curtailed or eliminated. They also show that the program is favored most in the Far West and South, where distances between large cities are often greater than in the Midwest and East.

Trendex interviewers asked each person polled to give the reason for his answer, and it was among these explanations that the opposition to further taxes was expressed. This opposition appeared in all sections of the country and in all categories of answers. Many of those who said they wanted the program to go on as planned said, "But higher taxes weren't part of the plan."

Here is a sampling of the responses:

A midwestern decorator; "The Federal

A midwestern decorator; "The Federal Government shouldn't have stuck its nose into State affairs. Taxes are exorbitant now." A retired easterner: "What good are new highways if you can't afford the gas to run your car on them?" A western tele-phone worker: "We are already spending so much we are being taxed to death. Let them cut down some of the bureaus."

A western service station operator: "It \ should be reexamined, but not by the pcople who approved it in the first place. were assured that the last increase in gas taxes would be sufficient. Now they are coming back for more taxes." An eastern janitor: "There is too much graft in highway construction." A western barber: "Some contracts are questionable in my opinion." An eastern motorman: "In New York City we pay 6 cents to the State, 3 cents to the Federal Government and 1 cent to the city on every gallon."

A midwestern salesman: "Our highways are 20 years behind the times." A retired westerner: "Present highways are in a deplorable state." The owner of a southern supply company: "They have already taxed up to pay for them; now let them give us the highways." An eastern investigator: "The Government must go ahead simply because the States aren't doing their part."

An eastern insurance agent: "I don't like traffic jams." An eastern body shop fore-man: "In case of war we need adequate roads to evacuate people from target cities."

#### Propaganda at its Worst

EXTENSION OF REMARKS

## HON. H. R. GROSS

OF IOWA

IN THE HOUSE OF REPRESENTATIVES Thursday, May 28, 1959

Mr. GROSS. Mr. Speaker, last week, when the general Government matters appropriation bill for 1960 was before the House of Representatives, I offered an amendment to cut \$400,000 from President Eisenhower's so-called emergency fund.

I offered this amendment in the interests of economy and because the subcommittee hearings on this subject clearly revealed that \$400,000 of the \$1

million so-called emergency fund voted to the President for the current fiscal year had in fact been used, not for an emergency, but to underwrite the activities of what is known as the Draper committee-an aggression assembled by the White House for the purpose of propagandizing Congress and the American people to the alleged need for additional billions of dollars annually for the foreign handout program.

In other words, and contrary to the plain intent of Congress, at least \$400,000 of taxpayer money was and is being used by the executive branch of Government to flim-flam the public.

If further proof is needed I herewith present a statement by Brig. Gen. Bonner Fellers, U.S. Army, retired, and now the National Director of the Citizens Foreign Aid Committee. Appearing before the Senate Foreign Relations Committee on May 22, 1959, General Fellers has this to say:

Mr. Chairman and members of the committee, for the privilege of appearing be-fore you, I am grateful. My name is Bonner Fellers. I am a brigadier general, U.S. Army, retired. I have been graduated from various Army schools beginning with West Point and including the War College. For 2 years, 1940-42, I was the U.S. observer of combat with the British forces in the desert campaigns in Libya. From 1943-46, I was on the staff of General of the Army Douglas MacArthur. My duties included Chief of Joint Planning and Military Secre-

tary to General MacArthur. On Tuesday, April 28, 1959, Gen. William H. Draper, Jr., Chairman of the President's Citizens Panel on Foreign Aid, addressed the U.S. Chamber of Commerce breakfast, He attacked the entire program advocated by the Citizens Foreign Aid Committee. attack, in general, paralleled the criticism previously published by the executive branch of the Government for the use of the House Committee on Foreign Affairs, copies of which doubtless have been issued to the Senate Foreign Relations Committee. Consequently, as head of the President's Citizens Panel, which has already cost American taxpayers nearly half a million dollars, General Draper, possibly to a con-siderable degree, reflects administration

The General's opening sentences were:

"You here this morning, and all of the American people, are being asked by the committee headed by your other speaker (Mr. Walter Harnischfeger) to 'take our first stand in the last ditch.'

"You are being asked to embrace the fortress-America concept—the idea that America's safety lies in isolation—lies in a hurrled retreat back into our own hemisphere."

General Draper's remarks completely misrepresent and distort the views of the Citizens Foreign Aid Committee. We advocate neither isolation nor retreat.

In this air/space/nuclear age, a decisionif war is forced upon us-will not be reached on the ground. It will come from the sky. Five or fifty or no American divisions in West Germany would make little difference, militarily, These divisions, or lack of them, could not influence the decision being reached in the sky.

The United States is the only power willing and able to challenge the Soviet Union. Consequently, it is likely and it is militarily sound, that if the Reds strike, they will bypass Europe and strike directly against the United States. Should this event occur, the United States and our allies could be defended more effectively if our forces and resources are not deployed, as at

present, in indefensible positions around the world.

With intercontinental bombers and intercontinental ballistic missiles in the hands of both the Soviets and the United States. the teriffic striking power of these two colossi is only hours and minutes apart. Thus, today, it is foolish to speak of isolation for the United States. Modern technology has made isolation impossible.

General Draper continued to misrepre-

sent our stand:
"They (our Committee) would cold-bloodedly let our friends and allies fend for themselves against the Communist menace.

This assumption is wholly unjustified.

Our Committee has indicated no inclination to repudiate treaties, or to abandon our allies, or to permit the Soviets to take over free world. We stand uncompromisingly for free world defense with principal reliance on the air/space/nuclear striking power which our Strategic Air Command (SAC) now possesses. SAC is the only military force in the world which the Kremlin fears. With such totally destructive striking power at our disposal, the Soviet Union is unlikely to start a war. But if war came today, we could win quickly and decisively.

The majority of the planes in SAC, however, are wearing out; our intercontinental ballistic missile program lags. Our Committee stands for immediate action to keep SAC overwhelmingly superior to the Red strategic striking power.

Today, the United States alone is providing the entire free world with the protection of the greatest known war deterrent-SAC, and so long as SAC is superior to Red strategic power, our deterrent is likely to continue effective.

In the light of our airspace nuclear force, the withdrawal of our troops from West Germany, which General Draper deplores. in no sense represents an abandonment of our allies.

SAC costs the United States billions of dollars annually. If SAC maintains our airspace nuclear defense of the free world, and this it does, surely our allies in Western Europe, whose economy is now flourishing, should replace the five American divisions now stationed in West Germany.

To continue quoting General Draper:

"\* \* \* the Kremlin, which has demanded that our forces leave Taiwan and the western Pacific and that our troops be pulled out of Berlin, would warmly endorse every recommendation made by this other committee,"

Again, General Draper is in gross error. Our first report, "Foreign Ald and You, contains in its second recommendation, countries which we are morally obligated to defend and which are directly threatened with Red aggression, military assistance—for the time being-should be continued, but on a realistic basis." Our committeee's presentation before the House Committee on Foreign Affairs, April 20, used this recommendation and cited Formosa and Korea as examples. Therefore, the Kremlin would not warmly endorse every recommendation which our committee has made. And the Kremlin most certainly would not endorse the strengthening of SAC to which our committee is dedicated.

General Draper put these questions:

"Do we-the richest and most powerful Nation in the world-help to defend the free world and thus defend ourselves?

"Or do we default our responsibility \* default the leadership we have inherited \* \* \* abandon the rest of the world to Communist conquest and in effect accept worldwide defeat?"

Our Committee endorses the only weapons system—SAC—capable of defending the Free World. The surface defense which General Draper proceeds to outline could result in our defeat and in the abandonment of our

allies. He traces "the free world's far flung defense perimeter \* \* \* manned jointly by allied and United States forces"

"It extends through the NATO area in Central Europe, through the Middle East and around the rim of Asia to the Northern Pacific \* \* \*

"It is a very wide area important to our security; the nations of this area cannot defend it without our help.

"Together we do have the strength \* \* \* strong and well-armed forces hold these perimeter positions, then in the event of local aggression our friends and allies and we ourselves gain time for reinforcement."

General Draper and the advocates of surface defense would station American troops about the Soviet perimeter knowing that they and those of our allies, will never equal in strength the forces of the Soviet Union and her allies. They ignore the lessons handed down from Napoleon and Hitler who fell victims of Russia's unlimited manpower, her intolerable winters and her enormous distances. In the light of our present superior strategic striking power, what a false picture of America's true capabilities General Draper has painted! He speaks of strong and well armed forces

about the Soviet perimeter. Whose forces?
The 21 divisions in NATO? Allied forces in Iraq? Iran? Afghanistan? Pakistan? India? Burma? Thailand? How ridiculous is it to pretend that "strong and well armed forces" exist or will exist to "hold these perimeter positions." Every one of these countries has trouble maintaining internal order and con-

trol. It would be useless for us to garrison these far flung perimeters even if we could afford the billions of dollars and the millions of men that would be required.

Yet General Draper and others high in the defense picture, believe the issues can be resolved by ground combat along the Soviet frontier. He calls this nonexistent perimeter force "a major deterrent to aggression and an opportunity through negotiation to avoid war itself".

What is a deterrent? To be effective, a deterrent must incite fear-sufficient fear to prevent the enemy from striking. There is nothing in our imaginary perimeter force to incite fear in anyone. Thus, surface forces about the Soviet perimeter cannot constitute a deterrent or offer "an opportunity through negotiation to avoid war itself."

The real deterrent, SAC, is commanded from Omaha. Today It has the capability of destroying the Soviet war potential in a matter of hours. This is the deterrent which we—at all costs—must keep stronger than the Red strategic forces.

The real barrier to Free World security lies in the fact that many of our Government planners are unwilling to face these new facts. They are unwilling to concentrate our strength and genius to meet the new airspace nuclear threat which now wings over heads like a vulture.

SAC neutralizes this Red threat and insures the safety of the free world. It is not our Committee, rather it is General Draper and those for whom he speaks who-through faulty strategy-are abandoning our allies. And not once in his address did General Draper mention SAC-the true keeper of the peace today.

"Belize"

EXTENSION OF REMARKS

## . HON. ALFRED E. SANTANGELO

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES Monday, June 1, 1959

Mr. SANTANGELO. Mr. Speaker, in my congressional district, which is probably the most heterogeneous district in the United States, there are many people with tremendous ability and knowledge of not only our Government but of our Latin-American neighbors. One of my constituents, also a good friend, is Attorney William J. Bianchi, former State senator of the 22d senatorial district of New York, which district I formerly represented.

Mr. Bianchi is an expert in Latin-American affairs, a linguist, and a dedicated public servant. During his spare time, he has concerned himself with problems affecting the Spanish-speaking peoples, and particularly of the problems

confronting Latin-America.

I commend the editor and the director of the Las Americas Publishing Co., Mr. Gaetano Massa, who has recognized the talent of Mr. Bianchi and published his monograph dealing with the territory of Belize on British Honduras. The book "Belize" deals with the dispute between Guatemala and Great Britain over the territory of Belize. This dispute had its origin in the 17th century and still obtains. It cries out for solution and this book sheds light upon the problems and gives rise to a possible solution.

Even preliminary inquiry will reveal that the voluminous publications about the subject have, unfortunately, been

ex-parte in nature.

For practical purposes the monograph may be divided into three parts.

The first part deals with the White Book, published by the Guatemalan Ministry of Foreign Affairs, which is the sum and substance of Guatemala's case

against Great Britain.

The second part of the monograph is dedicated to tracing ownership, right, and title in relation to the territory of Belize or British Honduras. It includes, therefore, treaties, statutes, excerpts from government archives, diplomatic letters, and documents of state, as well as citations by Guatemala of cases and authorities on international law that bear materially on the question. It correlates their existence and relation to Great Britain's occupancy and ownership of the disputed territory.

The third portion of the monograph evaluates the reasoning employed and the claims raised against Great Britain as well as their validity in the light of logic, law, and historical fact. Both the reasoning and the claims are subjected to study, question, application to the facts, and analysis. In some cases, the premises on which the reasoning or claims are based are even conceded for purposes of discussion. Such a procedure insures thoroughness of treatment. Thus, where some fault is found with the immediate bases upon which a claim rests, all further consideration of the topic is not ipso facto terminated by reason of such fault. The correctness of the grounds upon which the claim or reasoning rests is assumed for the purpose of determining, in such an event, the soundness of the final or ultimate conclusion.

Mention is also made of documents like the Clayton Bulwer and Dallas Clarendon pacts. They have not been dealt with separately. Together with other treaties, excerpts from parliamen-

tary debates, diplomatic communications, and letters of state that do not bear directly on the question, they have been accorded space and attention commensurate only with their importance as related but collateral matters.

Finally, the monograph calls attention to the extra legal methods proposed for settling the problem unilaterally and indicates several contingencies which may resolve the protracted dispute.

I am proud that a constituent of mine took the trouble to make a needed, thorough and impartial study of the entire matter.

#### Poison in Your Water-No. 92

EXTENSION OF REMARKS

## HON. JOHN D. DINGELL

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Monday, June 1, 1959

Mr. DINGELL. Mr. Speaker, pursuant to permission granted I am inserting into the Appendix of the Record an article appearing in the Salt Lake City. Utah, Deseret News-Telegram of December 19, 1958, entitled "Utah Hepatitis Cases Triple 1957 Figure":

UTAH HEPATITIS CASES TRIPLE 1957 FIGURE

This year in Utah there have been nearly three times as many cases of infectious hepatitis, a liver inflammation formerly known as yellow jaundice, as in 1957.

Through December 12 there were 177 cases reported this year compared with 66 for the same period of last year. In all of 1957 there were 74 cases.

However, there have been four deaths this year compared with six in 1957.

"Thus far," says Dr. George W. Soffe, interim State health director, "we haven't been able to attribute the increase to anything definite."

"It is one of those viruses that hit here and there. Last year there was quite a bit of it in San Juan County. This year it has been in all areas of the State."

Dr. A. A. Jenkins, director of disease control for the Utah State Health Department, points out that infectious hepatitis usually is not fatal although it does cause prolonged disability.

#### FEVER, NAUSEA

Symptoms include fever, lack of appetite, nausea, and vomiting, high abdominal pain, fatigue, and headache. Stools are clay-colored and bile appears in the urine. A yellowing of the skin and whites of the eyes is the most easily recognizable symptom but it does not occur in all cases.

Dr. Jenkins emphasizes that recognition of the disease and medical care are "awfully important." Gamma globulin is highly effective in preventing its spread to other members of the same family.

#### THROUGH MOUTH

The infectious hepatitis virus enters the body through the mouth. It is believed to be spread through water that is sewage-contained though epidemics have been related to contaminated food and milk. There also is a possibility it is spread through person to person contact.

Personal cleanliness and community sanitation help control spread of the disease,

Dr. Jenkins says.

A related disease, serum hepatitis, is spread through transfusion of whole blood from infected persons. No cases of this disease were reported this year to the State.

## Growing Menace of Mail Order Obscenity

EXTENSION OF REMARKS

## HON. EDWARD H. REES

OF KANSAS

IN THE HOUSE OF REPRESENTATIVES

Monday, May 25, 1959

Mr. REES of Kansas. Mr. Speaker, under unanimous consent heretofore granted, I am including a copy of a release by the Postmaster General calling attention to the ever growing menace of mail order obscenity. General Summerfield urges the immediate need of concerted action in an attempt to deal with this serious problem:

GROWING MENACE OF MAIL ORDER OBSCENITY—
SMUT MERCHANTS CONCENTRATE ON CHILDREN—FILTH SALES TOP HALF-BILLION
DOLLARS—POSTMASTER GENERAL DECLARES
WAR ON RACKET—NATION'S PARENTS ARE
KEY TO EFFECTIVE ACTION

WHAT IS THE MAIL ORDER OBSCENITY RACKET?

The vile racket that traffics in obscenity and pornography by mail has now reached a sales level estimated at more than a half billion dollars a year.

Relying on the historic sanctity of firstclass mail in the United States, and liberal court interpretations of what constitutes obscenity, peddlers of filth can reach into vir-

tually every home in America.

This is a matter of growing concern especially to American parents because teenagers and even grade school boys and girls are becoming the principal targets of these racketeers.

The Post Office Department, which is responsible for enforcing the laws against transmitting indecent literature and film through the mail, estimates that merchants of filth will double the scope of their already extensive operations over the next 4 years unless parents and the decent-minded public join in a determined campaign to stamp out this racket.

Postmaster General Arthur E. Summerfield has emphasized that the absolute privacy of the mail is a basic American right, and that the Post Office Department cannot, and will not, violate this right, even when it has strong evidence that the mall is being used for unlawful purposes.

The Post Office Department, therefore,

The Post Office Department, therefore, must rely on the complaints of an alert citizenry—of people into whose homes solicitation material is sent—to take action against the purveyeors of mail order obscen-

## ANTIQUATED LAWS AND LIBERAL COURT INTERPRETATIONS A HANDICAP

Until August of 1958, however, an additional handicap was placed on the Post Office Department. Obscenity laws had shackled the Government by permitting it to prosecute only at the point of origin of the mail. This meant that court actions were taken primarily in New York and Los Angeles, where interpretations of what is obscene or pornographic are much different from those in the average American community.

In recent years, the Post Office Department had urged Congress to amend the law so that prosecutions could take place where the obscene material was received, where the actual damage was being done, and where citizens would have an opportunity to express their standards of morality and decency. This amendment was enacted, and signed into law by President Eisenhower, in August of 1958.

Taking advantage of the new legislation, the Post Office Department during the past year has completed approximately 14,000 separate investigations, almost two-thirds of them based on complaints from American parents whose children received lewd solicitations for sales of obscene materials through the mails.

NO YOUNGSTER IS SAFE FROM SOLICITATION BY MERCHANTS OF FILTH

A child need not have indicated any interest in this trash to receive it in the mail. The racketeers openly solicit every young person whose name they can obtain, whether through the purchase of mailing lists, study of school classbooks, or through the use of fake business fronts. Postmaster General Summerfield says the Post Office Department has thousands of letters from indignant parents whose children received unsolicited obscene material soon after answering an advertisement to purchase some innocent item such as a baseball bat or a toy automobile, or whose names were obtained because they had joined a youth club or social group.

In a recent raid by the postal inspectors in New York City on just one dealer in pornography, 17 tons of highly obscene printed and filmed materials were confiscated, as well as mailing lists containing the names of thousands of high school graduates culled

out of high-school yearbooks.

The Post Office Department estimates that between 700,000 and a million children in American homes will receive unsolicited obscene and pornographic literature through the mails this year.

POSTMASTER GENERAL URGES CONCERTED ACTION

In testifying before Congress recently, Postmaster General Summerfield said:

"Ruthless mail-order merchants in filth are violating the homes of the Nation in definance of the National Government. They are callously dumping into the hands of our children, through our mailboxes at home, unordered lewd material, as well as samples soliciting the sale of even more objectionable pictures, slides, films, and related filth. Unquestionably, these large, defiant barons of obscenity are contributing to the alarming increase in juvenile delinquency, as many noted authorities have publicly observed on repeated occasion."

Repeatedly, in the investigations of armed robbery, extortion, embezzlement, and for-gery, authorities find that those guilty of the crimes were early collectors of obscene

pictures and films.

Authorities also point out that sex crim-, ·inals and sex murderers almost always prove to have a long record of addiction to pornographic and sadistic material. Children who are never exposed to this material, it is noted, may nevertheless be victims of sex criminals who have been exposed to it.

In a speech in Washington in May 1959 Postmaster General Summerfield said the Post Office has diligently tried to keep the

mails clear of indecent materials.

In the fiscal year of 1958, he stated, investigations conducted by postal inspectors caused the arrest of 293 persons. The Post Office General Counsel issued 92 orders barring use of the mails to dealers in pornography. The arrests in 1958 were 45 percent above the previous year and—Mr. Summer-field predicted—will increase substantially again this year.

With the weapon of the new legislation in hand, he declared, the Post Office is greatly

intensifying its campaign.
"We are, in effect," he said, "declaring war on these purveyors of filth, big and little, high and low."

We are launching an intense and unrelenting effort to stop this monstrous assault on the Nation's children in every way possible.

"And we are confident that, with adequate public and legislative support, this job can be done."

FOURFOLD PROGRAM OF COOPERATION

To achieve this cooperation, the fourfold Post Office program is:

1. Drawing maximum public attention to the menace of this racket;

2. Urging parents to help apprehend the mailers of filth to their children;

3. Helping mobilize community support behind adequate law enforcement of local ordinances or State laws when these purveyors are apprehended and brought to court;

4. Rallying public opinion behind new and stiffer fegislation on obscenity.

PARENTS OF AMERICA ARE KEY TO EFFECTIVE ACTION AGAINST THIS RACKET

Parents into whose homes obscene material is mailed are urged to take these two simple steps:

1. Save all materials received, including the envelope and all enclosures; and

2. Report the matter immediately to the local postmaster, and turn the materials over to him, either in person or by mail.

Postal inspectors stand ready to take action when evidence is received anywhere that the laws applying to the mailing of pornographic material have been violated.

The Congress has shown deep concern over this problem, and special committees are currently giving it serious and purposeful

study.

In increasing numbers of communities throughout the country, parents, various organizations, civic groups, newspaper publishers and others are working together in determined efforts to help meet the racketeers' challenge.

By supporting and aiding the Post Office, and backing up Members of Congress and local officials who are fighting to stamp out this evil, they can look to the real success that is vital to the Nation's moral fiber and future welfare.

## Come to Oregon's Party

EXTENSION OF REMARKS

## HON. CHARLES O. PORTER

OF OREGON

IN THE HOUSE OF REPRESENTATIVES Wednesday, May 20, 1959

Mr. PORTER. Mr. Speaker, my friend and colleague, Senator RICHARD L. NEU-BERGER, has written a fine article entitled "Oregon's Big Birthday Party" in the Eagle for June 1959. No one knows better than DICK NEUBERGER how to sing the praises of Oregon.

I hope many of our colleagues and readers of the RECORD will have an opportunity to come to air conditioned Oregon to join in the celebration of its 100th birthday. Under a previous consent I include the text of Senator Neu-BERGER'S article:

> OREGON'S BIG BIRTHDAY PARTY (By RICHARD L. NEUBERGER)

(The author: U.S. Senator from Oregon, and a veteran member of Portland Aerie, F.O.E.)

In that distant year when Hawaii cele-brates the first centennial of its statehood, its Pacific Coast sister State of Oregon will be 200 years old. This is another way of emphasizing that 1959 marks the 100th anniversary of Oregon's admission to the Union. While activities celebrating congressional passage of Hawaiian statehood are dying

down in the colorful islands, Oregonians are just beginning a festive year full of activities commemorating their admission day, which occurred on the eve of the Civil War.

Vacations on this last great frontier are always exciting, but Oregon, in 1959, is put-ting forth a special effort to make the tourist season a memorable one. Portland will be the site of a huge exposition and international trade fair from June 10 to September 17 and all Eagle Aeries in the State are participating in the promotion of this event. More than 50 foreign nations will submit exhibits.

Furthermore, such traditional Oregon events as the Portland Rose Festival, Ashland Shakespearean Festival, and Pendleton Round-Up will be far more elaborate and extensive in tribute to the fact that Oregon has achieved the ripe old age of 100. Many gala events fight for attention on the crowded centennial calendar.

The Eagle who brings his family to Portland, the State's largest city, in June for the opening of the exposition and trade fair will be caught up in the Mardi Gras-like excitement of the famed Rose Festival. The favorite flower of the city of roses will be the featured attraction-from the new Zoological Gardens, where a miniature streamlined train winds through wooded hills around one of the West's most elaborate garden areas, to the grand floral parade downtown.

On the nearby white slopes of Mount Hood, the flower will be saluted in the Golden Rose ski tournament. Headquarters for this extraordinary climax to a spring celebration is Timberline Lodge. The only inn of its type in the Nation's 153 national forests, Timberline Lodge offers a host of attractions for the winter sports fan or casual visitor, including many examples of native Northwest Indian art, a new steam-heated swimming pool, and, of course, the spectacular ski runs

July brings a wealth of rodeos and ploneer celebrations as rich as Oregon's western heritage. A variation on the cowboy theme is spotlighted in the Independence Day weekend Albany Timber Carnival. Daring birlers, who compete to stay on twirling logs in a milipond, and high climbers vie for world titles in skills of the industry that has been the bulwark of the Oregon economy.

The world-famous Shakespearean Festival draws crowds to the pleasant southern Oregon community of Ashland through August and early September as renowned performers display the Bard's works in authentic costumes and settings. Amid the rich wheat and cattle country of the broad eastern part of the State, real live cowboys and Indians delight small fry and oldsters alike in mid-September with one of the greatest of wild west events, the Pendleton Roundup.

The list of festivals and celebrations, many of them sponsored or actively promoted by Aeries, runs to great length. Most of the events share a common debt, however. They are made extraordinary by, or even based solely upon, some aspect of Oregon's natural beauty. No matter how long the list of manmade spectacles, the State's awesome scenery goes the planning committee one better every time.

Numerous regattas and fishing festivals glorify the contribution of the sea to Oregon's picturesque coastal towns. No single celebration, however, can fittingly honor the magnificent 300 miles that a veteran Life photographer once told me was the most beautiful and spectacular of all the world's great seacoasts that he had ever photographed. Fortunately for Oregonians and visitors, every beach on the coast was re-served for public use by the farsighted action of Gov. Oswald West back in 1909.

It was at the northern end of this coast, near Astoria where the great and powerful Columbia River greets the sea, that Lewis and Clark spent the winter of 1805-06 after becoming the first Americans to venture overland to Oregon. The National Park Service is reconstructing their campsite as part of Fort Clatson National Monument.

Farther down this unparalleled coast lie the vast Oregon dunes, towering billows of sand sheltering tiny clear lakes. I have recently introduced in Congress legislation to have the dunes area further preserved and developed for the public by giving national seashore status to them, and to the famed nearby Sea Lion Caves, where as many as 2,500 of the slippery animals frolic in underground caverns.

Spectacular as the coastline is, it must share honors with the mountain ranges that dominate virtually every Oregon horizon. The Skyline Trail threads along the crest of the Cascade Mountains, which soar as a north-to-south centerpiece. In northeastern Oregon, the Wallowas climb ruggedly from a high plateau, forming America's own little Switzerland around alpine meadows and lakes

Widely traveled Justice William O. Douglas of the U.S. Supreme Court insists that the Wallowas are more beautiful than European topography to which they are so often compared

The timbered slopes of Oregon's awesome mountain ranges drink deeply of western slope rains. As a result, many foaming streams rush to the ocean, daring anglers to capture the wealth of steelhead and trout their waters shelter. On the lower stretches of one such stream, southwestern Oregon's beautiful Rogue River, the entire family willenjoy a pleasant day's diversion, traveling from Gold Beach upriver to the little town of Agness and back in the boat that delivers mail.

Father will want to return to cast a fly in the swift Rogue's white water or troll for the big fellows on the bar at the Pacific end of the stream. All along the coast, mothers and children join fathers in surf fishing, a popular year-round, license-free sport.

In every corner of Oregon's abundant scenery—besides the smooth sands of a Pacific Beach, near a high mountain lake or next to a rushing trout stream—the visitor will find room for tents, trailers, or picnics in one of 164 well-kept State parks, more than any other State. Pleasant tourist cabins and motels are set conveniently alongside the good roads and highways.

The challenges of the great outdoors have made Oregon one of the last frontiers of America. But the pioneer spirit of the settlers who brought their belongings painfully to the new country by Conestoga wagon or Cape Horn steamer was not limited only to carving new livelihoods out of verdent forests and rich rangeland. The State has been a cradle for murderous political reform movements and leaders.

The progressive ideas in Government long advocated by the Fraternal Order of Eagles find a hospitable reception in Oregon. Our State has been a leader in Government reform. Oregon was the first to introduce the initiative and referendum, by which petitions may be used to place any proposal on the ballot for a plebiscite by the people. This machinery has been used to assure Oregon a high standard of old-age welfare and an educational system which ranks high in the Nation. Oregon, for example, was the first State to enact legislation providing maximum hours and minimum wages for women and children in industry.

Furthermore, Oregon led all other states in bringing about the direct election of U.S. Senators. Until Oregon elected a Senator by Popular vote, Members of the Senate were appointed by the State legislature. This often encouraged corrupt deals and supremacy of special interests. After Oregon had made the breakthrough, the 17th amend-

ment to the Federal Constitution soon followed, making mandatory the election of all Senators at the ballot box. The famed Senator William E. Borah, of Idaho, said Oregon's people were entitled to the credit for this major reform.

In Oregon the Eagles have found a fertile soil for all their principal causes. The state maintains high standards of health, and Aeries have collected generously of funds for the Damon Runyon Memorial Institute for Cancer Research. Only recently the National Institutes of Health made one of the largest grants in many years—\$1,297,000 to be matched by a similar sum from the State—for a medical research center at the University of Oregon Medical School.

Jobs After 40 is also a popular undertaking in Oregon. Because the State has been a mecca for many people nearing normal retirement age, Oregon has a population sympathetic to legislation which would protect people from discrimination in employment due to their later years. The Eagles have accumulated the signatures of thousands of Oregon citizens who support the Jobs After 40 program. As a Senator from Oregon and sponsor of this proposal, I feel that I enjoy the support of most of my constituents in advancing the undertaking.

Many improved highways, supplemented by the State's own fine network of roads, will make it easier for the visitor to travel in Oregon, but the majestic scenery, which dominates all else, will continue to make it difficult for him to leave the State. Eagles who visit Oregon in this centennial year will find that out, and some of the State's Aeries may find their membership rolls fattened with transfer member when the year is over. Eagles, like other visitors, are only human.

Remarks by the Honorable Fred Seaton, Secretary of the Interior, at the Lincoln Sesquicentennial Stamp Dedication, Washington, D.C., May 30, 1959

EXTENSION OF REMARKS

#### HON. FRED SCHWENGEL

OF IDAHO

IN THE HOUSE OF REPRESENTATIVES

Monday, June 1, 1959

Mr. SCHWENGEL. Mr. Speaker, among the notables attending the dedication of the 4-cent Lincoln sesquicentennial stamp at the Lincoln Memorial last Saturday, was our esteemed Secretary of the Interior, the Honorable Pred Seaton.

His remarks should become a part of the historical record of this sesquicentennial year. Under unanimous consent I submit them for the Appendix of the RECORD:

REMARKS BY FRED A. SEATON, SECRETARY OF THE INTERIOR, AT THE LINCOLN SESQUICEN-TENNIAL STAMP DEDICATION, WASHINGTON, D.C., MAY 30, 1959

With pleasure I join in welcoming all of you to this noble Lincoln shrine, dedicated 37 years ago today and now administered by the Department of the Interior.

It seems to me to be althogether fitting and proper that we pay tribute on Memorial Day to the man who delivered on the terrible battlefield at Gettysburg the classic tribute to our honored dead.

It is equally fitting that we honor him by issuing a commemorative stamp.

Though the historic fact is largely overlooked, in May of the year 1833, a new post-

master was commissioned at New Salem, Ill., the first office Abraham Lincoln ever held under the Federal Government.

According to Lincoln's friend and biographer, William Herndon, Postmaster Lincoln received a salary "proportionate to the amount of business done. Whether Lincoln solicited the appointment himself, or whether it was given him without the asking," Herndon continues, "I do not know; but certain it is his administration gave general satisfaction. The mail arrived once a week, and we can imagine the extent of time and labor required to distribute it, when it is known that he carried the office around in his hat. Mr. Lincoln used to tell me that when he had a call to go to the country to survey a piece of land, he placed inside his hat all the letters belonging to people in the neighborhood and distributed them along the way."

It would probably surprise a man of such humility to know of the many memorials to his honor, including this shrine, already visited by more than 54 million men, women, and children—nearly twice the U.S. population of 1860; the monuments in stone sculptured by Saint-Gaudens, Gutzon Borglum, Daniel Chester French, and Thomas Balf; the poems and prose writings of Emerson, Whitman, and Sandburg, the cities, towns, counties, colleges, and universities which proudly bear the name of Lincoln.

This commemorative stamp which we dedicate today lengthens that imposing list. Through it, 120 million times over, Americans will be reminded of him and of compassion and greatness of heart and mind and belief in all the people—characteristics which were his in abundance.

## Wandering Jew Wanders No More

EXTENSION OF REMARKS

## HON. BARRATT O'HARA

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Monday, June 1, 1959

Mr. O'HARA of Illinois. Mr. Speaker, I am extending my remarks to include a poem by A. J. Glickman, a distinguished constituent who has been a contributor for years to the Sentinel and active in civic, communal, and philanthropic endeavors in Chicago. He is a member of the board of directors of the Covenant Club and the Chicago Loop Synagogue, and a member of many organizations. His poem originally was published in the Sentinel on April 23, 1959, and has been widely read and praised. It follows:

THE NEW PASSOVER (By A. J. Glickson)

The wandering Jew, a wanderer has ceased to be

No more wandering, he has again crossed the Red Sea.

"Proclaim liberty throughout the land, And to all the inhabitants thereof," my

friend
On our Liberty Bell is indelibly inscribed,
From Leviticus, number 10, forever immortalized.

Israel's liberty bell too rings with Joyous

sound For at last the wandering Jew has again

found,
A home where he never again will be subject to

The whims and wiles of barbaric despoilers

Pillaged, plundered, and murdered at their will

While cowering civilization kept cravenly still,

Where was so called humanity's helping hand,

Where were they that preach "good will to all men"

Why were their understanding hearts, eyes, and ears.

Closed to the bloodshed, the moans and tears?

How will statesmen to their Maker explain, Their selfish cowardice and expedient dis-

Perhaps some day civilization may truly reign,

And humaneness will be more than a masquerading name.

But until that day comes as we hope it to be The Jew, his own humanitarian and salvation must be.

So to live that the world shall with open hearts see

Israel's pealing Liberty bell proclaiming justifiably;

The Jew too now lives in freedom's full dig-

nity.
The wandering Jew, a wanderer has ceased to be

Israel is where he shall ever welcome be The Jew has again, "passed-over" inhu-manity's "Red Sea."

## Miss Nancy James, Winner in Christian Endeavor Citizenship Contest

EXTENSION OF REMARKS

## HON. RALPH J. SCOTT

OF NORTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES Monday, June 1, 1959

Mr. SCOTT. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I am pleased to recognize Miss Nancy James of Winston-Salem, N.C., who was awarded first place in division B in the 1959 Christian Endeavor's citizenship contest sponsored by the International Society of Christian Endeavor, on the basis of her letter to Mr. Reed Sarratt, executive editor of the Winston-Salem Journal. The letter is as follows:

Mr. Reed Sarratt, Executive Editor Winston-Salem Journal, Winston-Salem, N.C.

DEAR MR. SARRATT: That our Nation was founded on Christian principles is evidenced in the Constitution of the United States. Today many of these principles are not practiced by a considerable precentage of Americans. In almost every newpaper we read or radio or television broadcast we hear, there is proof of this fact. We read and hear about narcotics addiction, evils caused by liquor, and the many other vices rampant in our Nation. Many people are so worried about nuclear weapons and war that they let go by unnoticed the things that could tear down our country from the inside as well as destruction from an outside source could. As long as citizens are full of fear they cannot think intelligently enough to recognize the destruction these vices might cause. And they certainly cannot make any progress toward remedying the situation unless they are aware that it exists. I believe certain people turn to narcotics, liquor, and the like because they are afraid. They shrink from making the countless decisions that must be made in the 20th century and,

therefore, seek means of withdrawing from reality. In a culture emphasizing competi-tion they fear failure in business, in love, in grades, and in any task they might un-dertake. The way to overcome this fear is to rely on the peace of God. The true peace of God comes only to those who are completely yielded to His will for their lives, and this yielding comes through obedience to God's word and a daily consecration to God through prayer.

Youth may be prone to think they can be of no help toward liquidating the vices of their particular community. It is true that the elder persons probably have more chances to do something about the vices that threaten our Nation, but there are many ways in which young people can help. One way is by winning others to Christ, either by testifying of the work He has done in their lives or by their very actions. By showing their love for Christ in their home and community, they can help to win other persons to Christ and, thereby, build a better community. Having been won to Christ, these people will be better citizens of the community and, thus, of the Nation. Every young person should feel the responsibility of doing his best work in his studies and in the extracurricular activities of his school. Often non-Christian students feel that a person cannot be outstanding, have friends, and be a true Christian also. Thus, friends, and be a true Christian also. it behooves Christian youth to prove the inaccuracy of this idea.

Neither one adult nor one person can build a better community, but many persons, relying on God's grace and peace, can do the job. It is certainly true that we must be concerned about outside forces that seek to destroy us; but let us not, in the meantime, forget the domestic evils.

Sincerely yours.

NANCY JAMES.

#### Brotherhood Is Good Business

EXTENSION OF REMARKS

#### HON. BARRATT O'HARA

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES Thursday, May 21, 1959

Mr. O'HARA of Illinois. Mr. Speaker, Walker Sandbach is a fabulous personality in a community of fabulous personalities who, in the district that I have the honor to represent in this body, are joined in a dedicated crusade for a living brotherhood. I think it is nationally recognized that the peoples of all races, faiths, and stations in our district are doing the best job of happy integration in the United States. We are proud of the pattern in brotherhood that our district is giving the Nation. My colleagues may recall my remarks on this subject on other occasions. I have spoken of our block clubs where men and women of various races, faiths, and stations meet as members of a block family to discuss together what is best for all the members of that black family. I have spoken of our schools and of how successfully and advantageously the pupils have worked together with n consciousness of differences in race, faith, or station. This is what we call living in brotherhood.

Walker Sandbach is general manager of the Hyde Park Cooperative Society Supermarket. He has made this cooperative supermarket an outstanding insti-

tution. This year he was given an award in recognition of his distinguished contribution in the field of human relations.

Each year the National Conference of Christians and Jews presents the James M. Yard Brotherhood Awards to persons in metropolitan Chicago who have done an outstanding job in the field of human relations, working at their neighborhood level. The purpose of the award is to honor and to bring widespread recognition to men and women who work to bring understanding and cooperation among people of various national origins, races, creeds, and economic standing.

The James M. Yard Brotherhood Awards were made this year at a ceremony held in the Chicago City Council Chamber, and Mr. Sandbach made the response on behalf of the award recipients. I am extending my remarks to include Mr. Sandbach's address on that occasion, as follows:

BROTHERHOOD IS GOOD BUSINESS (By Walker Sandbach)

It seems a little strange to me to be accepting an award for doing what comes naturally. In my case, and I imagine many of the awardees here today could say the same, the award probably belongs to my parents, and to my teachers. There are others who practice brotherhood when they, because of their background and upbring-ing, don't believe in it and don't like it. I have friends in that position, and I have great admiration for them. They do it out of a sense of fairness and, sometimes, economic necessity. They have practiced brotherhood while deep within they have wished desperately that the tremendous changes in our social and economic life had never occurred.

It is interesting to contemplate on how we arrive at the beliefs and principles which guide our lives. A short time ago my father, who is a Methodist minister in Iowa, was visiting me. I was telling him, with some pride, of this award. He replied, "I'm not surprised that you are getting an award for practising brotherhood, because that is what we taught you. What I don't understand is why you accepted our teachings on brotherhood but completely ignored our training and examples in politics."

Fortunately, brotherhood knows no party lines. If you were to poll this group of awardees I am sure you would find both major parties well represented.

I personally am very much encouraged by the progress that has been made in Chicago toward the ideal of having jobs available on the basis of ability without regard to race, or color, or creed. Of course, we still have a long way to go.

When I hired my first Negro salesgirl in 1947 I was told by some of my business friends that I was committing economic suicide. The first day this girl went on duty, I began to wonder if they were right. I manage a co-op supermarket. This girl was hired as a checker. At one time during that first morning two other girls who were also on duty were doing stock work on the floor, leaving the Negro girl as the only checker. A customer refused to be checked out by her and called for the manager. When I arrived she said, "I'm going to sit down until you bring on a white girl. I'm not going to have a colored girl handling my food." I don't need to tell you how ridiculous was her stand.

Her calling this girl colored reminds me of a recent suggestion by Harry Golden, editor of the Carolina Israelite. He says. "Since so many people insist on referring to Negroes as colored, we should start referring to whites as colorless." Then newspapers could run stories of today's event as

follows: "The James M. Yard Brotherhood Award ceremonies, held today at city hall, was attended by a large group of colored and colorless people."

To return to the woman who was on a sitdown strike, I told her she was welcome to sit. I even got a box for her to sit on. She had to wait an hour until the other girls were

needed at the checkouts.

You know, that was the only trouble we ever had. And yet, how close I came at that point to backing down on my decision to have an integrated staff because I had half accepted the propaganda that disaster would strike if we tried to serve the public with an integrated staff. I was told by some that I would lose most of my employees and half of my customers.

Actually, we lost no employees and our business has prospered. It has prospered, as it turned out, in part just because we have had a policy of beieng willing to hire people of many different races, creeds, and nationality backgrounds. We now include in our staff of 50 American Negroes, American Japanese, an American Puerto Rican, and an American Indian. In the matter of creeds we have had Buddhists, Jews, Catholics, and Prostestants, as well as some young men who thought they were agnostics or atheists. One of our advertising slogans has been that the co-op is a United Nations in miniature.

Recently a newspaper reporter asked me if our open hiring policy would work in places other than Hyde Park, which is a community of people of many races and creeds. My answer was that we had copied from Gimbel's in New York the idea of using the United Nations approach in advertising our integrated staff. It has worked. In addition, I was able to say that today our open hiring policy is not an uncommon one in Chicago and more and more retail businesses, particularly in the field of food distribution, have open hiring policies.

Another interesting incident comes to mind that I want to tell you about. Several years after we hired our first Negro, I had an application for a checker's job from a colorless girl with a strong southern accent. She had just arrived in Chicago and was an experienced checker. I told her I would like to hire her, but I wanted her to know that we had several Negro girls on the staff and she would have to work closely with them, eat in the same employees' lunchroom, and treat them courteously. Her reply was, "We don't do it that way where I come from, but if you say that is the way it has to be, I'll give it a try." It wasn't a month before I saw her and a Negro girl returning from a coffee break, arm in arm.

Unfortunately, there are still businesses in my community, and in yours, that practice discrimination in hiring, mainly because they are afraid to make the break. I understand this because I was afraid, too.

However, the time is so late on the clock of human relations that we need to encourage these businessmen to make a start toward integrating their staffs.

Our best hope for the future, in my opinton, is in the schools. If we could get really integrated schools much of the prejudice that still exists would, in a generation, disappear,

My children go to a school that is 90 percent Negro. Because it is a good, well-run school, they are happy even in this minority situation. But it would be so much better for all concerned in this school if the percentage of white children could get to be 25 percent of the school population. We are working hard to achieve that goal.

In addition to three children born to us, my wife and I have an adopted American Japanese daughter named Jill. One day, when she was 7 years old, Jill came home from school and said: "Daddy, I wish I could be Negro at school and white at home." She

hasn't been able to achieve that, but last month her fifth grade classmates did elect her for an Outstanding Student Award, so apparently she has solved her problems in other ways. I seriously doubt if we do our children any favors by making their lives too easy, considering the world which they will be inheriting from us.

In closing, I want to express my appreciation, and I'm sure, that of the other awardees, not just for the award, but also for the continuing work of the National Conference of Christians and Jews in furthering true brotherhood. I want to urge that we all keep everlastingly at the job of making the practice of brotherhood a reality in our homes, in our schools, in our businesses, and in our communities.

## Pilot Watershed Program in West Virginia

EXTENSION OF REMARKS

## HON. CLEVELAND M. BAILEY

OF WEST VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Monday, June 1, 1959

Mr. BAILEY. Mr. Speaker, under leave to extend my remarks in the Appendix of the Record, I want to remind my colleagues that earlier today I spoke briefly outlining the signal honor that has come to the State of West Virginia, and particularly my congressional district, when the National Watershed Conference met in Washington earlier this week and awarded a plaque in recognition of the Salem Fork of Tenmile Creek Upstream Development Project near Salem, W. Va.

This Salem project happens to be the first project of its kind authorized under legislation passed by the Congress some years ago through the sponsorship of former Congressman Hope of Kansas, who was then chairman of the House Committee on Agriculture.

There is widespread interest throughout the Nation of communities which desire to organize and complete a projetc similar to this pilot project for which these West Virginia people have been honored.

In accepting the plaque from the National Watershed Conference, Mr. Herschel D. Wade, president of the Salem local development association, went into detail as to the activities of his community, group and other associated groups in making this the Nation's outstanding flood control, water conservation, and reforestation project.

Mr. Wade's remarks follow, and I am sure they will be quite informative and worthwhile to the Members of Congress whose constituents might desire to initiate a program of this kind:

A PILOT WATERSHED PROGRAM FOR SALEM FORK OF TENMILE CREEK, SALEM, W. VA.

You have paid tribute to my community by inviting me to appear on this program. You have given special recognition to my town, Salem, W. Va., next to your town, the best town in the world.

You have asked me to represent a group of people, full of community spirit, trying with their best efforts to build a better community, State, and Nation.

By your invitation, you have honored me personally, and for this, I am deeply grate-

ful. I have accepted your invitation as a challenge to bring to you, out of our experiences, some constructive ideas in proper land use and water management.

My grassroots story of the Salem Fork watershed project can best be presented by a brief description of the area, a general survey of the problems involved, an outline of the proposed solution, and a summary of the results and benefits.

The watershed is a drainage area of 8.32 square miles, or 5.325 acres. It is situated in the western part of Harrison County, W. Va. The Salem Fork of Tenmile Creek rises on the western edge of the area and flows in an easterly direction through the city of Salem, into Tenmile Creek which, in turn, flows into the West Fork River, a tributary of the Monongahela River. Within the city limits of Salem, there are three principal tributaries of Tenmile: Jacobs Run and Dog Run from the north, and Patterson Fork from the south.

The topograph is that of a rolling hill country, with moderate width valleys. The slopes are steep and long, characterized by bench and break profiles. Elevations vary from 1.030 to 1,500 feet. Approximately 800 acres of the watershed lie within the corporate limits of the city. Salem Fork flows through the city a distance of approximately 3 miles, paralleled by U.S. Route 50 and the Baltimore & Ohio Rallroad; all crammed into a narrow valley, less than one-quarter of a mile wide.

Records reveal that as early as 1896, damaging floods occurred within the Salem Fork Watershed. The most destructive one came in 1950, when there was 5½ feet of water in the main street of Salem. The estimated damage was \$233,000. From 1946 to 1951, the accumulated estimated flood damage was more than half a million dollars.

Prior to 1954, the city of Salem, having a population of 2,578, relied on deep wells for its municipal water supply. Quite often, because of drought, it became necessary to curtall industrial water consumption in order that at least a minimum amount of water would be available for domestic use and fire protection.

The early settlers cleared the land of timber, and planted and cultivated food and grain crops. This type of farming depleted the humus and greatly accelerated erosion damages. The fertile topsoil was washed into the streams. Rainfall, instead of being retained, ran off rapidly, causing floods in the valleys. In recent years, it is estimamated that the loss of topsoil was approximately 23,000 tons annually. Sheet erosion accounted for about 97 percent of this loss on 2,200 acres, or approximately 40 percent of the area.

Sedimentation often destroyed the hay crop. Channel capacities, especially in the main streams, had been reduced more than two-thirds at some locations; resulting in more frequent floods and increased flooding, followed by the ever-mounting expense of a cleanup job.

Therefore, proper land use and water management presented a four-fold problem floods, drought, erosion, and sedimentation. Floods, being the most spectacular and

Floods, being the most spectacular and causing the most damage, became our first concern.

As early as 1935, our city council sponsored a WPA project of stream dredging. Then, following our most destructive flood in 1950, some \$14,000 was raised by public subscription to pay for a second stream dredging project, completed in 1951. Solicitation was done by volunteers, representing civic clubs and other community organizations.

A committee, appointed by our city council,

A committee, appointed by our city council, with myself as chairman, made detailed surveys of flood damage and investigated various ways and means of possible flood control. In spite of these early attempts, which brought only temporary and partial relief, our flood problem still remained.

Our opportunity for outside help came when the 78th Congress, within the framework of Public Law 46, made an appropriation for a national pilot watershed program. Salem was a logical choice for one of these pilot projects for two reasons: first, an informal organization with a help yourself approach was already at work; second, the West Fork Soil Conservation District had voluntarily offered assistance.

Then came the task of selling the project to our people, both farmers and townfolk. This was largely a process of education, which was accomplished by newspaper publicity, town meetings, and group discussions. Films depicting the value of soil conservation were shown before civic clubs and other local organizations. Soil Conservation Service personnel cooperated fully in this phase of the project, as in all others. The chief ingredients of success on the local level were public spirit, homegrown diplomacy, a lot of hard work, and plain old-fashioned nattence.

When public sentiment for the project jelled, the next step was organization, which led to the formation of the Upper Tenmile Watershed Association, Inc. This association and the West Fork Soil Conservation District became cosponsors of the pilot project.

A combination plan of land treatment practices and other structural measures was cooperatively developed in 1954, with flood prevention the prime objective. Seven flood control dams, about 2 miles of upstream channel improvement, and a municipal reservoir were included.

All of the flood retarding dams have been built. Each has a storage pool through which normal stream flow passes, with an additional basin capacity to hold back dangerous runoff. Each dam can trap a 3-inch runoff. More than one-third of the entire watershed is thus protected, with a total storage capacity of 382 acre-feet. One of the structures is on Salem Fork, one on Patterson Fork, and five on Jacobs Run.

In conjunction with the plan for flood prevention, the Salem City Council issued \$250,000 worth of 30-year revenue bonds. With funds from this source, a municipal reservoir of 60 million gallons capacity was constructed in 1954, with flood control features incorporated.

There are 115 farms within the watershed. Some 80 percent of the owners are Soil Conservation District cooperators. They have established such conservation practices as: 241 acres of contour farming, planted more than half a million trees on 500 acres, some 400 acres of pasture have been improved, and 670 acres of woodland have been protected. In fact, an all-around stabilization program has been developed with the assistance of Soil Conservation Service personnel. When all measures have become completely operative, 4,500 acres will become like a sponge, and slow the rate of runoff to a minimum.

Many obstacles were encountered and overcome by the association in the securing of easements. More than 2 miles of oil and gas pipelines, ranging in size from 1 to 3 inches, were removed and relaid. This work required the greatest cash outlay by the association, despite the fact that much of the work was donated by the utility companies involved. Farm buildings were moved from dam sites. In one instance, a new barn had to be built, at a cost of \$2,500. Water was piped from one dam to a dairy barn. At another site, a small tract of land was purchased and deeded to the principal owner of the site, in order that the entire structure will be on his property. When easements for the final dam could not be secured, the association arranged for the sale of the two farms involved and the subsequent purchase by new owners, agreeable to the proposed construction.

County, district, and State officials of the road commission were approached by the officers of our association, and persuaded to spend some \$16,000 in relocating and rebuilding roads on three dam sites. When electric power lines and telephone lines obstructed the way, they were relocated by the companies involved, at no cost to the association. One gas utility furnished a buildozer and operator, free of charge, to build a farm pond for a landowner, to justify his granting an easement.

The Forest Service and West Virginia Conservation Commission provided technical assistance to the farmers in forest management. The Agricultural Conservation Program assisted with the installation of conservation measures, on a cost-sharing basis, in keeping with policies in effect in Harrison County. The West Virginia Conservation Commission cooperated in accelerating tree, shrub, and hedgerow planting, according to their established policies. The West Virginia Agricultural Extension Service cooperated by intensifying its educational and informational program to the farmers in the Watershed. Members of the Members of the Future Farmer of America clubs in the area assisted in planting many thousands of trees. The County Court of Harrison County helped to defray some of the expenses.

Proper engineering and good construction of the dams spell low maintenance cost. This maintenance responsibility has been assumed by the city. Six of the dams were limed and fertilized last year.

A detailed evaluation program has been instituted, with the U.S. Weather Bureau, Soil Conservation Service, and the U.S. Geological Survey cooperating. This will, we believe, be extended indefinitely.

The total cost of the project was \$703,000, proportioned as follows: Federal, \$366,000; city of Salem. \$250,000; our association, \$87,000. The ratio of benefits to cost is 1.5 to 1.

Our only source of cash income was from membership dues of \$1 annually for individuals, and from \$5 to \$25 for commercial firms. Even 4-H clubs paid \$10. As a project, the Business and Professional Women's Club conducted annual membership campaigns. From this source, some \$3,000 was collected.

We have \$674.62 in our treasury and our accounts payable amount to less than \$100. While not sufficient rain has fallen within a short period of time, to give an actual test of the installation since its completion, we can point with pride to many benefits already accrued:

1. The opportunity for recreation has been increased—all the dams have been stocked with fish,

- 2. There exists a sense of security from floods.
- 3. More food and cover have been made available for wildlife.
- 4. Property values have been stabilized.
- 5. Returns to the farmer from woodlands and fields have been increased.
- Unfavorable publicity to Salem by the press, radio, and TV, because of destructive floods, has been eliminated.
- 7. We have helped others. Our project has been the guinea pig for many communities to visit and study.
- Sedimentation in stream channels has been reduced an estimated 73 percent.
- 9. Floodwater damage will be reduced by an estimated 50 percent.
- 10. Estimated benefits amount to \$18,416 annually.
- 11. We have an abundance of good city water.
- 12. We have a community achievement that cannot be evaluated by the dollar mark.

The project is complete. In retrospect, we ask ourselves how we did it. There is but one answer—complete community cooperation.

## The Navy's William B. Franke

EXTENSION OF REMARKS

## HON. CRAIG HOSMER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, June 1, 1959

Mr. HOSMER. Mr. Speaker, nowhere in the world, and no time in history has seapower been as effectively and efficiently mobilized as in the modern U.S. Navy. Ours is a naval force of which Americans are justly proud and for which our free world allies are justly grateful. One of the nontangible reasons for the excellence of our Navy is the tradition that every officer and every man be thoroughly trained for and competent to handle the job next above him. This tradition also extends at the secretarial level and is exemplified at its finest with the promotion of the Honorable William B. Franke from Under Secretary to Secretary of the Navy. Secretary Franke's background, ability, and competence were recently summed up in an article in Navy magazine as follows:

THE 46TH SECRETARY DESIGNATE, W. B. FRANKE

A man with a working knowledge of Government, business, and the Navy. Such a man will be sworn as successor to Secretary of the Navy Thomas S. Gates, Jr., in early June. He is the present Under Secretary William Birrell Franke.

He entered the naval service as Assistant Secretary of the Navy (financial management) in October 1954, and fleeted up to the position of Under Secretary on April 17, 1957. He brought with him a broad background of business nad financial experience that began even before his graduation from Pace Institute of Accountancy in New York City. As a student he was employed by Cluett, Peabody & Co. Later he joined Naramore, Niles & Co. of Rochester, where he stayed until he his own accounting firm of Franke, Hannon & Withey of New York.

Secretary Franke has given freely of his talents to the Government. From 1948 to 1951, he was a member of the U.S. Army Controllers Civilian Panel, and served as Special Assistant to the Secretary of Defense in 1951-52. He was awarded the Patriotic Civilian Commendation by the Army, and the Distinguished Service Award by the Department of Defense.

Considered something of a financial prodigy in his early years, he has become an acknowledged leader in the accounting profession and a recognized authority on Government financial management. He has ably directed the formulation of the Navy's budget and supervised the complicated accounting associated with its execution. He is a father confessor for those who are in danger of overexpending their allocated funds and a valued advisor on the subject of budget control.

The combination of Secretary Gates and Under Secretary Franke has frequently been referred to as unbeatable. Though quite unalike in many ways, they have many common interests, see eye to eye on most important Navy matters, and complement each other effectively. Both are completely familiar with, and interested in, the organiza-

tion and operation of Government, the Navy, and the business world. Both are dynamic proponents of scapower as a vital element of national security. The transition with change of command should be a smooth one.

An occasional game of golf and an even more occasional dip in the pool are about the extent of Secretary Franke's out-of-doors activities. Not physically rugged, he is much more inclined to spend his free time reading or conversing with close friends. Extremely conscientious, he perhaps works as long hours as anyone in the Pentagon except Adm. Arleigh Burke, and takes home a full briefcase. Outwardly calm, never off balance, he takes the Navy's problems to heart and worries when things are not going well.

A practitioner of what he calls the "open door" policy, Secretary Franke will see anyone who has a problem that merits discussion. He is a good listener, patient and understanding. His questions are pertinent and penetrating. He quickly gets to the root of a matter, and easily makes decisions.

One of Secretary Franke's proudest boasts

One of Secretary Franke's proudest boasts is that he knows personally, usually on a first-name basis, virtually all of the flag officers in the Navy and Marine Corps. He often refers to himself as the "Under Secretary of the Marine Corps," much to the delight of the Leathernecks. Whenever he can get away from Washington, he likes to visit the far-flung network of bases and stations. He would rather enjoy the hospitality of a station commander than the best hotel in town because it gives him a chance to become better acquainted with the personnel and their problems. Mrs. Franke invariably accompanies him when he travels.

Secretary Franke has great respect for the Congress and enjoys the confidence of its leaders. They appreciate his integrity, ability, and candor. He will not tolerate anything underhanded. He is considered by his closest associates to be a man who has no

secrets.

Born in Troy, N.Y., on April 15, 1894, he attended the local schools in that city. Unable to afford an ivy league education, he worked while attending the Pace Institute of Accountancy. With characteristic independence and self-confidence, and to the chargin of his parents, he changed jobs occasionally in his early years as he worked toward his goal. His genius in his chosen field, and the confidence that he inspired in its leaders, brought him quick success.

He is a member of the Union League Club of New York City; the Rutiand (Vt.) Country Club, and the Army-Navy Club of Washington, D.C. He has been associated with many firms other than his own, has served as chairman of the board of John Simmons Co., Inc., and General Shale Products Corp., and as Director of the Carolina, Clinchfield Ohio Rallway Co. He holds an honorary degree of doctor of science from the University of Louisville, and an honorary degree of doctor of laws from Pace College.

## The Need To End a Wicked Calumny

EXTENSION OF REMARKS

## HON. JEFFERY COHELAN

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, May 18, 1959

Mr. COHELAN. Mr. Speaker, in previous remarks we have noted allied disagreements over the reunification of Berlin and the whole of Germany. In his latest report from Europe, C. L. Sulzberger, of the New York Times, notes

these differences in point of view have resulted in independent concessions by France, West Germany, and the United States in recent months—concessions made without prior interallied consultations.

With allied differences so clearly demonstrated, there is created an atmosphere in which we can be tempted to turn from the task at hand and set to bickering among ourselves. There are those who, in their eagerness to blame Britain for our lack of unity, could well bring about that result. In his article which I ask to have reprinted in the RECORD, Mr. Sulzberger warns that malicious and false accusation of Britain, if unchecked. will damage a most important U.S. partnership and benefit only Russia. The British have made it clear that they are more willing than we are to acknowledge East Germany, but they have stuck by the allied package plan for Geneva negotiations, while the United States and others have talked about concessions.

The article is as follows:

[From the New York Times]
THE NEED TO END A WICKED CALUMNY
(By C. L. Sulzberger)

An urgent immediate task of U.S. diplomacy is to quell the smear campaign directed from various quarters at our most valuable single ally, Britain. Surely, the Western Powers cannot hope to negotiate successfully with Russia while simultaneously knifing each other in the back.

There are, of course, differences among

There are, of course, differences among the Allies; there always have been and there always will be. We are independent, demoratic nations who regard satellities as astronautical or astronomical, not political,

bodle

But differences now advertised are too often unfairly slanted at the British. The Geneva conference, for lack of concrete diplomatic achievement, developed into a rumor center where anonymous hints, largely aimed at London, flourish.

There is a comprehensible background to this situation. When Macmillan went to Moscow this year, some London newspapers boasted he was filling a leadership vacuum caused by Secretary Dulles' illness. This irked many Americans. At the same time Britain became involved in a trade dispute with France and West Germany, who supported a European Common Market in opposition to Britain's proposed free trade area. London fears its exports to the Continent will be unfairly restricted.

#### UNITED STATES-BRITISH DISAGREEMENTS

There are also disagreements between the United States and Britain. We favor Nasser over Kassim in the Arab cold war. The British think Kassim should not yet be abandoned and, with our reluctant approval, sold him arms. Also, the British want to build up commerce with Russia. They see nothing wrong with East-West trade, as long as it does not violate NATO embargoes on strategic materials.

Macmillan's trip was followed by a 5-year Anglo-Soviet trade pact. Britain sold Moscow certain civilian aircraft devices; the Reuters news agency established a minor office in East Berlin to use up accumulated blocked marks; and the Federation of British Industries is exchanging bureaus with East Germany.

This is scarcely treason. Sir David Eccles, president of Britain's Board of Trade, signed a conventional import-export pact. Private British firms, doing long-term business, are guaranteed against losses. Is this more reprehensible than Vice President Nixôn's pro-

jected Moscow visit to open an American trade fair?

Britain refused either to grant large governmental credits requested by the U.S.S.R. to finance exchanges or to buy cut-rate petroleum. A year ago NATO agreed that expanded East-West trade was desirable. Nobody has suggested that the British are proposing to violate allied restrictions on the sale of strategic goods. Yet France, now criticizing London, has promised the Russians quantities of cable, an item on the banned list.

#### OTHER BRITISH POSITIONS

The British, as everyone knows, are more prepared than the French or West Germans to acknowledge de facto existence of East Germany. But London accepted the three-power package plan as a basis for the Geneva negotiations. And Selwyn Lloyd stuck by it even though he thought it unreasonable.

So far, in the slow-moving negotiations that have been taking place by notes and conversations since early this year, there have been four major concessions, all without prior inter-allied consultation. Dulles, at a press conference, suggested free elections were no longer a necessary precondition to German reunification. Then Bonn agreed East Germany could be represented on an advisory basis at the foreign ministers' meeting. De Gaulle publicly said the Oder-Neisse line should be the eastern frontier of a reunited Germany. And, on May 17, an American spokesman indicated willingness to undo the package and negotiate a separate interim agreement on Berlin.

In no case was the culprit British. It is time our diplomats tried to end the mischievous calumny implying that Britain would doublecross its allies. If Secretary Herter is genuinely disturbed by London's attitudes, let him say so firmly and confidently to Lloyd. The chances are he will find sensible answers.

London knows as well as Washington the value of our partnership. The only beneficiary of these sordid innuendoes is Russia. Gromyko has gone out of his way to make kindly public references to Macmillan. This is an obvious propaganda gambit. If Khrushchev praises Nixon when he goes to Moscow, should NATO close up shop?

#### The Case for Educational TV Legislation

EXTENSION-OF REMARKS

## HON. STEWART L. UDALL

OF ARIZONA

IN THE HOUSE OF REPRESENTATIVES
Thursday, May 28, 1959

Mr. UDALL. Mr. Speaker, an article appeared in the press yesterday which forcefully presented the case for the type of educational television legislation now pending before the Congress. I refer, of course, to the Magnuson bill, S. 12, which has already passed the other body and is now awaiting action before the House Committee on Interstate and Foreign Commerce.

This article was written for the North American Newspaper Alliance by Dr. Benjamin Fine, formerly education editor for the New York Times, and was based on his analysis of a report on the educational TV experiments which have been underwritten recently by the Ford Foundation's Fund for the Advancement of Education.

It is highly significant that the Ford Foundation people have concluded already that the use of educational television will first, provide a much higher quality of classroom instruction; second, result in a major breakthrough in the use of new tools which enhance the learning situation; third, improve student instruction and require the student to accept more responsibility for his own learning; fourth, generally upgrade the quality of teaching; fifth, make a major contribution toward the elimination of the current teacher shortage; and sixth, and, not least, help in the long run to hold down school costs.

Mr. Speaker, considering the challenge confronting American education surely this Congress will not fail to act on this sensible legislation which would improve the instructional process and at the same time permit the economical use of the Nation's teacher resources.

Mr. Fine's article follows:

CUT IN SCHOOL COSTS SEEN WITH TELEVISION (By Dr. Benjamin Fine)

New York, May 30 .- Educational television can help reduce school costs and help

lick the teacher shortage.

This is the considered opinion of the man who has done more to introduce television to the Nation's classrooms than anyone in the United States. In an exclusive interview, Dr. Alvin C. Eurich, director of the Ford Foundation's Fund for the Advancement of Education, said 569 school districts are making regular use of televised instruction. In addition, 117 colleges and universities offer credit courses through television.

Dr. Eurich has been the Nation's foremost exponent in the use of this new mass media for schools and colleges. His fund has allocated \$10 million during the past several years to educational institutions, to experi-

ment with television.

FIVE HUNDRED THOUSAND IN TV CLASSES

"It is no longer a question as to whether television can succeed in the classroom," he asserted. "That has been proved. We must now determine how best to utilize this new-est means of instruction."

Classroom television has made gigantic strides during the last half dozen years. More than 500,000 youngsters, from first grade through college, now receive all or

part of their instruction by TV.

An outstanding example of the use of television on the college level is the Continental Classroom, carried over the National Broadcasting Co. network. Jointly sponsored by the American Association of Colleges for Teacher Education and the Ford Foundation, the "classroom" was launched last fall to upgrade high school teachers of physics.

TWO HUNDRED AND FIFTY SCHOOLS IN PROGRAM

At present, 250 colleges and universities offer credit for this course. Dr. Eurich reported that 300,000 teachers and other interested persons get up at 6:30 each morning to listen to this college physics course. The principal teacher of the course, Dr. Harvey E. White, of the University of California, is an outstanding authority in his field. Six Nobel Prize winners appeared as guest lecturers. Each described the partic-ular experiments which led to the Nobel Prize.

"No college or university could bring to-gether such talent," Dr. Eurich stressed. "This course is a major breakthrough in the use of new tools which really enhance the learning situation. It provides a much higher quality of instruction than we can provide in our regular teaching."

How good is educational television? Critics have warned that the mechanical gadget

cannot replace the warm human teacher without loss to the pupil. They have charged that children would get little more than a diluted second-rate education if television entered the classroom.

The facts do not bear out these criticisms. COMPARISONS CITED

According to Dr. Eurich, comparisons at all levels, from elementary grades through college, indicate that students who take a course by television do as well if not better than their classmates who receive regular instruction.

The role that educational television is playing in today's schools was brought into focus last week by the Ford Foundation and the Fund for the Advancement of Education. In a thorough, 87-page report called "teaching by television," the Ford officials suggested that in the future more and more will be made of the air waves. Reading, writing and arithmetic, as well as difficult subjects such as trigonometry and organic chemistry, will be taught via TV. At present, almost every conceivable subject is found in the television curriculum.

#### CONCLUSIONS OUTLINED

Among the conclusions reached by the Fund, Dr. Eurich noted, are these:

1. Superior teaching over television stimulates much better learning on the part of the student than ordinary teaching in the

2. Televised instruction requires the student to accept more responsibility for his own learning than is the case with conven-

tional methods.
3. Students in television classes at the elementary and secondary level make more extensive use of the school library than students in regular classes.

4. The use of superior teachers on television has proved an important means of upgrading the quality of other teachers, par-

ticularly beginning teachers.

Television can extend the classroom beyond the four walls and seek out the best talent in the land. Recently, for example, fifth-graders in the Pittsburgh public and parochial schools had an opportunity to see and hear Robert Frost read his poems over television. They did not read Mr. Frost's poems from a book; rather they saw, and heard the Nation's beloved poet himself. It is difficult to measure the value of this experience to the children.

#### SOME PRACTICES LISTED

Television is used in many ways to improve instruction. Here are a few practices, now used, that have proved successful:

At Pennsylvania State University and at Miami University (Oxford, Ohio) closed-circuit television is used in the required freshmen and sophomore courses.

At the University of Detroit and Chicago Junior College, open-circuit television used to bring the major portion of the freshmen and sophomore curricula to students off

At San Francisco State College, collegelevel courses are televised to able high school students for credit.

At the University of Minnesota, television enables student teachers to observe teaching and learning situations in a classroom.

In Washington County (Md.) a closed-circuit television network brings daily instruction in 39 courses at all grade levels to 18,000 pupils.

#### USED AT HOUSING PROJECT

In New York City, television is used in a low-income housing project to bring the school and the community closer together. It also helps overcome the language barrier between English-speaking and Spanishspeaking children.

Those who have watched the various experiments at first hand believe that television can become a powerful tool to help

raise the quality of education. This is doubly important today, with the growing enrollment and the severe shortage teachers.

However, television alone will not solve the Nation's school problems. An electronic tube will never replace a master teacher. Money-and lots of it-will be needed for some time to come to keep pace with school needs.

Television in the classroom, though, is a valuable step forward in American educa-tion. It has a useful and exciting place in the schools of tomorrow.

Talk by Deputy Postmaster General E. O. Sessions at the 4-Cent Stamp Ceremony at the Lincoln Memorial, Washington, D.C., May 30, 1959

> EXTENSION OF REMARKS OF

## HON. FRED SCHWENGEL

OF IOWA

IN THE HOUSE OF REPRESENTATIVES Monday, June 1, 1959

Mr. SCHWENGEL. Mr. Speaker, because of their importance to the Lincoln Sesquicentennial Year observance, under unanimous consent I include in the Appendix of the RECORD the remarks of Deputy Postmaster General E. O. Sessions, delivered at the Lincoln Memorial on Memorial Day, last Saturday, with the thought that they will become a part of the historical record for this year:

TALK BY DEPUTY POSTMASTER GENERAL E. O. SESSIONS AT THE 4-CENT LINCOLN STAMP CEREMONY, THE LINCOLN MEMORIAL, WASH-INGTON, D.C., MAY 30, 1959

It is a privilege to join in welcoming this distinguished company and to share with you the meaning and purpose of this significant ceremony. It is altogether fitting that we should meet at this place on this day.

Here before the Lincoln Memorial in our Nation's Capital on May 30, 1959, the U.S. Post Office Department-with mingled pride and humility—dedicates the fourth and last in a series of commemorative postage stamps paying homage to the 150th anniversary of the birth of Abraham Lincoln.

The previous stamps in this sesquicentennial series have commemorated Lincoln's birth date, the Lincoln-Douglas debates, and the Lincoln speech at the Cooper Union in New York City. All four were designed by the noted artist, Ervine Metzl, of New York.

The stamp we issued today portrays the Lincoln head and shoulders of Daniel Chester French's inspiring statue that stands above us, gazing eastward across the Reflecting Pool, past the Washington Monument and on to the dome of the Capitol.

This stamp is being placed on first day sale today in Washington because May 30 marks another anniversary of the completion of the Memorial housing this noble statue. which nearly 50 million men, women, and children have visited in the past 26 years.

These visitors have represented all races, nationalities, colors, and creeds. Some came from distant parts of the world, others from homes almost within the shadow of this memorial. Some had wealth, position-power, but the vast majority were of humbler station, the kind of people Lincoln had in mind when he said, "God must have loved the common people. He made so many of

In the shadow of this statue of our beloved Lincoln, all these varied visitors shared one great opportunity with him, the free-dom to stand proudly erect and in dignity as free men and free women.

For Americans in many parts of our country, May 30 is a somber holiday, and its origin lies in the event of our history which this man knew so tragically. This day was established in 1868 not long after the end of the War Between the States as a day on which to pay annual tribute to the fallen dead of all our wars, who,-Lincoln had hoped, "Shall not have died in vain."

Each year since then, the graves and the monuments have been decorated. And there have been more graves to revere and more deeds to recall and the ranks of the dead have grown as we have fought again and again since Lincoln's lifetime in defense of liberty. Let us again-here today-renew our resolution to stand steadfast in defense of that freedom for which they died.

As Lincoln stood at Gettysburg, his shoulders bent with the cares of the war he would gladly have given his life to avoid, he uttered words that are being reechoed from many a flag-draped platform today. Among the many memorable passages from that address, these words seem especially signifi-

"We here highly resolve that this Nation, under God, shall have a new birth of free-

Few of our great statesmen believed more deeply and unswervingly in liberty than did our 16th President. No one was more diligent or far-seeing in denouncing the evil of tyranny in any form. No one so completely laid aside his personal problems to serve our country in a position of almost unendurable responsibility. The tragedies, failures, suf-ferings, and frustrations that lined the path of Lincoln's life would have engulfed a less noble soul. But Lincoln subordinated his personal trials to the great need our Nation had for him in our most critical hour. For his immense service to mankind we shall continue to give thanks and to revere him throughout our history.

May this postage stamp, whose issuance we observe today, inspire us with a renewed understanding of Lincoln's greatness in his day and for all time.

May it, as it is transformed into 120 million likenesses of the well-remembered face, inspire us to support by all the means at our command the principles he so valiantly defended.

Today, thanks to him, we are a united cople. Let us use the strength of our people. unity to contend here and abroad for those same principles for which he lived. Let us ever strive in his memory to uphold liberty from exploitation. In our internal affairs and in our attitudes toward world affairs let us never permit our power to be used to abridge the fundamental rights of free men.

In supporting this cause we can all share in some degree in his greatness.

#### A Lesson From Dulles

EXTENSION OF REMARKS OF

#### HON, ROBERT W. HEMPHILL

OF SOUTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES Monday, June 1, 1959

Mr. HEMPHILL. Mr. Speaker, under leave to extend my remarks in the REC-ORD, I include the following editorial from the Evening Herald, Rock Hill, S.C., of May 26, 1959:

A LESSON FROM DULLES

When it became publicly known that John Foster Dulles was seriously ill with cancer, the free world rallied to pay him homage.

He died Sunday amid much acclaim. But it was not always so.

As U.S. Secretary of State, Dulles was probably the most second-guessed man in the world. Everybody knew how he could have handled the job better. His critics were legion. Most of them claimed that Dulles' method of treating the Communist threat was too dangerous. He scared the public with his brink of war decisions which called the bluffs of communism.

The free world argued within itself on the merits of Dulles' methods. The free world could not make up its mind about the man

Dulles.

But the Communists knew Dulles. And Dulles knew the Communists.

Perhaps a key to Dulles' greatness is the fact that Soviet Premier Nikita Khrushchev. and Nikolai Bulganin before him, made no secret of their reluctance to do business with him. They were scared of Dulles. They knew that he would not allow himself to be hoodwinked or bluffed. Dulles even did some bluffing of his own.

Naturally, he had his weaknesses. greatest shortcoming was probably his insistence on being a one-man show. He insisted on running things his way. A country the size and power of the United States cannot afford to have just one man running

our foreign policy.

Dulles sometimes became too rich for our blood. The Evening Herald twice editorially suggested he resign because he was alienating our allies by his inflexibility, somewhat of a trademark with him.

However, through it all, Dulles served his purpose. He kept us out of war and he kept the Communists behind the lines which were drawn when he took over 6 years ago. In this day, maybe that's all one can expect.

Dulles taught us a lesson. The only way to handle the Communists is to be brave enough to stand up to them in the face of their threats and bluffs.

It is a lesson which should be remembered in future negotiations with the Reds.

#### Willie Sugar Didn't Hesitate

EXTENSION OF REMARKS OF

## HON. CHARLES E. BENNETT

OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES Thursday, May 28, 1959

Mr. BENNETT of Florida, Mr. Speaker, the May 20 edition of the Jacksonville Journal contains an excellent editorial praising Willie Sugar for his heroic actions and saving the lives of little children in the face of great danger to himself. As the newspaper states this is inspiring to everyone. Certainly, I am deeply grateful for this opportunity to pay tribute to this heroic deed. I include herein the editorial mentioned.

WILLIE SUGAR DIDN'T HESITATE

The heroic actions of a 28-year-old Negro last Friday not only saved the lives of two children, it inspired men and women of both white and Negro races.

Willie Sugar, on his way to lunch when the fire broke out on Phelps Street, did not hesitate to risk his life to enter the flaming building and do what he could.

No one would have blamed Sugar much if he had not gone or if he had hesitated and weighed the consequences. He had been a victim of fire himself only 8 months before and still bore the unhealed marks of it.

Once burned, a person never forgets the ordeal and the suffering and doubtlessly a recollection of his own pain flashed through his mind at the smell and sight of smoke. But he didn't wait to debate with himself. he dashed in to help a fellow man.

In this case children were involved, which made it all the more vital that action be as quickly as possible. Two were saved, but

two infants perished.

Sugar was on his way back into the inferno to get the infants, probably already dead, but the flames proved too much to combat

Fire Marshal E. C. McDermon, Fire Chief F. C. Kelly and Assistant Chief G. R. Cro-martie praised Sugar for his unhesitating heroic deed

His bravery exemplifies the courage that men of all races and creed respect and admire. While Sugar was ready to risk his own life for another. "Greater love hath no man than he lay down his life for a friend."

How much more love does a man show risking his life for a stranger?

## Relations Between the Races in Schools and Neighborhoods

EXTENSION OF REMARKS

## HON. JAMES C. DAVIS

OF GEORGIA

IN THE HOUSE OF REPRESENTATIVES Thursday, May 28, 1959

Mr. DAVIS of Georgia. Mr. Speaker. there recently came to my attention a letter written to the editors of the Saturday Evening Post by Mr. N. G. Sherouse, of Reddick, Fla.

The letter contained some sensible observations on the subject of relations between the races in schools and in residential neighborhoods.

I wrote and asked Mr. Sherouse's permission to insert the letter in the Con-GRESSIONAL RECORD. He has kindly granted this permission, and I insert the letter herewith:

The EDITORS, THE SATURDAY EVENING POST: Much interested in reading some of the views expressed in the letters column of your current issue concerning the story carried in April 4 issue, "When a Negro Moves Next Door '

Without expressing an opinion on what seemed to be a quite unnecessary waste of white space in your magazine, let me quote a thing or two, viz.

In a recent issue (April 11) of the Pittsburgh Courier, which is certainly an outstanding Negro newspaper in this country, on page 2 is a story headlined: "Negro Family Gives In, Moves—Violence and Boycott Pay Off for Delaware Bigots." This is about a Negro who apparently works for the Du Pont interests but also has a sideline handling garbage, formerly using up to four trucks, but the operator stated that after he moved into a house in a formerly all-white section his contracts, mostly with whites, were dis-continued. I was much interested in a quote from this man that he had purchased a home in an all-white neighborhood as a "decent place to bring up his teenage daughter."

This man is apparently making it quite clear that the average Negro neighborhood

was not considered decent and that he wanted to get away from it into what he did consider a decent neighborhood. He overlooked the fact that usually when one Negro family moves into an all-white section he is soon followed by others and in time he is back among his own kind. How much better if he would stay where he started and attempt to raise the level of decency there.

On May 3 Associated Press story from Atlanta quoted Carl F. Hansen, Washington, D.C., Superintendent of Schools, as saying that "given the right kind of opportunity Negro children can respond to education,"

Here, again, the speaker is low-rating the work formerly done in the Washington all-Negro schools, although they were being taught by Negroes who were getting the same salary as white teachers, and supposedly had equal education, many of them no doubt having come to that work as graduates of white colleges. This, in my view, is putting a low label on some at least of the Negro school teachers and should be proof that it would not be advisable to employ Negro teachers to teach in the now-integrated schools of Washington. The people want their children to have the best possible instruction in the schools. According to Mr. Hansen, who has had experience, such good instruction would be doubtful if Negro teachers were employed. If they could not properly teach Negro children it is doubtful that they could teach white children.

Mr. Hansen did say, in this talk made on television from Atlanta—which was sponsored by the Georgia Council on Human Relations (another one of those things)—that after integration of his schools they have set up a "four-track system," with pupils being assigned to the groups according to their ability to absorb instruction. He did not give any percentages here but that has been done, some time ago, by U.S. News & World Report magazine which covered the Washington schools, after

integration.

Any well informed person who has been at all interested in getting at the truth of the thing knows that the southerners have always, for the most part, not objected at all to having Negro neighbors. Most of the stink about this matter shows up in cities outside the South. Just one example, Levittown, Pa. There have been many others just as ridiculous. The city of Chicago is reported to have spent hundreds of thousands of dollars keeping policemen in a neighborhood where a Negro had attempted to move in where he was not wanted. However, you will find any number of hot-shots always shooting off their lips about what the people in the South do or don't do for the Negro as a group. Born and reared down here I have also spent much time living and working in several cities of the North and I say that much of the stuff printed on this subject is asinine.

More of those white citizens in the North who like to take pot shots at the South should begin to read one of their Negro newspapers and get some idea of what goes on. That is, if they are too blind to see it all around them.

N. G. SHEROUSE.

P.S.—If I were going to give any advice to the Negro group in this country it would be: Take the chip off your shoulder and begin to be proud of your heritage as a Negro, and quit trying to be a white man. The Jew is a minority race but you never hear him crying for entry into the Gentiles' group, but he stands on his own feet and is doing very well, thank you, in this minority position. It is doubtful that any other group of people ever made the progress that the Negro has made over the last 2 centuries. Of course such progress would never have been possible without the help of the white man, and I dare say he has had more actual

help from the southern white man because there are so many more Negroes down here. Surely any one knows that the Negro pays a very small part of the cost of his schools anywhere in this land, and now that so many of them are on welfare of course even a smaller part of this tremendous cost is being paid by them. "The Negro is the white man's burden" was at one time a familiar saying. Truly, now, with welfare from cradle to grave, plus good schooling, he really is the white man's burden—although a lot of white critics never seem to realize it.

#### Constitutional Government

EXTENSION OF REMARKS

## HON. JAMES C. DAVIS

OF GEORGIA

IN THE HOUSE OF REPRESENTATIVES
Thursday, May 28, 1959

Mr. DAVIS of Georgia. Mr. Speaker, from time to time I read on the editorial page of the Metropolitan Herald, Atlanta, Ga., editorials which are notable for their soundness and logic.

Two recent editorials in this newspaper contain information and observations which I think will be of interest to those who believe in constitutional government and the doctrine of three separate and independent departments of Government. One of these editorials is "Why Should They Destroy Our Schools?" and the other "Truth About Book 'An American Dilemma'." Under unanimous consent previously obtained, I insert these editorials herewith:

WHY SHOULD THEY DESTROY OUR SCHOOLS?

Much is being said and written these days about our public school system and how it may be improved. Of course there is always room for improvement and we must continually make these improvements when they are needed.

However, there is one thing that should not be overlooked. We Americans have evolved the best system of public education ever devised through the diverse approaches of the 48 States.

Our educational system is the admiration of the free world. Only recently British school authorities have been making detailed studies of our high schools with a view of adapting it to its own needs.

The strength of our public school system, like that of our Nation, lies in the fact that we are a Republic. The Constitution guarantees to each State the right of a republican form of government, the present U.S. Supreme Court to the contrary notwithstanding.

The miraculous growth and development of this Nation and its public school system was made possible without the direction or dictation of a highly centralized Federal Government.

Here in Georgia we have made great strides. The progress in Georgia schools has attracted nationwide attention.

Last fall, Dr. John Dobbins, a nationally recognized educational authority of Princeton, N.J., made a study of Georgia schools and their faculties. Here is what he said at the conclusion of his inspection tour:

"Georgia is making such progress in education that if it keeps it up at the same rate for another 10 years, this State may well lead the Nation in education. It will be hard to find another State that does a better job of educating its young people. The

Georgia story is a story of renaissance in education, a new kind of dedication to realties, a new willingness to study your strengths and weaknesses, a fresh eagerness to borrow and adapt good educational ideas from wherever they exist. To an onlooker, this is an exciting story."

Not only has the improvement in our educational system won national acclaim, but the school building program has won the praise and admiration of educators and school administrators throughout the Na-

tion.

As long as the Federal Government keeps its claws out of the Georgia educational system, we will continue to make progress. Our State government will continue to spend over 53 cents out of every tax dollar for public education. But, tragic Federal interference seems near at hand.

The present members of the U.S. Supreme Court are more interested in forcing the admittance of some Negro students to white schools than they are in the education of the great majority of white and Negro pupils. This majority, in both races, seem to have no rights whatsoever in the eyes of the Warren court.

When, and if, Georgia's public school system grinds to a halt, it will be by action of the Supreme Courrt, the dictatorial, antiwhite National Association for the Agitation of Colored People and its motley allies, who have made not one single contribution to the development of Georgia's public school system.

They and they alone will be responsible for halting the progress or destroying the system in its entirety. It is as simple as

tnat,

TRUTH ABOUT BOOK "AN AMERICAN DILEMMA"

The darling of the so-called liberals and race-mixers, a well-known columnist, last week defended the book, "An American Dilemma," by Gunnar Myrdal, a Swedish Socialist, which was used by the U.S. Supreme Court in its school integration edicts as "modern authorities."

He described the work as "a really understanding book on the Nation's problems

of race."

Now this is the same book which says on page 13 that the U.S. Constitution is "impractical and ill suited for modern conditions" and that its adoption was "nearly a plot against the common people."

This is the book wherein 16 of its contributors have been cited for long records of pro-Communist activities. One of them, W. E. B. DuBois, long a leader in the NAACP, contributed 82 portions of the book. This "modern authority" has been cited for memberships in 72 pro-Communist organizations. He is the man who filed legal briefs on behalf of the atom spies, Julius and Ethel Rosenberg. He is the man who, according to the Saturday Evening Post, recently was an honored guest of Communist Russia, singing its praises and pointing out the faults of his native fand. Leaving Moscow, DuBois made a visit to Red China in defiance of our State Department.

Members of the Supreme Court cannot plead ignorance about the contributors to this book which they used as their authority instead of the Constitution. Neither can the newspaper columnist who defended the book.

John Gunther, another so-called liberal, in his book "Inside U.S.A." stated on page 683 that before he started on his trip to the South he was told by a Justice of the U.S. Supreme Court that the one thing indispensable to understanding the United States was a book—"An American Dilemma"

Mr. Gunther quotes at length from that book and from statements by DuBois. It makes some enlightening reading in view of recent Court edicts. Regardless of the printed views of the columnist mentioned above, we believe the great majority of thinking Americans have more faith in the writing of Thomas Jefferson, Alexander Hamilton, and James Madison than they do such modern authorities as Myrdal, Brameld, DuBois, Frazier, Clark and company of "An American Dilemma" fame.

We also believe the great majority of American citizens have a great deal more confidence and faith in the Supreme Court decisions of Chief Justices Taft and Hughes and Justices Holmes, Cardozo, Brandeis, et al., than they do in the edicts of Warren, Black, Frankfurter, and company.

#### Foreign Languages the Best Idea

EXTENSION OF REMARKS

## HON. LEONARD G. WOLF

OF IOWA

IN THE HOUSE OF REPRESENTATIVES Monday, June 1, 1959

Mr. WOLF. Mr. Speaker, the American Bulletin, which is published monthly by the Czechoslovak National Council of America, had an excellent article regarding the teaching of other languages in American schools.

Because so many Americans are of foreign birth there are readymade opportunities for their children to learn the language of their parents. This should be stimulated both in the schools and in the homes of our citizenry. In todays world where peace is dependent on communication between men, the ability to express one's self in another language, to understand and read in another language, it is clear that language facility becomes the key to better world understanding.

The article follows:

FOREIGN LANGUAGES THE BEST IDEA

"We jump up and down and babble about Russia's first sputnik revealing that our educational system is antiquated and we get almost panicky about pushing kids into engineering and scientific studies. But we don't seem to wake up to the progress that is made by communism this side of the moon mainly because the Communists knew the language of people whose nations were taken over \* \* \* Foreign languages are being taught in our schools just about as they were 50 years ago. Probably there's less foreign language education of American children now than there was 50 years ago when European languages were spoken in many U.S. homes."

The above is from an article "Americans Need Foreign Languages" by the columnist Herb Graffis (Chicago Sun-Times, April 23, 1959). The author welcomes an experiment in Champaign, Ill., where "youngsters in fourth grade of a public school are learning to speak French. How long that sort of language instruction (of other language as well) will go on and in how many U.S. schools, there is no telling. The idea is the best foreign policy for the United States I've heard about."

To begin with, the teaching of French in an Illinois public school seems a very timid experiment. While the teaching of French is commendable, it can hardly compensate for the loss we are experiencing in other quarters. For instance, in Chicago, Cicero and Berwyn, the suburbs with a large population of Americans of Czechoslovak descent, the teaching of Czech in public high schools

is being gradually dropped. And yet, the teaching of a Slav language should be given priority in view of the great Soviet danger. The Czech language is a key to the Russian and other Slav languages; anyone knowing Czech, easily learns Russian. We are told repeatedly that 10 million Soviet citizens are learning English and that only a few thousand Americans are learning Russian, and that we are suffering from a very serious language handicap at every step.

Why then do we permit this great potential within arm's reach to go to waste? The school board of the Sterling Morton High School of Cicero and Berwyn, where Czech has been taught for decades but where enrollment has dropped to almost nothing, is willing to keep the classes going and there are good teachers available. What then is the problem? In our opinion, there are two basic obstacles: Sometimes the students do not sign up because credit for Czech is not recognized by some colleges; secondly, they do not realize the urgency. Until now, they have felt that to be a good American one should forget all that foreign stuff. The importance of learning a foreign language, in their case Czech, should be impressed upon them at home and at school. America asks you to do this.

Obviously, it is much easier to learn the mother tongue of one's parents or grand-parents than an entirely strange language. Without knowing it, many students of Czech or Slovak background have acquired an ear for it. Ordinarily, it takes months of diligent study to get over this difficult hump, for learning a foreign language is hard work. There are no short cuts except one, and only one: To learn the mother tongue of one's parents. Therefore, make full use of your Czech or Slovak heritage.

#### FIFTY YEARS BEHIND

It seems Mr. Graffis is right in more ways when he says that we are 50 years behind in the teaching of foreign languages. Fifty years ago, a Slav language seemed unimportant to Americans; today the Soviet danger has made it vitally important to us. Why then should students be given credit for French or Spanish, but not for Czech, a key Slav language?

#### GOOD NEWS

There is good news from Texas, the State with a large population of Americans of Czechoslovak descent. Years ago, Czech was taught in 18 high schools; it has survived only at the University of Texas. The reasons are the same as in Cicero and Berwyn. The sputnik scare has, however, prompted the Czechoslovak communities to launch a drive: "Learn Czech and Russian." Dr. Joe Malik of the Department of Slavonic Languages of the University of Texas is teaching Czech and Russian over radio station KULP and the lesson is then printed in Leader News-Svoboda, a local newspaper, published in El Campo, Tex. The Department of State welcomes the program. Other Czechoslovak communities, for instance Chicago, New York, Cleveland, Pittsburgh, Cedar Rapids, etc., could also carry on such a program.

Seton Hall's Monsignor McNulty

EXTENSION OF REMARKS

## HON. FLORENCE P. DWYER

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 6, 1959

Mrs. DWYER. Mr. Speaker, the entire State of New Jersey mourns the death of Msgr. John L. McNulty, presi-

dent of Seton Hall University, in South Orange, N.J. Under his leadership, a small college has grown into a great university. Thus, in the sense that he was a benefactor of mankind in the most lasting and significant way, Monsignor McNulty belongs not only to New Jersey but to all humanity.

Under leave to extend my remarks in the Record, I include an editorial from the May 29 issue of the Elizabeth (N.J.) Daily Journal. It was written by one who knew and cherished Monsignor Mc-Nulty and his great work. As a labor of love, it acutely reflects the greatness of this outstanding man:

#### MSGR. JOHN L. MCNULTY

"Sometime Sunday afternoon a polished black hearse will move slowly down the long, winding road that leads from a highway to the top of the hill and the brownstone chapel where for more than a hundred years generations of Setonia undergraduates have knelt in prayer. And it will be fitting if the walks, bordering the old path beneath an archway of interlocking trees, should be lined with graduates and students, the townsfolk and the friends come to stand at grieving attention as Rt. Rev. Msgr. John L. McNulty leaves his beloyed Seton Hall for the last time.

Monday morning, in the vast Cathedral of the Sacred Heart in Newark, high church dignitaries will be joined by leaders from all the fields of temporal effort, by the fortunate and the unfortunate, the rich and the poor, the Christian and the Jew, there in capacity to honor a reverend gentleman whose life reflected everything we can hope for in the complete Christian. This is to be the climax, the last expression of public sorrow—the recommendation of his immortal soul to the mercies of the God he had served so realously in life.

so zealously in life.

And yet, humbly joining in the prayers that will be recited and while acknowledging the propriety of this public demonstration, it is almost impossible to shake off the persisting belief that the climax of Monsignor McNulty's life of devoted service will be reached Sunday when the gates of the communion rail before which he knelt in adoration many times as an undergraduate, are opened wide. This will be climax that will come when the casket within the chancel, lighted by candles from the altar before which he read his daily Mass for so many years, is carried from the chapel that has become a shrine for all Setonians.

This will be the departure of the chubby lad who came to South Orange as a student, the outstanding college graduate selected because of brilliance to study abroad and returning to lecture at a little diocesan college. This will be the departure of the educator eventually named for the presidency, divinely inspired as he brought Seton Hall to a place of prominence among the foremost Catholic universities of the world, inspired in the effort that gave New Jersey its first medical and dental school after so many years of waiting, the inspiration that produced the Seton Hall School of Lawtireless central figure as the Seton Hall enrollment expanded from hundreds to thousands and, bursting all bounds the South Orange campus, carried the opportunity of advanced education to young men and women at so many other centers. This will be the end, the climax of a glorious career that for all its impossible demands still had time for any who sought to share in the abundance of his limitless heart.

We mourn Monsignor McNulty as a friend and hasten to acknowledge the passing of a public benefactor who had already contributed more than a lifetime of accomplishment when suddenly torn from his drafting table so laden with plans for still broader

service.

#### Government Aid to Education

## HON. LEE METCALF

OF MONTANA

IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 27, 1959

Mr. METCALF. Mr. Speaker, I am indebted to my good friend, the gentleman from California IMr. Youngerl for inserting in the Congressional Record for May 11, 1959, at page A3934, the message of Montana's Governor, J. Hugo Aronson, vetoing a resolution of the Montana Legislature endorsing the passage of H.R. 22 and S. 2.

Senate Joint Resolution 4 passed the Montana Senate by a vote of 35 senators in favor and 18 opposed. The vote in the State house of representatives was 48 in favor of the resolution and 32 opposed with 12 of the 14 absentees announced as in favor.

The text of the resolution follows:

A JOINT RESOLUTION OF THE SENATE AND HOUSE OF REPRESENTATIVES OF THE STATE OF MONTANA TO THE PRESIDENT OF THE UNITED STATES; TO THE CONGRESS OF THE UNITED STATES; TO SENATORS JAMES E. MURRAY AND MIKE MANSFIELD FROM THE STATE OF MONTANA; TO CONGRESSMEN LEE METCALF AND LERCY ANDERSON FROM MONTANA; REQUESTING THE REAFFIRMATION OF NATIONAL POLICY OF FEDERAL FINANCIAL SUPPORT FOR EDUCATION

Whereas we (the Montana State Legislature) recognize the education of our youth as the most important responsibility of our local, State, and National governments, if our national defense, our system of free enterprise, and our devotion to the ideals of American democracy are to endure; and

Whereas despite earnest efforts on the part of the several school districts of the State of Montana to meet the cost of providing adequate school facilities for an ever-expanding enrollment and despite the continued increase in State funds to help meet the cost of supporting public elementary and aecondary schools, there continues to be a widening gap between need, and funds to meet the need; and

Whereas the financial resources of the counties and the States are increasingly overdened by using school costs and enrollments, to the neglect of other essential county and State responsibilities; and Whereas there continues to be a shortage

Whereas there continues to be a shortage of qualified teachers, since, despite all efforts to the contrary, teachers' salaries in Montana are inadequate to recruit and retain a sufficient number of good teachers to serve all the children: Now, therefore, be it

Resolved, That the Montana State Legislature petition the U.S. Congress to provide sufficient funds through the proposed School Support Act of 1959 (sponsored by Senators Murray, Mansfield, and others, and introduced by Congressman Lee Metcalf and others, including Congressman Leroy Andreson) in order that local and State control of education may be continued by providing, by means of the more equitable taxing authority of the Federal Government, a share of the Federal income to the several States in amounts sufficient to supplement State and local financial resources for this most important of all State services; and be it further

Resolved, We hereby respectfully petition the Congress of the United States to reaffirm the national policy of Federal financial support for education which has ample precedent

in the school land grants given to this and other States nearly 100 years ago and without which even the present inadequate programs of public education could not survive; and be it further

Resolved, That copies of this resolution be submitted by the Secretary of State of the State of Montana to the President of the United States; to the Congress of the United States; to Senators James E. Murray and Mike Mansfield from the State of Montana; to Congressman Lee Metcale and Leroy Anderson from Montana.

Paul Cannon.

President of the Senate.

John J. MacDonald,

Speaker of the House.

Governor Aronson's message, as quoted by the gentleman from California, is full of pious statements about the need to finance elementary and secondary education at the State and local level. Yet in 1955, Governor Aronson in his message to the legislature said:

My recommendation for your consideration is that the State accept as its obligation the university responsibility and return to the counties and school districts the major responsibility for elementary and secondary education. \* \* It is my opinion that increasing State aid is just providing the door opener for the next step—Federal aid.

The Montana Governor's position that State aid leads to Federal aid and he is against them both is in curious contrast to the position taken by President Eisenhower and Secretary Flemming insisting that any Federal aid legislation stimulate State aid. In the most recent Flemming proposal, which Senator Murray designated "a legislative monstrosity" there is insistence that the matching of any Federal assistance come directly from the State and no credit be given for local effort.

It is apparent that the Governor of Montana is not in favor of spending any money for education that is raised at either the State or Federal level. His veto of the above joint resolution should give comfort to people who are opposed to the appropriation of money to educate the Nation's boys and girls but otherwise the Governor's statements in his veto message are of little probative value.

## A Puerto Rican Writer's Views on Statehood

EXTENSION OF REMARKS

## HON. VICTOR L. ANFUSO

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, June 1, 1959

Mr. ANFUSO. Mr. Speaker, as my colleagues will recall, I was the first to propose that Puerto Rico be admitted as the 51st State of the Union back in March of this year and, subsequently, introduced a bill to that effect on May 7. I have since been deluged with a flood of letters, telegrams, statements, articles, and petitions signed by thousands of people in Puerto Rico in support of my bill.

I am saving all this material and at some opportune moment will present it to Congress or to an appropriate committee of Congress for consideration. A few days ago I received an article by a Puerto Rican writer, Eugenio LeCompte, which was published in the Spanish language in the daily newspaper El Dia of the city of Ponce. He was kind enough to translate it into English and forwarded a copy of the translation to me. His article is entitled "Puerto Rico Wants Statehood." I wish to insert it into the Record, as well as his letter to me of May 26, both of which are as follows:

PONCE, P.R., May 26, 1959. The Honorable Victor L. Anfuso, U.S. Congress, Washington, D.C.

DEAR MR. ANFUSO: Allow me to congratulate you most heartly for your bill in favor of statehood for Puerto Rico. It is a great act of democratic justice to the 2½ millions of true American citizens who were born in this enchanted island of the Caribbean Sea.

Puerto Rico is getting ready to demonstrate that the immense majority of the American citizens of Puerto Rico, enjoying its beautiful and healthful climate, as well as those who are living and working in the continental United States, are backing your legislative measure, and shall appear before the Committee of the Interior and Insular Affairs to give full testimony in favor of statehood.

Your name shall be remembered from generation to generation as the leading champion of a just cause, and one of the unforgetable friends of Puerto Rico. The new generation of college and university students are already repeating your name as one of the great leaders of the House, who has put his intellect, his good will, and best efforts in action, to clear the way, so that Puerto Rico be admitted as the 51st State of the Union.

I am permitting myself to enclose a translation of one newspaper article which was published recently on the question at issue. Also I am sending herewith a copy of a letter which I wrote to the Nashville Banner, touching on the said matter.

The great columnist, Drew Pearson, made some very good comments on your bill, which appeared translated into Spanish at the San Juan El Imparcial, and which gave a more detailed account of the said proposed legislation.

We assure you that the American citizens of Puerto Rico will remember for ever and ever your altruistic, patriotic, and fair deal towards our beloved island. May God bless you and give the material, moral, and spiritual recompense you deserve.

With my very best wishes for your good health and success, I am

Yours sincerely,

EUGENIO LECOMPTE.

PUERTO RICO WANTS STATEHOOD
(By Eugenio LeCompte)

The president of the popular Democratic Party and Governor of Puerto Rico, Hon-Luis Muños Marin, sald while arriving in Boston during his visit to Harvard (April 1959): "Puerto Rico does not want Statehood."

With all due respect deserved by the Governor of our island, we cannot silence our firm objection to his saying.

It is to go beyond the mandate of the Puerto Rican people, to make an affirmation of such magnitude and transcendency.

The people of Puerto Rico has never manifested itself at the polls, expressly, definitely and decidedly, against statehood. It has not done it in the past, and it will not do it at this very moment, after having taken notice that Alaska and Hawaii have been awarded the highest honor and privilege to be ad-

mitted to the Union, on equal footing of dignity, obligations and rights as the other States of the North American Federation.

Everybody knows that Puerto Rico has never been offered, as yet, the opportunity to cast its votes in a referendum or plebiscite, to determine whether Puerto Rico favvors or not be constituted as a State of the United States of America.

It is for that reason that a great part of the Puerto Rican electoral opinion-conscious of its inalienable right to demand from the U.S. Congress a fair deal for the American citizenship that the Puerto Ricans honorably enjoy since 1917—wish to be given the opportunity to express through their free ballots, their unvarying want for state-hood. Thus, to be able to put an end to the political uncertainty spoken of by Señor Muñoz Marin, and to finish with the anguish and anxiety encouraged by the existing doubt, we think that the referendum for federative and irrevocable statehood for Puerto Rico, should not be postponed any more. If the Puerto Ricans cast their votes in favor that Puerto Rico shall become the 51st State of the Union, the free world will rejoice and American democracy shall increase its prestige in America.

Until such referendum shall take place and its unappealable result be known, no-body, regardless how high he considers himself, is legally and morally authorized to dictate an adverse dictum against the many hundred thousands of Puerto Rican women, men, and adolescents who, loyal to their American citizenship, trust in the justice of the Congress and of the people of the United States, and wait for the time when they shall be given the same opportunity which was offered to Alaska and Hawaii, to express themselves for or against statehood.

The history of the elections held in Puerto Rico since 1900 until 1956, is the best evidence to counteract the unsustainable saying that "Puerto Rico does not want statehood." Let us see.

During the first elections, the Puerto Rican Republican Party obtained a full victory with a political platform for statehood, in opposition to the Federal Party. Afterwards, the Union of Puerto Rico Party, with a political platform containing statehood, independence, or autonomy, won the elections. Thus the Federal Party disappeared. Then took place the elections with the American citizenship clause provision in the form of a referendum. An overwhelming victory was recorded in favor of the American citizenship, as only a few Puerto Ricans decided to maintain the Puerto Rico citizenship.

Later on, the Socialist (Labor) Party entered the political arena with a platform for the incorporated Territory and social justice; and the Nationalist (Radical) Party, with a political platform for independence. The former had a great predicament among the organized (A.F. of L.) labor forces, but it did not get the majority vote. The other, got some followers among the radical youth, but at the elections only cast 5,000 votes, and it was done away with as a political party. Then came about the Allanza Puertorriqueña, a political alliance of the Union of Puerto Rico Party and the Puerto Rican Republican Party, which won the election and the legislative and administrative power, with a political platform of the sovereignty within the sovereignty. In the same manner there came about a coalition of the Socialist Party and the Pure Republican or Historical Constitutional Party, with a political platform for statehood. Alianza was broken while in power, and from the legislature emerged what was called a good government group, made up from outstanding people who believed in statehood for Puerto Rico. They constituted the Union Republican Party which associated with the Socialist (Labor) Party, won the

elections with a political platform in favor of statehood for Puerto Rico.

In the meantime, other parties came up to the electoral field: The Liberal, Unification, Independent, and Popular. The first two were eliminated, and also the Socialist Party. Then the Popular Party, with an electoral platform of bread, land, and liberty, but affirming that the political status was not in issue, and with the New Deal administration's compliance and other political factors which caused a double division of the coalition Majority Party, the said Popular Party acquired the electoral power which it now exercises.

Never, at no instance whatever, have the Puerto Ricans said that they do not want statehood. When they voted in favor of Public Law 600 (1951), they voted to reaffirm American citizenship permanently, and with the understanding and assurance of Mr. Muñoz Marin's word that Public Law 600 does not close the doors to the final political aspirations as to the status of either statehood or independence.

Therefore, the arguments cannot be brought now that the said doors are closed for those who believe in the high and dignified concept of collective sovereignty, federated or separated. Never before had this grave problem disquieted so deeply the feeling of Puerto Rico. We cannot march blindly toward our future, without stumbling. We are aware that in order to attain the said sovereignty, we must struggle hard and constantly, because it is not an easy task. But the final victory will compensate every sacrifice realized to obtain statehood for Puerto Rico.

And, as Puerto Rico wants statehood, the Congress shall consent to it, as soon as the American citizens of Puerto Rico will convince the Congress that they want it.

## Statement by Duane Orton on the Farm Problem

EXTENSION OF REMARKS

## HON. MERWIN COAD

OF IOWA

IN THE HOUSE OF REPRESENTATIVES
Thursday, May 28, 1959

Mr. COAD. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD I should like to include a statement of Mr. Duane Orton, of Atlantic, Iowa, which he recently made before the members of the House Committee on Agriculture serving on the Livestock and Feed Grains Subcommittee. I feel that Mr. Orton has contributed greatly to the thinking of the members of the committee in his presentation. Mr. Orton has outlined his plan for the solution of the farm problem in this statement and I am certain that each and every Member of the Congress will appreciate the plan and will be enlightened by it:

STATEMENT OF DUANE ORTON, ATLANTIC, IOWA, BEFORE THE LIVESTOCK AND FEED GRAINS SUBCOMMITTEE OF THE HOUSE AGRICULTURE COMMITTEE, WASHINGTON, D.C., MAY 14, 1959.

Mr. Chairman and committee members, my name is Duane Orton and I am a resident of Atlantic, in Cass County, southwestern Iowa. I was raised on a farm near Griswold, also in Cass County, and have been connected with agriculture in one way or another all my life. Back in the thirties, when it was

tough going, I ran a cream truck to supplement our farm income. I own and operate my own farm in Iowa. In fact, I have actually left field work to be here today.

I am grateful for this chance to discuss the farm problem, at least as it exists in my part of the country, and to make a few suggestions for solution. I come here not as a representative for any organization but rather as a reporter on the hopes and fears of all the farm people I know. There is a strong feeling of frustration and disappointment among farmers at the present time, because of so much misrepresentation and misunderstanding of the farm issue. With many farmers, this feeling of frustration is now so deep that they no longer bother to express themselves. This accounts, I think, for the lack of letters which has puzzled some of you and your fellow Representatives.

However, there still is considerable hope and confidence—and I should add, expectation—that Congress wil come up with something. I share this feeling and that is the big reason why I appreciate this privilege to submit a statement which might encourage legislative action. Some of the people out our way have a lot of confidence in the members of the House Agriculture Committee and sometimes wish that their recommendations could become law directly without always having to run the veto gauntiet.

It is understandable, though, why people not close to agriculture might get false ideas as to what we farmers want and need. In the corn referendum last fall, the vote went against a continuation of allotments and we are now right in the middle of planting about 84 million acres of corn, the highest total in 10 years. Now to a lot of people, that seems to say farmers really are against Federal farm programs and that they really believe unlimited plantings are a good thing. Actually, it is my belief that this is far from Time and again, in the past few months I have heard farmers tell how they were going to plant more corn in 1959 and then add: "But this is no solution. It's crazy and will only make matters worse, for the Government as well as for us. Yet we really had no other choice. The way corn had been cut down on both acreage and support, we just couldn't go along with the old program any more."

What I am trying to say is that farmers haven't really fallen for all this freedom talk. I think I am reporting the majority view correctly when I say that they would be for a farm program if it were really effective in raising farm income and protecting the complier. I stayed in compliance to the end of the farm I operate because I happen to believe very strongly in production control, but I understood why some of my neighbors dropped out each year as the price supports were lowered.

Even then, we got some good from the program because it had some effect, I think, in keeping a lot of excess grain out of feeding channels. We undoubtedly are headed for trouble now on livestock prices, but we would have been there a lot sooner if a few years back some people had had their way on program abandonment.

Our farm plant in this country has now become so productive and there is so much feed already on hand that nothing short of a strong supply adjustment program will do. Before setting up a reduction target, however, I feel Congress should fully explore the possibilities for expanded utilization of farm commodities. How much more food could be consumed here at home, for example, under an enlarged distribution program? How much more might be sent abroad under a food-for-peace program? In view of the radiation fallout and the everpresent danger of war, shouldn't we have a liberal permanent national food and fiber reserve?

As a farmer, I don't have time to keep track of all these things, but I certainly have an impression that much more might be done than is being done. Unfortunately, of course, the difficulty is not all legislative. There has been too much lukewarm, if not outright hostile, administration under exist-

ing laws.

Before passing along a few specific ideas of my own, I wish to say that as long as certain basic requirements are met, any one of a number of farm program plans might work. I could endorse, for example, the bill recently introduced by a member of your committee, Congressman Coap. It would require, as any effective farm bill must, the diversion of excess acreage to nonuse. And again, as any farm bill must to be accepted, it would require less Government spending than at present. I would go so far as to say that even the present farm program, with more administrative determination and perhaps some amending, could still do a fair job.

One aspect of farm programs to which I have given a lot of thought is the matter of deciding on planting limits for each farm. A lot of grumbling and eventual noncompliance arises from this problem.

Thus, it occurs to me—and this is the main new idea I bring to you—that it might be simpler to establish a formula under which each farmer could work out his own acreage diversion total. You could do this by requiring that for each acre planted to corn, for example, a certain additional area, say one-half acre, should be shifted out of production. The farmer would be permitted to figure out for himself how many acres to put in a given crop, as long as he matched these acres to the required extent with diversion of land to nonuse. The diverted land, incidentally, either should be of a productivity approximately equal to the planted land or it should be discounted according to its estimated yielding power.

For meeting this set-aside requirement, I would recommend support loan on the crop of 100 percent of parity price. Compared to the support levels we have now, this recommendation sounds high, but with the production change which should result, I am convinced that the Government would have far less commodity takeover. I would mention in this connection that the parity formula itself was revised earlier this year so that 100 percent today is only equal to about 97 percent before the revision.

I also hold to the belief that anything helping farm income also brings greater prosperity to business catering to agriculture and in the end produces more tax revenue with which to help offset farm program costs. After all, as the U.S. Department of Agriculture itself recently reported, farmers in 1955 (which, incidentally, was not one of our best years in the Midwest) spent around \$40 billion on production and living items.

Now as for the acres set aside, some assistance on seed, fertilizer and such should be provided for the complying farmers, just as is now the case under the present soil bank program. At the support level which I recommend, and assuming fairly substantial acreage set aside for at least the next few years, annual payments may be necessary on such acreage. However, payment rates at about the current conservation reserve levels would hardly be high enough, especially if the crop support were lowered. These payments could be made either in cash or in the form of grain surpluses from Government bins. Payment-in-kind up to an amount of grain equal to two-thirds of the estimated average yield of the banked acres seems reasonable to me.

At this point, it might be of interest to refer to some cost estimates for putting 150

acres of southwestern Iowa cropland into the soil bank:

Two discings at \$1.25 per acre each	\$375
One harrowing at 50 cents per acre	75
Drilling seed at \$1.50 per acre	225
acre after ACP allowance Phosphate fertilizer, less ACP allow-	165
ance but including spreading	550
Two mowings per year to control	
weeds	450
Taxes (estimated)	500
Seed: Alfa!fa, timothy, and orchard	
grass	750

The conservation reserve payment on this land amounts to \$3,150. It is thus evident that there should be a further income of some \$2,000 from this farm, if it is to pay 5 percent interest on the estimated value of \$40,000.

Should compliance with the program be required of all farmers? I consider that our circumstances today require compliance by all farmers of any program adopted. At the same time, I hold that farmers themselves should have the right by referendum ballot to say whether they want the program to be put into effect. We see plenty of evidence in industrial and labor experience that partial compliance is no answer. There are no noncompliers when it comes to State regulation of crude oil output, for example.

In this same connection, there must be no noncompliance loans or other gimmicks to encourage noncompliance. That was what helped wreck our corn program and I hear wheat producers are now afraid it may be

tried on them.

It should go without saying that farm programs ought to be administered at the State and local levels as much as possible by farmer-elected committees. These are the people who best know how to apply a program to local conditions and they can be very helpful to Washington in making program improvements from year to year. It is regrettable that this practice of collecting suggestions from the country has somewhat fallen into disuse in recent years.

It is hardly necessary to emphasize to this committee the justification for an effective farm program. All of you recognize the income handleap under which agriculture has been working, in relation to the nonrural part of our economy. You are aware that we need to take the best possible care of our farmland because it will have to be cropped much more intensively some day for a much

larger population.

And you are also aware, I am sure, that if nothing is done, many, many solid family farmers are either going to be busted off or discouraged out of agriculture. Either way is bad and will leave use with too much contract farming and other giantism in agriculture. If something isn't done, I'm afraid we will see more and more of these million-hen egg factories and these pig parlors with more comfort facilities for animals than we have in our own homes. At some point, these outfits will get strong enough to force up food prices and their costs will also rise due partly to widespread unionization of their help. If that day comes, the people of this country could have some real regrets.

As I said at the beginning, the farm people out my way are still looking to Congress with hope. They feel you should not let the threat of a veto keep you from bringing out some kind of a farm bill this year, and even then it will be 1960 before we can affect production. Although they would be a long way from a full parity income, I suppose the majority of farmers could manage to get along if the farm situation didn't

change. But that's just it; we are convinced that if nothing is done, it will change—and for the worse. Though you have no way of detecting this, I assure you that there are a lot of us out there who reflect often on the legislative situation even though our eyes may seem to be only on the corn row.

Mr. Chairman and members, I thank you

sincerely for your attention.

Statement by Congressman Victor L. Anfuso on Cooperation With Russia in Outer Space Exploration

EXTENSION OF REMARKS

## HON. VICTOR L. ANFUSO

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, June 1, 1959

Mr. ANFUSO. Mr. Speaker, I regret the recent misunderstanding between the chairman of the House Committee on Science and Astronautics, the Honorable Overton Brooks, and myself. This misunderstanding should have never arisen between us. I feel sure it was all clarified satisfactorily in my personal talks with Mr. Brooks on Thursday, May 28.

I have the highest regard for Mr. Brooks and respect his judgment. He is doing a grand job as chairman of the full committee and I am most anxious to cooperate with him in every way. The chairman has allowed me to explore the matter further and to consult with our congressional leaders, as well as with

the Department of State.

This whole matter raises the very important issue of the separation of powers between the legislative and executive

branches of Government.

On my part as a legislator, I do not quarrel with the point of view that it is up to the administration to negotiate agreements, treaties, and so forth, between the United States and other countries. There can be no quarrel also that it is the duty of Congress to establish by legislation how far the administration can go in this field, and it is part of this duty to learn the facts. As a study and fact-finding body, the Legislature has the duty to inquire from administration witnesses and to travel within the continental limits of the United States and in foreign countries. Committees of the Congress do have the power to hold hearings anywhere within the United States, but not in foreign countries.

Having defined our respective duties, now let us examine the particular functions of the House Space Committee and particularly those of the International Cooperation and Security Subcommittee.

By House resolution, the committee has been given jurisdiction over the exploration and control of outer space. Both Congress and the President have approved the policy of limiting outer space to peaceful purposes. The dedication of outer space to peaceful purposes is essential, if mankind is to survive. It is the purpose of the Subcommittee on

International Cooperation and Security to seek ways and means whereby the United States can cooperate with other nations in the peaceful uses of outer space. Such cooperation must necessarily include the Soviet Union. I firmly believe that the United States must take the lead in developing a peaceful and productive international space program.

Under this jurisdiction, the members of the House Space Committee have the right to go to Russia, if permitted of course by the Soviet Union, and to all other countries where international conferences or studies are in progress, in order to familiarize themselves with the programs and activities of those countries in the field of exploration of outer space and to examine communications and tracking stations involving international traffic in space.

Under this same jurisdiction, we have the right and the duty to learn for ourselves whether there is room for cooperation between the United States and the Soviet Union and other countries in the peaceful uses of outer space. In this atomic and space era we cannot approach world problems with 18th or 19th century philosophy. The question of finding ways and means of preserving the peace is not limited to any individual or any single branch of Government. Congress has its responsibility, too.

Speaking for myself—and I believe

Speaking for myself—and I believe this to be true throughout the United States—the people of my district are worried about a world conflict and they expect me to do everything within my power to assist and work together with the State Department and any other branch of Government in this quest for peace and international cooperation.

To be more specific, the ad hoc committee of the United Nations, to which I have the honor to be an alternate delegate, was specifically formed to bring in all the countries of the world in one combined effort to explore what peaceful uses can be made of outer space and to explore the field of international communications, weather forecasting and control, and so forth. Thus far the Soviet Union, Czechoslovakia, and Poland, as well as India and the United Arab Republic, have refused to participate in this noble venture. This leaves a tremendous vacuum and a huge geographical area which remains uncovered for the proper and more extensive exploration of outer space. It will present insurmountable difficulties for the future and will leave the problem incompletely solved.

Does anyone deny that it is necessary to have Russian cooperation in the peaceful exploration of outer space? Does anyone contest the fact that she is still the only nation, outside of the United States, which has taken the giant step to space flight? Does anyone deny that Russia did cooperate in, and did make valuable contributions to, the International Geophysical Year?

The United States and Russia have the power of bringing about total destruction of the earth itself. Therefore, in the interest of peace, it is the duty of everyone to do everything humanly possibly to obtain Russian cooperation and avoid a world catastrophe. If after exercising these efforts and leaving no stone unturned the Soviet Union still refuses to cooperate, she must then be exposed to world censure.

There is still much division in many parts of the world as to who really wants peace—the United States or the Soviet Union. This division must be narrowed, and I hope on our side. When this is achieved, the danger of war will be materially reduced.

## Washington Report

EXTENSION OF REMARKS

OF

## HON. BRUCE ALGER

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES Wednesday, May 27, 1959

Mr. ALGER. Mr. Speaker, under leave to extend my remarks in the Record, I include the following newsletter of May 30, 1959:

WASHINGTON REPORT BY CONGRESSMAN BRUCE ALGER, FIFTH DISTRICT, TEXAS, MAY 30, 1959

John Foster Dulles left a heritage to comfort and strengthen those he left behind, fellow Americans and the people of other nations. For Americans he embodied great truths, the ties that bind us, patriotism rooted in deep religious convictions, inflexible principles such as the inviolability of contractual obligation and the sacredness of human dignity and freedom. Confronted with the need to compromise differences of viewpoint, he endeavored to remain steadfast to basic principles. For this he was bitterly criticized as unbending. Unfortu-nately his greatest recognition by friend and former foes alike was saved until he had departed. Fortunately we can benefit from the lessons contained in the eulogies. His memory could yield much to world peace and understanding. For his part in main-taining world peace during his tenure of office we can all give thanks. To some, Christian charity of viewpoint was taxed by Russian Gromyko's presence at the funeral, a man dedicated to destroying all that Dulles stood for.

James Hoffa, teamster boss, currently is busily documenting the faults and dangers of union leader bossism in our country today. Consider these incidents together: (1) Hoffa's threat of a punitive nationwide strike (despite subsequent denials); (2) the teamsters clumsy efforts over a series of breakfasts to indoctrinate Congressmen concerning labor law and the lack of need for correction of union abuses; (3) Hoffa's charge that Reuther lacks brains or guits; (4) the AFL-CIO demands that the House weaken the already weak Senate labor bill; (5) the AFL-CIO mapping of a drive to repeal the States' right-to-work laws. Think about them. What do they mean?

Here's a labor leader who loudly proclaims he is above the law; that he is bigger than the government in a public be damned attitude; that he is bigger than the other segments of the labor movement (the skillet calling the kettle black); and he is operating within a framework of trade unionism that would by law force working people to join unions and then (by the success of political pressure) remove unionism from the reach of Congress and corrective legislation. Well, unfortunately, Congress will not lead; it will only follow the people. Public indig-

nation only will force the necessary corrective legislation. For my part, I am not waiting but will continue to work for legislation to put unions under antitrust laws

such as now apply to business.

The U.S. Government's financial position should cause every citizen to stop and reflect. In 1 year U.S. bonds have dropped in popularity as an investment as much as 14 points (the 1995 3 percent issue from \$97 to \$83); or another example, 1 year Government certificates of indebtedness a year ago were taken by investors at 114 percent interest. Recently, when 1 year renewals were offered not at 1½ percent but 4 percent only one-third of the investors reinvested. Consider also that our money is becoming a soft currency overseas. The trend is toward increasing difficulty for Government to get money, and at that at a terrifically increasing interest rate which in turn will affect everyone as the national debt interest soars. The end result? Who knows, but the unpleasantness of the suggested possibilities should not be lost nor vent our doing some stern thinking right now. The reason is quite obvious. The \$13 billion deficit of last year and years of deficit financing are catching up with us. The correction necessary requires some public support and self-discipline; namely, that Government must live within its means and reduce spending. We will not do this without public pressure which exceeds the organized minorities pressure on Congress-

The Renegotiation Act extension of Government defense contracts brought on some controversy over whether to terminate the Act or extend it by 2 years or 4 years. Ultimately, the fear of windfall or excessive profits by defense contractors precluded any House action to curtail the authority of the Renegotiation Board. It was extended 4 years. I suggested in debate a five-fold course of action more suited to preservation of competitive free enterprise without permitting excessive profits (and will send to you on request) but the bill passed with only seven dissenting votes. Here's an example, as I see it, of a complicated law not being understood by the House membership. Yet the facts are there and will yet force an accounting of those who either do not understand or who wishfully expect of Renegotiation Board the wisdom of the Almighty, as they take back as profit the earned income of defense contractors.

Appropriation bills are coming to the floor in rapid succession. The Executive Office and general Government agencies, \$14 million approximately; the State and Justice Departments, Judiciary and related agencies, \$650 million (\$19 million less than last year); others will be ready soon. Unquestionably, public displeasure is resulting in smaller expenditures, but the danger is ever present of public apathy causing almost overnight blowing up of the spending balloon.

## The Emperor's Clothes

EXTENSION OF REMARKS

## HON. CHARLES O. PORTER

OF OREGON

IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 20, 1959

Mr. PORTER. Mr. Speaker, once there was an emperor who was deceived by wily men into believing that he was wearing clothes of wonderful material when in fact he was, as a little boy pointed out, naked. This old story, in a slightly different form, has now been acted out by the International Olympic Committee which has just seen fit to tell Chiang Kai-shek that he is not China.

Under a previous consent I am including a perceptive editorial from the Washington Post, Sunday, May 31, 1959, entitled "Bolt From Olympus":

BOLT FROM OLYMPUS

It is too bad that any group of athletes will be excluded from participation in the Olympic Games for political reasons. Nevertheless, the decision of the International Olympic Committee to withdraw membership from Nationalist China because it does not control sports in mainland China happens to conform to political reality. A decision to retain Nationalist China as representative of the mainland would have been just as political as the decision opening the way for Com-munist China to represent the area it controls. This does not mean that the Peking government should be permitted to dictate to the Olympic Committee. There is every reason to encourage free chinese participation along with Communist participation, irrespective of any propaganda demands from Peking. The sensible thing, now that the Committee has recognized a political fact which the State Department is still unwilling to recognize, would be to invite the Chinese Nationalists back—but as representatives of an independent Formosa.

## HON. FLORENCE P. DWYER

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 6, 1959

Mrs. DWYER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include a statement which I recently submitted to the Subcommittee on Health and Safety of the Committee on Interstate and Foreign Commerce urging approval of legislation extending the Federal Air Pollution Control Act: STATEMENT OF HON. FLORENCE P. DWYER, OF

NEW JESSEY, BEFORE SUBCOMMITTEE ON HEALTH AND SAFETY, HOUSE COMMITTEE ON INTERSTATE AND FOREIGN COMMERCE, ON BILLS TO EXTEND THE AIR POLLUTION CONTROL LAWS

Mr. Chairman, I am most grateful to the subcommittee for this opportunity to express my views on the question of extending the duration of the Federal Air Pollution Control Act and expanding Federal activities under this law.

I have been personally interested in this problem for some time. As the sponsor in the State Assembly of New Jersey's first study commission in the field of air pollution, I had occasion to acquaint myself with the increasingly severe conditions in urban and industrial areas of our State and especially in the bi-State metropolitan area of New Jersey and New York. Later, as a member of the Subcommittee on Intergovernmental Relations of the House Government Operations Committee during the last Congress, I actively participated in the subcommittee's investigation of air pollution in a number of the country's largest cities. We also held on-the-scene hearings in Los Angeles, certainly one of the cities hardest hit by atmospheric contaminants.

It is my considered opinion that the matter of the growing contamination of the air we all must breathe is one of the most serious problems affecting the people of our country. Despite the extensive efforts of areas like Los Angeles County, despite the growing awareness of States and communities throughout the Nation, and despite the slowly increasing activities of the Federal Government, the problem of air pollution is more serious today than ever before.

What is worse, the concensus of scientists and engineers and other air pollution experts clearly indicates that the harmful contamination of the air is steadily becoming more serious. The rapid urbanization and industrialization of the country, the increased population, the growing number of automobiles, and the introduction of new sources of atmospheric contamination such as petrochemicals, high energy fuels, nuclear technology and a whole host of new synthetics, have combined to produce a present and future problem of immense scope-one that requires more intensive efforts at local and regional control of pollution, more reliable knowledge of the sources and effects of pollution, and a much more effective network of cooperation among the many levels of government and private organizations involved in the problem.

It is obvious that air pollution is not an exclusively Federal concern. Historically it hasn't been, and practically it can't be. Yet, the Federal Government does have a critically important role to fill in the complex attack on this menacing condition. The nature and extent of this Federal role is the question presently before this subcommittee.

Public Law 159, 84th Congress, authorized a program for research and technical assistance to obtain data and develop methods of control and abatement of air pollution. The Secretary of Health, Education, and Welfare and the Surgeon General of the United States were assigned the responsibility for this program.

While the act recognized the primary responsibility and right of the States and local governments in controlling air pollution, it provided for Federal assistance in the formulation and execution of research programs, in encouraging cooperation between interested governments and agencies, and in collecting and disseminating information.

The act also authorized annual appropriations up to \$5 million for each of the years 1956 through 1960. However, of the authorized total of \$20 million for the first 4 years, only \$12.4 million was actually appropriated. For fiscal year 1960, the last year of the expiring program, the administration has requested \$4.212,000, while the House recently voted to increase this amount slightly.

Two principal questions are posed by the bills now under consideration by the sub-committee: For how long a period should the Federal Air Pollution Control Act be extended? and, to what degree, if any should the Government expand its current rate of

activity in this field?

Concerning the first question, one of the bills proposes a 5-year extension of the act, while the remainder propose that the air pollution program be made permanent. On the other hand, the Senate has recently passed legislation extending the act for 4 years.

There is no doubt in my mind that the problem of dangerous air contamination will be with us for a long, long time. Yet, this factor alone does not necessarily justify that the antipollution program be made permanent. Even though the Appropriations Committees of the Congress would be examining the operation of the program on an annual basis, it seems to me that there is much to be said for the view of the Senate Public Works Committee that Congress

should review and evaluate such an important matter on a periodic basis,

On the other hand, the executive agencies involved in the air pollution program should be given reasonable assurance of long-term authority and support from the Congress. We have learned from experience in other programs that an uncertain, stop-and-go approach is certain to reduce effectiveness, limit the availability of personnel, and cause an unnecessary amount of wasted time and money in a complex undertaking of this kind.

If Federal assistance is to continue to be worthwhile, there must be time to plan and carry out difficult research programs. In the past 5 years, the Federal effort has contributed toward the sampling, identifying, and measuring of airborne contaminants which are present in the atmosphere of almost all cities. It has appraised several of the more important sources of urban air contamination, such as oil refineries, automobile exhausts and combustion processes. And it is presently tackling important studies of the chemical, meteorological, and physical influences and of atmosphere reactions.

All of this and related activity is necessarily conducted on a continuing basis. It must be refined and tested and the findings communicated to other levels of government and to private groups for use in the fight against pollution.

Therefore, it would be my view that Congress ought to extend the Air Pollution Control Act a minimum of 4 or 5 years—long enough to permit uninterrupted progress without loss of legislative oversight.

On the second question, too, there is some difference of opinion. One of the bills before the subcommittee would authorize a continuation of the program at the present maximum level of \$5 million annually. Other bills would eliminate the ceiling over the funds which could be appropriated. The Senate-approved legislation would increase the annual authorization limit to \$7.5 million—an increase of 50 percent.

I am impressed, however, by the argument of the Secretary of Health, Education, and Welfare, who stated that "removal of the statutory limit on the annual appropriation authorization would be highly desirable." As Secretary Flemming explained, air pollution research has developed several important leads, especially with respect to the effect of pollutants on health, and any breakthrough would probably require additional funds to develop and exploit the new knowledge. In any event, the Secretary should be able to come to the Congress and explain why extra money is needed—a freedom he would be denied by continuing the statutory limit on authorized appropriations—since the final decision would be left to Congress.

As the subcommittee knows, the Bureau of the Budget has endorsed this recommendation.

Another recommendation of the Secretary also appeals to me as being eminently sound. He has requested specific legisaltive authority to make investigations and hold public hearings in two types of situations. These are (1) where particular pollution problems are common to many communities throughout the country, and (2) where such problems are essentially intertsate in character, affecting people both in the State of origin and in neighboring States.

Both types of problems, as the Secretary has stressed, can be expected to increase in number and extent especially with further urbanization. In many cases, the development of solutions for them transcend the capabilities of local agencies and even of State control authorities.

State control authorities.

In this respect, I should like to call the subcommittee's attention to a portion of a statement issued last fall by the chairman

of the Subcommittee on Intergovernmental Relations, Mr. FOUNTAIN, and myself, which was in the nature of a report on the subcommittee's investigation of air pollution prob-

lems during the 85th Congress:
"Air pollution is already a serious problem in many areas of the United States. Because of our increasing population and the tre-mendous growth of metropolitan areas, the problem will inevitably become more serious unless we move promptly and vigorously to meet it. There is much that State and local governments can do to fight air pollu-tion; they must take every practicable step that is within their power if we are to have clean air for our cities. However, there are certain things that local authorities cannot do by themselves. States and localities cannot control pollution which originates outside the limits of their jurisdiction, nor do they have the resources necessary to solve some of the more difficult technical problems of air pollution control. In such instances the Federal Government can and should assist local authorities."

I can think of no better way to conclude this brief statement than by quoting from the conclusion of a remarkable address delivered by the Surgeon General of the United States, Dr. Leroy E. Burney, before the National Conference on Air Pollution held in Washington last November 18 to 20.

Referring to the tremendous acceleration of American industrial growth due to the high rate of investment in advanced research,

Dr. Burney observed:
"The problems that come as byproducts of our almost unbelievable material progress demand everybody's skills and knowledge. More than that, they demand genuine cooperation. We can no longer ask 'Who's going to be in charge?' 'Who's going to get the credit?' We must ask 'How can we most effectively work together?' Nor can we ask 'Can we afford to clean up the air?' We cannot afford not to. It costs cities more to endure dirty air than to apply the controls We now have. Controlling air pollution will cost big money, but it is an essential in-

vestment.
"Assuredly we all have the same goal—a which safe and healthful environment in which everyone may enjoy the fruits of progress.

The legislation now before the subcommittee provides a great opportunity to take a long step forward in making our country a better and safer place in which to live.

I thank the subcommittee for its consider-

ation of my views.

#### Italy's Role in International Affairs

EXTENSION OF REMARKS OF

## HON. PETER W. RODINO, JR.

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES Monday, June 1, 1959

Mr. RODINO. Mr. Speaker, the United States should take every opportunity to urge that Italy be given a more active role in international negotiations. Too often, Italy's importance in European affairs since the end of the last war has been minimized or obscured. There were many reasons for this, the main one being that she was on the losing side of that war. However, Italy has now suffered enough the consequences and setbacks for her earlier deeds and no longer should be treated as a secondary power in Europe. Since the war, particularly during the last several years, Italy has changed so radically from what it was under Fascist dictatorship that it is a mistake for people to still regard Italy as a secondary power in European and in world affairs.

Italy's importance in the East-West cold-war struggle, especially in the context of the current Foreign Ministers' Conference in Geneva, and also in the proposed summit conference, looms large. In the tug-of-war type of diplomacy going on at the Foreign Ministers' Conference the unscrupulous and wily men of the Kremlin are constantly espousing the cause of their satellites and that of East Germany and are clamoring for full representation of Czechoslovak, Polish, and East German delegates at the Geneva conference. Under these circumstances the Western statesmen should insist that if the conference is broadened. Italy should be the first nation to be added.

Italy certainly has earned such a place at least in matters involving the fate of Europe. Moreover, she is entitled to due and serious consideration for an important role in all important negotiations. In the course of a dozen years Italy's present leaders have not only cleansed their country of all Fascist beliefs, but they have also established a democratic republic, the Republic of Italy, through an orderly democratic process. Italy has become an integral and important part, and also a rampart, of the free West in its fight against Communist totalitarianism. Politically, economically, commercially, culturally, and ideologically Italy is not only a stanch partner of the West but one of the leaders of the free world.

As we all know, Italy is not as rich in natural resources as are some other European countries, and for that reason it has sometimes been most difficult for her to support her teeming and industrious population. This has been particularly true since the end of the last war in view of the devastation of that war. But despite innumerable serious handicaps, internal unrest and external threats, in the course of a relatively short time Italians have registered some impressive successes in governmental, financial, and commercial fields. By the efficient use of the generous aid provided by this country, both in goods and in money, they recouped a part of their terrific war losses, and began to rebuild the country. With sheer force of determination and firm resolution the Italian people, under genuine and wise leadership, pulled themselves up by their bootstraps, and improved Italy's position immensely in the commercial, industrial, and technological world. Their gains were impressive and inspired confidence and hope in their friends and sympathizers. With these advances and improvements has come her just recognition as a major power in world affairs.

This recognition of Italy as a leader in the community of free and democratic nations is most clearly acknowledged in the North Atlantic Treaty Organization. In that bulwark of democracy, the most efficient and working handmaid of the West in its defense against surging Communist totalitarianism, Italy's role is clearly defined and is supremely important. That importance is attested to by

the fact that now the NATO powers have agreed, with Italy's consent, to install guided missile bases in Italy. measure of the confidence which Italy's allies have placed in her, and Italy is certainly worthy of such trust.

For all these reasons, the leaders of the West should insist unequivocally that Italy be given a real, audible, and effective voice in all negotiations between the free and democratic West and the Communist totalitarian East.

#### Mr. Dulles

EXTENSION OF REMARKS

## HON, EDWARD H. REES

OF KANSAS

IN THE HOUSE OF REPRESENTATIVES Monday, May 25, 1959

Mr. REES of Kansas. Mr. Speaker, under unanimous consent approved by the House, I am including an editorial by William L. White, editor of the Emporia Gazette, Emporia, Kans., which is a fine tribute to our great Secretary of State, John Foster Dulles.

Mr. White gives one a closeup of the life and service of Mr. Dulles. This is because of the personal relationship between Mr. Dulles and Mr. White.

The editorial follows:

Mr. Dulles

Since it was announced that John Foster Dulles had been stricken with cancer, American editorial writers have been enjoying a curious honeymoon with death. With mo-notonous unanimity all have since been praising his sterling qualities of heart and mind.

Yet in the Secretary's precancer days, the same columns were filled with scathing commands that "Dulles must go." Today they praise his "firmness"; then they denounced his "inflexibility." Today they praise his courage in refusing to back down in the face of Sould threats; vectorian they denounced of Soviet threats; yesterday they denounced his "brinkmanship" which frightened both the neutralist world and the queasier of our European allies by leading the free world (so said the Dulles critics) to the crumbling edges of war.

Why the switch? And could it be that the universal acclaim of John Foster Dulles today is in some cases a deference to death which all of us must face, and some with a quivering dread, but toward which Secretary Dulles has, in recent months, so fearlessly

And why had he so little fear of it? Perhaps because this fine mind has never been turned inward on himself and his own fate. How or when he died, and whether in painfree peace or in vomiting agony, mattered little to him compared with the fate of Freedom which was to his last conscious hour his main concern.

In these final months all of us have been spectators at a deeply moving pageant in which a brace man in a foulard bathrobe walked deliberately out of history and down into the shadows ahead, yet could do this without faltering because he cared so greatly for his country and so little for himself,

This writer's first memory of this man was when he was plain Mr. Dulles, an authority on international law in the firm of Sullivan & Cromwell, at the moment candidate against Herbert Lehman for the Senate in New York. Having little money to contribute to the Dulles campaign, I volunteered my services as a writer and was pleased that these should be immediately accepted; I was given a mass of source material and asked to pull from them facts from which I would write what should be frankly called a campaign biography, which would then be used by the more devoutly Republican dailles and weeklies in upstate New York.

My chore was to keep the story brief and smoothly readable-a blending of fact, garnished with adjectives of praise. It was in 2 days finished and then, according to schedule, I took a taxi to his home, a brownstone in the east seventies where, after a hard day's campaigning, he would be waiting to review

my manuscript.

It had been a very hard day upstate, with speeches every half hour in a dozen towns, and he now received me in carpet slippers and in the same type of foullard dressing gown in which he died, and then sat immediately at his desk with my biography before him, going over it with the frozen face of a good lawyer, its strong contours plain in the yellow light of his desk lamp, his massive Scotch features intent on my double-spaced manuscript, his chunky fingers busy with a blue pencil.

While I sat opposite him in a comfortable black leather client's chair (both of us at the bottom of a canyon of law books whose ponderous titles stared out from each of the four walls) wondering uneasily what he was up to. For the manuscript, even though it was to appear anonymously, was still my own. The poor thing was now at the mercy of the vanity of a candidate. With that blue pencil he was stabbing, butchering my piece. Had not my carefully chosen words of praise been strong enough for his appetite, inflamed as this probably was by the hand clappings of the Republican crowds?

Back in a taxi at last, by the light of a dying sunset coming through the windows over the treetops of Central Park, eagerly I fumbled through the pages to see what his candidate's blue pencil had done to that

campaign biography.

Well, what remained of it were only factsnames, dates, offices he had held-a recital as coldly stark as the data on a tombstone. And heavily blue-penciled out of the lifestory was every one of my adjectives of praise-however mild, and however richly deserved.

He failed because in that year New York's voters were not ready for cold facts, and Herbert Lehman, warmed by the radiance of the Roosevelt smile, coasted in to victory. But a look back, now, at the Dulles inflexible brinkmanship: Without losing an acre of ground for the free world, it has kept us out of war. We have avoided it largely because all knew that, under Dulles, we

would not shrink from it.

We have had more adroitly flexible Secretaries of State. Dean Acheson, for one—limber-limbed as a Bolshoi ballerina—pranced and pirouetted us into the Korean war only because this man of infinite tact had not made it crudely clear that Korea lay within our defense perimeter and that, should one Red soldier cross the 38th, then surely we would fight. A few words of frightening bluntness, spoken at the proper time, would have alarmed the neutralist world, but would have saved American lives.

In serving freedom's cause this coldly logical mind did not fear to walk alone or, as once happened, in strange company. When the British and French (after much provocation, of course) seized Suez, he did not hesitate to rebuke these, our warmest allies, with the righteous wrath of an Old Testament prophet, alining himself for one brief moment with the Soviet Union, but showing the skeptical neutralist world that we stood foursquare for law and freedom, even when these were violated by our friends.

So now he passes into history, leaving us with our heels dug firmly in on the Berlin

perimeter. Let us hope that Mr. Herter and President Eisenhower will have the courage to keep us there.-W. L. W.

Questions and Answers on the 1959 Amendments to the Railroad Retirement Act and Railroad Unemployment Insurance Act

> EXTENSION OF REMARKS OF

## HON. JAMES E. VAN ZANDT

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES Monday, June 1, 1959

Mr. VAN ZANDT. Mr. Speaker, railroad workers and their families will receive higher benefits as a result of amendments to the railroad retirement and unemployment insurance laws which were signed by the President May 19. The following questions and answers explain the changes that were made by these amendments.

RETIREMENT-SURVIVOR BENEFIT PROGRAMS

First. What changes were made in the railroad retirement and survivor pro-

Changes in these programs are as follows: First, monthly benefits and insurance lump sums were increased 10 percent; second, reduced benefits are payable as early as age 62 to spouses of 65year-old retired employees and to women employees; third, employers and employees will pay higher taxes; fourth, the limit or creditable earnings was raised to \$400 a month; fifth, the work restrictions for disability annuitants and for survivor beneficiaries who work outside the United States were modified; and sixth, payments under the Railroad Retirement Act are no longer considered income in determining eligibility for certain veterans' benefits.

Second. When will the higher annuities become payable?

The increases in annuities take effect with payments for the month of June and the increases in almost all benefits will be reflected in the July 1 or August 1 checks. Beneficiaries are asked not to write to the board regarding increases in their benefits, as it will only delay the making of adjustments.

Third. How will employee annuities be affected by the amendments?

Benefits to employees will be about 10 percent higher under a new formula. The formula, which is applied to the employee's monthly compensation, is as follows: 3.35 percent of the first \$50; 2.51 percent of the next \$100; and 1.67 percent of the remainder.

The amount of the monthly benefit is found by multiplying the sum of these amounts by the employee's years of serv-

Fourth. What is the highest annuity an employee who retired now could re-

An employee with 30 years of service and maximum creditable earnings could receive an annuity of \$205 beginning June 1, 1959.

Fifth. When I retired, my annuity was computed under the railroad minimum formula. Will I receive a higher benefit under the new law?

Yes. The amounts of minimum annuities were also raised 10 percent. If an employee has a current connection with the railroad industry when he retires, his annuity cannot be less than the lowest of the following amounts: \$5 times his years of service; \$83.50; or 110 percent of his monthly compensation.

Sixth. Is there a new formula for

computing a wife's annuity?

No. A wife's annuity is equal to half of the employee's annuity, as under the old law. However, all wives on the Board's rolls will receive increases of about 10 percent in their annuities because the employee annuities on which they are based will be increased and because the amendments established a new maximum for wives' annuities. Formerly, the maximum wife's annuity was equal to the largest amount that could be paid as a wife's benefit under the Social Security Act; the maximum is now 110 percent of that amount.

Seventh. Will the survivors of deceased railroad employees get higher

benefits?

Yes. A new formula for computing the "basic amount," which determines the amount of survivor benefits, provides for monthly survivor benefits and insurance lump sums which will be about 10 percent higher than under the old law.

Eighth. Were the maximum and minimum amounts of survivor benefits

changed?

Yes. The new maximum family benefit under the railroad survivor formula is 234 times the basic amount up to \$193.60. The minimum family benefit is \$16.95. However, benefits may be higher if they are computed under the social security minimum guarantee provision.

Ninth. I am receiving an annuity computed under the social security minimum guaranty provision. Will I receive a

higher benefit?

Yes. Your benefit will be increased 10 percent. Railroad employees and their families are now guaranteed that their total monthly benefits under the Railroad Retirement Act will not be less than 110 percent of the amount, or 110 percent of the additional amount, that would be payable if the employee's railroad service after 1936 had been covered by the Social Security Act.

Tenth, My father's railroad pension was taken over by the Railroad Retirement Board in 1937. Did the amendments provide for an increase in his

benefit?

Yes. The amendments provided for 10 percent increases in all monthly benefits, including pensions.

Eleventh. Will I have to apply for a

recomputation of my annuity?

No. You do not have to apply for a recomputation of your annuity. Except for a small group who will be notified, all beneficiaries on the Board's rolls will receive the increases in their benefits automatically.

Twelfth. What are the new provisions

for reduced benefits?

Wives and dependent husbands of retired 65-year-old employees and women employees who have less than 30 years of railroad service can retire as early as age 62 on reduced benefits. The annuity is reduced 1/180 for each month the applicant is under 65 when the annuity begins. The first month for which these benefits will be payable is June 1959.

Thirteenth. What is the new limit on

creditable earnings?

Railroad earnings up to \$400 a month after May 1959 will be creditable and can be included in figuring an employee's monthly compensation and average monthly remuneration.

Fourteenth. What are the new tax rates on employers and employees?

As of June 1, 1959, employers and employees will each pay a tax of 634 percent on earnings up to \$400 a month. In 1962, the rate will rise to 714 percent, and after 1964, the rate will be increased, on a conditional basis, by the same number of percentage points as the social security tax rate exceeds 234 percent.

Fifteenth. Will the new tax rates provide enough income to put the railroad retirement system on a sound financial basis?

Yes. According to estimates by the Board's actuaries, the new tax rates are nearly adequate and will provide sufficient income to keep the system on a reasonably sound financial basis.

Sixteenth. If I pay higher railroad retirement taxes, will I be guaranteed higher benefits?

Yes, all formulas are increased 10 per-Also, railroad employees are guaranteed by means of a residual payment that they and their families will receive more in benefits than they paid in railroad retirement taxes. The formula for computing this benefit-which becomes payable only after the employee's death-has been revised to take into account the higher taxes which will be paid by employees. The gross amount of the benefit, before any deductions because of railroad retirement or social security benefits, will be computed as follows: 4 percent of the employee's creditable earnings after 1936 and before 1947; 7 percent of his earnings after 1946 and before 1959; 71/2 percent of his earnings after 1958 and before 1962; plus 8 percent of his earnings after 1961.

Seventeenth. What change was made in the work restrictions for survivor annuitants?

The work restrictions which apply to a survivor beneficiary who works outside the United States are the same as for individuals who work in the United States. Beginning with 1959, a beneficiary may earn up to \$1,200 a year in employment-or self-employment-that is not covered by the Railroad Retirement Act without losing his annuity for any month. If he earns more than \$1,200, his annuity will be withheld for 1 month for each \$80 or part of \$80 he earns over \$1,200, but not for any month he earns less than \$100—or, if self-employed, does not have substantial self-employment. These restrictions only apply if the beneficiary is under age 72.

Formerly, if a survivor beneficiary under age 72 worked outside the United States on 7 or more days in employment that was not covered by the Social Security Act, his annuity was withheld for that month.

Eighteenth. What are the new work restrictions for disability annuitants?

As before, if a disability annuitant under age 65 earns more than \$100 in a month, his annuity is withheld for that month; and if he fails to report such earnings on time his annuity may be withheld for one or more additional months as a penalty. These provisions have not been changed. However, any annuity payments which have been withheld may be payable at the end of the year if the employee's annual earnings are not more than \$1,200.

In counting annual earnings for this purpose, earnings in last person and railroad employment are not counted, since no annuities are payable for any month in which such employment occurred. If the annual earnings are more than \$1,200, the annuity cannot be withheld for more than 1 month for each \$100 the employee earned in excess of \$1,200, counting the last \$50 as \$100. This provision applies to earnings in 1959—and later years.

Nineteenth. How are railroad employees who are eligible for veterans' pensions affected by the new law?

A Veterans' Administration pension which is based on non-service-connected disability is not payable if the veteran's income exceeds certain limitations. Railroad retirement and survivor benefits are no longer considered income for this purpose. Retired employees who waived all or part of their annuity in order to qualify for a veteran's pension should revoke the waiver.

UNEMPLOYMENT-SICKNESS BENEFIT PROGRAMS

Twentieth. What changes were made in the unemployment and sickness programs?

A number of changes were made in these programs: First, unemployed and sick railroad workers will receive higher benefits; second, provision was made for extended unemployment benefits; third, the qualifying earnings requirement was increased; fourth, the limit on creditable earnings was raised; fifth, Sundays and holidays will be treated the same as other days in figuring unemployment benefits; sixth, the number of days of unemployment required before benefits can be paid in a first registration period was reduced from 7 to 4; seventh, employers will pay higher taxes; and eighth, the Railroad Retirement Board can borrow funds from the railroad retirement account when the balance in the unemployment benefit account is low.

Twenty-first. What are the new benefit rates for unemployment and sickness?

An employee's daily benefit rate for unemployment or sickness will be determined in one of two ways:

(a) From the following schedule: Employee's creditable base-year earnings:

Da	lly
benefi	t rate
\$500 to \$699.99	84.50
\$700 to \$999.99	5.00
\$1,000 to \$1,299.99	5, 50
\$1,300 to \$1,599.99	6.00
\$1,600 to \$1,899.99	6.50
\$1,900 to \$2,199.99	7.00
\$2,200 to \$2,499.99	7.50
\$2,500 to \$2,799.99	8,00
\$2,800 to \$3,099.99	8.50
\$3,100 to \$3,499.99	9.00
\$3,500 to \$3,999.99	9.50
\$4,000 and over	10.20

(b) An employee's daily benefit rate is raised to 60 percent of his daily rate of pay on his last railroad job in the base year, if this amount is higher than his daily benefit rate according to the schedule. The daily benefit rate, however, cannot exceed \$10.20.

The new rates are retroactive to July 1, 1958, for normal unemployment and sickness benefits, and to January 1, 1958, for extended unemployment benefits.

Twenty-second. What provisions were made for extended unemployment benefits?

Extended unemployment benefit periods were provided for employees who did not quit voluntarily without good cause or voluntarily retire, as follows:

First, employees who have 15 or more years of railroad service can be paid benefits for as many as 130 additional days of unemployment in a 26-week period after they exhaust regular unemployment benefits. Employees who have 10-14 years of service can be paid for as many as 65 additional days in a 14-week period after they exhaust regular unemployment benefits. These benefits can begin as early as January 1, 1958.

Second, employees who have at least 10 years of railroad service and who become unemployed in a benefit year in which they are not qualified for benefits may start the next benefit year early if they are qualified for that year. This provision is also retroactive to January 1, 1958.

Twenty-third. Can employees who have less than 10 years of railroad service receive extended unemployment benefits?

Yes, but the provision for these benefits was not made part of the Railroad Unemployment Insurance Act, and the benefits are payable on a temporary basis only. Employees who have less than 10 years of service and who exhausted their unemployment benefits after June 30, 1957, and before April 1, 1959, can be paid benefits for an additional 65 days of unemployment in registration periods beginning in the period June 19, 1958-June 30, 1959. However, an employee cannot establish a claim for benefits under both this provision and the Tempotary Unemployment Compensation Act of 1958.

Twenty-fourth. If I have 10 or more years of railroad service and exhaust normal benefit rights for unemployment, what should I do to receive benefits in an extended benefit period?

agent. The Board will determine your each day over 7. That is, benefits for eligibility from its records and make payments for the extended period if you are eligible.

Twenty-fifth. What service is counted toward eligibility for benefits in an

extended period?

Any service that is creditable under the Railroad Retirement Act. In addition to the service shown on an employee's BA-6, this includes creditable service before 1937 and service after the end of the base

Twenty-sixth. When does an employee exhaust his rights to regular un-

employment benefits?

An employee exhausts his rights to regular unemployment benefits under any of the following conditions: First, he has been paid benefits for 130 days in a benefit year; second, he has been paid benefits in a benefit year equal to his base-year compensation, or third, a normal benefit year ends in which he has drawn unemployment benefits less than the maximum amount for which he was qualified.

Twenty-seventh. Can I receive sickness benefits during an extended benefit period or before the regular beginning

date of a benefit year?

Yes. You can receive sickness benefits in a benefit year which has been extended for unemployment benefits or which began early. Sickness benefits will be paid as in a normal benefit year, with benefits limited to 130 days or to an amount equal to your base-year compensation.

Twenty-eighth. Are registration periods in an extended benefit period different from other registration periods?

Yes. Ordinarily, a reigstration period must start with a claimed day of unemployment. In an extended benefit period the registration periods are an unbroken sequence of 7 or 13 2-weeks periods, and the beginning date of each depends on when the extended benefit period began. This period begins on the first day of unemployment after exhaustion of benefits in the normal benefit year.

Twenty-ninth. How can I find out if I am eligible for retroactive benefit payments for unemployment or sickness?

The Railroad Retirement Board will notify all employees who are eligible for retroactive benefit payments for unemployment or sickness. Employees are asked not to write to the Board, as it will only delay the payment of benefits. All but a small number of 1958-59 beneficiaries will receive additional pay-

Thirtieth. What is the new qualifying earnings requirement?

An employee must have creditable railroad earnings of at least \$500 in a base year (calendar year) in order to qualify for unemployment or sickness benefits in the benefit year which begins the following July 1. If an employee's creditable earnings were at least \$500 in 1958, he is qualified for benefits in the period July 1, 1959-June 30, 1960.

Thirty-first. What change has been made in the waiting period for unemployment benefits?

In his first unemployment registration period, an employee can be paid for each

Continue to register with your claims day of unemployment over 4, instead of basis as benefits for subsequent periods.

Thirty-second. What is the effect of removing the Sunday and holiday disqualification?

Formerly, a Sunday or a holiday was counted as a day of unemployment only if the day before and the day after were days of unemployment. The removal of this requirement means that a railroad employee who, for example, regularly works a 5-day week has 4 days of unemployment in every 2-week period when he is employed full time. Since in all registration periods unemployment benefits can now be paid for 10 days out of the 14, an employee who regularly works a 5-day week can receive benefits whenever he loses a day's work, or whenever there is a holiday-other than on a Saturday or Sunday-for which he is not paid wages.

Thirty-third. Was the waiting period for sickness benefits also changed?

No; as before, benefits are payable for all days of sickness over 7 in an employee's first sickness registration period.

Thirty-fourth. What is the new limit

on creditable earnings?

Railroad earnings up to \$400 a month after May 1959 can be counted in an employee's base-year compensation for service performed after May 1959.

Thirty-fifth. How were the provisions for financing the unemployment and sickness benefit programs modified?

Beginning June 1, 1959, railroad employers will pay taxes on earnings up to \$400 a month and the tax rate will rise to 334 percent. This is the maximum rate under a new schedule for employer contributions. As before, the rate for any calendar year will depend on the balance in the railroad unemployment insurance account on September 30 of the previous year. The new schedule is as follows:

					Rate
Balance:				pe	rcent
8450 million or					1.5
\$400 million,	but	less	than	\$450	
million					2.0
\$350 million,	but	less	than	\$400	
million					2.5
\$300 million,	but	less	than	\$350	
million					3.0
Less than \$300	milli	on	- Chronic		9 75

The amendments also gave the Railroad Retirement Board authority to borrow money from the railroad retirement account for the railroad unemployment account when the balance in the unemployment account is not sufficient to pay benefits that are due. When the money is returned, interest at 3 percent a year will be paid to the retirement account.

#### A Time for Anger

EXTENSION OF REMARKS

#### HON. EDITH GREEN

OF OREGON

IN THE HOUSE OF REPRESENTATIVES Monday, June 1, 1959

Mrs. GREEN of Oregon. Mr. Speaker. the Committee on Education and Labor

is presently occupied in the study of a labor-management reform bill. daily papers, and the daily mail of probably every Member of the Congress, are filled with comments on this bill. As a conservative estimate, I would assume that 90 percent of the editorial comment and the mail expresses deep concern over abuses committed by union officials. The long hearings of the McClellan committee and the House Education and Labor Committee demonstrated that the corruption and antisocial activities are characteristic, not of the great mass of labor nor of the great mass of employers, but of a tiny handful of each. A small percentage of employers and a small percentage of union officials have been deeply embroiled in the shady situations and corrupt practices of which we have heard so much lately. It is important, Mr. Speaker, that we be reminded that this is so. It is important, Mr. Speaker, that, together with the properly indignant protests of businessmen against union corruption, we hear the equally proper protests of honest and forthright union officials against business corruption. It is also important-yes, imperative-that this situation be remedied.

Mr. Al Whitehouse, of the Industrial Union Department, AFL-CIO, has voiced such a protest in an address given at the public relations seminar, Harvard Graduate School of Business Administration

on April 16, 1959.

Mr. Whitehouse's speech entitled "A Time for Anger," is the forthright statement of a man whose career is an example of the best in the American labor movement. A dedicated Christian, a person deeply committed to democracy in all its phases, Al Whitehouse has risen through the ranks of labor, to the position of director of the industrial union department. I know and admire Al Whitehouse, Mr. Speaker, and I think his statement deserves widespread attention:

#### A TIME FOR ANGER (By Albert Whitehouse)

Not long ago, a prominent New Jersey racketeer committed suicide. He was blessed with a society wife and was known as the the number one man in lucrative rackets. Why he chose to hang himself may someday make an interesting research paper for some aspiring doctor of philosophy.

Although he was a known racketeer, this man was reported to have connections with the high and the mighty of our world

and to command their respect.

Among other things, the Jersey racketeer was reported to be the head of a \$100 million steel company. He still retained his control in the underworld but had graduated to the heights of American enterprise.

In years to come, some novelist intent on movie and TV rights will probably ro-manticize this man as "Scarface" has already been romanticized. In the national scheme of things, it appears to be success alone that counts, no matter how attained.

While the business community wasn't much put out about the suicide of our New Jersey rackcteer, neither was it at all squeamish about dealing with him while he was alive. After all, business is business and the so-called neutral market is said to have no ethical values.

The Wall Street Journal reported some time ago that the Justice Department is planning a drive against the blue chip bosses of the underworld. These are big financiers who operate out of fancy New York office suites and who, among other things, are middlemen bringing together the nether world and respected enterprise.

These are well-known facts in American life, but they hardly appear to get anybody excited least of all the NAM, the chamber of commerce, or the heads of our big corporations.

In truth, respectable America seems to be unable to get mad at anything, even the Soviet leadership. There is, of course, one exception. Big business, the press, and our more reactionary Congresamen have whipped up a storm over organized labor. Our unions-clean or corrupt-have become the very convenient target for the ire of middlebrow and middle-class America.

When a racketeer operates within the framework of a business, he is simply a crook-not a business racketeer. Let same man change his operations to a union and he becomes a labor racketeer while his activities are used to smear even the average

union member.

Nobody has proposed to close up the banks because some midwestern banker recently swindled the depositors out of \$450,-000 through an embezzlement scheme. Nor has anybody proposed to shut down industry because the New Jersey racketeer was also chairman of a big company.

The underworld's connections to legitimate enterprise are well known. Nobody has proposed to do anything about it and few seem even disturbed at the extent of organized crime in America. Revelations of organized crime seem to lead only to feeble

efforts at law enforcement.

Crime in America is a cancer eating at the vitals of our society. Attorney General William Rogers has placed the cost of crime in 1958 at a staggering \$20 billion-more than we spend on schools, roads or wage increases.

Bank president and bank clerk are equally involved in crime. Embezzlers in the high places are proportionately as common as petty thieves in the low. The excuses of the petty crook and the big time operators are about the same.

#### MADE IN THE MARKETPLACE

The social values of today's world are made in the marketplace. When the State of New York last year established a Division of Consumer Frauds and Protection, it was swamped with complaints.

Sales Management, a trade magazine, reported last year that the payoff is customary in American business and that, in one form or another, it has become an expected part

of sales practices.

Last fall the Harvard Business Review carried an article by Dr. Theodore Levitt, prominent marketing and economic consultant who, among other things, is adviser to Standard Oil of Indiana.

Dr. Levitt's article was entitled, "The Dangers of Social Responsibility." He declared that the worst thing that can happen is for the businessman to develop a sense of social responsibility for his product and his

marketplace conduct.

The businessman, according to this industry spokesman, has no responsibility for his product nor is he answerable for consequences just so long as he remains within the letter of the law. If he manufactures gimeracks that won't last, it's up to the buyer to beware. So far as Mr. Levitt is con-cerned, the businessman's sole responsibility is to see that the price is right and that the product sells.

"If what is offered can be sold at a profit (not necessarily a long run profit), then it's legitimate. The cultural, spiritual, social, etc., consequences of his actions none of the businessman's business," this oracle of the marketplace proclaimed.

Dr. Levitt's views are not the exception in American enterprise. They are justified by what is described as the "neutral" market a bazaar with laws of its own making.

Far too often, the businessman addresses himself to the marketplace as if it were motivated by some force akin to the nether gods of Viking folklore. And like the Vikings of yesteryear, today's businessman seeks to propitiate his marketplace gods with incantation and sacrifice.

The myth of the neutral market is as hollow as the outlook of those who proclaim it. The very same persons who proclaim the neutrality of the market are first to seek to corrupt society with hidden persuaders intended to make fools of all of us.

The February 1959 issue of Dun's Review carries another indictment of today's business morality. Here, business is damned unknowingly by one of its more ardent wooers, Mr. Martin Mayer, author of "Madison Avenue, U.S.A."

Mr. Mayer places a stamp of approval upon style obsolescence in durable consumer goods—urging substitution of empty style change for true improvement in the product.

Mr. Mayer has also declared that planned obsolescence of goods through premeditated materials failure is good business practice. In plain language, the market is to be loaded down with junk if that's the best way to assure sales at prices that industry seeks to

This author asks that subjective judgments be set aside in considering the issue. "\* \* \* it is clear," he pontificated, "that a pattern of successful style obsolescence must eventually be reinforced by a decrease in the durability of the product."

America's resources aren't endless and trouble lies ahead if they are expended on such swindles as planned obsolescence. Quite apart from even this consideration, planned obsolescence imposes enormous hidden costs upon the consumer and robs him of higher living standards.

I have heard charges of featherbedding against organized labor until I'm weary. To listen to the righteous fathers of the NAM. our workers are loafers and our union members want triple pay for standing around.

Sure, there's some featherbedding in some unions. But despite this so-called crime, only 50,000 of the Nation's 300,000 union musicians have full-time jobs and this union is supposed to be among the worst offenders. If you will look at the record you will find that this union hasn't stopped the advance of technology in its field. At the risk of being labeled a reactionary, I sometimes wish they had, especially when I am forced to listen to the wailing of a jukebox in some restaurant when I am seeking peace and

By comparison, industry featherbedding is monstrous. What's worse, society justifies and accepts it. The cost of phony style obsolescence and planned materials obsolescence adds billions to the bills of our consuming public. Honest investigation will show that this has more to do with rising price levels than any wage increases.

We have accepted the morality and success standards of the marketplace and they color our every action. Recently on TV, Groucho Marx facetiously asked a young coed of obviously good home about the kind of man she wanted to marry. Her choice was a stereotype—good looking, good clothes, and good income. Integrity and decency apparently had little or nothing to do with the Youth's sole rebellion in these days of prosperity appears to be in the direction of juvenile delinquency. In view of our elders' values, who can blame the juveniles?

How can industry expect its employees to bleed for it if it treats the public like so many suckers? The corporation board that winks at stock deals, yachts, hunting lodges, ex-pense account living, and hijinks for its executives shouldn't be horrified at pilferage among the rank and file.

In the twenties, Texas Guinan, the showgirl, had a work for it-"Hi, Sucker." Today, the idea that only suckers really work is imbedded in our society. Why should the average employee overexert himself, after all, if he's to be considered a "square"?

#### AMERICA'S DOUBLE STANDARD

There's a double standard in America-one for the boss and one for the worker; one for labor and one for everybody else. Organized labor has become a whipping boy for our every ill. No longer does there seem to be hard thinking about ourselves or our institutions-even within our universities.

Such is the state of affairs that when organized labor erects a modern structure to house its staffs, there is a lifting of eyebrows. But nobody even blinked when the National Geographic Society announced recently that it was junking its impressive marble halls in favor of a multimillion dollar structure of modern design,

Some time ago, I was at a gathering of polite people in an upper middle income The locale could have been outside of any large city in the U.S.A. The group was all-professional, of middle age and upward-doctors, lawyers, government career-

ists, and their wives.

To hear these good people, organized labor is to blame for virtually everything from the Berlin crisis to nationalist outbursts in Nyasaland. What bothered me most was that all the disagreement was virtually as polite as the agreement. Nobody got angry: nobody had a point of view truly worth fight-

These professionals seemed to have forgotten the past, although some suffered in the depression and others had been caught

up in yesteryear's wartides.

A strange myopia afflicted the crowd, or so it seemed to me. The doctors were remarkably unconcerned over the kind of closed shop enforced by the American Medical Association. The rising costs of medical care, the pushing up by doctors of their fees, or other unsavory aspects of organized medicine. The lawyers were equally unconcerned about the activities of the American Bar Association, even the recent ABA attack upon the Supreme Court because it had upheld traditional civil liberties.

Organized labor is not holy or beyond reproach. In some cases, unions have been entrapped by the same corruptions that have afflicted other organizations and groups. course, action must be taken to root out this corruption. Labor itself recognizes the dan-gers better than any other group within our society and it is doing something about it.

I think I can say in all honesty that labor is almost alone in its lack of smugness toward this and other major problems of our day. I don't mean either that our halo's on too tight. Nor do I mean that some among us haven't grown smug and self-satis-

But organized labor is one of the last places where a nonconformist can still hold a job. It is one of the few groups which has refused to stand by while freedom is traded away in the name of some imagined security. Had it not been for labor's protests, the Defense Department's security program might have degenerated into a nightmare, especially in the day of McCarthy.

Where else in America, other than in the labor movement, are the ethics of the marketplace subject even to critical appraisal?

Who, in America, other than labor, now speaks up for the underdog?

Who else in America dares even remind big enterprise that the primary purpose of production is a better life, not better profits?

Like every other organization subjected to the erosions of time, organized labor has been affected by institutionalism. The fighting idealism of yesterday has been lost in some cases. But the institutional drives remain and these are drives that are good for America because they compel the union to represent the interests of the average man. Despite the press, these are not just mouthings. Our fight for a better minimum wage is real, so is our fight for better housing and so is our

struggle for racial equality.

Much of organized labor's idealism remains. If you don't think so, go to a local union meeting where unpaid officers administer the affairs of struggling organizations far removed from the power politics of Washington. Or go on the job where stewards—average Joes and Janes—take up the cudgels for their fellows as an accepted part of their unpaid assignments.

Come South along with me. Here, the struggle for organization goes on in the face of terrible odds. Here, organizers are still beaten up and run out of town, as happened only recently to a Textile Workers Union organizer and one from the Hosiery Workers.

Despite the odds, men still go back into the Southland with the union message. These men who work for struggling unions could get jobs elsewhere. They return after defeat because they know that only the union can answer the problems of the exploited worker. Call this misplaced idealism in an age of cynicism, if you will. But thank God, as well, that there still is some small share of it in the land.

If, by big labor, you mean big unions, then there is big labor in America. But just remember that when a strike takes place, it is individual working people who rally to their organizations. The biggest union in the world couldn't make its strike instructions stick if workers weren't convinced that without the union they would be nothing.

Contrary to the popular view, most of our unions are anything but big. Many are still struggling for bargaining rights in unequal battles with employers. And while strikes are won, they also are lost. Yet, the battle goes on and it will continue as long as labor must fight the morality and the values of the marketplace.

#### SOMETHING IS MISSING

Something seems to have gone out of American life. It's a sense of sympathy for one's fellow man, a sense of integrity, an understanding of the other fellow's right to human dignity.

There was a day when the picket line of underpaid textile workers commanded sympathy. There was a time when the plight of the farm worker was of national concern. There was a day even when the Nation cared about its poor, and that wasn't so long ago.

The latest figures show that millions of workers remain unemployed and the projections show that joblessness will remain high. Congress doesn't seem to care, and the President appears perfectly willing to sacrifice the welfare of the jobless to budget balancing and economy.

Like the weather, a measure of unemployment now seems to be taken for granted. A few years ago, the rate was four percent. Now six percent of our manpower willing and able to work is jobless, and only labor really seem to give a tinker's damn.

A few years back, labor was informed that the key to jobs and prosperity is high productivity. In the abstract, that's absolutely correct. Labor responded with a will and produced more than ever.

When automation came along, we raised no objection. Some of us wondered what the social consequences might be but the experts pooh-poohed our fears and told us that automation would create more jobs than it would destroy. What's more, we were promised that these would be highly skilled job that would pay better.

We are also told that service and white collar employment opportunities would expand and that there would be plenty of new jobs in these areas. Every man, it seemed, would be free of drudgery and

what's more, the new technology would automatically bring about shorter hours.

A few who doubted cited the case of the farmer who then, as now, was being over-whelmed by his own productivity. We agreed that there ought to be more production and higher productivity. All we asked was assurance that this be transformed into prosperity for everybody.

Automation, we were told, would bring about a brave new world in which all our social and economic problems would be solved with the precision of an electronic computer. All we had to do, the experts said, was leave it to the corporations and to nature.

Nature's way, it appears, hasn't been good enough. Today, fewer manufacturing workers are turning out about 50 percent more goods than a decade ago.

Where are those jobs in the service trades? Where are the white collar jobs? And where, for that matter, are all those skilled

The same process that has cut down jobs in manufacturing is cutting down job opportunity in the service trades and in white collar. If this is the age of the atom and of automation, it is also the age of the computor. The same computer that has made possible the robot factory is also making possible office, warehouse, and store automation.

In the steel industry, some 100,000 jobs are gone forever. In autos, the situation is even worse. Year after year, more and more farmers are tractored off the land. Year by year, the work force grows as the war bables of the forties enter the job market.

By 1965, over 1,250,000 new workers will enter the job market annually. At this time, the Nation will have a work force of 78 million. Even if gross output expands at a rate higher than today, the mid-sixtles will be a time of high joblessness.

#### THOSE ROSY PROMISES

What happened to the rosy promises of yesterday?

What kind of future can we offer today's unemployed and tomorrow's eager youth?

Who cares? Certainly not our corporate employers. And, this administration appears to care even less. I wish I could say that the leadership of the Democratic Party truly cares but even they don't seem much concerned. Certainly, Congress has yet to come forward with a program that will put the Nation back to work.

This is the great immorality of today—an immorality worse by far than the hand in the till. Nobody seems to care very much any more—nobody but organized labor and the lobless.

Today, in Clearfield County, Pa., in Hightop, W. Va., in Washington, D.C., and in other cities and counties in most of our industrial States, children and their elders are eating mollygrub.

"What's mollygrub?" you may ask.

It's a diet of Federal surplus foods. Millions in this country are dependent in some measure on this diet.

In Washington, D.C., a family of one to five persons dependent on public assistance or living in abject poverty is eligible for one unit of mollygrub. That unit consisted, some time ago, of a monthly allotment of 10 pounds of flour, 5 pounds of cornmeal, 5 pounds of cheddar cheese, 5 pounds of rice, and 4½ pounds of powdered milk. The total value of this package has been estimated at \$6.

Some 7,000 children in the Washington, D.C., public schools are hungry each day and so far there has been only talk of feeding them, since our National Congress hasn't seen fit to appropriate extra funds for their lunches. A Washington, D.C., newspaper recently ran a series on poverty in our Nation's Capital. It found that 31,000 families—over

100,000 men, women, and children-live in dire want

Side by side with hunger at home and with even worse hunger abroad, are whole warehouses full of surplus food. Year by year, we stockpile this food as a monument to the folly of our marketplace morality.

As the idle miners of Hightop, W. Va., eat their sparce surplus food diet of dried milk and rice, the Government warehouses are bursting with wheat, corn, butter, eggs, dried fruits, peanut butter, dried meats, and almost every other variety of food.

By next July, the United States will have

By next July, the United States will have invested \$9 billion in surplus foods. Under the flexible farm support program of Ezra Taft Benson, the surplus grows year by year. Flexible supports meant more intensive cultivation of the land last year and another 300 million bushels of wheat were surplus. This year, there will be a bumper corn crop which should mean meat in plenty even for the jobless.

The peoples of the entire world know about our farm glut. If they become anti-American, this food surplus that they cannot touch may have something to do with it. The reasons will have much more to do with hunger than pro-Communism.

On the subject of the spread of communism, I would like to point out that the peoples of the entire world also know about our many millionaires. I wish we could get just I percent of our more than a quarter of a million millionaires to visit all other countries of the world to testify personally and publicly that the largest contributing factors toward the acquisition of their millions and positions of wealth are the basic and radical principles of our American Declaration of Independence and our U.S. Constitution. This would do more to sell American capitalism to the rest of the world than anything I know of that is being done today.

Because we are fools, we have geared our food surplus program to the market. Today, the food cannot be passed out to those in need even at home unless this will stabilize prices. The chase for higher farm prices, like the chase for the hard dollar, is the excuse for denying food to the hungry.

That's the law, and the law, after all, must be respected even though it makes jackasses of us. The thought that the law might be changed so that the hungry might be fed seems to send shivers down the spines of respectable businessmen who look upon this as the backdoor to socialism.

This year, \$4 billion are being spent for price supports to carry out Uncle Ezra Benson's flexible farm price policy. Another billion will be required simply to pay storage costs for our mountain of surplus foods.

If just the amount of money now going to pay for storage were spent to feed the hungry of America, a big dent would be made in food surpluses. This would do more to stabilize prices than any support program since the expenditure would permanently remove millions of pounds of food from the market. This could be done without entering into competition with our usual food distribution outlets.

Senator WAYNE Morse recently charged that "we do a better job of feeding our livestock" than we do in feeding our hungry children. The Oregon lawmaker pointed out that "when cattle starve, half the U.S. Air Force files hay to them."

The surplus food program is financed by 30 percent of the receipts of all customs received by the United States under terms of a law enacted in 1935. Last year, the Department of Agriculture could have spent \$220 million for this purpose and could also have dipped into \$300 million of unobligated balances carried forward from previous years.

Such was the state of morality in the recession year of 1958 that Secretary Benson turned back unspent to the Federal Treasury \$83.5 million which will be forever lost for this purpose.

This money was deliberately withheld from the poorest and weakest of our soclety. When Benson turned it back to the Treasury, he virtually took food from the mouths of hungry babies.

This is the same man who, in the name of economic good sense and marketplace morality, ran up the agricultural budget to \$7 billion.

The crime of Benson is far more serious than that of the New Jersey racketeer I mentioned at the start of this talk. Benson, however, acted within the framework of law and in the name of morality.

Even as Benson turned back his "surplus" funds, a local union president from the Textile Workers Union had this to say in

testimony before the Congress:

"We have read in the papers that the [Agriculture] Department does have funds to buy more surplus commodities. If this is the case, it is a national scandal that hungry children, to say nothing of their parents, in communities like ours are not receiving sufficient nourishing and palatable foods to meet their urgent needs.

Here is an indictment that speaks for itself. Ask yourselves who are the guilty in our society and answer the question hon-The answer is hardly pleasant.

#### OUR ADVANCED CIVILIZATION

Yes, our is an age of advanced civilization and one of advanced technology. We cower in the shadow of the H-bomb and despite big talk, we refuse even to meet our responsibilities in harnessing the energy of the atom for peaceful purposes.

A major problem for the industrial workers of the new age will be protection from the killing effects of radiation. Great new problems are appearing in this area-problems both of adequate safety and of compensation

to those injured on the job.

Recently, industry spokesmen appeared before a joint Congress committee to state their views. The head of a big insurance company urged no Federal action to set safety standards until the States prove they will not or cannot do the job. How many must die or suffer the pangs of radiation sickness before industry is convinced of the need for uniform safety and compensation standards?

Here, too, the same old arguments of statism and cost were raised by industry in the same old basis as in yesterday's world. So callous were industry spokesmen that Representative CHET HOLIFIELD finally declared: "You are talking about a material that throws rays through 5 feet of concrete and

kills people."

This is the morality of our day. It is a morality that permits the \$150,000-a-year executive to cut himself into a stock melon while condemning a 20 cents an hour union-won Wage increase as inflationary. A recent report of the State of New York showed that there are now 45 persons in that State alone with incomes of over a million a year. Wealthy are very much still with us and they probably get a big bang out of seeing labor blamed for so many of today's ills.

Labor is blamed today for the results of

the administered prices of big business— for an inflation that has its roots in a business policy geared to maximum unit profits instead of maximum production. Labor has become the whipping boy for outlandish profits of our monopolistic corporations. To blame the factory worker with his average wage of \$87 weekly for inflation is nonsense. This worker is the victim of inflation, not its cause.

It is strange that we hear little today about the mad speculation in Wall Street, and its effects upon inflation, but then the

profits made there don't go to working peo-ple. Today's land speculation is fantastic, but the speculators don't work in auto or steel plants and they aren't unemployed,

os their profits must be perfectly kosher.

Nor has anybody even talked about the growth of a technical and middle management bureaucracy that fattens on itself and adds significantly to costs. In these days of upper-middle-income suburbia, it just wouldn't do to talk about these cracks in

management's picture window.

Hundreds of thousands of displaced workers stand as a monument to today's productivity and this productivity unemployment is the best answer to those who lay featherbedding, high wages, and inflation at labor's door. The plain fact is that unit labor costs in key industry haven't gone up significantly and that management has recouped wage increases through the rise of output per manhour. What we need is ever wider markets for goods, not stagnant wage levels.

is time for a stock-taking in America and for ending senseless stockpiling. It is time to take up the cudgels against the present dead level of conformity and for plain old-fashioned decency. The American people need once more to understand that righteous wrath is not only permissible but desirable. America needs above all fewer pitchmen and more angry men. We need, possibly, fewer whitewashing detergents and more

soapboxes.

## Wisconsin Conservationists Offer Program To Prevent Sprayings Harmful to Wildlife

EXTENSION OF REMARKS

## HON. HENRY S. REUSS

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES Monday, May 4, 1959

Mr. REUSS. Mr. Speaker, two of Wisconsin's foremost conservationists, Charles Brees and Dixie Larkin, both of Milwaukee, recently outlined their program to prevent pesticide sprayings from harming wildlife to the agriculture committee of the Wisconsin Senate.

The Brees-Larkin program, embodied in substitute amendment 1 to bill S. 557, would require spraying to be done by licensed and bonded firms during the time of year when the hazard to wildlife was lowest. As an added precaution, it would also require special permits for use of certain pesticides.

It seems to me the program deserves careful study in light of the action taken by the last Congress directing the Secretary of Interior to study the effects of pesticides upon fish and wildlife for the purpose of preventing losses of those invaluable natural resources following spraying. For, if the Federal study reveals a need for State action, the Wisconsin plan is available as a pilot measure for spraying control programs in other States:

STATEMENT OF CHARLES BREES AND DIXIE LARKIN TO THE WISCONSIN SENATE AGRI-CULTURE COMMITTEE ON BEHALF OF LEGIS-LATION TO PREVENT SPRAYINGS HARMFUL TO WILDLIFE

The present State Administrative Code, H. 89, on toxic insecticides was born in 1947. The organic phosphates and the chlori-nated hydrocarbons with their deadly re-

sidual and cumulative effects were then in their infancy. In 1956, total production of these poisons had risen to four times the total of 1947. These poisons rain down on the earth today with such density that few. if any, living things escape-plants, insects, birds, fish, animals, man, or his food. Not only are insects being killed, both the socalled pest insects as well as the invaluable pollinating and parasitic insects, but fish, birds, and animals are dying throughout the world, wherever these poisons are used. have proof through research by Dr. James DeWitte, chemist for the U.S. Fish and Wildlife Service at Patuxent Wildlife Research Refuge, that after two generations of exposure to poison sprays, the pheasants and quail used in the experiment were unable to reproduce. Now, more and more well known and reliable physicians are speaking out publicly as to the damage both present and potential to human beings.

With this in mind, the situation as it now exists must be reevaluated here in Wisconsin and throughout the Nation. Laws, codes, or controls must be changed or enacted to fit the nightmarish power of these poisons today. Substitute amendment No. 1S to bill S. 557, attempts more adequately to regulate and control a situation which we feel has gotten completely out of control throughout our Nation. We believe (although it is not the ultimate in what we desire) it is a step

(1) It will eliminate the present administrative code, H. 89, which is weak and has proved to be quite inadequate.

(2) It will require a license for persons engaged in the business of spraying on for-est and noncrop areas with toxic poisons at a cost of \$50.

(3) It will require a surety bond in the amount of \$5,000.

(4) It places direct responsibility for the administration of the bill on the State Board of Health where we believe, after a great deal of research, it rightfully belongs.

Substitute amendment 5. 1 to does not include agricultural spraying. We does not include agricultural spraying. We Additives Amendment" signed into law last September 6 by President Eisenhower as to its enforcement. The bill does not include the individual property owner's home premises. It is mass and large area spraying in heavy populated areas that is the public health menace, and the thousands of acres throughout America today being sprayed for various and sundry reasons, that is slaughtering our wildlife and rendering much of it unproductive-wildlife being one of our greatest and most valuable resources.

(5) Substitute amendment S. 1 to bill S. 557 places spraying dates for the approved chlorinated hydrocarbons and organic phosphates November 1 to April 1 for southern Wisconsin and October 15 to April 15 for northern Wisconsin. We know the spraying can be done between these dates if there is really an earnest desire and concern on the part of the chemical sprayers and municipal authorities to do the least damage to wildlife, people, and beneficial insects.

We also know that after April 1 the migration of birds is in full swing. Over 85 species have reached their peak before April 15. These include ducks, geese, snipe, woodcock,

and all game species.

(6) Substitute amendment S. 1 to bill S. 557 requires permits for spraying large areas with the deadly chlorinated hydrocarbons and organic phosphates. Certainly poisons as dangerous as the modern sprays have proven to be need carefully kept records as it is in the repeated spraying with their resid-ual cumulative qualities and the large con-centrated amounts that do the most damage.

(7) The bill appropriates money for enforcement and provides a penalty of \$50 to \$500 for violation of the provisions. A second offense means a revoked license. Certainly no one who is careful and fully informed as to the dangers connected with these sprays

can object to this.

The resolution asks an interim study by our legislators on this very serious and complex problem in 1959-61 in an effort to determine the most effective manner in which to regulate and control the use of toxic poisons in order to protect humans and wildlife. Remember our wildlife is one of our greatest economic resources. In 1955, hunters and fishermen spent over \$3 billion, and there were 25 million licensed sportsmen that year. There were approximately 34 million licenses sold in 1958, a gain of 36 percent in 3 years. There is every reason to believe there will continue to be a rapid increase. Add the profit to sporting goods stores, gun makers, boat companies, tent makers, resort owners, and all the rest of it and you'll find even the elms are not worth that much. Our urban areas and parks are reservoirs for song birds, many game birds, and animals. They are invaluable to our school children who must study conservation and our teachers who must teach it. Our wild birds, both song and game, are fully protected by Federal laws during migration and nesting time. By what right does anyone destroy them or render them unproductive?

The interest of the Congress of the United States in the preservation and increase of wildlife is indicated by the passage of Public Law 85-582, which specifically directs the Secretary of the Interior to undertake continuing studies of the effects of pesticides on wildlife. State and Federal legislation to protect wildlife values has increased

in recent years.

We believe substitute amendment No. 1S. to 557 S., and joint resolution 55S. is a forward step in protecting our people and our waning wildlife from a situation that is get-ting completely out of control.

## A Conceptual Design for the Teaching Profession

EXTENSION OF REMARKS

## HON. EDITH GREEN

OF OREGON

IN THE HOUSE OF REPRESENTATIVES Monday, June 1, 1959

Mrs. GREEN of Oregon. Mr. Speaker, one of the most fundamental problems confronting American education has been the reluctance of the American people, and particularly of members of other organized professions to recognize the truly professional status of teaching. It has been common for nonteachers to look upon teaching as something anyone can do, if no better-paying jobs happen along. The further professionalization of education has seemed to me, for a long time, to be a necessary prelude to recognition by the community at large of the importance of the function of the teacher. Our other learned professions—the medicine, the ministry, have, in large part, earned the respect which they enjoy, and the prestige which accrues to them, because of their own efforts, within the membership of these professsions, to establish standards of professional practice, and to work to have these standards regularized and enforced.

I have been deeply heartened by the efforts of members of the teaching profession in my own State of Oregon, led by the Oregon Education Association, to develop such professional standards. In a recent pamphlet entitled "A Conceptual Design for the Teaching Profession." issued by the Oregon Education Policies Commission, some thoughts on the establishment of such standards were set forth. I think the gratitude of every teacher, and of every person concerned with the future of American education should go to the members of the Oregon Education Policies Commission whose efforts went into this statement. The members of this commission include the following:

Martha Shull, chairman, high schoolteacher, Portland; Florence Beardsley, director of elementary education, State department of education; Frank B. Bennett, president, Eastern Oregon College; Agnes C. Booth, county superintendent of schools, Marion County; Chester C. Frisbie, professor of education, Lewis & Clark College; Keith Goldhammer, associate professor of education, University of Oregon; Lester D. Harris, high school principal, Medford; John C. Jensen, assistant superintendent of schools in charge of curriculum, Tillamook; R. E. Jewell, superintendent of schools, Bend; Loran Meidinger, elementary school-teacher, Sweet Home; Melvin F. Moore, elementary school principal, Eugene; Cecil W. Posey, executive secretary, Oregon Education Association; Esma Reynolds, elementary schoolteacher, Sen-eca; Eleanor Roberts, junior high schoolteacher, Salem; Bert S. Wengert, professor of political science, University of Oregon; David D. Darland, general secretary, Oregon Education Policies Commission, 1530 S.W. Taylor Street, Portland 5, Oreg.

In the May 15, 1959, issue of Oregon Education, the newspaper of the OEA, there appeared a condensation of the commission's statement. I ask unani-mous consent that this statement be printed, following my comments:

"CONCEPTUAL DESIGN" CORE CONDENSED

#### 1. INTRODUCTION

The teaching profession must assume responsibility for establishing self-govern-

To set its own standards and to establish its own self-government, a profession requires, not only the desire and the professional elan, but also a structural frame of reference. These are the prerequisites of a badly needed conceptual design for the teaching profession. And, therefore, the remainder of this document constitutes a suggestion by which a conceptual design for the teaching profession might be accomplished.

The commission considers what follows a context within which further study and refinements should be made. Moreover, the suggestions made herein are not looked upon as final answers, but are intended to stimulate study activities.

#### 2. THE STRUCTURAL FRAME OF REFERENCE

The education policies commission believes that the structural frame of reference could best be established by seeking the passage of some form of a professional practice act for teaching in Oregon. Such an act should:

1. Establish for the teaching profession a statutory legal status which would serve as a foundation for the systematic development of self-government by the profession.

To implement such an act the policies commission proposes the establishment of a board of teacher standards and licensure.

This board might either be a completely independent government agency with its own staff, or it could be a legal adjunct of the office of superintendent of public instruction.

Such a board should be representative of the various areas and levels of teaching. And appointments should be of several years' tenure and so staggered as to provide continuity of experience.

Appointment to the board could be made by the Governor in case it were to be established as an autonomous professional agency. or appointments could be made by the State superintendent of public instruction. Members of such a board should be those held in high esteem by the teachers, and thus suggestions for appointees should be expected from the organized teaching profession.

This board should have specific powers of recommendation or possibly final authority in certain matters related to professional standards of the teaching profession. These

are discussed later.

2. A professional practice act for teachers should be designed to establish certain formal relationships among the various entities of the teaching profession thereby insuring certain minimum relationships which would foster high standards and a greater degree of unity for the teaching profession.

Certainly an organized profession should determine the qualifications and standards for the licensure of its practitioners. Therefore, the proposed board of teacher standards and licensure should either have power to establish these or make all final recommendations to the State superintendent regard-

ing certification of teachers.

The board might be responsible for recommending, within certain statutory limitations, the specific certification requirements for all teaching levels and areas. However, the board would be required to appoint certification study teams so that each area or level of teaching would be involved in establishing its own specific standards. For example, the elementary principals, the English teachers, the guidance personnel, etc., would each, as a group, be required to have standing certification study teams who would be called to make recommendations to the board.

The board of teacher standards and licensure should be charged with recommending procedures for the accreditation of teachereducation institutions. Authority for these might rest in the board or might be made to the superintendent of public instruction. And the board should have the responsibility of reviewing the results of all teacher-education accreditation studies and should have the obligation of making such recommenda-tions as they deem desirable. Such a procedure would involve the board in a position to receive feedback.

The board should have the power to initiate and supervise an annual survey of the unmet educational needs of Oregon teachers. Such a study should involve representatives from all of the entities of the teaching profession.

3. A professional practice act for teachers should establish for the profession certain incentives and programs which would en-

courage ever higher professional standards. Today in Oregon the incentives for mature teachers to engage in further academic study are inadequate. Therefore, the proposed professional practice act for teachers should establish a system of fellowships whereby annually a minimum of two percent of the teachers of Oregon could be on leave pursuing additional academic training. \* \* The amount of the fellowship should be exactly the respective teachers' salary.

Candidates for such fellowships would be required to submit detailed plans for their year's academic study or research and give supporting evidence for such plans. Emphasis would be placed on encouraging the improvement of their teaching ability rather than acquiring degrees.

Such a system of fellowships would create a great incentive for excellent teachers to portant—to be able to improve their teaching abilities. If Oregon is interested in the "pursuit of excellence" here is a challenge. \* \* stay in Oregon and-further and more im-

Certain personnel policies should also be required of all accredited public schools in Oregon. The board should have the responsibility for recommending in this regard. Certainly, for example, a teacher should have a right to have in writing the personnel policies of his respective district, and certain minimum requirements should be upheld. These should be a part of the accreditation requirements of all public schools. The school board association should have representation in the development of any requirements in this area.

4. A professional practice act for teachers should establish certain guarantees in the

interest of the public welfare.

The teaching profession can best serve the public by first protecting and encouraging the component teacher and, second, by eliminating the incompetent.

A procedure should be established whereby any teacher charged with incompetence, or any teacher who feels he has been treated unfairly, or any group of teachers having such a feeling, can be assured of recourse Other than of going to court. This implied procedure would not preclude the right to go to court, but would be an intermediate step

if desired by the parties involved.

Therefore, the board of teacher standards and licensure should be empowered to appoint standing professional "hearing pan-els," which would have legal status and the right to hold hearings and make reports and recommendations at the request of principals, either professional personnel or boards of education. This procedure would be designed to protect as well as to discipline the

Persons serving on such panels would be given vigorous training in the techniques of hearing procedures and would at all times have the advice of legal counsel provided by the office of Superintendent of Public

Instruction.

teaching profession.

Teachers, of course, can always resort to the courts. But so far there has been no statutory provision for teachers to give expert testimony in court as to what constitutes competency in a given case. Therefore, the professional practice act should also empower the board of teacher standards and licensure to appoint such expert testimony. Such witnesses could be selected from among the "hearing panel" personnel. Doctors and lawyers already have such priv-

Bringing into existence these two procedures-the professional hearing and the establishment of the expert witness conceptshould result in affording the teaching profession great opportunities for protecting and disciplining its own members. procedures if properly handled would provide ways of ameliorating certain problems before they create a public disturbance of a detrimental nature to all concerned.

5. A professional practice act should establish certain specific powers regarding professional standards either in the office of the State superintendent of public instruction, or in the board of teacher standards and licensure whereby certain actions Would be final (short of court action) after due consideration and appropriate hearings.

Either the office of the State superintendent of public instruction or the proposed board should be given certain defined dis-

cretionary powers to: (a) make exceptions in general certification requirements; (b) remove teaching certificates for just cause after appropriate hearings; (c) adjust accreditation procedures for teacher-education, etc.

Although the authority for these actions at the moment rests with the State board of education, they are professional responsibilities and should be assumed by the profession. However, nothing in the practice act should in any way infringe upon the State board of education prerogatives in the area of general public policy. The changes suggested herein are strictly concerned with the teaching profession being afforded the legal opportunity of accepting themselves as professional and conducting their own affairs accordingly.

6. A professional practice act should organize and dovetail insofar as possible into one statute all matters related directly to

teaching as a profession.

Scattered through the Oregon statutes are variety of laws related directly to the teaching profession. These include certification, tenure continuing contracts, sick leave, etc. These should all be rewritten and made to conform to the intent of the professional practice act for teachers suggested herein. As important as all of these are as they stand now, they represent the piecemeal and patchy manner in which the teaching profession has either had to, or chosen to, go about gaining certain legal protections.

7. A professional practice act for teachers should either authorize the superintendent of public instruction to appoint or reassign necessary personnel to guarantee the proper functioning of the board of teacher standards and licensure or authorize the es-

tablishment of a new agency.

8. To function properly it is obvious that there would need to be appropriated adequate State funds for the administration of a professional practice act for teachers.

#### 3. PROFESSIONAL DESIRE AND ELAN

The structural frame of reference discussed above will not in and by itself be anything other than a skeleton for a conceptual design for the teaching profession. Giving life to such a design will require professional desire and elan. In many people's minds it is a moot question whether the teaching profession is mature enough to recognize its fundamental responsibility for self-government. This is not the feeling of those who prepared this document,

The policies commission believes that the profession must breathe life into such a design by creating a symphony of effort in the interests of the total profession and the welfare of those it serves. Self-government makes the union of diverse interests possible. It is necessary, not to prevent free will, but to prevent people from exercising free will unconsciously and inadvertently.

Self-government provides the forum which balances the various forces. Selfgovernment guarantees and makes possible the involvement of individuals in formulating the policies under which they must live and perform. No mature group would tolerate it otherwise. It brings the broad light of day to the administering of justice.

Self-government makes both stability and orderly change feasible. And above all, if an optimum form of self-government prevails in the teaching profession the opportunity is increased for the individual teacher to establish a more productive relationship between his own private and professional life; this is fundamental.

#### LAWS RELATIVE TO THE PRINTING OF DOCUMENTS

Either House may order the printing of a document not already provided for by law, but only when the same shall be accompanied by an estimate from the Public Printer as to the probable cost thereof. Any executive department, bureau, board, or independent office of the Government submitting reports or documents in response to inquiries from Congress shall submit therewith an estimate of the probable cost of printing the usual number. Nothing in this section relating to estimates shall apply to reports or documents not exceeding 50 pages (U. S. Code, title 44, sec. 140, p. 1938).

Resolutions for printing extra copies, when presented to either House, shall be referred immediately to the Committee on House Administration of the House of Representatives or the Committee on Rules and Administration of the Senate, who, in making their report, shall give the probable cost of the proposed printing upon the estimate of the Public Printer, and no extra copies shall be printed before such committee has reported (U. S. Code, title 44, sec. 133, p. 1937).

#### GOVERNMENT PUBLICATIONS FOR SALE

Additional copies of Government publications are offered for sale to the public by the Superintendent of Documents, Government Printing Office, Washington 25, D. C., at cost thereof as determined by the Public Printer, plus 50 percent: Provided, That a discount of not to exceed 25 percent may be allowed to authorized bookdealers and quantity purchasers, but such printing shall not interfere with the prompt execution of work for the Government. The Superintendent of Documents shall prescribe the terms and conditions under which he may authorize the resale of Government publications by bookdealers, and he may designate any Government officer his agent for the sale of Government publications under such regulations as shall be agreed upon by the Superintendent of Documents and the head of the respective department or establishment of the Government (U. S. Code, title 44, sec. 72a, Supp. 2).

## RECORD OFFICE AT THE CAPITOL

An office for the Congressional Record is located in Statuary Hall, House wing, where Mr. Raymond F. Noyes is in attendance during the sessions of Congress to receive orders for subscriptions to the Recogn at \$1.50 month, and where single copies may also be purchased. Orders are also accepted for the printing of speeches in pamphlet form.

#### PRINTING OF CONGRESSIONAL RECORD EXTRACTS

It shall be lawful for the Public Printer to print and deliver upon the order of any Senator, Representative, or Delegate, extracts from the Congressional Record, the person ordering the same paying the cost thereof (U. S. Code, title 44, sec. 185, p. 1942).

### CONGRESSIONAL DIRECTORY

The Public Printer, under the direction of the Joint Committee on Printing, may print for sale, at a price sufficient to reimburse the expenses of such printing, the current Congressional Directory. No sale shall be made on credit (U. S. Code, title 44, sec. 150, p.

## Oregon Press Pays Tribute to John Foster Dulles

EXTENSION OF REMARKS

## HON, RICHARD L. NEUBERGER

OF OREGON

IN THE SENATE OF THE UNITED STATES

Tuesday, June 2, 1959

Mr. NEUBERGER. Mr. President, many of the leading newspapers of my native State have heralded the career and dedication to duty of our late Secretary of State, John Foster Dulles, who died recently from cancer complicated by pneumonia.

I join with these editors of Oregon in expressing the most profound sympathy to Mrs. Dulles and all her family.

Mr. President, I ask unanimous consent that editorials from certain Oregon daily and weekly newspapers be printed in the Appendix of the Record, as a tribute to Mr. John Foster Dulles, who served from 1953 until 1959 as Secretary of State of the United States.

These newspapers are the Oregonian of Portland of May 26; the Oregon Daily Journal of Portland of May 25; the Milwaukie (Oreg.) Weekly Review of May 27, and the Astorian Daily Budget of Astoria of May 25, 1959.

There being no objection, the editorials were ordered to be printed in the RECORD, as follows:

[From the Oregonian, Portland, Oreg., May 26, 1959]

STRONG LEADER GONE

Had John Foster Dulles been an ordinary man, or only a cut above the ordinary, he would have resigned as Secretary of State after his operation in 1956 for cancer of the colon. Had he taken time out then for radiation treatments he might have been alive today. He did not do so. The cancer was not halted. And this extraordinary American will be buried Wednesday in Arlington National Cemetery with the statesmen and ordinary citizens of the world paying homage.

The risk he took with his own life typifies his unswerving belief that the United States must always be ready to accept the risk of war if it is to prevent war. This led to misunderstanding and criticism, chiefly after publication of a Life magazine article in which he said that this country, more than once, had been brought to the brink of war to keep communism in check. He believed that withdrawal into isolation, or failure to be firm on the great world issues of morality and aggression would have been a far greater risk of war.

In watching Secretary Dulles in action, in the United Nations, the Japanese Peace Treaty Conference, the North Atlantic Treaty Alliance, one was struck with his confidence, his humor, his strength and his deeply religious and moral vigor. He looked like a country lawyer and he addressed the leaders of nations as if they were a Jury. He was calm, persuasive, and effective. He laid the

groundwork for eventual agreement with the Soviet Empire to live and let live. The world hopes that his successor will have equal strength to carry this historic mission to a successful conclusion.

[From the Oregon Daily Journal, Portland, May 25, 1959]

DULLES' LEGACY OF FAITH, WISDOM

John Foster Dulles lost his battle against cancer and he died without achieving his most cherished goal—a stable and peaceful world.

The loss is great but it is not a total loss. Dulles was a man of great faith and great wisdom, and he left behind evidences of his faith and wisdom which are as valid today as when they were published some 9 years ago.

Now that he is no longer present to implement his ideas, we of America might well review his words and let them bear on our conduct in the months and years ahead.

Dulles saw clearly the dangers around us, and he saw with equal clarity the extent to which we were falling to meet the challenge, yet he concluded his book, "War or Peace," with these words:

"If our efforts are still inadequate, it is because we have not seen clearly the challenge and its nature. As that is more clearly revealed, we shall surely respond. And as we act under the guidance of a righteous faith, that faith will grow until it brings us into the worldwide fellowship of all men everywhere who are embarked on the great adventure of building peacefully a world of human liberty and justice."

Dulies saw as our greatest weakness that "we seem to have lost the spirit which animated Lincoln when he said of our Declaration of Independence that it gave 'liberty, not alone to the people of this country, but hope for the world for all future time. It was that which gave promise that in due time weights should be lifted from the shoulders of all men'."

There was a time, Dulles said, when Americans were welcomed everywhere because, it was judged, they were working in a common human cause. But as our material power waxed, our spiritual power seemed to wane.

He warned that we cannot compete on a materialistic basis with the Russians, whose main credo is materialism.

"We cannot successfully combat Soviet communism in the world and frustrate its methods of fraud, terrorism, and violence unless we have a faith with spiritual appeal that translates itself into practices which, in our modern, complex society, get rid of sordid, degrading conditions of life in which the spirit cannot grow."

And, he added, "there is no use having more and louder Voices of America unless we have something to say that is more persuasive than anything yet said."

Dulles also warned that a "frequent cause of war has been the effort of satisfied peoples to identify peace as a perpetuation of the status quo. \* \* \* Peace must be a condition where international changes can be made peacefully."

We have disagreed at times with Dulles but usually the disagreement was on a matter of detail and method rather than on basic aims.

Dulles saw clearly that safety does not lie within a fortress, whether its walls be erected on our shores or on the borders of the NATO countries, and he saw that, while aid

is essential, we cannot buy loyalty to our way

His overall conclusion was that, "There is hope \* \* \* provided we develop the spiritual power without which no policy can be more than a makeshift." This legacy Dulles left to us, and if we are wise we will use it.

#### [From the Milwaukie (Oreg.) Review, May 27, 1959]

-JOHN FOSTER DULLES, SOLDIER

The passing of our ex-Secretary of State this week will be mourned by Americans and free men of other lands everywhere. In an era when U.S. foreign policy sets the pace for the rest of the free world, John Foster Dulles shaped the policy of that world for the last 6 years.

Dedicated to his work, Dulles, despite being racked with pain from illness many times, devoted these 6 years of his life to his country and the cause of peace, and it was the hard, almost incessant toil at this task which eventually brought about his death.

Since the days of Nathan Hale, Americans have laid down their lives in eight major wars in the defense of their country. Their epitaphs have been brief: American Soldier—Killed in Action in the Line of Duty.

However, battlefields are varied when a young nation is founded on an ideal of freedom and democracy. Wars are won on the land and sea and in the air, peace is won at the council tables of the world.

It was at these council tables that Dulles fought for his country on the battlefield of diplomacy. And the rigors of fighting and the long trips and strenuous hours took their toll

In Washington, this strange, little known battleground has made strong men weak, healthy men sickly, and many brilliant men have had their lives shortened by the rigors of its administrative work.

And it was on such a battlefield that John Foster Dulles gave his life for his country. It was here he fought his last battles, sometimes wisely, sometimes in error, but always with the dedicated spirit of a man whom Americans will remember.

Americans will remember.

History will have to judge John Foster
Dulles as a policymaker; history will have
to judge whether his deeds strengthened or
weakened America.

Today, however, we could give him no better memorial than that we gave a minuteman at Concord or GI at Omaha Beach: "John Foster Dulles, Soldier—Killed in Action in the Line of Duty."

[From the Astorian (Oreg.) Budget, May 25, 1959]

#### JOHN FOSTER DULLES

The United States never has had a more dedicated public servant than John Foster Dulles, who died Sunday of cancer.

Dulies worked hard and traveled incessantly, until he became more of a symbol of globetrotting than even after he had been stricken with the disease that killed him, and only quit when his condition became such he could no longer function.

Dulles had many critics, who thought he risked war too readily in his policy of stern refusal to make forced concessions to Russia.

It was a bold and courageous policy and despite the criticisms of "brinkmanship" it has been successful. He has forbidden Quemoy, Formosa, and Berlin to the Reds, and they have stayed out.

President Eisenhower hailed Dulles as one of the truly great men of our time, and it seems likely that the verdict of history may concur.

## Effects of Welfare State Policies

EXTENSION OF REMARKS

## HON. STROM THURMOND

OF SOUTH CAROLINA

IN THE SENATE OF THE UNITED STATES

Tuesday, June 2, 1959

Mr. THURMOND. Mr. President, on the 29th of May the able editor of the Allendale (S.C.) County Citizen very effectively pointed out that the adverse effects of our welfare state policies are not limited to the material aspects of our life, but actually go to the very moral fiber of our people. Each and every one of us should pause and reflect on the point made by this editorial. I ask unanimous consent that the editorial be printed in the Appendix to the RECORD.

There being no objection, the editorial was ordered to be printed in the Record, as follows:

"THE TIME HAS COME," THE WALRUS SAID,
"TO TALK OF MANY THINGS"

The practice of that rule by which men are enjoined to live is fast becoming passe in America. No longer does man try to do for his brother as he would have done for himself, but rather he seeks to get the Government to do it.. Is your neighbor ill? Then let the health department take care of him. Does he hunger? Call for the welfare de-partment. Is he troubled; does he worry; is it that he misunderstands his wife and child? Call out the department of mental health and have his head examined. Is he out of work? What is the department of unemployment for? And on the outskirts, not yet a government department except for certain crops, is Friendly John, the loan man, who will tide him over his financial ills.

Indeed, it would seem that almost every problem that can beset man is either left to the Government or somewhere lurks a bill which will make it the Government's business as soon as enough votes for it can be rounded up. The welfare state is well enough along so that recently as last week the News & Courier editorially observed. "Americans will try to preserve liberty even under the welfare state." Deponent sayeth not so. For liberty has had it and if it actually exists today it does so in the breasts of some diehards who do not yet believe that a taxpaid for agency can do all things for all men. Somewhere the, no doubt eccentric, character, who would have men a little more selfreliant, a little more independent, a little more aware of their own power and strength, lives in a curious dream world, not at all related to the realities of government set up to control births, to feed, clothe, and shelter and to bury, when they are dead, the subjects who live within its jurisdiction.

Let any wee arise and immediately the cry goes up, "The Government ought to do something about it." It is implored to raise our children, to insure our old, to get water to those who choose to live where there is no water, to make lakes where the weary of 3 days work a week may loll on sandy shores 4 days a week and let's have a superhighway to get them there and back in less time. Meanwhile, since they do not know what to do

with all that leisure, let us set up a government recreation bureau to take care of that.

Within the community itself there is little of the helpful spirit. Few men rush out to find jobs for jobless friends. There is no citizens' group which will feed the hungry, but many are glad to look up the welfare department number in the book. Some will go so far as to place the call. After all, it is the Government's business and the busy man all packed for a weekend at the seashore can't take time out to do anything for others. Besides he gave \$2 to the United Fund last year and that certainly ought to take care of the 18 or 19 agencies who got the contribution.

Even within the family there is observable the tendency to seek outside, usually government, help of one kind or another to solve those problems which our forebears took in their stride as a piece of the business of living. Grandpa always had an extra ham around for the hungry and a certain amount of the canned goods stacked on the celiar shelves each year were mentally earmarked for the needy. But who has a cellar and who gets his ham anywhere but out of the chain store counter?

It is not to be said that men are, any worse off these days for throwing themselves on the tender care of the Government. Indeed it can be shown that materially they are actually better off. But what of that stuff of which souls are made? Does the Government issue that also? Somehow or other in the welfare state there is little provision made for the spirit of man. Preachers are not paid Government subsidies and there are no propaganda machines working for God. If God achieves at all, he must do so on his own, knowing perhaps that the Golden Rule has been tossed aside in favor of that newer rule, "Get it from the Government." So, with the Government taking over the function of the individual, relieving him of the responsibility to do for others as he would have done for himself, what happens to man? That remains to be seen, but the shadow falls dimly now and we can see a self-centered entity in the family, the clan, scrabbling to get it while the getting is good and unconcerned for the welfare or well-being of other men.

No, man will not strive to preserve liberty under the welfare state. Men, American men, have shown that they are eager to duck the privileges of liberty for the presently unfelt chains of security. It would seem that the welfare state is the end of liberty for man. For sure he has no need for liberty who follows the regiment step by step on whatever forced march to whatever dubious end.

## Herter Takes Over

EXTENSION OF REMARKS

## HON. MIKE MANSFIELD

OF MONTANA

IN THE SENATE OF THE UNITED STATES

Tuesday, June 2, 1959

Mr. MANSFIELD. Mr. President, in the May 15 issue of the Christian Science Monitor there was published a commentary, written by Joseph C. Harsch, entitled "State of the Nations—Herter Takes Over." This is one of the best articles by one of the Nation's outstanding reporters I have seen in regard to the qualifications and abilities of our Secretary of State; and I ask unanimous consent that the article, in which Mr.

Harsch has the following to say "his opening performance matches his equipment. There is no reason why anyone should be concerned about his ability to handle the job. None has ever been better equipped for the job" be printed in the Appendix of the Record.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

STATE OF THE NATIONS—HERTER TAKES OVER (By Joseph C. Harsch)

GENEVA.—Christian A. Herter is still occasionally addressed or referred to among American diplomats here as Governor rather than as Secretary.

Partly this is a habit carryover. Dwight D. Eisenhower was addressed by some as general for months after he had become President. Changes of title require a period of adjustment. With Mr. Herter the adjustment among persons who long served John Foster Dulles is not yet entirely complete.

But it can be reported there has seldom in the annals of the U.S. Government been a transition as smooth as from Mr. Dulles to Mr. Herter in command of American diplomacy.

There is not the slightest doubt about his authority over the American Foreign Service establishment. Nor is there any serious doubt among our allies about accepting him as the successor to Mr. Dulles. Of course, the allied diplomats were all watching carefully when Mr. Herter took the chair here on the third day of the foreign ministers conference. This was his first real solo in high-level international conferences, and inevitably everyone else in the room was running a mental score sheet on his performance.

Mr. Herter passed the test for the simple reason he is not a person who worries about such things. In the eyes of others he was taking his driving test, but in his own he was merely doing the job assigned to him and for which he has been eminently prepared. He had no doubts himself. There was no reason why he should. He handled some very tricky problems that day to the full satisfaction of his colleagues.

The issue pending when Mr. Herter took the gavel was the question of Poles and Czechs.

Soviet Foreign Minister Andrei A. Gromyko had proposed their admission the previous day. The matter had been left unsettled. Technically it was the pending business. Mr. Herter had to dispose of that pending business without neglecting parliamentary proprieties and also without wasting time. He let Mr. Gromyko talk, offered others their chance to rehash an old subject, and deftly turned the conference to constructive business.

Behind the smooth easy takeover and the quick grant of loyalty to Mr. Herter by U.S. and allied diplomats allke is the simple fact that things are a lot easier for him than for either of his predecessors. Both Dean Acheson and Mr. Dulles before him were in many ways at times prisoners of political circumstances. Mr. Herter is the freest Secretary of State the United States has had since the great domestic political issues of the New Deal era opened.

Mr. Acheson was the favorite target of Republican political attack almost from the outset of his term of service. Democrats did their best to even the score when Mr. Dulles succeeded. Both men were extremely controversial figures. It is not easy for a man to make the judicious decision in highest foreign policy when he is constantly being dragged through political mud.

The political context within which Mr. Acheson had to work prevented him from doing some things he might have wanted to do-and induced him to do some things he might have avoided in a calmer emotional atmosphere. Mr. Dulles, operating in an equally charged atmosphere, declared many a policy he never practiced and never really favored.

Mr. Herter is free from these burdens, liabilities, and pressures. He is politically noncontroversial because the situations which plagued Messrs. Acheson and Dulles have largely passed and because he himself has avoided political controversy. He is a loyal lifelong Republican but never felt it necessary to make wisecracks about horses and Senator WAYNE Mosse or to resort to the political smear. He sidestepped the Stassen maneuver against Vice President RICHARD M. NIXON of 1956 without identifying himself with any Republican faction. He is respected as a foreign-affairs expert in both wings of the Republican Party and by the Democrats.

Both Messrs. Acheson and Dulles are entitled to a twinge of envy as they watch Mr. Herter start off. Both predecessors could have done better had they enjoyed Mr. Her-ter's priceless advantage of being politically a free agent. He was nominated by the President and is supported by the opposition leaders in the Senate. He is persona grata in both Nixon and Rockefeller wings of his own party and trusted among Democrats as an honorable man. His unanimous confirmation in the Senate is the strongest shield the American people have given their Secretary of State since the United States became a world power.

His opening performance matches his equipment. There is no reason why anyone should be concerned about his ability handle the job. None has ever been better equipped for the job.

## The Communist Trojan Horse

EXTENSION OF REMARKS

## HON. GORDON L. McDONOUGH

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES Tuesday, June 2, 1959

Mr. McDONOUGH. Mr. Speaker, the following letter and article were sent to me by John P. Fahey who I appointed to the U.S. Naval Academy, and later resigned to join the Jesuit Order.

His thought-provoking letter and the article which appeared in the Marian Helpers Bulletin follow:

MAY 16, 1959.

Hon. GORDON L. McDonough, House of Representatives,

Washington, D.C.
DEAR SIR: With graduation time nearly here my thoughts return to my own graduation from the Naval Academy in 1954 and to you to whom I am indebted for that singular privilege. Though I am no longer a member of our beloved country's Armed Forces, I never cease to glory in their ac-complishments and in the devoted men who have given their lives in defense of our ideals. To them and to you who serve in our Government I offer my heartfelt thanks and earnest prayers and good wishes for your success and happiness now and in eternity.

I came across the enclosed article recently and immediately thought what a good in-strument it would be for stirring in the hearts of our people the embers of their patriotic zeal, a zeal which has produced

heroes in every age.

The mere possibility that any allegiance, even to the United Nations, could ever be allowed to supplant the allegiance we owe to our country seems impossible. Yet, if the facts stated and examples presented be accurate, we must admit that not only our allegiance to America is endangered but every ideal for which we stand. Communist teachers who cannot be dismissed, Com-munists who profess no morals admitted to the bar, Communists allowed to actually plan the murder of our country with impunity; how can this be?

You are well aware of the situation; but are your constituents? Do they realize the extent to which the parasite of communism has worked its way into our vitals, there to corrupt and destroy all we hold dear? If they did I am certain they would give you all the support you need to fight for the laws we need. The days of Decatur, Preble, Dewey and Farragut are not dead. Americans will respond if you show them the enemy and the way to fight him.

Respectfully yours, JOHN P. FAHEY, N.S.J.

THE COMMUNIST TROJAN HORSE (By Wm. C. McGrath, S.F.M.)

Of late and all of a sudden your 16-yearold son has taken to sounding off with theories that sound strangely un-American. Patriotism, he informs you, is "for the birds." "Benighted nationalism." That's what wrong with the world. It will be a blessed day for America and for humanity when Old Glory is hauled from the masthead and supplanted by the flag of the United Nations, glorious symbol of the universal brotherhood of man.

You are shocked. You are grieved. When you were his age you gloried in the great American tradition but you have noticed generally of late that the story of American heroes is gradually giving way to one-world propaganda. It hurts deeply to realize that your own high regard for the patriots who made America should be despised by your own son as the outmoded hero worship of an old fogey, centuries behind the times and hopelessly out of step with the salutary trends of this great enlightened age.

What on earth is happening to your boy? Where is he being indoctrinated with such ideas, that smack so strongly of the Commu-

nist Party line? Where?

Why at school, of course! Where else? Something must be very wrong, somewhere. The principal, Mr. Robertson, is a good friend of yours. His loyalty and devotion to his country are well known throughout the community. Perhaps he can enlighten you. It

is time to pay him a call.

"Mr. Robertson," you explain, "I'm terribly worried about Johnny. The way he's been talking of late! His sudden truculent attitude and arrogant contempt for so many things that you and I and all of us hold sacred! I suppose I must be wrong but I am beginning to suspect that his teacher must be at least of the 'ultra liberal' school, if not definitely in sympathy with the Communist cause.'

A harried, worried, frustrated look crosses the face of the principal. "I only wish you were wrong, Mr. Sullivan. But the situation is far worse than you suspect. John-ny's teacher is not just sympathetic to the Communist cause. Johnny's teacher is a Communist."

You cannot believe what you hear. Communist. And openly engaged in ped-dling treason to the children of this Godfearing and patriotic Christian community.

"In Heaven's name," you ask, "What is such a man doing in our school? Are we taxpayers helping to finance subversive education? Are we actually being asked to pay our way into Communist slavery? I demand that this man be fired. At once."
"He was fired, Mr. Sullivan." There seemed to be a note of weariness in the

principal's reply.

You do not get it, if he was fired you want to know just what he's doing in the school right now.

"Yes. We did get rid of him, once. More than a year ago. But we have been com-pelled to reinstate him. Not only that, we are also obliged to reimburse him. Back pay to the extent of full salary for every day he lost."

So that was it. That ceretainly explained Johnny. With the school authorities helpless to prevent it, this traitor was literally taking over the mind of your boy. And of so many other boys. They were being brain-washed. They were being taught to hate and despise their own country. Before your

very eyes. Right here in America.
You puzzle over it. For days on end.
There must be something that somebody can do. Your friend George. Why didn't you think of him before? He is one of the ablest lawyers in town. Yes. George will be able to advise you. He must know all the angles. You call on him and it is not long before your worst fears are realized.

"Mr. Robertson is helpless," he explains. "So are we all. There is just nothing that you or I or anybody else can do."

George tells you much more. He lets you in on the starting, unbelievable story of the Communist Trojan Horse: of the incredible extent to which Communists may operate within the gates while they continue relent-

lessly in their efforts to destroy America.
"Here's more of it," George explains. "Lets suppose you are working 'under cover.'
You manage to infiltrate the Communist inner circle. You sit in on their meetings. You hear them discussing plans—as yet only in the abstract-to Sovietize the country. The speak quite openly of revolution-ary techniques for mass indoctrination: of plans to sabotage water supplies and electric There is talk of riots and goon power. There is talk of rious squads and blood in the streets. Quite an academic discussion, you understand. The time is not yet ripe for Operation Take-

"You feel that you have heard enough. is time to make your move. You lay the case before the F.B.I. The agent in charge patiently explains that the Bureau has long since known about these characters. They've had their eye on them for many a day. Their dossiers are all on file.

"But as of this moment," he tells you, "there isn't a blessed thing that we can do. You see, it is no longer an indictable offense merely to advocate the overthrow of the American Government by force. Sedition in the abstract has ceased to be a crime. The Communists will remain immune unless and until they become more specific; go into actual detail as to how the attempt is to be made."

(By that time, you tell yourself, it may be a little too late.)

George enlightens you further. He explains about the Communist lawyers. "Once upon a time the bar examining board of the State had a rule. A known Communist or one who refused to admit that he was a or one who refused to admit that he was a Communist could be refused admission to the bar and to practice law before the courts. That rule no longer holds. The bar association of a sovereign State may no longer set such standards. A man may not be prevented from taking the examination or from practicing law simply because he is a Communist, simply because he subscribes to the policy of sabotage and blood in the streets and a Soviet America."

"Take the case of the congressional committees," he went on. "In the 'old days' any subversive or criminal up before any one of them could be cited for contempt if

he refused to answer questions other than those which might involve self-incrimina-tion. Congress has always had the right to question such witnesses. But not any more. Congress must not play rough with our future commissars. Let's say that the committee is in vital need of information to guide them in framing protective legislation to prevent the Reds from taking us over. Without such information to guide them they are powerless to do so. What's the pitch now? They are obliged to explain to the witness in advance just how the questions are pertinent and just what they propose to do. It is a little difficult to explain to anybody just what you are going to do before you know yourself, before you are enabled to root out the information that will enable you to do it."

It still doesn't make sense, of course. But you are beginning to see the light. There are many pieces of the jig-saw puzzle that are beginning to fit together. In your day you would have deemed it impossible that any American would ever initiate a smear campaign against J. Edgar Hoover, one of the greatest patriots of our time: or against the FBI itself, dedicated guardian of the safety of America and staunch bulwark against the ravages of criminal conspiracy. In your day. But this, Mr. Sullivan, isn't your day. The gates have been opened to the Trojan Horse. It may not be America's day much longer.

It was the monthly meeting of the Knights of Columbus. The speaker was Mr. Patrick Thomas Sullivan. He had agreed to do his best to alert his fellow members to the very real danger of the Communist subjugation of America.

It was small wonder, he told them, that the pinkos and fellow-travelers-not to speak of the hard core of the party-were going all out to have J. Edgar Hoover and the Senate investigating committees eliminsted from the American scene. They were feeling their oats. They had received an unexpected shot in the army. As Jo Hindman wrote in the March issue of the American Mercury, "Fellow travelers began tossing socks and cuff links into the suitcases, preparing to circulate more busily throughout the Nation. Hiding Commu-nists uncramped their bones, stirred by Dorothy Healey Connelly's cry, 'We are on Dorothy Healey Connelly's cry, 'We are on our way.' Timed to coincide with a lateral 'Abolition' operation that agitated up and down the Atlantic seaboard, the bent-for-the-West 'Abolition' junket of the Emer-gency Civil Liberties Committee stumped the Pacific coast, sponsored by ECLC affiliates, calling for abolishment of the House Committee on Un-American Activities, the Government Security Program and the Federal Federal Bureau of Investigation." One by one, if they had their way, they would re-move every last obstacle that stood between them and a Soviet America.

He asked his fellow-Knights not to take his unsupported word concerning the immutable objective of the Communist Party. There was evidence galore: from our own experts on subversive tactics and from the writings of the Communists themselves. "The Communist Party professes to be a legitimate political organizan on the American scene. However, its leadership reins are firmly held by rabidly pro-Soviet elements and the party's ultimate objective remains the overthrow and destruction of our Government by force and violence." (J. Edgar Hoover, 1958.)

Further—from "Masters of Deceit": "International communism will never rest until the whole world, including the United States, is under the hammer and sickle."

"Communism is \* \* \* a way of life; a false, materialistic 'religion.' It would strip man of his belief in God, his heritage of freedom, his trust in love, justice and mercy, Under Communism all would become 20th-century slaves."

But listen to the Communists themselves. As far back as 1923 Lenin reportedly had gone prophetic: "First we will take Eastern Europe. Then the masses of Asia. Then we shall encircle the United States which will be the last bastion of Capitalism. We will not have to attack. It will fall like an overripe fruit into our hands."

Professor Manuilsky, of the War College in Moscow, was more specific. "A final struggle between communism and capitalism is inevitable. To be sure, we are not strong enough today to attack. Our moment will come in 20 or 30 years. In order to be victorious we will need the element of surprise. The 'bourgeoisie' must be put to sleep. We will begin by starting the most theatrical peace movement that ever existed. The capitalistic countries, being stupid and decadent, will work with pleasure toward their own destruction. They will walk into the trap of what seems a new opportunity for friendship. And as soon as their protective ring is bared, we will smash them with our clenched fist."

The speaker quoted verbatim from a report by a former Communist of the Red plan to enslave America: "Flying squads of Communists are to seize control of the water supply and shut it off; also the electrical power and gas \* \* \* picked bands of Reds are to seize the radio stations and telephone exchanges \* \* \*. Homes would be without water, light or fuel. It would be impossible to communicate with friends or loved ones, even in another part of the city.

"Goon squads of professional murderers are to round up the people in the business districts. Men are to be held as hostages in some of the larger buildings. Women are to be turned over the sex-crazed mobs \* \* \*. Sharpshooters and snipers are to be detailed in taxicabs and vehicles which are to be taken over to wipe out the police, soldiers, uniformed persons and known vigilantes \* \* \*. When night comes, the city is to be in pitch darkness. Murderous bands of Reds will roam the streets \* \* \*. Then, as the morning sun casts her first rays on the community, one will be able to see blood flowing in the streets. This is no idle dream. The Communist Party is working methodically and with deadly precision towards this objective. It can happen here. Unless we destroy the Red menace in our midst we shall one day suffer the same fate as our Christian brethren in Europe."

Decades of insistent clamor for "a better understanding" of communism would lead one to conclude that our own liberals and our appeasement-minded allies simply do not believe the Communists own open declaration that they intend to wipe us—and them—off the face of the earth. This swelling chorus on behalf of "peaceful coexistence" and periodic summit meetings has played directly into the hands of the rulers of Russia and their traitorous stooges right here in America. The persistent, unending pressure from our allies that we do nothing, ever, to provoke our would-be-destroyers has so weakened the American position that this great Nation, the most powerful, the most wealthy, the most productive the world has ever known, has been reduced to the humilitating position of being no longer able to carry out any foreign policy of its own. We have deliberately subjected such policy to the approval of a United Nations Organization obviously committed to consistent placation of Russia, a gracious, neighborly gesture that has already lost us nearly half the world.

Mr. Sullivan instanced the case of Hungary. "During five days that should have shaken the world, with Russia watching nervously on the side lines as that country struggled desperately to shake loose from the coils of Communism and appealed for admission to the United Nations, if even an American brass band had marched through the streets of Budapest playing the Star Spangled Banner, Russia would never have dared engage in

the orgy of butchery that followed fast upon the petrified immobility of that 'great' Parliament of Nations.

"Whereas in Spain, America had permitted two brigades of American boys to fight on the side of Communist murderers and to be party to atrocities unparalleled in all the dreary annals of human savagery, there was not a single bullet available to help those brave Hungarlan freedom fighters, battling tanks with bare hands as their dying cry for help fell upon unheeding ears."

The speaker respected the idealism and the sincerity of many of the U.N. representatives. He agreed that under Christian principles as enunciated by the Holy Father, a community of nations, each respecting the inviolable rights of the other and united for the common good of humanity, would be a consummation devoutly to be desired. But why not face the facts? There was no such organization in existence and there never would be. Russia and her satellites were not interested in the common good of humanity but in humanity's enslavement and the United Nations was actually the instrument of Soviet powers within the borders of the United States. Beneath its alluring palimpsest of universal brotherhood lay concealed the ugly outlines of godless, totalitarian world government with slavery as the portion of the greater part of humankind.

What we need in this 11th hour, the speaker concluded, is more of the spirit expressed in a recent editorial in the Indianapolis Star:

"We must do two things. First we must withdraw from the United Nations, which has hung a paper rope around our necks that has strangled our freedom to act in our own interest. Second we must begin to run our own foreign policy show. Let us call our own conferences with those whose destiny is intertwined with our own. Let us make our own proposals and our own plans with friend and enemy alike. We have put the best interests of our people second to the interests of other peoples, pouring out our treasure and skill everywhere in the world and we have reaped only humiliation, insult, disrespect for our flag and for our leaders.

"It is time to cut ourselves loose from those who are the masters of our foreign policy. It is time for America to issue another declaration of independence from the U.N. and from friends and foe alike. It is time to put only Americans on guard over America's future and America's present. It is time to acknowledge the plain truth that the policies we have followed year after year since World War II have produced nothing but gains for the Soviet Union and losses for the United States.

"Cannot our United States shake itself loose from the coils of U.N. intrigue and entangling alliances? Can we not once again seek to become what we once were, the envy and inspiration of all men everywhere who love liberty and justice, honor and peace?

"Cannot our leaders speak again in the thundering tones of past American heroes, 'Damn the torpedoes, full speed ahead,' or 'Pedecaris alive or Rasuli dead'?"

#### Expanded Ocean Research Needed

EXTENSION OF REMARKS

## HON. LEVERETT SALTONSTALL

OF MASSACHUSETTS

IN THE SENATE OF THE UNITED STATES

Tuesday, June 2, 1959

Mr. SALTONSTALL. Mr. President, attention was called yesterday to the first of a series of articles written by Chairman Warren G. Magnuson of Senate In-

terstate and Foreign Commerce Committee for Hearst newspapers pinpointing deficiencies in our oceanographic re-

search program.

Today I would like to place the second of my colleague's series of articles in the CONGRESSIONAL RECORD. I do this because of the significant reference made by Senator Magnuson to the work being carried on at the Woods Hole Oceanographic Institution on Cape Cod. This institution has accomplished much in furthering our knowledge of the ocean, but the accomplishments have been made in the face of limited budgets and limited support. Indeed there is a lack of full understanding by the public of the herculean task facing us in this effort.

I ask unanimous consent that Senator Magnuson's article appear in the Ap-

pendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the New York Journal-American, June 1, 1959]

UNITED STATES IGNORES COAST AND SPAWNS MANY PEARL HARBORS

(In a penetrating analysis of our stupendous, costly efforts to probe space to the virtual neglect of the seas surrounding us, Senator Magnuson, in his concluding article, observes: "What will it profit us to win the skies and lose the oceans if the oceans become infested with enemy submarines?")

(By Senator WARREN G. MAGNUSON)

Soviet Russia is better equipped to probe and study our waters than we are ourselves, and better equipped to exploit our ocean resources after she has explored them.

One reason is that since World War II our Government, with the exception of a few scattered scientists and a segment of our Navy, has virtually abandoned interest

A billion dollars has been spent for space research to date, exclusive of military op-erations, and a half billion will be spent in the coming fiscal year. Our space commit-tees have been told that a billion dollars annually probably will be required in the years following.

Support these appropriations as essential

to our defense.

But only a trifling \$8 million has been spared annually for studying the 300 mil-lion cubic miles of water that cover 72 percent of the earth's surface.

As a result we are losing the wet war. STUDIES NEGLECTED

As a result, the youngest and least developed of all military sciences-antisubmarine warfare-is being neglected by the United States.

As a result, the United States-all along its 12,255 miles of coastline touching three oceans and the Gulf of Mexico—is wide open to as many Pearl Harbors and Nagasakis as there are missile-firing Russian submarines.

What will it profit us to win the skies and lose the oceans if the oceans become infested With enemy submarines?

#### BUILDING DELAYED

"From the point of view of military operations there is no comparison between the urgencies of the problems of the oceans and those of outer space," states the Committee on Oceanography in its introduction to a 12-page report in process of publication.

"There has been no effort to improve research ships in this country in the last 15 Years," states a Navy report approved by the Chief of Naval Operations, Adm. Arleigh A. Burke. "We have 25 years of shipbuilding to accomplish in 10 years."

"There has been no program for the replacement of our research fleet as the ships become old and unsafe," the report states elsewhere. "If we are to get ahead of the Russian submarine menace and stay there a 10-year program must be implemented."

We are losing the wet war by default and our lapses are likewise obstructing the effective operations of our own submarines.

The Navy says:

"Submarines cannot function properly in strategic areas without adequate knowledge of currents, bottom topography, sound velocities, ocean temperatures, and weather. We are now ill equipped to provide the knowledge because we lack ships capable of working in the northeast Atlantic, the north Pacific and the Indian Ocean."

American scientists have been dangerously skimped while Russian oceanographers have an amplitude of scientific ships, laboratories, gear, and special instruments.

#### RUSSIAN FLEET

The Soviet scientific fleet includes the 12,000-ton icebreakers Ob and Lena, soon to be supplanted by the 16,000-ton atomic icebreaker Lenin, and the 15,500-ton dieselelectric icebreaker Moskva; the 6,000-ton specially designed Mikhail Lomonosov; 5,546ton Vityaz, 5,000-ton Pole, 3,000-ton Sevastopol and Okean, 1,500-ton Diamond and Equator, and the world's first nonmagnetic research ship Zarya, the last now working in the Indian Ocean.

The Mikhail Lomonosov, constructed exclusively for deep sea research in 1957, alone displaces more tonnage than all our basic

research ships combined.

Only one ship originally designed for re-search has ever been built in the United States, the Atlantis at the Woods Hole Oceanographic Institution on Cape Cod, Mass., and it was constructed in 1931.

The Navy, wisely in my opinion, has delegated its basic research to universities and affiliated laboratories and institutions.

Our universities thus have become our first line of defense in the naval warfare of future, which indisputably will be fought not on the seas, but in the air above and the dark waters below the surface of the oceans.

Until last November the largest ship for basic research at the disposal of the United States was the Vema, displacing 533 tons or less than one-tenth that of the Vityaz. The Vena is a one-time auxiliary schooner built in 1923 and sponsored by Columbia Univer-sity's Lamont Geological Observatory.

The Vema is supplemented by the Horizon and S. F. Baird at the Scripps Institute of Oceanography, San Diego, both 505-ton former tugs built in 1944, and the Stranger, a

300-ton former yacht.

Woods Hole also had a one-time cutter of uncertain vintage, the Crawford, displacing 280 tons. The University of Washington's department of oceanography has the Brown Bear, a 270-ton converted coastal freighter built in 1934.

Texas Agricultural and Mechanical College had the 243-ton Hidalgo, built in 1944; Scripps the 200-ton Orca, a former patrol boat, and Woods Hole the 200-ton Bear, an ex-coastal freighter.

The University of Miami's marine laboratories conducts research in the 80-ton Gerda, a one-time North Sea trawler but still the newest ship of all, having been built in 1949. Scripps has a 111-ton one-time purse seiner, the Paolina T., constructed only a year

Chesapeake Bay Institute of Johns Hopkins University, Baltimore, has the 32-year-old Joan Bar II, displacing 60 tons, and New York University's department of oceanography and meteorology the 28-ton Action built in 1930. The Narragansett Marine Laboratories of the University of Rhode Island has the smallest craft of all, the 12-

ton Lil Joy, one thousand times smaller than Russia's Ob or Lena.

#### LINE OF DEPENSE

All of these ships continue in operation. Our basic research fleet recently has been joined by the 1,800-ton Chain, a converted submarine rescue ship supplied by the Navy and assigned to Woods Hole.

This is our basic research fleet, our first line of defense in the wet war.

In the field of applied research, which Government agencies handle themselves, the Navy has three hydrographic survey ships capable of working in the high seas, the Coast and Geodetic Survey three sound oceangoing vessels, and the Fish and Wildlife Service's Bureau of Commercial Fisheries four that are considered usable in rough waters.

#### WHAT UNITED STATES NEEDS

What are we going to do about it? How are we going to recover our lost ground in the wet war?

To check Soviet aggression in the greatest sea war in history it is my opinion that Congress and the administration must do these things:

- 1. Construct a superior fleet of submarines that can launch missiles with atomic warheads from anywhere beneath the surface of the oceans.
- 2. Expand our aging merchant marine with fast, new ships of which at least several in our eastern and western oceans should be nuclear-powered, and provide air cover adequate to protect them and our trade routes in time of war.
- 3. Supplement the eight 3,500- to 6,500-ton icebreakers we now have with atomic-powered crushers powerful enough to keep a sea route open north of this continent.
- 4. Expand our deep sea research to all depths of the oceans and in all aspects to assure maximum operation of our underseas fleets and maximum defense against enemy submarines.

The last would entail the smallest expenditure of all, but it is imperative to security of our coastal areas and commerce.

Tribute to John Foster Dulles by Dr. Porfirio Herrera-Baez, Secretary of State of the Dominican Republic

EXTENSION OF REMARKS

## HON. HOMER E. CAPEHART

OF INDIANA

IN THE SENATE OF THE UNITED STATES Tuesday, June 2, 1959

Mr. CAPEHART. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a statement to the press by Dr. Porfirio Herrera-Baez, Secretary of State of the Dominican Republic, on the death of John Foster

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

STATEMENT TO THE PRESS BY DR. PORFIRIO HERRERA-BAEZ, SECRETARY OF STATE OF THE DOMINICAN REPUBLIC

The passing of ex-Secretary of State John Foster Dulles fills with sorrow the Dominican people and its Government. His courageous diplomacy designed to save the freedom and independence of nations from the onslaught of international communism was always a source of inspiration and hope to the free

I had the privilege of meeting Secretary Dulles on different occasions and was impressed by the high regard in which he held the great leader of the Dominican Republic, Generalissimo Rafael L. Trujillo Molina, for the effective and unequivocal cooperation given by the Dominican Government, at the 10th Inter-American Corference at Caracas in 1954, in support of the momentous resolution, passed in that conference, contemplating collective measures in the event that international communism should take control of the government of any of the American Republics.

The Dominican Government, together with its people, join wholeheartedly in the universal expression of bereavement over the loss of this great Secretary of State of the United States of America, who gave to the cause of international peace and security the full measure of devotion.

Launching a Book-Scottsburg, Oreg., Style

EXTENSION OF REMARKS

## HON. RICHARD L. NEUBERGER

OF OREGON

IN THE SENATE OF THE UNITED STATES Tuesday, June 2, 1959

Mr. NEUBERGER. Mr. President, there occurred recently in the 111-yearold Emma Hedden General Store in Scottsburg, Oreg., an event which is illustrative of the spirit of my home State and its citizens in this, Oregon's centen-

nial year of statehood.

The residents of the little southern Oregon community of Scottsburg and the surrounding area held a huge potluck picnic to help one of their number launch a book she had written. Representatives of the publisher of Mrs. Gladys Workman's book, "Only When I Laugh," are reported to have been amazed at the unique event; they were said to have been used to the cocktail party methods of New York or Hollywood.

The story of Mrs. Workman, her inspiring and amusing book and the party which launched it is told by Anna Olds and by Don Brown, writing for the Portland Oregonian and the Eugene Register-Guard, respectively. unanimous consent that these articles. together with a brief editorial, "Gladys' Laugh," from the Oregon Statesman of Salem, be printed in the Appendix of the RECORD.

There being no objection, the articles and editorial were ordered to be printed in the RECORD, as follows:

[From the Oregonian, Portland, Oreg., May 20, 1959]

PICNIC AT SCOTTSBURG ATTRACTS 1,000, STARTS AUTHOR ON BUSY WHIRL OF EVENTS

(By Anna Olds)

"To launch a book you usually have a cocktail party in New York or Hollywood," Stuart L. Daniels of Prentice-Hall, Inc., said Tuesday during a Portland visit. "But this, in Oregon, is the most unusual one I ever attended."

He was talking about the spectacular picnic in Scottsburg Sunday, a potluck event attended by 1,000 persons who converged on that small town to honor Gladys Work-

man, a Scottsburg resident. Her book, "Only When I Laugh," published this week tells about the neighbors, the country, and the Workman family in the Umpqua Valley.

The story evolved after the author's appearance on Ralph Edwards' "This Is Your Life," 2 years ago. The script was a melodrama of her travails: Illnesses, operations, a period of being blind, deaf, and dumb; various accidents leaving her with broken bones, and more illnesses.

#### EMCEE LOSES TRACK

Her troubles seemed ludicrous to Gladys in retrospect, and she collapsed in laughter. Her husband, Norman, wandered in front of the teleprompter and the master of ceremonies lost his place. Unexpectedly, the show turned into rich comedy. TV writers over the country devoted columns to this winning sequence.

So drawing from her letters to her mother, Mrs. Workman began a book on her move from San Francisco to the Umpqua when her husband's health failed. Starting in a shack with no facilities, Mrs. Workman, her husband, her nephew, and the family cats

edged into community life.

"The night Gladys tried to kill us all with clams." the greenhorn venture into the daffodil business, the brushes with flood and mudslide, the time she fell asleep while cooking food for daffodil pickers and almost set the house aftre were anecdotes to treasure.

Much of this contributed to a feeling that

Gladys was off her rocker, but her exuberant warmth and friendliness eventually affected a change for the better.

#### NEIGHBORS GIVE ASSISTANCE

The whole story was reviewed and polished by Gladys and her neighbors, who helped recall the hilarious events almost forgotten.

"The best part of writing a book has been the joy it has given the people in it," she sums up. "We had such fun getting together and talking about it."

Again, about the book launching. Emma Hedden painted her general store for the event, and the stock was in immaculate order. The town's beer parlor was washed up for the event. The grange hall had been cleaned in a frenzy of tidiness. Even the blacktop was swept.

The 1,000 put their food together in a tremendous Dutch treat collation.

#### OFFICIALS TAKE NOTICE

Telegrams arrived from Gov. Mark Hatfield, Dick and Maurine Neuberger, and Charles (Congressman) and Priscilla Porter. in Mrs. Workman's words.

"In my whole life, I could never repay them for this wonderful tribute," says the author.

The publisher's representative still pondering one woman's comment to him, This is more exciting than a pioneer's funeral."

Meanwhile, Mrs. Workman's schedule is full. Wednesday, from noon until 2 p.m., she will preside at an autograph party at J. K. Gill Co. Tuesday evening, she spoke at a writer's gathering.

Late Wednesday, she will leave for Callfornia for more autograph parties.

And when it's over, she'll continue with her work in ceramics and her husband with his bulb farming-which reach 11/2 million bulbs this year.

[From the Eugene (Oreg.) Register-Guard, May 19, 1959]

BOOK ON SCOTTSBURG REGION'S PERSONALITIES IS INTRODUCED

## (By Don Brown)

Mrs. Gladys Workman, the vivacious Scottsburg author who has put a little Ump-qua Valley community on the American literary map, visited Eugene Monday to help launch her first book, entitled "Only When I Laugh."

Her publisher is Prentice-Hall Inc., of Englewood Cliffs, N.J. The firm sponsored her book's introduction Sunday at Oregon's oldest general store, the 111-year-old Emma

Hedden Store at Scottsburg.

The whole town, and citizens from surrounding Umpqua Valley communities turned out Sunday to give the book its

sendoff

It relates how Mrs. Workman and her husband. Norman, moved from the bustle of the big-city living near Los Angeles to a dilapidated shack on the Umpqua River 12 years ago. This was after doctors gave her husband about 6 months to live because of fast-failing health. She credited Oregon's climate and terrain in the restoration of his health.

"Only When I Laugh" (which seems to be always for the author) relates stories about the personalities living in the Scottsburg area, and how the Workmans were at first rejected and then absorbed into the hearts and homes of the people there.

"If I lived 100 years and did my Boy Scout deed every day I'd never repay these people." she said in Eugene Monday in gratitude for her autograph party at Scottsburg.

The beautiful middle-aged woman with silver hair and a love for living and people, received congratulatory messages Sunday from many well-known Americans.

The book relates how, as a child, she became blind, deaf and dumb, and later had many other illnesses. Norman Workman became poisoned by dye in a plant which he managed in the Los Angeles area. Doctors thought it was leukemia. Finally, they sold their property and moved with their nephew. Norman Jackson, to land donated by a descendant of the pioneer Applegate family at Yoncalla.

The Scottsburg area was not new to Mrs. Workman, who had lived with Annie Applegate Kruse as a child at Yoncalla. "Mom" Kruse plays an important role in her new book, and the grand old lady of the Umpqua Valley was present Sunday at the com-

munity party.

Mrs. Workman's father, B. C. Y. Brown, once jointly published and edited the former Bohemia Nugget newspaper at Cottage Grove, with Jack Howard. Her father was also once

mayor of Yoncalla.

The author, in conversation, displays the same genius for converting adversity to humor as she has done in her writing. She has achieved the enviable ability to search out the good in everyone.

Take, for example, the time a youthful would-be-bandit confronted her in her home. She knew he had a pistol, and was intent on robbing her. But she talked the youth out of his idea, put him up for the night, and next day bought his gun for \$10 and sent him on his way with a full stomach.

Life in the Umpqua Valley is a different world from the hustle of Los Angeles and World from the hustle of los Angeles and Hollywood, she says. In Hollywood, for ex-ample, she said "People are wonderful—but the tendency there is to 'honey and darling' everyone in an insincere way." In Oregon. she says, it is different matter. Friendships are sincere and lasting.

As she said in her book, "We don't need beauty parlors or even lipstick to impress our neighbors. We arrive at meetings in jeeps. pickup trucks, jalopies, and Cadillacs."

[From the Oregon Statesman, Salem, Oreg. May 24, 1959]

#### GLADYS' LAUGH

They had quite a party down at Scottsburg a few days ago. The guest of honor was Mrs. Gladys Workman, and the occasion was written, "Only When I Laugh." Now Mrs. Workman has been laughing most of her life, and her laugh is quite infectious. She wraps up her mirth in this neat package merchandized by Prentice-Hall, New York publishers. The book is pure personalia, all about Gladys and her sick husband and how they came to the Umpqua and he got well and she got busy, and all their friends and the Scottsburg centennial and gray days on the Umpqua. It's a sort of Oregon edition of "The Egg and I," but sentimental rather than witty.

Mrs. Workman came to Salem a couple of years ago and talked to the Rotary Club. The book is like her talk—personal, intimate, homespun, good for a laugh or a (rare) tear. Just right for summer hammock reading. It should sell well to give Gladys the last laugh.

## It's Hard To Beat Senator John Williams

EXTENSION OF REMARKS

## HON. HARRY FLOOD BYRD

OF VIRGINIA

IN THE SENATE OF THE UNITED STATES
Tuesday, June 2, 1959

Mr. BYRD of Virginia. Mr. President, I ask unanimous consent to have printed in the Appendix of the Record an article entitled "It's Hard To Beat Senator John Williams," written by the well-known columnist Holmes Alexander.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

It's HARD TO BEAT SENATOR JOHN WILLIAMS
(By Holmes Alexander)

My candidate for Senator-of-the-year begins to take the oblong, upright shape of John Williams, Republican, of Delaware, who at last seems to have muzzled the taxeating ox called the incorporated farmer.

Williams has tentatively put a \$35,000 limit on what any producer can receive from the Government in crop support.

With Williams, this has been a long fight. It began, he tells me, in 1950 when, as a first-term Senator, he noticed that the fabulous King Ranch, owner of the face horse Swaps, was taking charity in the form of drought relief from the Federal Treasury.

Stories of this sort make flash headines, but they do not bring about instant reform. The latter, as Williams learned, takes years and years of grinding away at the whetstone of hard, unforgiving, irrefutable fact. A farmer, whether he is corporate or individual, is a constituent of two Senators and at least one Congressman.

Every constituent has a right to make, his case known, and usually the wealthy constituent has Senators and Representatives who are inclined to believe him to be right. Williams had to overcome both the inertia and the self-interest of statesmen from the agricultural South and West. Significantly, when the Williams measure passed the Senate on May 22 as an amendment to the Wheat Act, there were 21 absentees, 1 more than the 20 Senators, all Democrats, who voted against the \$35,000 limitation. But Williams got the support of every Republican who stayed on hand for the winning rollcall of 57 affirmative votes.

On Senator Williams' desk while he led the debate was a document which he did not use because, he says, "When you're winning, don't rub it in." But the weapon which he didn't hurl was a 1935 report of cotton payments under Secretary of Agriculture Henry Wallace. The report revealed that a wholly owned British firm in Scott, Miss., the Delta & Pine Land Co., had received from the U.S. Government \$114.840 in 1933, \$102.408 in 1934, \$101,039 in 1935. The point is that this

same company is still at the trough. In the past 10 years it has received \$9 million from the United States in support of crops, mainly cotton and rice.

Thus from the very inception of our present farm policy, down to the present year, the bureaucracy of socialized agriculture has been such a runaway monster that it has taxed the poor to enrich the wealthy, and in this instance, the allen wealthy.

Not only that, but the monster is robbing the U.S. Treasury with both fists. WILLIAMS showed the Seante that in 1957, 10 farming firms received over \$500,000 under the soil bank for crops they refrained from growing on part of their lands, and about \$3,500,000 for surplus crops which they did grow on other parts.

In nominating Williams for Senator-ofthe-year at the two-thirds point of the congressional session, there is some risk incurred. Who knows, but a mightier man with a more justly celebrated deed will arise?

"This is America," WILLIAMS says, "and there is a right to accumulate whatever you're able. I'm not against bigness in business, as such. But I'm against big businesses being subsidized out of the Federal Treasury."

What gives added size to the WILLIAMS achievement is that this success clears the way for more of the same kind. He is now working on loophole stopping in the soil bank, in certain features of income taxation, in boondoggling reclamation projects, and a few others. If there's a better Senator in the 86th Congress, it would be hard to name him at this point.

#### Farm Labor

EXTENSION OF REMARKS

## HON. HARRISON A. WILLIAMS, JR.

OF NEW JERSEY

IN THE SENATE OF THE UNITED STATES

Tuesday, June 2, 1959

Mr. WILLIAMS of New Jersey. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Report on Farm Labor," published in the New York Times of Monday, May 25, 1959.

The editorial calls attention to the condition of a forgotten segment of our country—farm labor. It points out clearly that the agricultural employees, especially the migrant laborers, are trailing far behind the advances made by workers in other fields and in the Government protection which has been given them.

There is no question that this situation deserves our wholehearted attention in order to remedy an obvious inequity.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

#### REPORT ON FARM LABOR

Last February the National Advisory Committee on Farm Labor held a 2-day conference in Washington to focus public attention on the condition of farm laborers in the United States. Reports from Government officials, labor leaders, and informed observers showed how far agricultural employees, especially migrants, were trailing behind the advances made by workers in other fields and in the Government protection which has been given them.

The committee has now published a summary and review of these reports which deserves wide reading. While the committee's purpose is research and public education, rather than reform, the record of the conference showed a consensus of those present as to some of the measures that ought to be taken.

Most important is the inclusion of all farm workers, now usually exempted, in Federal and State laws requiring union recognition and collective bargaining, setting fair standards for wages and hours of work and providing for unemployment compensation. Special measures for migrant workers, both domestic and foreign, are mentioned, including establishment of a Bureau of Migratory Labor in the Department of Labor to work for better standards.

The committee is doing good work in this checkup on farm labor conditions and what is being proposed to improve them. It should stage a repeat performance next year, using this first report as a benchmark from which to measure progress.

## To Insure Domestic Tranquillity

EXTENSION OF REMARKS

## HON. RICHARD B. RUSSELL

OF GEORGIA

IN THE SENATE OF THE UNITED STATES

Tuesday, June 2, 1959

Mr. RUSSELL. Mr. President, on May 19, 1959, the Washington Evening Star published a very interesting letter to the editor, written by Mr. J. Chester Wilfong. The letter brought up an aspect of the recent integration decision of the Supreme Court regarding precedents which had not heretofore come to my attention. The letter is so interesting that I think it should be made available to the readers of the Congressional Record. Therefore, I ask unanimous consent that it be printed in the Appendix of the Record.

There being no objection, the letter was ordered to be printed in the Record, as follows:

[From the Washington Evening Star, May 19, 1959]

#### FIRST THINGS FIRST

The preamble to the Constitution of the United States still reads: "We, the people of the United States, in order to form a more perfect Union, establish justice, insure domestic tranquillity, provide for the common defense, promote the general welfare, and secure the blessings of liberty for ourselves and our posterity, do ordain and establish this Constitution for the United States of America."

The Supreme Court, in its school integration decision, seems not to have noted that "insure domestic tranquillity" appears before "provide for the common defense" and "promote the general welfare." So it must have had some importance in the minds of the framers of our Constitution.

The Court, in rushing in where angels might very well hesitate, stirring up anger and ill feeling in a large section of the Nation where, immediately prior to the school integration decision, race relations were growing progressively better and happier, chose a very peculiar way of insuring domestic tranquillity, and I doubt its ultimate success in connection with the operation of our public schools.

J. CHESTER WILFONG.

La Crosse, Wis., Forward-Moving City

EXTENSION OF REMARKS

## HON. ALEXANDER WILEY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Tuesday, June 2, 1959

Mr. WILEY. Mr. President, across the Nation, we are witnessing a tremendous growth of towns and cities.

As focal points of trade and commerce, as well as being local meccas of social, educational, and cultural significance, these urban areas serve as a hub for activities in surrounding communities.

In Wisconsin, for example, our cities and towns—led by public-spirited citizens—are making a real contribution toward community development.

We recognize, of course, that today, rapid urbanization movement is creating a number of serious problems.

These include the need for: adequate housing and public facilities, including water, sewage, proper zoning for business, residential and industrial areas.

Consequently, I believe that we need to take a new look at the trends in population movement, economic development, and other factors that are contributing to mass urbanization. The purpose would be to provide for such growth in a well-planned, well-designed, manner rather than allowing it to happen on a haphazard basis, with its accompanying problems, either now or for the future years.

In the past, our communities, imbued with a pioneering spirit, have carried out the growth of urban areas; at the same time, they have attempted to cope as effectively as possible with the inherent problems.

Recently, the monthly publication of Lykes Bros. Steamship Co., Inc., of New Orleans, carried a fine article on the historical development of one of our outstanding Wisconsin cities, La Crosse. Recognizing the importance of this fine city to the surrounding communities, but also the fact that it is representative of the significance of other cities to their environs, I ask unanimous consent that the article be printed in the Appendix of the Record.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

#### WISCONSIN

At the confluence of three rivers, the La Crosse, the Black, and the Mississippi, French traders customarily stopped to trade with the Winnebago Indians encamped there. Because the Indians often played a game which reminded them of the French game lacrosse, they named the place Prairie la Crosse. From this very humble beginning grew the present city of parks, schools, churches, businesses, and homes known as La Crosse.

The first permanent trading post was established in 1841 by Nathan Myrick, who came out of New York and up the Mississippi in a keelboat. Myrick's first shelter was on Pettibone Island and that first winter he hired H. J. B. Miller to move supplies and timber across the ice of the river to raise the first house on the site of La Crosse.

By 1845, when John M. Levy and his wife came from Prairie du Chien with a horse, a cow, pigs, and a large stock of goods, Myrick and Miller (who had joined Myrick as a partner) had a competitor for the trade in the region. There were then only a few buildings at the site, giving shelter to four women and nine men, and when the Winnebago Indians were moved to Minnesota by the Government in 1848 the white population numbered 50.

Fortunately, the tradesmen, although hurt by the loss of the Winnebago Tribe, were not left long in difficulties. In the early 1850's a large group of settlers came into the region from Vermont, New York, and Ohio. Among these groups were many aggressive and visionary young men who bought land, constructed grist and saw mills, and organized the first religious congregation, Roman Catholic, in 1853.

Among the settlers who saw the commercial possibilities of the site was Lt. Gov. Timothy Burns, who moved to La Crosse in 1847 and bought half of the Myrick and Miller claim. To Burns' foresight in having the land surveyed, in laying out lots and selling them on easy terms to the people who decided to settle here, as well as his constant praising of the site of La Crosse, the city of today is indebted for its rapid growth.

La Crosse County was organized in 1851, and Timothy Burns was elected chairman by the 36 voters who appeared to exercise their democratic right. In the summer of that year the first county election was held and Burns was again elected, this time as county judge.

In 1852 a large steam mill was erected near the mouth of the La Crosse River and the saw mill became the nucleus for the lumbering industry which was to help develop the city in the years that followed.

The village of La Crosse was organized as a city in 1956 by virtue of a charter granted for that purpose. The first mayor was T. B. Stoddard. At this time the name was officially changed from Prairie La Crosse to La Crosse

Though the citizens had been anxious for the coming of the railroad in 1858, when the La Crosse and Milwaukee tracks reached the city, the steamboat traffic had by no means been inadequate. River boats carried settlers, freight, commodities, and everything necessary to sustain life and trade. In the winter when the Mississippi River froze over, sleds replaced the river boats. During 1856 and 1857, for example, steamboat landings at La Crosse averaged 20 per month.

After the railroads reached La Crosse, towboats carrying grain began to stop here to unload their cargo for shipment to Milwaukee by rail and thence east by the lake route. By 1876, with five railroads radiating from the city and having benefited by the Civil War's closing traffic on the Mississippi below Ohio, La Crosse was the most important distribution point between St. Paul on the north and St. Louis on the south.

Despite the coming of the railroads, La Crosse was the terminus for the largest transportation organization on the upper Mississippi. For years after its organization in 1860, the steamboat company of W. F. and P. S. Davidson and their associates plied their trade. By the 1870's, the decline of steamboating was balanced by the increase of logs and lumber rafts and towboating. From this decade to the early 1900's, La Crosse was headquarters for the largest fleet of raft boats on the upper Mississippi and most important center for westward travel between Dubuque and St. Paul.

Before the turn of the century, La Crosse was for a while second in importance as a manufacturing center in Wisconsin. Flour, cigars, foundry and machine products, furniture, agricultural machinery, beer and malt products, lumber and sawmill products,

doors, sashes, and blinds led manufacturing in the city.

The coming of the 20th century brought a decline in the lumber industry, due to the rapidity with which the timberlands were stripped in Wisconsin. While in 1899 the lumber industry accounted for approximately 1,800 millhands employed, 6 years later it sustained only 34.

Two early newspaper editors played an important role in the growth of La Crosse; Mark M. (Brick) Pomeroy, poet-editor of the La Crosse Democrat, and George W. Peck, editor of Peck's Sun.

Present day La Crosse is proof of the energy, enthusiasm and integrity of its early day founders. Its industry is widely diversified, its stores, residential district, its parks and playgrounds, schools, churches and modern appearance are a tribute to the founders.

La Crosse's manufacturing plants signify a great diversification in industry for a city of its size. Annually, a variety of finished and semifinished products lend themselves to worldwide markets. Manufactured for export and domestic use are heating and airconditioning products, farm machinery, refrigeration equipment, beer, office and church furniture, rubber footwear, and clothing. Fabricated steel makes up a large portion of the manufactured product and includes aircraft parts, tools, gages, name plates, clock assemblies and patterns. In 1957, 47 manufacturing plants reported gross sales amounting to \$181,665,985 and employment of approximately 9,000 men and women.

The topography of La Crosse County, which is characterized by alternating ridges and valleys resulting from erosion and dissection of the underlying Cambrian sandstone bedrock, does not lend itself to being classified as top agricultural land. However, with modern soil conservation practices, agriculture in the county ranks with the best in the Nation.

Of the total land area of slightly more than 300,000 acres, approximately 85 percent is utilized as farmland with 40 percent considered cropable. The county's 1,400 farms produced more than \$11 million in crops. Besides dairy products, cash crops include tobacco, peas, beans, cabbage, and corn.

Being pioneers in soil conservation, and realizing the value of maintaining good cropland, the average income per acre of county farms in 1957 was appropriately \$82 well above the rest of the country. The dollar value per farm increased to more than \$15,000 and for their size are worth more than most farms in the United States.

La Crosse is rich in educational institutions. Besides its 24 elementary schools, 3 junior high schools, 3 senior high schools, La Crosse is the home of an outstanding vocational and adult school, La Crosse State College, Holy Cross Seminary, Viterbo College, and the St. Francis School of Nursing.

Operating under the Wisconsin Statute which provides for a vocational school in every city over 5,000 population, these schools provide courses in trade and industry, homemaking, agriculture, and the business fields except for the professions. The disabled, the farmer and his family, the homemaker, the officeworker, the salesman, the industrialworker, the apprentice and youth find that vocational training prepares or aids them in their lifework.

Towering over the city of La Crosse, in all its rocky grandeur, is Grandad Bluff. From the protected lookout, at the very summit of the bluff (1.172 feet above sea level), you are offered a view of panoramic splendor. Spread out below you, like some unbelievable wonderful picture, you see La Crosse, with only its most impressive buildings thrusting through the foliage of century old trees \* \* you'll see the rolling green of the coulees, draped with shade \* \* \dagger you'll see the majestic sweep of the Mississippi and

Its tributaries \* \* \* and across the river you see the wooded rockiness of the Minnesota hills. On clear days, far to your left and caught up in the smoky purple shadows of distance, the Iowa bluffs are also visible from Grandad's Bluff, making it possible for you to see three States from this one vantage point. Parking and picnic facilities are modern and adequate. The road approaches are smooth and safeguarded.

Myrick Park with its zoo and picnic and recreation facilities is inviting to the vistor. At the foot of the downtown busness section is beautiful Riverside Park. There, the Mississippi, "Father of Waters," invites your intimate study. When you stroll along the flower-decorated levee in the park, you'll recapture much of the romance of bygone days on the river—especially if you happen to see one of the river boats moving its cargo on this important waterway. There you will see excursion boats with calliope music, heavily loaded barges deftly guided by river tugboats, and smaller pleasure craft, high-powered and fast.

Transportation by water, air, rail, and truck and bus makes La Crosse an ideal center for the location of all types of business. Many products manufactured in La Crosse are shipped by all methods of transportation to foreign and domestic markets. This advantage in transportation, coupled with the industrious; energetic people of the area, makes for the ideal situation, a splendid place to live and to make a living.

## Foreign Policy and Christian Conscience

EXTENSION OF REMARKS

# HON, BYRON L. JOHNSON

OF COLORADO

IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 2, 1959

Mr. JOHNSON of Colorado. Speaker, under leave to extend my remarks, I wish to include an article by George F. Kennan, formerly policy planner with the State Department, and former Ambassador to the Soviet Union. In this article—in the May issue of Atlantic Monthly-Mr. Kennan speaks as a Presbyterian to the Princeton Theological Seminary. When our policies are examined in the light of conscience we may all conclude they could be substantially improved. I commend Mr. Kennan's views as worthy of thoughtful study. He reminds us that this generation is only the custodian-not the owner-of the earth on which we live, and that man must not now commit the blasphemous act of destroying this great and lovely world:

I should like to say at the outset that questions of method in foreign policy seem to me to be generally a much more fitting subject for Christian concern than questions of purpose. It is very difficult for us to know which of the specific undertakings of government in foreign affairs might have Christian significance and which might not. If there is any one thing that is plain about international statesmanship, it is the externe difficulty of establishing in advance the relationship between cause and effect—of gaging the likely results of one's own acts.

The English historian Herbert Butterfield has shown us with great brilliance, and so has our own Reinhold Niebuhr, the irony that seems to rest on the relationship between the intentions of statesmen and the

results they achieve. I can testify from personal experience that not only can one never know, when one takes a far-reaching decision in foreign policy, precisely what the consequences are going to be, but almost never do these consequences fully coincide with what one intended or expected. This does not absolve the statesman of his responsibility for trying to find the measures most suitable to his purpose, but it does mean that he is best off when he is guided by firm and sound principle instead of depending exclusively on his own farsightedness and powers of calculation. And if he himself finds it hard to judge the consequences of his acts, how can the individual Christian onlooker judge them?

All this is quite different when we come to method. Here, in a sense, one can hardly go wrong. The government cannot fully know wrong. The government cannot fully know what it is doing, but it can always know how it is doing it; and it can be as sure that good methods will be in some way useful as that bad ones will be in some way pernicious. A government can pursue its purpose in a patient and conciliatory and understanding way, respecting the interests of others and infusing its behavior with a high standard of decency and honesty and humanity, or it can show itself petty, exacting, devious, and self-righteous. If it behaves badly, even the most worthy of purposes will be apt to be polluted; whereas sheer good manners will bring some measure of redemption to even most disastrous undertaking. The Christian citizen will be on sound ground. therefore, in looking sharply to the methods of his government's diplomacy, even when he is uncertain about its purposes.

In the fabric of international life, there are a great many questions that have no certain Christian significance at all. They represent conflicts between those elements of secular motivation which are themselves without apparent Christian meaning: commercial interests, prestige considerations, fears, and whatnot. I do not think we can conclude that it matters greatly to God whether the free trade area or the common market prevails in Europe, whether the British fish or do not fish in Icelandic territorial waters, or even whether Indians or Pakistani run Kashmir. It might matter, but it is hard for us, with our limited vision, to know.

But these are all questions which reflect the normal frictions between peace-loving nations. How about the issues of the cold war? How about colonialism? How about aid to the underdeveloped areas? How about the United Nations as an institution? How about the atom? Are not Christian values involved in our attitude toward these questions?

## OUR COMPETITION WITH MOSCOW

In its internal policies, the state can create a decent human atmosphere, in which the individual has the maximum possibility for grappling in a hopeful and constructive way with the moral problems of personal life. Or it can, as we have seen in the examples of Hitler and Stalin and the Chinese Communists, strike out on the most appalling lines of viciousness and cruelty, deliberately fostering a real sickness of the human spirit and inculcating on people's minds, for its own purposes, suspicion, terror, callousness, and the habit of brutalitycreating conditions dreadfully adverse to the success of the Christian cause. Christianity cannot be indifferent to the existence of such doctrines and methods; and whatever prevents their spread and their triumph on a world scale serves, it seems to me, a Christian purpose.

But I do not think this means that every measure that is damaging to international communism is necessarily good and every measure that is acceptable to a Communist government is necessarily bad. The world is not that simple. Our competition with

Moscow is not the only significant reality of international affairs. Our policies, furthermore, must take into account the interests of the peoples under Communist rule as well as those of their governments. Again, we have the question of method and the fact that not even the greatest conviction of righteousness in our purposes absolves us from the obligation of decency in method. If we allow ourselves to copy our adversary's methods as a means of combating him, we may have lost the battle before we start; for this is, after all, what is most essentially at stake.

Furthermore, we must not make the mistake of regarding international communism as a static, unchanging quantity in the pattern of world realities. While the full-blown totalitarian state in all its'unnatural, nightmarish horror is certainly an abomination in the sight of God, one cannot say this of the conservative authoritarian state which has been the norm of Western society in the Christian era. And we must not forget that it is in this direction that the Soviet Government, as distinct from the Chinese Communist government, has been rapidly evolving since Stalin's death. Its gravitation in this direction has not been final or decisive, but it has not been negligible. The mere fact that the most characteristic feature of totalitarian horror, the punishment of whole categories of people for abstract or preventive reasons, has been abolished, shows how far the Russians have come since Stalin's

Now between democracy and traditional authoritarianism there are still differences, but they are relative and do not present clear-cut issues. The authoritarian regime, despite its origins and its sanctions, often rests on a wide area of popular acceptance and reflects popular aspirations in important degree. In democratic countries, on the other hand, such things as the operations of lobbies and political parties and the inevitable control of nominations by small groups of people tend to reduce the ideal representativeness of government and to make it hard to view the political process as much more than a negative expression of the popular will.

And if you conider, as I do, that the value of a democratic society in the Christian sense depends not just on the fact of its enjoying certain rights and liberties but on the nature of the use made of them, then I think you have to raise questions about our American society of this day. These questions do not need to make us lose hope or hang our heads, but they should cause us to be cautious in drawing conclusions about the merit in God's eyes of any particular form of society.

All these considerations lead me to feel that, while Christian values ofter are involved in the issues of American conflict with Soviet power, we cannot conclude that everything we want automatically reflects the purpose of God and everything the Russians want reflects the purpose of the devil. The pattern is complex, fuzzy, and unstable. We must look sharply at each individual issue before we jump to conclusions. We must bear in mind that there are things we do not know and cannot know. We must concede the possibility that there might be some areas of conflict involved in this cold war which a divine power could contemplate only with a sense of pity and disgust for both parties, and others in which He might even consider us to be wrong.

#### THE TRAGEDY OF COLONIALISM

So much for the cold war. How about colonialism? Nobody seems to suggest any more, I notice, that God might conceivably be on the side of the metropolitan power, despite the fact that of the two parties involved it is often the mother country that represents the Christian society and the co-

Ionial people the pagan one. The assumption usually encountered today is that any form of foreign rule is necessarily oppressive and worse than any form of indigenous rule. The next assumption is that any anticolonial effort is therefore automatically good in the Christian sense—that self-determination, in short, is a Christian purpose. I am confident that for such assumptions

there is not a shred of justification. erection of the edifice of modern colonialism was not a moral act or a series of moral acts but the response to obvious historical conditions and necessities. It was a phenomenon occasioned by the fact that industrialism burst forth in Europe and North America more than a hundred years earlier than it did in other parts of the globe and thus produced huge and sudden disparities in physical and administrative power. This called for a political response, and colonial-ism was this response. We Americans were spared a greater participation in it only because of our preoccupation with the development of our own continent-for no other reason.

Today the colonial relationship has outworn in many instances—though by no means all-its original technological psychological justification. A great part of the colonial system has been liquidated, and another part of it is in course of liquidation. This process could not fail to give rise to tensions of tragic bitterness and difficulty. In the anatomy of these tensions, one will look in vain, as a rule, for any Christian meaning. The resistance to change on the part of the mother country has sometimes reflected selfishness and shortsightedness, and it has also reflected in many cases a genuine sense of responsibility. Conversely, the demand for change on the part of the colonial people has sometimes reflected a real love of liberty, and it has often been borne by a spirit fiercely chauvinistic, full of hatred, undemocratic, and irresponsible.

Let us, as Christian, view these resulting conflicts for what they are: tragic situations, in which the elements of right and wrong are indistinguishable to us. remember that, insofar as these situations reflect racial differences, we ourselves stand before God and the world as one of the most conspicuous examples of the failure to find a satisfactory Christian solution to such problems. Let us learn to view this whole subject of colonialism with humility, with detachment, with compassion for both sides. Let us not abuse the confidence of Christ by invoking his judgment one way or another on situations that were obviously beyond the power of mortal man to prevent and are now beyond the power of mortal man to liquidate without pain and strife.

Or take the problems of technical assistand other forms of aid to underdeveloped peoples. Here, too, I must argue against the absolutes. I can think of no question of Christian doctrine which needs critical examination more than the question of what constitutes charity. Even in the personal sense, in the relations between individuals, I often wonder whether we do not constantly misinterpret the term and whether it does not contain a host of subjective pitfalls. Charity is not giving people things which will only encourage them to postpone facing up to the necessities under which they are going to have to live in the long run. I question the handout as a means of bringing any important benefit to anyone, even in personal life. How much more complicated, then, is the matter of charity between nations. It is difficult to benefit a whole nation, as distinct from certain factions and elements in its competitive life, by anything you do to it from outside which affects its internal terms of competition. And make no mistake about it: every infusion of foreign aid has this There are always some who benefit

from it and others whose interests are damaged by it.

But beyond this, foreign aid, to be really effective as a gesture of Christian charity, would have to be understood as such a gesture by the recipients as well as by the donors. But most foreign peoples do not believe that governments do things for self-less and altruistic motives; and if we do not reveal to them a good solid motive of self-interest for anything we do with regard to them, they are apt to invent one. This can be a more sinister one than we ever dreamed of, and their belief in it can cause serious confusion in our mutual relations.

Foreign aid has a place in our foreign policy; but the favorable possibilities for it are more slender than people generally suppose. The less it consists of outright grants, the better. The less we try to clothe it in the trappings of disinterested altruism—to view it as Christian charity—the more we can show it as a rational extrapolation of our own national interest, the better understood and the more effective it is going to be abroad.

#### THE U.N. AS A SYMBOL OF CONSCIENCE

The sovereign national state, to which so much reverent devotion is paid in the various gradations of patriotism and chauvinism that make up national feelings, has no foundation in Christian principle, whatever its secular justification. Nowhere in Christ's teachings was it suggested that mankind ought to be divided into political families of this nature, each a law unto itself, each recognizing no higher authority than its own national ego, each assuming its interest to be more worthy of service than any other with which it might come into conflict. Surely this whole theory is an absurdity from the Christian standpoint. Before we could achieve Christian foreign policy we would have to overcome this unlimited egotism of the sovereign national state and find a higher interest which all of us could recognize and serve.

How about the United Nations? it will be asked. Is this not an institution which, insofar as it represents an endeavor to transcend national sovereignty, deserves our support as a vehicle of the Christian purpose?

The U.N. represents not a supergovernment, not a separate institutional personality, but one of a number of forums on which governments communicate with one another. It does not, in reality, transcend the barrier of sovereignty. Its members are governments, not peoples, and such slender authority as it sometimes possesses is conferred upon it by these governments, each still acting within the sovereign framework.

There is no particular Christian sanctity lent to decisions taken in the United Nations by the fact that they represent the views of a majority of governments. Little countries are not necessarily more virtuous or more enlightened than big ones; and an international majority does not necessarily reflect the Christian answer, or even the most wise and courageous answer, to anything.

wise and courageous answer, to anything.
On the other hand, the U.N. does represent the germ of something immensely necessary and immensely hopeful for this endangered world: namely, a sense of conscience higher than the national one, a sense of the fellowship of fate by which we are all increasingly bound together. I cannot conceive of a satisfactory future for humanity that does not embrace, and draw its strength from, the growth of this consciousness. The present U.N. is the symbol of it. This symbol is still weak and tender, but it is not insignificant. We must therefore cherish it and guard it, not burdening it beyond its strength, not looking to it for the impossible, but strengthening it where and when we can, above all in our own thoughts and attitudes.

This does not mean that all U.N. decisions

are to be taken as automatically right and good. It does not mean that all diplomatic questions should be uncritically consigned to the U.N. whether or not this is a suitable place for their discussion. But it does mean that we should be careful and respectful of the organization as such, rememberinig that if the idea which it symbolizes is ever allowed to depart from international life, nothing else can stand between us and the horrors of a wholly chaotic world in the atomic age.

#### THE MORAL IMPLICATIONS OF WAR

This brings me now to the question on which I think a Christian might, with good conscience, really, take a stand. They involve not just the national intersts of individual governments but rather the interests of civilization: the question of war, and the atom, and the other weapons of mass destruction.

I am aware that the institution of war has always represented dilemmas for Christian thought to which no fully satisfactory answer has ever been offered. I have, in the past, found myself unable to go along with the Quakers in their insistence on a sweeping renunciation of power as a factor in international affairs. I do not see the reality of so clear a distinction as they draw between domestic affairs and international affairs. The Communists have taught us that these two things are intimately connected, that civil Wars have international implica-tions and that international wars have domestic implications everywhere. I am unable therefore to accept the view which condemns coercion on the international sphere but tolerates it within the national borders.

But that we cannot rule out force completely in international affairs does not seem to me to constitute a reason for being indifferent to the ways in which force is applied-to the moral implications of weapons and their uses. It is true that all distinctions among weapons from the moral standpoint are relative and arbitrary. Gunpowder was once viewed with a horror not much less, I suppose, than are atomic explosions today. But who is to say that relative distinctions are not meaningful? I cannot help feeling that the weapon of indiscriminate mass destruction goes farther than anything the Christian ethic can properly accept. The older weapons, after all, were discriminate in the sense that they had at least a direct coherent relationship to political aims. were seen as means of coercing people dlrectly into doing things an enemy government wished them to do: evacuating territory, desisting from given objectives, accepting a given political authority. A distinction was still generally drawn, furthermore, prior to World War I at least, between the armed forces and the civilian population of a hostile country. Efforts were made to see that military action was directed only against those who themselves had weapons in hands and offered resistance. The law of war did not yet permit the punishment of whole peoples as a means of blackmail against governments.

In all of these respects, the atom offends. So do all the other weapons of mass destruction. So, for that matter, did the conventional bomber of World War II when it was used for area bombing. In taking responsibility for such things as the bombing of Dresden and Hamburg, to say nothing of Nagasaki and Hiroshima, Americans went beyond what it seems to me the dictates of Christian conscience should have allowed (which is not to say that I think their problem was an easy one).

I regret, as an American and as a Christian, that these things were done. I think it should be our aim to do nothing of the sort in any future military encounter. If we must defend our homes, let us defend them as well as we can in the direct sense, but let

us have no part in making millions of women and children and noncombatants hostages for the behavior of their own governments.

It will be said to me: This means defeat. To this I can only reply: I am skeptical of the meaning of victory and defeat in their relation to modern war between great countries. To my mind the defeat is war itself. In any case it seems to me that there are times when we have no choice but to follow the dictates of our conscience, to throw ourselves on God's mercy, and not to ask too many questions.

#### ATOMIC TESTING

But this is not the only moral connotation of the atom. There is another in the great controversy that has raged over the question of atomic testing, its effect on the atmosphere, and its consequences for human health. My colleagues in the scientific field advise me to stay away from this subject. They point out that there is a great deal about it which is not yet known; that scientists are themselves in wide disagreement about its seriousness; that I, as a scientific layman, would not even be able to understand the terms in which it is put. All this I readily concede; but even the little that is known to the general public is enough to pose a problem of Christian conscience.

Let us take a random sampling of recent press reports. During the first 8 months of 1958, we are told, the fall-out of radio-active strontium on New York City increased by 25 percent. Readings in Los Angeles are said by the health department of that city to have revealed for limited periods a count of 500 to 1,000 times the normal radioactivity in the atmosphere and double the intensity considered safe for continuous exposure over a lifetime. Only a few weeks ago observations in Sweden showed radioactivity at 10 kilometers above sea level to be 5 times as intense as it was earlier in the year, and individual particles were detected (apparently at ground level), "larger and thought to be more radioactive, than any yet reported except from the immediate area of a test explosion." A similar report has come from Brazil.

All this is only the beginning; a large part of the fallout from the tests conducted thus far is, we are told, still in the higher atmosphere and will not descend for years. Furthermore, the effect of radioactive substances on human health is cumulative, so that any unnatural exposure presumably reduces the tolerance of exposure from natural causes or for medical purposes.

ural causes or for medical purposes.

In the face of these facts, I listen with some amazement to the statements with which some of the scientists endeavor to reassure us about such developments. The damages, they say, have been "negligible" so far. Not many deaths, they say, can be expected to ensue from this increase in radioactivity compared with those which occur from natural causes. One scientist, pained and astounded at the concern about the radioactive particles in Sweden, explained that if, for example, 100 people would be killed by the effects of a normal atomic explosion, then only 102 could be expected to die from the effects of the increased radioactivity which Sweden has been experiencing.

But whoever gave us the right, as Christians, to take even one innocent human life, much less 102 or a 102,000? I recall no quantitative stipulation in the Sixth Commandment. God did not say through Moses that to take 102,000 lives was wicked but 102 was all right. I fall to see how any of this can be reconciled with the Christian conscience.

I am delighted that our Government now shows a serious readiness to work toward the termination of these experiments with atomic explosives. We must go further and work toward the elimination of the use of atomic weapons in war as well. This cannot be done in a day, and not all that needs to be done can be done by us. But we can at least make a beginning by endeavoring to free ourselves from our unwise dependence on atomic weapons in our own military calculations, from our fateful commitment to the first use of these weapons, whether or not they are used against us.

#### OUR OBLIGATION TO THE FUTURE

There is a principle involved here which has application beyond just the field of weapons, to a number of other effects in the introduction of modern technology. We of this generation are only the custodians, not the owners, of the earth on which we live. There were others who lived here before, and we hope there will be others who are going to live here afterward. We have an obligation to past generations and to future ones, no less solemn than our obligations to ourselves. I fail to see that we are in any way justified in making, for the safety or convenience of our own generation, alterations in our natural environment which may importantly change the conditions of life for those who come afterward.

The moral laws which we acknowledge predicate the existence of a certain nort of world—a certain sort of natural environment—in which people live. This setting presumably reflects God's purpose. We did not create it; we do not have the right to destroy it. We know the problems which this environment poses for man. We know the nature of the Christian effort to find answers to them. We live by this lore. When we permit this environment to be altered quite basically by things we do today, we are taking upon ourselves a responsibility for which I find no authority in the Christian faith.

Obviously, we do not know what the ultimate effects will be of the atomic weapons tests we have already conducted. I am not sure that we know what will be the ultimate effects of our methods of disposal of radioactive wastes. I doubt that we know what we are doing to the sea through the use of modern detergents and the fouling of its surface with oil. I am not sure that we know what we are doing with modern insecticides, which we employ quite recklessly in agriculture for our immediate purposes, giving little thought to their ultimate effects. We who call ourselves Christians must acknowledge responsibility in these matters, most of which are international in their implications.

We will unavoidably find in the motives and workings of the political process much that is ambiguous in the Christian sense. In approaching the individual conflicts between governments which make up so much of international relations, we must beware of pouring Christian enthusiasm into unsuitable vessels which were at best designed to contain the earthy calculations of the practical politicians. But there are phases of the Government's work in which we can look for Christian meaning. We can look for it, first of all, in the methods of our diplomacy, where decency and humanity of spirit can never fail to serve the Christian cause.

Beyond that there loom the truly apocalyptic dangers of our time, the ones that threaten to put an end to the very continuity of history outside which we would have no identity, no face, either in civilization, in culture, or in morals. These dangers represent for us not only political questions but stupendous moral problems, to which we cannot deny the courageous Christian answer. Here our main concern must be to see that man, whose own folly once drove him from the Garden of Eden, does not now commit the blasphemous act of destroying.

whether in fear or in anger or in greed, the great and lovely world in which, even in his fallen state, he has been permitted by the grace of God to live.

## Wheat Legislation Affecting Oregon Producers

EXTENSION OF REMARKS

# HON. RICHARD L. NEUBERGER

OF OREGON

IN THE SENATE OF THE UNITED STATES

Tuesday, June 2, 1959

Mr. NEUBERGER. Mr. President, many of us in the Senate realize that, although we have passed stopgap wheat legislation, the wheat problem has by no means been solved. The ultimate solution is yet to be enacted.

In the Oregonian of Portland for May 24, Jalmar Johnson, associate editor of that daily newspaper, has analyzed some of the major questions involved in handling wheat production. I am pleased that Mr. Johnson has stressed several of the advantages of S. 1140, introduced by the distinguished Senator from Kansas [Mr. Carlson], of which I am privileged to be a cosponsor. This is the so-called domestic parity program, which would separate wheat used domestically for human consumption from that sold abroad or fed to animals.

Because we know that much farm legislation remains to be considered by this 86th Congress, I ask unanimous consent, Mr. President, that the article by Jalmar Johnson from the Oregonian, entitled "Wheatmen Agree Farm Program a Flop," be printed in the Appendix of the Record.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

WHEATMEN AGREE FARM PROGRAM A FLOP (By Jalmar Johnson)

Tell a Umatilla County wheat farmer or grain marketing specialist that you think the present farm price-support program is a flop and he'll generally agree with you. He has seen the wheat acreage in this eastern Oregon hub county drop from 300,000 to 200,000 harvested acres since 1953. The high price of wheat closes him out of the feed market, except for the barley he grows on the land diverted from wheat. The great surpluses in the United States, he realizes, may force him to cut his remaining wheatland by 20 to 30 percent and he doesn't like it.

But don't tell him he's got his feet in the public trough, like the pigs he's raising on an increasing scale. He'll point out, with blood in his eye, that the national publications which have virtually said so recently are themselves the beneficiaries of immense postal subsidies. He'll point out that many businesses are protected by import quotas, tariffs, sometimes direct subsidies. City workers have the protection of strong unions and immigration restrictions. To expect farmers alone to be free enterprisers in a protected economy makes no sense in Pendleton or Pilot Rock or Athena.

Umatilla County people are still strong for the two-price plan for wheat, this writer discovered on a 2-day visit to the wheat country last week. The plan has been revised. Once known as domestic parity and going back to the McNary-Haugen legislation of the Coolidge administration, it is now

called the stabilization plan.

As set forth in Senate bill 1140, which Senator Frank Carlson, Republican, of Kansas, introduced last February, the plan now calls for lumping the estimated amount of wheat used for food in the United States (about 485 million bushels) and exports (about 480 million bushels) into a national marketing allotment. This would total about 840 million bushels, when 75 million bushels were subtracted for yearly removal from Commodity Credit Corporation stocks. Supports on the whole of this would be at 65 percent of parity, with each farmer receiving certificates entitling him to an additional 35 percent of parity on his share of the wheat used for domestic human consumption.

Acreage allotments would be eliminated, but each farmer would be required to put at least 20 percent of his wheat land in the conservation reserve to be eligible to receive certificates. Wheat grown in excess of the farmer's bushel allotment could be fed to animals on the farm where grown, sold to other farmers or to feed processors. It is estimated the stabilization plan would save the Federal Treasury \$738 million a year by lowering the cost of price-support operation, reducing CCC stocks, lowering export subsidies, and reducing CCC storage costs by placing the stocks on 5-year storage contracts.

Several persons told this writer they thought such a plan could be administered without great difficulty. A two-price plan may be said to be already in existence, with two-thirds of the acreage in high-support wheat and one-third in low-support barley,

one pointed out.

But there is little hope that Congress will enact such legislation this session. In fact, the plan is not being pushed. Corn belt Congressmen, the Farm Bureau, and the administration all are opposed to it. Midwest corngrowers, who now are free to grow all the corn they wish at support prices higher than noncompliance levels last year, don't want wheat competing for the feed market. Also other wheat exporting countries, such as Canada, Australia, and Argentina, are touchy about this country's wheat program.

If there is no chance to put over the Oregon wheat growers' favorite program, what is the next best plan? Surprisingly, one of the county's biggest handlers of wheat, who admits to no great admiration for Agriculture Secretary Exra Tart Benson, said he thought the administration plan might be the most advantageous for eastern Oregon wheat

growers.

This plan would base supports on average market prices over a 3-year period. Its effect would be gradual and not catastrophically sudden. Tempered by land bank payments, it would lead to eventual freedom from allotments and entry of wheat into animal feeding. How far the support price would drop, is problematical. It might go down to \$1.25 or so a bushel, which is much lower than the present level but not so much below the \$1.45 to \$1.55 a bushel which the average farmer probably made last year on a wheat-barley combination.

If such a plan were adopted, it might drive out of production the many 15-acre wheat plantings which add greatly to the surplus and which have been encouraged by high prices. Farmers in areas where wheat is not a traditional crop might return their land to former crops, if a profit on wheat were not assured them. The Pacific Northwest, this expert said, would be able to stand the policy reversal better than most sections and, if protected in the future by a disaster-type support, might get back into producing wheat for use rather than for storage.

Meanwhile, as the wheat problem reaches a crisis, eastern Oregon wheat men are not just a-sittin' and a-whittlin'. They are doing much to help themselves. That is another story which will be told here later.

## Neuberger Found New World

EXTENSION OF REMARKS

# HON. MIKE MANSFIELD

OF MONTANA

IN THE SENATE OF THE UNITED STATES

Tuesday, June 2, 1959

Mr. MANSFIELD. Mr. President, in the Washington Star of June 1 there appeared an excellent article, written by Jim Bishop, entitled "NEUBERGER Found New World." I believe the article illustrates the integrity, the soundness, and the stability of the distinguished junior Senator from Oregon [Mr. NEUBERGER] and represents a tribute truly deserved. I am delighted that this tribute is paid to him, and that he, in turn, is making known his views and thoughts on the basis of the illness which he underwent last year, so that the rest of us can become more philosophical, more understanding, and more tolerant in our own lives and our own viewpoints.

I ask unanimous consent that the article be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD,

as follows:

NEUBERGER FOUND NEW WORLD (By Jim Bishop)

Nothing humbles a man like the imminence of death. Once he feels that he is finished, he sees himself, in sorrow, as just one more grain of sand on a big beach. Matters that used to be important are now trivial. The patient learns the truth of the ancient aphorism: "All, all is vanity."

Sometimes the man recovers. The measure of his intelligence is in the amount of humility he retains when he gets well. A few keep it and enjoy life more than ever before. Many return to the old ways of dog-eat-dog. Arthur Godfrey, for example, has time to mediate now as never before. Last year, it was Senator Richard Neuberger's turn. Next year—who knows?—maybe mine. Or yours.

The Senator from Oregon writes well about the inner working of the human heart in distress. He has an article in the current Harper's, in which he relates how he discovered that he had cancer, of his thoughts and of his certainty that he would not get well. He had malignant growths on his tongue, a testicle, and the periphery of both lungs

testicle, and the periphery of both lungs. He was 46. The first thing he learned was that the imminence of death does not make the weak strong, nor the strong weak. "A change came over me," the Senator said, "which I believe is irreversible. Questions of prestige, of political success, financial status, all became unimportant. In those first hours when I realized I had cancer, I never thought of my seat in the Senate, of my bank account, of the destiny of the free world."

What was on his mind? His cat. He wondered who would take care of Muffet. What would happen to Mrs. Neuberger?

The Senator has not had an argument with his wife since the onset of illness. "I used to

scold her about squeezing the toothpaste from the top of the tube instead of the bottom," about not cooking the foods he liked best, about inviting people to the house without consulting the Senator, about spending too much money on clothes. Suddenly, all of these things were ridiculous.

Now the Senator gets a thrill out of having lunch with an old friend, sitting with his wife talking about nothing of importance, scratching Muffet's ears, raiding the refrigerator. "I shudder," he says, "when I remember all the occasions that I spoiled for myself—even when I was in the best of health—by false pride, synthetic values and fancied slights."

The great leveler was treatment for the cancer. Senator Neuberger began treatment and convalescence in Portland and it measured up to the best he might have had at the big name clinics. He found a cubicle in which to remove his clothes. Outside, he found a rack with linen smocks. One had his name on it. He looked at the other smocks. They had the names of a noted banker, a college professor, a society woman, a union worker, a housewife.

Wherever he went, RICHARD NEUBERGER found that he saw a world different from the one he knew all his life. The Senator was a wide-eyed Alice in Wonderland, treading lightly through a strange maze of mirrors. A brief grin from a doctor studying an X-ray plate became more important than the latest pronouncement from Nikita Khrushchev; a silent squeeze of his hand by Mrs. Neuberger meant more than a certified check for a million dollars.

The Senator did well. The treatment wasn't as difficult as he thought and, when he returned to Washington, a roentgenologist studied a new picture of Neuersons's lungs and had to ask the Senator where the cancer used to be so that he could study the area. These are the moments that constrict a man's throat.

In his office were messages from colleagues of both parties. The Senator is a Democrat. There was a note from Senator Goldwater saying that he and his wife Peggy were praying for Richard Neuerger. There were offers of transfusions, money, medical assistance, mass cards.

When he returned to the Senate, his hands feit the edges of his old chair. Vice President Nixon smiled down from the President's desk. Senator Frank Church of Idaho, 34, stood to welcome Neuberger back to the U.S. Senate. He revealed that, 11 years before, he, too, had recovered from the same kind of cancer.

Senator Neuberger was in a brandnew world.

#### Lewis Strauss

EXTENSION OF REMARKS

# HON. STEPHEN M. YOUNG

OF OHIO

IN THE SENATE OF THE UNITED STATES

Tuesday, June 2, 1959

Mr. YOUNG of Ohio. Mr. President, in the Cleveland Press of May 21, 1959, on the editorial page, there was published a jingle relating to the nomination of Adm. There being no objection, the jingle was ordered to be printed in the RECORD, as follows:

Joe Newman's Frying Pan (Father Goose rhymes)

Said Senator Young (and he wins our applause),
"Why strain at an Adams, yet swallow a

y strain at an Adams, yet swallow a Strauss?"

Never were words more courageously flung. But such are the things that you do when you're Young.

## Buildings for Brotherhood

EXTENSION OF REMARKS

# HON. HARRISON A. WILLIAMS, JR.

OF NEW JERSEY

IN THE SENATE OF THE UNITED STATES

Tuesday, June 2, 1959

Mr. WILLIAMS of New Jersey. Mr. President, the Young Men's Christian Association is now at work on a program Which, I believe, merits some attention. It is called "Buildings for Brotherhood." and it is a program to build more YMCA's abroad. I understand that citizens of this Nation will be asked to give \$5 to \$6 million to this cause. My hometown, Westfield, in New Jersey, has accepted a goal of \$9,000, according to a letter I have received from Edward C. Ewen, the general secretary there. Mr. Ewen also tells me that not one U.S. dollar goes out in aid to any specific place until that community has met its share of the capital expense involved.

Mr. Ewen also writes:

It has proven to be quite a stimulus to self-help, and a push along the road to better relations, and a more peaceful atmosphere among our friends in foreign lands.

Mr. President, it seems to me that much good may come from this program. Any efforts intended to promote understanding among people of many nations is a step toward ultimate peace. I ask unanimous consent to have printed in the Appendix of the Record an excerpt from a YMCA publication called "Buildings for Brotherhood."

There being no objection, the excerpt was ordered to be printed in the RECORD, as follows:

ADMINISTRATION

With the exception of the World Youth Fund in 1948—which provided \$5 million restricted to replacement and repairs in war devastated countries—little help has been given in the last 30 years by the international committee for new buildings and facilities. Inadequate facilities handicapped many movements located where recent developments offered the YMCA its greatest opportunities.

At its plenary meeting in September 1954, the international committee, composed of elected representatives of the States, areas, and Canada, appointed a study commission to investigate mounting building requests. Under Chairman William J. Grede, building needs received the consideration of laymen and secretaries at every level. A national referendum, taken after 2 years of study, reported overwhelming approval of the validity of those needs and the urgency of meeting them without delay. This recom-

mendation received the unanimous endorsement of the National Council of YMCA's. It designated the international committee as the proper body to plan and direct the campaign to begin in 1958.

Responsible leaders of national movements around the world began an intensive study of the needs of their youth in order to plan a bold program of advance through strategically placed new buildings. Each building project must be on a share basis. The result is a great cooperative undertaking of 33 countries at a total cost of \$16,039,165. Of this amount, the international committee will undertake to raise at least \$5 million.

Documented projects are submitted by the national movements to the international committee. After thorough examination by staff, they are reviewed by the projects committee of Buildings for Brotherhood. This committee refers the examined projects, with recommendations, to the executive committee of the international committee. Decisions made on separate projects use the following criteria:

Soundness of the project.

Evidence of real need for assistance toward its accomplishment.

Evidence of real effort to secure locally as large a proportion as possible of the funds required.

Satisfactory mutual understanding on matters related to the financing of the project and construction of the building. Judgment on the relative importance of

Judgment on the relative importance of the project among all the requests currently being considered.

If the project is approved, the Committee on World Service Interpretation and Income Production is authorized to solicit contributions in the United States and Canada in the amount requested or in a modified amount. Because the international committee has no capital funds, it cannot commit itself in advance to make an appropriation toward any project. Any mention of a figure for a project is descriptive only. When it has the money in hand, the international committee will make appropriations toward projects agreed upon, authorizing notification to the national movement concerned and transmission of funds in the manner agreed upon.

No more careful preparation has ever been made for any campaign in terms of grass-roots approval and thoroughly worked out policies. On the basis of necessary documentation, national movements have inaugurated self-appraisal and new long-rang planning techniques. The worldwide YMCA is now engaged in a total, Christian advance to meet the needs of youth. This courageous global program has been aptly named, "Buildings for Brotherhood."

Day Is Done-Day Has Begun

EXTENSION OF REMARKS

# HON. J. VAUGHAN GARY

OF VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 2, 1959

Mr. GARY. Mr. Speaker, under leave to extend my remarks in the Appendix of the Congressional Record, I would like to insert a very beautiful poem which was printed in the Virginia Legionnaire, official publication of the Virginia Department of the American Legion. This poem was written by my friend, Charles H. Phillips, of Richmond, Va., a former member of the Virginia General Assembly, in memory of his

brother, Henry Adams Phillips. It is based upon Army Taps.

DAY IS DONE

Over the years we men of the American Legion participate in many graveside services, the last rites to our friends, our fellow Legionnaires.

Our emotions are always stirred. We stand, the service comes to a close, ashes to ashes, prayers of thanksgiving and hope, blessings on the family have been said, the service ends.

Then, as a benediction, on it all a last farewell salute to the departed spirit there comes the clear call of a bugle. We stand at attention, some one removes the flag from the casket as the notes of the bugle rise and swell. We join with them silently repeating the words of old familiar Army Taps:

Day is done
Gone the sun,
From the land
From the sea
From the sky,
All is well
Rest in peace,
Day is done.

#### DAY HAS BEGUN

It is a most fitting farewell, leaving us in the spirit of approving our act of participating. We get the feeling that the departed spirit too approves, goes on its way calmer, confident, reassured by our love and esteem.

Could it be—I am sure that it is—that our feeling of elation, of being lifted up that we get on such an occasion, comes yet from another reason than our participation in fittingly bidding goodby to our departed comrade, comes from something far more wonderful, comes from the spirit of our departed friend taking its leave of us, telling us to be of good cheer, to have faith and hope, and that we, like him, when our time comes to follow must also call back to our graves to the same well beloved bugle call notes of the same old familiar Army Taps;

Day has begun,
Risen the sun,
On that land
Far up above
In the heavens,
I'm with God,
God with me,
My new day's begun.

## Will This Frankenstein Devour Us?

EXTENSION OF REMARKS

# HON. STEVEN B. DEROUNIAN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 2, 1959

Mr. DEROUNIAN. Mr. Speaker, the following article, by Lawrence Fertig, which appeared in the New York World-Telegram and Sun on June 1, offers considerable food for thought:

LABOR LAWS BLAMED FOR THREATS, CRISES
(By Lawrence Fertig)

The chickens are now coming home to roost—more insistently than ever. One serious labor problem after another threatens the country as a direct result of bad labor laws passed by Congress, and even worse interpretations by the Supreme Court and the National Labor Relations Board. Several recent happenings reveal the scope and gravity of this problem. They prove that what

is now necessary is a fundamental solution and not a palliative.

First. James Hoffa, head of the Teamsters' Union, threatened to "call a primary strike across the Nation" which would bring this country to its knees. The public and the press were shocked and outraged by this threat. But in their resentment against Hoffs few people stopped to think that he would be doing nothing illegal and that the law protects him-in fact it encourages in such action.

No other group in the United States could cossibly threaten the country this way.

Why? Because no other group has been Why? Why? Because no court group granted such monopoly power by Congress (under the Clayton Act). No other group would be protected in such action under the law which exempts unions from injunctions by the court (Norris-La Guardia Act).

Mr. Hoffa is protected by a majority opinion rendered by the U.S. Supreme Court in the Hutcheson case. In this case Justice Felix Frankfurter delivered himself of this shocker: "So long as a union acts in its selfinterest, and does not combine with non-labor groups, the licit and illicit \* \* \* are not to be distinguished by any judgment regarding the wisdom or unwisdom, the rightness or wrongness, the selfishness or unselfishness of the end of which the particular union activities are the means.'

In plain words this means that unions can do no wrong when they pursue their own interest. Those who grow violent about Hoffa or any other labor union leader should direct their fire where it really belongs-at the Congress of the United States. this body can change the basic labor laws protecting union monopolies-laws which give an excuse for the kind of frightening opinion rendered by Justice Frankfurter.

2. Another labor crisis indicating the necessity of a basic solution is the threat of a national steel strike. Steel companies are resisting the union's billion-dollar demand because they want to hold prices down. The steel industry must meet increasing competition from imported steel, as well as from other basic industries such as aluminum, etc. Why should this particular price (the price or hourly wage of workers in steel) create a national crisis threatening the entire country Every week tens of thousands of important prices are made or revised throughout the country, but the public is not threatened with a crisis in any of them. The answer is that wherever competition exists prices can be established without any crisis. Prices seek a level which favors maximum public buying-and this is done without any violence, coercion, or threat of national calamity. But since labor unions are legal monopolles there is no way in which the price they demand can be lim-They can effectively shut down an enited. tire industry and no one can stop them. Only Congress can change this.

Only Congress can change this.

3. Still another problem was pointed up by Senator McClellan. He said, "It is obvious to the whole country that the labor unions themselves cannot handle the critical problem of racketeering." The record of coercion, violence, corruption, and crime was made clear by sworn testimony before the Senate rackets committee. But why is all this so prevalent in labor unions and not in this so prevalent in-labor unions and not in business and all other voluntary organizations of society? The answer is that the labor union is a legal monopoly not subject to the ruling of the courts, as corporations and other organizations are. That is precisely what racketeers want to get hold of.

The union charter, as Senator McClellan said recently, is the racketeer's private certificate to do business. When certified by the NLRB one union becomes exclusive bargaining agent. Workers must knuckle ungaining agent.

gaining agent. Workers must knuckle un-der to those in control-minority groups are helpless. Furthermore, the union has a

stranglehold on business. The courts cannot interfere and dispense justice, as in all other

Dean Emeritus Roscoe Pound of Harvard Law School, America's most distinguished legal scholar, said in a recent study that there exist under the law, general privileges and immunities of labor unions and their members and officials to commit wrongs to person and property, to interfere with the use of highways, to break contracts, to deprive individuals of the means of earning a livelihood, to control the activities of the individual workers and their local organizations by national organizations centrally and arbitrarily administered beyond the reach of State laws \* \* things which no one else can do with impunity. Such privileges and immunities naturally attract racketeers to get control of unions.

The weak Kennedy bill, passed by the Senate, in no way touches these vital mat-To get at the heart of this problem requires congressional action to revoke the monopoly power which was granted; and to place unions, like all other organizations in society, under the rulings of our courts.

# When I Learned I Had Cancer-Article by Senator Neuberger

EXTENSION OF REMARKS

# HON. BARRY GOLDWATER

OF ARIZONA

IN THE SENATE OF THE UNITED STATES Tuesday, June 2, 1959

Mr. GOLDWATER. Mr. President, in the June issue of Harper's magazine there is a very interesting article written by one of our colleagues, the junior Senator from Oregon, RICHARD L. NEU-BERGER. It is a most interesting description of the coming of cancer to a patient by a man who has been through it. It is well written, as is always the case with this distinguished Senator.

I ask unanimous consent that the article be printed in the Appendix of the RECORD:

There being no objection, the article was ordered to be printed in the RECORD. as follows:

## WHEN I LEARNED I HAD CANCER

(By RICHARD L. NEUBERGER, U.S. Senator, Oregon)

(The intimate personal story of a successful treatment, by recently developed methods and the effect of such an experience on one man's character and outlook on life.)

My grandmother died a lingering death at the age of 57. I then was 12 years old and devoted to her, since she took my part whenever parental discipline threatened. On the day of her death I was brought into the bed-"RICHARD," she told me, "Grandma's room.

Afterward, frightened and trembling, asked the nurse what had caused my grand-mother's death. "She had cancer," the nurse replied. Not until then had I been trusted with this information. My grandmother had never known the nature of her illness, and the family had feared I might betray the secret to her.

Perhaps because of the emotional impact of this episode, I have been deeply concerned with medical-research legislation ever since I entered the U.S. Senate in 1955. Under the tutelage of Senator LISTER HILL, of Alabama,

the pioneer legislator in this field, I helped to get approval of increases in research grants for the National Cancer Institute from \$21 million to \$75 million. Many times during those debates I mentioned that 40 million Americans now living were destined to suf-fer from cancer. I believe I stressed it on the afternoon last spring when Senator Hull. Senator Humphrey, and I welcomed delegates from the Cured Cancer Congress, who dramatically thronged the Senate galleries.

Yet none of this prepared me for the day last August, in Portland, Oreg., when our family doctor-who is also my closest friendtold me that I probably had cancer. Ironically. I had gone to him merely to ask him to look at a sore in my mouth, which turned out to be trivial. The malignancy had pro-

duced no symptoms.

While I lay on the table waiting for a specialist from the University of Oregon Medical School to confirm the diagnosis, my mind kept insisting that this could not pos-This was the kind of thing which sibly be. always happened to somebody else, but never to me. I soon would awaken from the nightmare, the cold chills would subside, my heart would stop pounding—and my wife and I would be driving through evergreen forests to our annual vacation on the seacoast.

But when I did awaken, it was after surgery at the Teaching Hospital. The little lump in my testicle, caught miraculously early, was nonetheless malignant. There was no doubt about that. I lay back, physically and psy-chologically exhausted, and wondered how soon I was to die. Then I heard the doctor, who earlier had been so candid with me,

"We think you're going to be all right." Through the haze of the anesthetic which had not yet worn off, I remember that I answered, "You're just telling me that to keep me from being overcome by panic. It's not true."

The doctor's reply was dogmatic: "If the permanent histological sections tomorrow confirm the frozen section studies in the

surgery today, we're very hopeful that you are going to have a complete recovery."

I still suspected that, like my grandmother, I was just another cancer patient who was being drugged with lies.

#### THE SAVING COBALT BEAMS

And so began the long and patient effort of my physicians to teach a layman-even a layman who had been sponsor of cancer-research legislation-that cancer is not one disease, but many. If my tumor had turned out to be any of several other types, my outlook would have been hopeless. These types, explained my doctors, were not responsive to radiation, and it was on radiation that my life now depended. Fortunately, my cell-type was that of a tumor long regarded as susceptible to destruction by radiotherapy.

"Was there spread?" I inquired fearfully. Yes, admitted my doctors, there was spread. This tumor almost invariably metastasized early. Rapid dissemination was one of its characteristics. There were indications of cancer in both my lungs. They added that the spread was "minimal"—so little, in fact. that they had missed it on the first X-rays-But it was there, a very small spot on the periphery of each lung. If not destroyed, the spots would grow until they were the size of baseballs or larger. After that, they would eventually spill out of the lung, reaching to the brain and other vital organs. This, course, would be the terminal stage of the

This candor encouraged me. If my doctors were so truthful with me about the spread of the illness and its fatal possibilities, would they be lying about the vulnerability of the tumor to radiation? This glimmer of hope was strengthened when medical texts came down from the shelves and I was shown, like a schoolboy, that the cell-type named in my pathological report had been proven destruc tible by radiation over a long history of med-

I will never forget the afternoon I spent in a rowboat on a quiet mountain lake with the

radiologist who was to treat me.
"Cure is not inevitable," he began, and I felt perspiration creep over my body. "But if we get any breaks at all," continued the 'we think you're going to be radiologist, cured."

What do you mean by breaks?" I asked.

"First," he answered, "you must be able to tolerate the treatment so the necessary number of roentgens can be applied to the affected areas. That's a whole lot easier with cobalt than with the old-style X-ray therapy. Second, we hope that additional new lesions do not appear throughout your chest in such numbers that we would have to apply a high dose of radiation to your entire lungs—for that cannot be done safely. To a limited area in the chest, definitely yes; to entire chest, no."

As I started my brief daily treatments beneath the cobalt-60 cone, my doctors pared down my speaking schedule. They let me keep some speaking engagements in Oregon, because they felt it would be better for my mental outlook to be moderately active rather than to become a semi-invalid. They made me warn each sponsoring group, however, that my appearance might be canceled at the last moment because of radia-tion reactions. During 5 months of treatment, I spoke 53 times. In addition, I presided at six Senate hearings, some as distant from Portland as San Francisco and Kalispell, Mont. No one had to be can-This indicates only how I tolerated celed. This indicates only how I tolerated the cobalt treatments but also the skill with which I was treated.

Hope lives by example, and I think one of my main sources of strength during a long period of anxiety was to meet other men who had suffered the same malignancy and gone on to full recoveries. Several were in the little lumber town of Lebanon, Oreg., and called themselves "the club." My spirits soared when William C. Doherty, president of the National Association of Letter Carriers, told me one of his sons had recovered from a testicular tumor 6 years ago. I read at least a dozen times a letter from a talented Portland doctor my age, who was teaching in the medical school at Djakarta on the Indonesian island of Java. "Eight years ago I traveled the same path you are traveling now," he wrote. This kind of en-couragement to a cancer victim cannot ever be measured.

Where is the best treatment available?

From the beginning, my friends in the East were greatly alarmed that I was receiving therapy in a place which, to them, seemed so remote and even primitive. wasn't I at the Mayo Clinic, or the National Institutes of Health, or the Harvard Medical Center? Several friends generously of-fered to pay the travel and medical bills to any center of international renown. I know that throughout my entire therapy they worried over the quality of my care. A member of President Eisenhower's staff wanted to help arrange for treatment at Walter Reed.

Yet my own decision was never in doubt. I had complete personal confidence in my doctors in Portland. I think this is enormously important with a disease that imposes such heavy psychological stress. Furthermore, I was meeting people day after day who had survived malignancies more serious than mine, and they had received their care in Oregon.

This faith in my own doctors was justified when, midway during my treatments,

one of the Nation's great cancer specialists visited Portland—Dr. Sidney Farber, direc-tor of the Children's Cancer Foundation of Boston and chairman of many of the chemotherapy panels of the National Cancer In-He and I had become intimate friends through my sponsorship of legislation for medical research. He studied my case thoroughly.

At the Portland airport, as he made ready to fly back to Boston, Dr. Farber said to me, "If I had been in the least dissatisfied with your care, you would be on the Mainliner with me tonight, en route East. But you must stay here. You are being treated with skill and wisdom. I am impressed with your doctors as real medical scholars. In fact, I think you should let them complete your therapy in Portland, even if it extends over into the start of the next session of Congress. Don't transfer your case."

As Dr. Farber's plane took off, my hopes stood higher than at any time since I had heard the bad news in August. I had also been confirmed in my belief that many tal-ented doctors are scattered all over the United States and not concentrated in one or

two celebrated medical centers.

Dr. Farber left with my doctors a supply of actinomycin-one of the new chemical agents recently developed for the treatment of cancer. Administered by itself, actino-mycin often must be used in such large quantities, in order to have an effect on tumors, that it comes as a toxic reaction, But, used in conjunction with radiation. even small doses of actinomycin have helped to make the radiation far more effective on certain types of tumors. My particular type of lesion happened to be one of these.

My doctors took chest films from week to week, as they applied the cobalt rays and injected actinomycin into my arm. feared mass seeding of my lungs had not occurred. This, in itself, was a source of jubilation to the doctors. Yet I still worried. What if the original pathology had been wrong? What if the spot in each lung proved resistant to the cobalt beams and continued to grow? And would my doctors tell me the truth if this should happen? Many times I awakened in the night and imagined I could feel the lesions expanding within my chest.

What a cancer victim thinks about

In the daylight, fantasy yielded to reality. No one could have feigned the relief and satisfaction of my doctors when the lung lesions began to show signs of growing smaller relatively soon after the cobalt treatment started-indeed, far earlier than they had dared to hope. They lost their hard outlines on the X-ray film and appeared fuzzy and ghostlike. The time was to come when a trained radiologist, taking films for a routine checkup in Washington, could not discern the exact location where the lesions originally had been.

So the pathology done at the Teaching Hospital was confirmed. Equally significant, my doctors felt that the worth of the actinomyocin, as a so-called potentiating agent with the cobalt had been clearly proved.
And I recalled the day before Senator Hul's Subcommittee on Health Appropriations when Dr. Farber and his brilliant medical associate, Dr. I. S. Ravdin, had testified that, in their opinion, chemotherapy offered the single most promising avenue for hastening our ultimate conquest of cancer. While I may overdramatize my own case, I thought it was an extraordinary coincidence that a Senator so actively interested in cancer-research legislation should himself, at the age of 46, have been treated by all three methods thus far discovered-surgery, radiation, and chemotherapy.

I imagine all sensitive people have won-dered about the mental outlook of some-

body who has cancer. Of course, such re-actions are highly individualistic. "Cancer finds us as we are," Dr. Farber has said. "It does not make the weak strong or the strong weak." Furthermore, my own case, its earliest stages, was regarded as hopeful-although my doctors had a trying time convincing me of this.

Yet a change came over me which I believe is irreversible. Questions of prestige, of political success, of financial status. became all at once unimportant. In those first hours when I realized I had cancer, I never thought of my seat in the Senate, of my bank account, or of the destiny of the free world. I worried over my cat Muffet, Who would take care of him? What would happen to my wife when I was gone? And how would it feel to die?

My wife and I have not had a quarrel since my illness was diagnosed. I used to scold her about squeezing the toothpaste from the top instead of the bottom, about not catering sufficiently to my fussy appetite, about making up guest lists without consulting me, about spending too much on clothes. Now I am either unaware of such matters or they seem irrelevant. In their stead has come a new appreciation of things I once took for granted-eating lunch with a friend, scratching Muffet's ears and listening for his purrs, the company of my wife, reading a book or magazine in the quiet cone of my bed lamp at night, raiding the refrigerator for a glass of orange juice or slice of coffee

For the first time I think I actually am savoring life. I realize, finally, that I am not immortal. I shudder when I remember all the occasions that I spoiled for myself-even when I was in the best of health-by false pride, synthetic values, and fancied slights.

Politics looks different

Politically, I have changed, too. I doubt if ever again I could be wholly partisan. The response of the people in Oregon to my illness reflected no party lines. Republicans as well as Democrats offered us the use of their beach cottages or mountain cabins for convalescence. The press, without exception, was friendly and concerned. The Republican State chairman wrote a glowing letter about what a good Senator I had been. Another Republican politician telephoned my sister, offering to give blood if a transfusion were necessary. Senator BARRY GOLDWATER sent a telegram from a remote Arizona town, telling us that he and his wife Peggy were praying for me. Other Republican or conservative Senators, including George AIKEN of Vermont, Margarer Chase Smith of Maine, and ALAN BIBLE of Nevada went by my suite in the Senate Office Building frequently to inquire about my health. On the other hand there were some fellow Democratic liberals from whom I never received so much as a postcard during the 5 months of my treat-

Under such circumstances it becomes hard to bristle at people for political reasons. At the treatment center, each patient receiving radiation had a separate little shelf for his or her linen smock. Here were the names of a Republican banker, a Democratic Senator, a liberal college professor, a socially prominent housewife. We might be separated on questions of balancing the budget or public power, but we were united by something more fundamental: a realization that life itself is a privilege and not a right.

I am glad that I insisted upon my doctors' disclosing publicly, from the very start, the nature of my illness. The medical profession and the press are not the most congenial of companions, and doctors often think that what affects their patient is none of the publich's business. I disagree, when the patient is a public official of any prominence. Several times during recent years major officials

in Oregon have suffered from cancer but no announcement of the fact was made except posthumously. This contrasts with the commendable candor surrounding the illness of John Foster Dulles. Beyond all this, I believe that a heavy obligation rests on any individual who has recovered from cancer, particularly somebody who is in the public eve.

Leaders in the American Cancer Society have told me that cancer has such horrifying connotations to many people that thousands, even after they recognize their symptoms, still refuse to seek prompt medical treatment. They fear their case is hopeless and that they will be hurt by doctors to no purpose. Time for successful treatment may run out for these people while they hestate. They find it difficult to believe that 30 per-

They find it difficult to believe that 30 percent of cancer cases are being saved right now, even though no major breakthrough has yet been made. But this fact can be given dramatic impact whenever a person of prominence is included in the 30 percent. When I was welcomed back on the floor of the Senate the Senator from Idaho, 34-year-old Frank Church, revealed that he had suffered from the same sort of cancer when he was a student at Stanford University 11 years earlier.

From my experience an old word has come to have new meaning for me. It is "seren-It was coined by Horace Walpole to describe the three wandering Princes of ancient Serendip (Ceylon), who were always making lucky and unexpected finds by accident. If there is any one issue about which I long have felt strongly, it is the fact that our total investment in cancer research-Federal and private-falls far short of what we spend on permanent waves or even parimutuel wagers. It is less than 2 percent of what we spend on cigarettes and barely more than 1 percent of what we spend on liquor. out of three American families will be afflicted by cancer; yet the Federal Treasury pours out 65 times as much money on price supports for six favored crops as it does to investigate the causes of and possible cures for cancer.

Now I can talk about this situation more effectively to my colleagues in Congress. For I can tell them that I, myself, am alive today because of medical research. What would have happened in my case without cobalt radiation and actinomycin?

Like the Princes of Serendip, I was in quest of one thing and I found something else. I sought desperately a restoration to health and I discovered, along with it, the opportunity to symbolize a cause which may help in the future to bring health to countless others.

# The Irrefutable Facts of the Communist Crisis

EXTENSION OF REMARKS

# HON. JOSEPH C. O'MAHONEY

OF WYOMING

IN THE SENATE OF THE UNITED STATES

Tuesday, June 2, 1959

Mr. O'MAHONEY. Mr. President, it was my privilege last night to be permitted to hear a notable address delivered by Dr. Charles H. Malik, of Lebanon, President of the General Assembly of the United Nations, in which he outlined irrefutable facts of the Communist crisis. With logic and eloquence he pointed out that those of us who believe in free government must realize that the struggle against the tyranny of

totaliarian communism must be waged among ourselves to strengthen our spiritual comprehension of the meaning of liberty and the dignity of man.

Dr. Malik's address was delivered on the occasion of the presentation by the University of Notre Dame to Deputy Under Secretary of State Robert D. Murphy of the Laetare Medal for 1959. This has been an annual event for more than 75 years, and a distinguished company were present at the presentation, highlighted by the notable speech of Dr. Malik. I believe this address is must reading for all friends of freedom, and I ask unanimous consent that it may be printed in the Appendix of the Record.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

THE IRREFUTABLE FACTS OF THE COMMUNIST

(Address delivered by Dr. Charles H. Malik, President, United Nations General Assembly, at the Lactare Medal presentation dinner, Mayflower Hotel, Washington, D.C., June 1, 1959)

People have little leisure today to reflect on the ultimate things. Some of them have even lost the capacity for such reflection, so that it would make little difference even if they had plenty of leisure. In the hour-to-hour and day-to-day attention to immediate demands we often lose sight of the grand design. Nothing is more reinvigorating and necessary than to recapture as authentic a vision of what is really at stake in the world situation today as possible. Without such a vision we can never be certain that in the daily discharge of our duties we are not really serving those very forces whose aim is the destruction of the very values we wish to defend and promote.

There are two standpoints from which this perspective can be sought: the standpoint of history and the standpoint of immediate judgment. We are asking in effect: what will history 50 or a hundred years from now say about what was at stake today about the real questions in the balance, about whether my existence, whether your existence, helped or hindered or obscured the right issue. The difficulty of this approach is that the verdict of history will depend on who will write it. If one point of view prevails, then that point of view will justify itself in the history it will write. The most fundamental thing at stake today therefore is history itself, for the decisions we ourselves take determine how history will be written and what it will say as to what was really at stake. History is nothing but the creation of history, and the present is already determining how the future will view the present. This is why nothing is more awesome than immediate responsibility. are thus forced back upon the standpoint of immediate judgment.

WHAT IS AT STAKE IN THE WORLD TODAY?

How can we ourselves tell what is really at stake? We can only do so on the basis of principle and conviction. What we affirm to be at stake reveals exactly what we believe and are. If we say nothing really important is at stake, then we have already disclosed that ours is a life of drift. If we only see see an adjustment in Europe or an adjustment in the Middle East or an adjustment in the Far East at stake, then we have already exposed the extent of our analysis. If we only see economic matters at stake, such as the raising of the standard of living of this or that country or continent, then we have already displayed our economic determinism. If we only see the great social revolution in progress in Asia and Africa, then we have already declared our inability

to face the revolution that is occurring or that should occur in our own lives. Nothing mirrors a man's soul more accurately than his honest answer to the question as to what is at stake.

#### DETERMINING FORCE IS COMMUNISM

Behind and determining practically everything at stake today is the Communist menace. People have a way of congratulating themselves on the recent events in Tibet and Iraq because these events appear to have produced a wave of awakening in Asia and the Middle East. People also congratulate themselves on the independence of Yugoslavia from Moscow and on the retreat of communism in France, Italy, Greece, and Iran since the war. These are great develop-ments and they should be exploited to the full. But side by side with them consider the decisive advance of Communism in continental China; the accomplishments of communism in southeast Asia; the Communist infiltration of the Middle East, so that no important decision is taken today in or about the Middle East except as a function of the Communist thrust, whereas most certainly this was not the case 10 years ago; the striking advance made by the Communist realm both in the economic and the technological fields; the superb activity of the Communist Party throughout Asia, Africa, and Latin America; and its steppedup activity even in the United States, as some authoritative sources declared only last

#### THESE ARE REALITIES

To the complacent and comfortable I submit therefore the serious contemplation of the following six irreducible facts: (1) That for 42 years communism has never been pushed back or dislodged one inch from where it gained real political power. (2) That it monolithically controls today about one-third of mankind. (3) That it has penetrated in varying degrees the remaining two-thirds so that the field of struggle of freedom with Communism is actually in these two-thirds rather than in the realm of Communism itself. (4) That its basic objective of Communizing the world and destroying the values of freedom is absolutely unchanged. (5) That the Iron Curtain in Europe appears to be firmer than ever before. And (6) that it is now 19 months since Sputnik I and the West appears to be still behind in that field.

I will accept to be comforted by what one can be fairly thankful for but only after these facts are honestly faced and only in their light I repeat, these are irreducible facts, and when one fully grasps them one is bound to conclude that the free world has not yet demonstrated that the Communist onslaught is not irrestible and that Communism is not after all the irreversible wave of the future This demonstration is one of the greatest things at stake today, and its importance is not at all diminished by the fact that the comfortable and complacent will of course say that it is none of their business.

#### ECONOMIC TENSION IS ISSUE

Great things are at stake in the economic realm. The average standard of living in the United States is 30 times that of Asia and Africa. Regardless of how it came about, this fact by itself generates all sorts of rational and irrational tensions. And yet it is not easy to tackle this problem. There are economic, political and psychological limits to economic assistance, and even if one shared everything one owned with everybody else, still the problem is not solved. For people are happy only when they work and produce, and indeed when they work on and for that which they regard as their own, It happens, however, that what they regard as their own is in some cases innately poor. While economic development therefore is absolutely neces-

sary, and while it holds forth teremendous possibilities for the underdeveloped, there are objective human and material limits to such development. Some countries will never by their own resources achieve a very high standard of living. The tension therefore appears to be of the essence. How to live with such essential tension is one of the momentous issues at stake.

#### PRINCIPLE OF NATIONALISM IS AT STAKE

It may be that science in the future would resolve this issue. But science means universities, institutes, freedom of thought and inquiry, a whole scientific culture, and until the underdeveloped people accept, attain, and sustain all that their scientific salvation will have to come from the outside. In the meantime strong governments have arisen to keep the lid down; but in the nature of the case this is a very precarious effort. Strong governments acting on restive populations without palpable hope for real economic improvement would, even if they were the most benevolent to start with, sooner or later degenerate into tyrannies, and to keep on bolstering their position they would resort to all the tricks of demagogy. The people will have to be fed on illusion, and when illusion is a perpetual condition of survival it becomes national mythology. What is at stake here is the truth, namely, whether people can stand the real truth about themselves and their possibilities without a considerable dose of illusion. Illusion, and therewith the suppression of freedom of thought and expression, becomes a studied instrument of stability. To maintain a modicum of peace under these most trying conditions some international order, like that of the United Nations, is required under which the underdeveloped peoples would develop themselves in complete freedom, but with the temptation of aggrandizing at each other's expense reduced to a minimum. The economic necessitles of the underdeveloped world generate a strong drive toward economic mergers transcending all narrow nationalism. And so we see how, in this age of intense nationalism, the very principle of nationalism itself is at stake.

#### WAR HAS CHANGED ITS GUISE

Another fundamental question at stake today is war. I do not mean whether war will break out, but what kind of war. The very notion of war has become ambiguous. Now, in general, a state of war exists whenever the enemy is identified and steps are taken to reduce or control or eliminate him. Until recently the term "war" has been applied only to hot war, and even now when people speak of war they usually mean the fireworks. But the development in recent years of new methods of taking steps against the enemy has necessitated the distinction between "hot" and "cold" war. For the objective of reducing or controlling or eliminating the enemy can, under modern condi-tions, be reached through a variety of means short of armed conflict, and no nation will precipitate such a conflict if it can gain its objective without it. The new methods in-clude "infiltration," "the softening up of the The new methods inenemy from within," "subversion or indirect aggression," "fifth-columnism and the in-citement of civil strife from abroad," a whole host of measures which clever propaganda can take through the radio and the press and which disciplined and dedicated agents with lots of money at their disposal can administer through ruthless action by bribery or blackmail or intimidation or assassination or smear tactics or forged documents.

Thus, so far as war is concerned, this is not the age of the old legalistic notion of direct aggression. We speak of the critical world situation. A fundamental aspect of this situation is that everywhere there is a listening ear, a staring eye, a paid agent. This is not the age of war in the classical

sense, but of infiltration and indirect aggression; of espionage and counterespionage; of the softening up of the will and the resolve; of the undermining of character and morale; of slander and character assassination; of bribery and demoralization; of the manipulation of the press and the radio in the most vicious manner.

This is the age of the arousal of the darkest passions in man, the age of the dread mob spirit, the spirit of terror, and revenge, the spirit that lives on scapegoats and personalities, on blood and sacrifice, the spirit that, to be placated and propitiated, demands a victim every day. It is like the dragon in the legend of St. George who asked for a fair damsel every morning, and perhaps today also every evening; and believe me it takes someone like St. George in the name of somebody higher than himself to stab and kill the modern dragon with his mighty sword.

In short, this is the age of cold war, and those who keep on talking about aggression and about territorial integrity and political independence, as though these were the real worries, are either naive or hypocrites or not living in this age or only using these terms as temporary expedients.

#### DEFENSE AGAINST NEW TYPE WAR IS ESSENTIAL

The result has been a general terrorization of people; they are afraid to stick out their neck; they are afraid to call things by their exact name; they voluntarily accept to be hypnotized and lulled; in fact, they practice the macabre art of self-hypnosis themselves; they say to themselves, "Let somebody else do it, let somebody else take the blow, let me repair to some lee and hide myself in quiet." And he who has no adequate means of defending himself in this strange kind of warfare, in this brave new world, he who, for whatever reason, even if it be the best of reasons, is not able to retaliate in kind, is simply lost.

## WE MUST WIN COLD TYPE WAR

It is my opinion that the West is weak in this new kind of warfare; that it cannot congratulate itself because it has deterred aggression when the real question is whether it can deter subversion; and that of course communism will always carry out a peace offensive in the classical sense of no aggression when it is all the time waging a most successful war in the neoclassical sense of infiltration, neutralization, and subversion.

What is really at stake today concerning war is not so much who will win the arms race, although that is most important, as the ability of the free world to win the cold war. The difficulty of this challenge should never cause one so to lose his patience as to think of hot war as the only way out. For that is no way out at all. But if communism persists in waging its own kind of war, as I believe it will, it ought to be beaten at its own game; and I believe it can be beaten without stooping to its methods.

WESTERN CIVILIZATION MUST JUSTIFY ITSELF

Western civilization is beleaguered today. It is called upon to justify itself. Its fundamental values are not only denied and opposed by international communism and questioned by the awakened old cultures of Asia and Africa, but within its own ranks skepticism and unbelief are working havoc. So far as the Western World is concerned, the deepest thing at stake is its faith in its values and its ability to justify and defend them.

Can the Western World be conceived without the people freely electing and dismissing those who govern them? And yet it is that very principle of free representative government that is denied by communism and many another system.

many another system.

Where would Western civilization be without the doctrine that the individual human person is the highest visible reality? And yet this is precisely what is denied, and the

party or the system or the nation or some abstract set of ideas is put above man.

Where would Western civilization be without struggle and hard work and adventure and taking risks and some law by which people live? And yet look at the softness, and ease, and lawlessness, and refusal to take risks, and quest of pleasure and security, which infect the whole world.

Where would Western civilization be without the cumulative continuity of four or five thousand years of history, which enables the mind in identifying itself with this whole stretch to contemplate, for instance, the 4th century B.C. or the 13th century A.D. in itself and for itself, and to learn a great deal from it? And yet history today is precisely the rejection of history, the chopping up of the past, the setting up of a multitude of arbitrary beginnings, the selection of only those themes and values that fit into a preconceived frame.

Where would Western civilization be without the personal freedom to think and seek and speak and be? And yet in many parts of the world only the party or the dictator is free, and even this freedom is subservient to the lust for power and down.

the lust for power and glory.

Where would the wonderful tradition of science and knowledge enshrined in the great universities be without the principle that there is a fixed, independent, and attainable truth in every field of inquiry? And yet truth is regarded by many today as only that which serves the party or the nation or the revolution or the government, and the whole intellectual quest becomes the handmaid of power.

Where would Western civilization be without the imminent operation of a personal God? And yet the first principle of communism is precisely militant atheism, and in the pantheistic revivals elsewhere the personal character of God is altogether depied.

FUNDAMENTALS OF OUR CULTURE ARE AT STAKE

Free representative government, the primacy of the human person, the moral law, the continuity of history, freedom, truth, and God—it is these things that are at stake today. They are all rejected and opposed from without, and some of them are doubted or compromised from within. Is life worth living without them? And yet if people do not wake up, life will not be worth living.

A mighty spiritual revival therefore is needed. For much more than peace is at stake. The revival must take hold not only of individuals here and there, but of whole installations; not only of the leaders, but of the grass roots. The complacent and soft must be thoroughly shaken. When they congratulate themselves, they ought to congratulate themselves on real things. When they sit back and pontificate, they ought to be anxious how history will judge the 50 years from now. They ought to show that they and their culture are growing in the mastery of the deep and ultimate. They ought to prove that they are galvanized into a keen awareness of what is really at stake.

The ideal of a settled, successful, selfish life is wholly inadequate. One craves to see great themes sought and discussed, great causes espoused. One burns for the reintroduction into life of the pursuit of greatness. And yet everywhere I go I find people sitting at the edge of their seats waiting to be shown the way. It is not therefore their fault that they stay in that posture.

The time is here, I feel, for a vast advance on many fronts. I am persuaded that there are virtually infinite possibilities, both material and moral, wherewith to vindleate freedom against unfreedom, joy of living against tyranny, man against all that is subhuman and inhuman, truth against darkness and falsehood, and God against the devil and his works. The only question is

whether the realm of freedom will prove worthy of its possibilities.

Mr. Dulles understood what was at stake. He gave his life that freedom and decency and justice and real peace should not perish from the earth. He could not have given more

Mr. Robert Murphy, whom we are gathered to honor tonight, also understands what is to stake. He sees the details in the perspective of the whole. May he be granted a long life still in the service of his country and the world, to the end that wherever he goes the realm of freedom shall not shrink, and whatever he does shall be blessed with the firmness and fruitfuiness of the eternal.

# Death of Msgr. John L. McNulty

EXTENSION OF REMARKS

# HON. HARRISON A. WILLIAMS, JR.

OF NEW JERSEY

IN THE SENATE OF THE UNITED STATES

Tuesday, June 2, 1959

Mr. WILLIAMS of New Jersey. Mr. President, we in New Jersey were saddened indeed to learn last week of the death of Msgr. John L. McNulty, president of Seton Hall University. He was truly an outstanding citizen, dedicated to the service of God and country.

No finer description of his many, many contributions can be found than in an editorial I have before me from the Paterson News of May 28, 1959, and I ask unanimous consent to have it printed in the Appendix of the Record.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

MSGR. JOHN L. MCNULTY

The sudden passing of Right Reverend Monsignor John L. McNulty, president of Seton Hall University, is a loss not only to the Catholic Church and its people he had served with such fidelity through his lifetime, but to New Jersey as well. For here indeed was a man in whom greatness abided, a family trait so magnificently exemplified by him and his revered brother, Bishop James A. McNulty, of the Paterson diocese.

Like his brother, Monsignor McNulty was born to the cloth, and even beyond that, he was a brilliant educator who won notable awards from numerous institutions. Beginning in the comparatively obscure position as an instructor in religion and French at Seton Hall back in 1926, he rose to head of the language department, then to dean of the lurban division of the college. When the then president Msgr. James F. Kelley, now of Ridgewood, resigned, Monsignor McNulty was appointed to the post by the late Archbishop Walsh and ever since, its growth has been little less than phenomenal.

Under his dynamic leadership, Seton Hall College became a university; New Jersey acquired its first college for medicine and dentistry in the name of Seton Hall in 1956, a law school was instituted followed by an institute of Far Eastern studies and another in Italian.

Monsignor McNulty's ambition for his university was boundless and quenchless—an expansive building program brought about completion of a new dormitory in South Orange, a science laboratory and library, downtown buildings in Newark, and a coeducational college on Elison Street in Paterson where students pursue their courses night and day. Costs of these programs

mounted into the millions, but this presented no barrier to a man who knew none and for whom the world was his oyster.

Beyond church, beyond education, Monsignor McNulty, like his distinguished brother, was an outspoken protagonist of tolerance and understanding. For bigotry he had no patience, nor for anything un-American forebearance.

Typical was his denunciation as far back as 1943 of "isms," when he proclaimed in a speech:

"There is no place in the United States for Fascists, Nazis or Communists; there is no place for anti-Semites, anti-Catholics nor anti-Protestants."

Such was the universality of a leader of the Catholic church.

And so a brilliant career ends and we are all the loser for its sad close.

Especially to the brother who graduated with him from the University of Louvain, Belgium in 1925, and who was ordained with him that same year, does the earnest condolence of the people of the State pour out.

Surely the passing of his beloved priest-brother at the peak of his career is a heavy cross to bear in the midst of his great cares as the head of the vast diocese over which he presides. But the Lord is good. He is merciful and in his hour of sorrow, he and other members of the family will be warmed by the knowledge that all men and women of deep sincerity and good will will pray for peaceful repose of the departed and comfort for those who remain to mourn.

General Accounting Office Valuable Tool in Rooting Out Inefficiency, Favoritism

EXTENSION OF REMARKS

### HON, JACK BROOKS

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 2, 1959

Mr. BROOKS of Texas. Mr. Spcaker, as we all know, much of the important work of our Federal Government for the people of this country is done by conscientious Government employees who rarely if ever receive public notice or acclaim. It is to their ever-abiding credit that they make the outstanding contribution that they do.

We here in Congress have a group of hard-working and dedicated employees who have continued to be of invaluable assistance to us ever since the creation of their position. I am speaking of the General Accounting Office—an invaluable arm of the Congress in determining the efficiency and economy of the conduct of our Federal Government.

The General Accounting Office is made up of highly qualified accounting experts whose assigned task is to present to the Congress their conclusions after independent audits to determine how well the financial affairs of the Government are being handled. A number of very revealing reports have been issued by the General Accounting Office in recent weeks but perhaps none more interesting than two which occassioned editorial comment by the Beaumont

(Tex.) Enterprise and the Beaumont Journal.

I submit, Mr. Speaker, that each citizen of the United States is personally indebted to the employees of the General Accounting Office for their long and painstaking work which has been instrumental in the savings of substantial sums of our tax money. Our people want plainly honest and efficient Government and the General Accounting Office is an important tool in rooting out inefficiency and favoritism.

So that our fellow Members of Congress may have an opportunity to read these splendid editorials pointing up the contribution of the General Accounting Office, I offer the following editorials to be printed in today's Congressional Record:

[From the Beaumont Enterprise, May 12, 1959]

SECRECY IS COSTLY

The General Accounting Office has done some more digging into the United States Air Force's ledgers and come up with results which prove that these skilled auditors should have been permitted to dig where they were shut out last year.

The GAO has accused Lockheed Aircraft Corp. of giving the Air Force cost figures on 132 transport planes in 1954 and 1956 which the company knew were \$4,110,600 too high. It's contended that this alleged overpricing would have given Lockheed a \$1,251,000 profit if GAO had not discovered it.

The Air Force, the Pentagon and the administration would do well to recall how the GAO tried for several months last year to obtain a copy of an Air Force inspector general's report entitled "Survey on Management of the Ballistic Missile Program." The Air Force claimed that if this report were entrusted to GAO, the national security might be endangered. President Eisenhower backed the Air Force but a House subcommittee dissented, saying security wouldn't be harmed.

Instead of objecting to GAO scrutiny of the missile program, the Air Force should welcome it—unless it has something to hide. At any rate, the GAO can help the Air Force make the defense dollar go further. The Lockheed case is evidence of that.

[From the Beaumont Journal, Monday, May 4, 1959]

AIR FORCE REVEALS UTIES CONTEMPT OF CONGRESS AND TAXPAYER

That the U.S. Air Force utterly disregards the taxpayer has long been known. But no one knew this branch of the Armed Forces would flout the direct orders of Congress. The General Accounting Office has revealed that the Air Force has spent or obligated on its new Academy nearly \$60 million more than Congress gave it permission to spend.

And to further rub salt in the wound, GAO says the cost of the service school may go to nearly double what Congress has authorized by law. The Air Force was granted \$139 million to build and equip the Academy. But it has already spent or obligated \$197 million "and anticipated additional cost of \$72 million, a total cost of \$269 million."

The American taxpayers haven't begrudged the Air Force its Academy, but they have expected it to be built economically. Least of all, was it thought the Air Force would switch funds around and run up the cost.

Since its conception, the Academy at Colorado Springs, Colo., has been in hot water. There have been many complaints about its ultramodern architecture and extravagance in planning. There have also been some strong complaints about the site.

Now the Air Force has shown contempt for both Congress and the taxpayer by extravagances that will far exceed its estimates. Too, more than \$6 million specifically earmarked before Congress as being for family housing has been used for other purposes.

More than \$8 million was spent on such things as a hockey rink, a museum, golfing facilities and other items which the report charges were either unmentioned to Congress or understated on costs.

It's time Congress stepped in and halted this wasting of money. Almost anything that would trim the Air Force's high-living wings would not be too harsh. It's also a good occasion to give the General Accounting Office a hearty hand of approval for its vigilant efforts to keep spending from getting out of hand. The individual taxpayer should be eternally grateful.

#### Permanent Status for Berlin

EXTENSION OF REMARKS

# HON, HARRISON A. WILLIAMS, JR.

OF NEW JERSEY

IN THE SENATE OF THE UNITED STATES

Tuesday, June 2, 1959

Mr. WILLIAMS of New Jersey. Mr. President, Representative Cornelius E. Gallacher, of New Jersey, a member of the House Committee on Foreign Affairs, recently spent 10 days in Berlin as chairman of a special study mission.

In this capacity, he was able to observe firsthand the problems of Berlin. In a series of articles, he probes the underlying cause-and-effect of the rapidly deteriorating situation which holds such a serious threat to world peace.

In a clear-cut, concise fashion, Mr. Gallagher presents things as they are, and not as we might wish them to be In his first article he says:

We cannot abandon hope of the eventual reunification of Germany \* \* \* however, we must face up to the fact that reunification now or in the near future is not likely.

Confronted as we are with the need not only to ease the present situation by provising a temporary solution, he says:

The United States and her allies must look beyond the present crisis and insist on agreements which are clearly defined and of some permanency.

It is obvious to say that the impact of decisions which will be made in Berlin today will have far-reaching consequences for years to come.

As a guide for all of us interested in seeking out solutions and for the attention of my distinguished colleagues, I ask unanimous consent to have printed in the Appendix of the RECORD, Representative Gallagher's first article, entitled "Foreign Ministers Should Seek Permanent Status for Berlin."

There being no objection, the article was ordered to be printed in the RECORD, as follows:

Poreign Ministers Should Seek Permanent Status for Berlin

(By Representative Cornelius E. Gallagher, member, Committee on Foreign Affairs, House of Representatives)

In any negotiations between the free nations of the West and the Soviet Union, seeking to dissolve the present crisis in Berlin, the United States and her allies must look beyond the present crisis and insist on agreements which are clearly defined and of some permanency. This is the task confronting Secretary of State Herter and the ministers of the other free nations in their forthcoming meetings with representatives of Communist nations.

What is needed most in Berlin is a permanent agreement that would spell out working arrangements for the continued support of the military garrison of the Allied Powers, the citizens of West Berlin, and the maintenance of the economy and commerce of West Germany.

Only if this sort of agreement is reached can we hope to avoid in time to come—a month, a year, or longer—repetition of

It is important that the immediate problems stemming from the Berlin crisis be studied and understood against the broad background of East-West relations as they presently exist and as they may be carried on in years to come.

We are in trouble in Berlin today because there are no clear-cut and well-defined agreements. Certainly we have a right to be in that city, just as the Soviet Union has a right to be there. But nowhere is there a formal agreement which was ever intended to have any degree of permanency.

What agreements do exist were drawn up some 14 years ago, and it was never expected by those who prepared them that they were to be anything but temporary in nature.

As an example of the type of agreement on which we base certain rights in our dealings with the Russians in Berlin, the right to deny inspection of our vehicles moving through Communist East Germany is based on a memorandum for record written by Gen. Lucius Clay following a discussion on the subject with the Russian Marshal Zhukov. Clay at the time was Military Governor in Germany.

While we should aim for agreements that will work to our advantage in future dealings with the Soviet, there should be no underestimating the urgency of the present crisis. The thought is intended as a guide in seeking solutions that will do more than temporarily ease tension in Berlin.

A well-defined agreement of status will bring to both East and West Berlin a degree of stability that is badly needed. Neither sector can be expected to live from crisis to crisis. The impact of such uncertainty is telling on the economy, the Government, and the people.

The writer is aware that we cannot abandon hope of the eventual reunification of Germany, and that we must keep the desire for freedom alive in the hearts of the East Germans. However, we must face up to the fact that reunification now or in the near future is not likely

future is not likely.

Next best, then is to bring about stability in the economy, the administration, and the day-to-day, year-to-year living of the people of Berlin.

In addition to doing this, a new status of agreement would eliminate the vague and ambiguous arrangements on which we base the right to our position in Berlin. Thus, we would reduce the likelihood of new crisis and the likelihood of war.

We have in the past given up certain rights, particularly in the period following the 1948 blockade of Berlin. The Allied Powers no longer, for example, maintain motor patrols on the Autobahn from Helmstedt to Berlin, nor do we maintain rest stations or installations of any type along the way. During the 1948 blockade, telephone lines which were maintained by the allies along the corridor were cut. These have never been put back into operation.

These, admittedly, are minor points, but they are rights which we abandoned and they serve to point up the need for agreements covering all phases of our position in Berlin.

In any move toward negotiating a new status for Berlin, the West should determine what rights are necessary to the existence of West Berlin as a healthy economic and political body and should settle for nothing less than measures which will assure such a status,

## The Case Against Capital Punishment

EXTENSION OF REMARKS

# HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 26, 1959

Mr. MULTER. Mr. Speaker, on January 7, 1959, I introduced H.R. 870, a bill to abolish the death penalty under all laws of the United States except the Uniform Code of Military Justice.

In this connection, I am pleased to commend to the attention of our colleagues the following article by Daniel M. Berman as it appeared in the New Jersey State Bar Journal, winter 1959 issue:

THE CASE AGAINST CAPITAL PUNISHMENT (By Daniel M. Berman)

(EDITOR'S NOTE.—A few months ago, Delaware, our neighbor, abolished capital punishment. As this goes to the printer, a press report indicates that a special commission has recommended the end of the death penalty in Massachusetts. The commission found that execution was not a deterrent to murder and did more social harm than good.)

As far back as 1915, the New Jersey Senate passed a bill abolishing the death penalty in this State. But the bill was lost in the assembly. However, the following year the mandatory death penalty in murder was eliminated and the jury given the power to recommend life imprisonment. In 1919, the jury's prerogative was further clarified.

The Legislature in New Jersey has again been in the process of considering whether to do away with capital punishment, without getting down to a decision. The long transcript of the well-attended, 2-day public hearing in 1958, probably constitutes the most impressive monument to citizen concern on this issue anywhere and any time in the Nation's history, according to Hugh Adam Bedau, of the Department of Philosophy of Princeton University, who has spearheaded the fight for abolition in this State. The curious fact is that, in practice, the death penalty here as elsewhere has already been curtailed almost to the point of actual abolition.

Legislatures seem to be lagging everywhere behind the courts, in this particular, and in this State it is to be wondered sometimes whether some legislators are even familiar with the opinions of the courts. In some States and in the Federal system as well, the lawmakers have actually lengthened the list of offenses which, in theory, may be punished by execution. But judges and juries show increasing reluctance to impose the ultimate penalty.

The contrast is evident in the fact that, although there are 31 separate capital offenses on the books in the United States, only 7 have ever been punish by death. New Jersey's case is somewhat typical. Although the State has executed criminals for only the offenses of first-degree murder and kidnaping, it statutes list two other capital crimes: treason, and—a whimsical item—

attempts to assault the President, any official in the line of succession to the Presidency, a Governor, or the "heir apparent or heir presumptive to the throne of a foreign state."

#### PRACTICE VERSUS THEORY

Paradoxically, then, there has been a steady drop in the number of executions in the United States, even as the list of capital crimes has been lengthened. In the 1930's, the average year saw 150 convicted felons pay the supreme penalty. By 1951 the number has fallen to 105, and in both 1956 and 1957, it stood at 65. In 1957, only 22 of the 42 jurisdictions retaining capital punishment actually used it—and a majority of the executions took place in four States, Georgia, Louisiana, California, and Texas. New Jersey has had no executions since August 1956; in the past 2 years, the State supreme court has ordered new trials in most first-degree murder cases it has reviewed.

A considerable number of State have been making efforts to abolish capital punishment in theory as it has already been limited in practice. In 1958 the six abolitionist States—Michigan, Rhode Island, North Dakota, Wisconsin, Minnesota, and Mainewere joined by Delaware, and the admission of Alaska to the Union adds still another State to the ranks. In a referendum in 1958, Oregon came within 10,000 votes (out of a total of more than half a million) of approving abolition. And there are strong abolitionist movements in California, Connecticut, Illinois, Massachusetts, New York, Pennsylvania, Tennessee—and, of course, New Jersey.

Thus, although theory still lags behind practice, the trend seems clear: Capital pun-

ishment is on the way out.

An important reason for its demise is the modern shift in emphasis from retribution to rehabilitation as the goal of penology. The present tendency is to attempt, first and foremost, to remove the conditions in which crime tends to breed. And, when a crime is committed, its perpetrator becomes a logical subject for study to determine whether he can be made fit for reinstatement in free society. Viewed in this light, the death penalty is an anachronistic relic of retributive justice.

## THE DEATH PENALTY DOES NOT DETER

There is, however, an even more compelling reason why capital punishment has been losing ground: It has failed as a deterrent to crime.

The death penalty as a weapon against major offenses seems perfectly good commonsense: the greater the crime, the greater the threat needed to deter it. Commonsense, however, has broken down in the face of statistics. Several deserve enumeration:

1. As the number of executions has failen, the murder rate might have been expected to increase, if the deterrent theory is valid. It has, however, gone steadily down. When proponents of capital punishment claim that the decline would have been even more rapid if there were more executions, they exchange the terra firms of provable fact for the wild blue yonder of sheer speculation.

2. States and nations which have scrapped the death penalty have generally seen no increase in the incidence of murder. A British Royal Commission, after a 4-year study of the problem, concluded: "\* \* there is no clear evidence in any of the figures we have examined that abolition of capital punishment has led to an increase of the homicide rate, or that its reintroduction has led to a fall."

3. States which have eliminated capital punishment have lower murder rates than those which retain it. In 1957, for example, the abolitionist States Maine and Rhode Island had lower rates than New England as a whole, Michigan and Wisconsin fared

better than the East North Central States generally, and Minnesota and North Dakota were well below the average of the West North Central States. In striking contrast, Georgia, with the largest number of executions in the Nation (14 in 1957), had the lion's share of the murders.

It is difficult to study these statistical facts without concluding that apparently capital punishment is totally ineffective as a deterrent to murder. Perhaps the explanation is simply that while fear of punishment often dissuades people from committing minor crimes, for which the motive may be trivial, it has no effect on major crimes, for which the motive is often overwhelming. Certainly knowledge of consequences does not enter into the thinking of a psychopath. Neither can it stay the hand of the man who kills in a wild fit of rage. The only class of murderers for which capital punishment could have any deterrent value is professional gunmen—and we have per-versely deprived the death penalty of precisely the quality which might make it somewhat effective with this group: certainly that it will be imposed on the malefactor.

As a matter of fact, only about 1 percent of those convicted of intentional homicide are obliged to walk the last mile. With odds of almost 100-to-1 in his favor, why should the professional criminal hesitate? In addition, we have made the deterrent even less effective by painstakingly attempting to make executions more "humane." Surely we are guilty of the iptome of inconsistency when, while retaining the death penalty for its deterrent value, we continue searching for swifter and more painless methods of administering it.

ministering it.

In any event, the professional gunman represents only a small fraction of the humber executed. Of the 157 men New Jersey has put to death, for example, only 45 had ever been institutionalized—and presumably few of these could accurately be labelled "professionals."

## WHO PAYS THE PENALTY?

Thus the statistics, buttressed by logic, indicate the futility of capital punishment as a deterrent. But there is an additional, tragically ironical possibility to consider: its existence may actually tend to boost the murder rate. A disturbing indication of this was furnished by the British, who began an 18-month suspension of death penalty at the end of 1955. During the moratorium, the Home Office reports, the number of murders was almost 10 percent below what it had been during the preceding year and a half. And, during the 18 months after the hangman's vacation ended, the number of murders jumped more than 25 percent. The experience of most other abolitionist countries and States also indicates the possibility that there is a contagion between executions and capital crimes.

The reasons for this are by no means clear. Perhaps capital punishment, by diminishing respect for human life, actually breaks down a most formidable barrier to murder. Or perhaps the explanation is that an execution glorifies both the killer and his deed. How else can one interpret the common phenomenon of innocent men confessing to murders? Why else does the number of murders seem to rise on the nights executions take place?

If explanations of the possible correlation between capital punishment and murder are difficult, there is nothing obscure about another fact concerning the death penalty: it has been used far more frequently against Negroes than against whites. From 1930 to 1957, with whites composing about 90 percent of the population, more than half the executions in the United States were of Negroes, according to official statistics of the Federal Bureau of Prisons. The figures are especially horrifying with regard to execu-

tions for rape: 7 Southern States which doomed 78 Negroes for the offense have never put a white man to death for it although many have been convicted.

The use of-capital punishment as an instrument of race hatred is perhaps only part of a larger problem. Clarence Darrow put his finger on it when he predicted that no rich man would ever be executed. Warden Lewis E. Lawes, of Sing Sing, who led 150 men to the electric chair, testified that the forecast was accurate. "All were poor and most of them were friendless," he reported. None could afford a good lawyer.

Much of the same statement would have to be made by New Jersey's wardens. Twenty-eight percent of those who suffered the death penalty in this State were foreign born and 34 percent were Negroes. The remainder, too, were poor and uneducated. Only a few had advanced as far as high school; hardly any had been graduated. Of the 157, only 1 had had a college education.

#### THE PENALTY IS SELF-DEEATING

But the class implications of capital punishment are something of a peripheral issue. There are other, even more relevant arguments which are helping the abolitionist cause:

1. The wrong man is sometimes convicted. Readers of Edwin M. Borchard's "Convicting the Innocent" and Jerome and Barbara Frank's "Not Guilty" do not have to be convinced that mistakes can be made. When the wrongfully accused is still alive, at least some sort of restitution can be made!

2. The existence of capital punishment results in the freeing of many gullty men, since juries are reluctant to convict when execution will probably—or certainly—follow.

- 3. In States where death is the punishment for crimes like kidnaping and armed robbery, the offender has nothing to lose by committing murder in order to liquidate the witnesses.
- Capital punishment makes jury selection difficult, since many prospective good men and true are also disbelievers in the death penalty.

#### THE HAINES BILL

As knowledge of all these facts spreads, the cause of abolition advances. The question now is; should New Jersey join the procession?

The current drive is led by C. William Haines, Republican, of Burlington. In committee hearings on his proposed bills, an array of distinguished witnesses has brought the facts about capital punishment to the attention of the legislature. Their general point of view is that New Jersey, with its streamlined court system, its progressive probation and parole methods, and its advanced institutional programs should now take the logical next step.

The next step as Mr. Haines outlines it is by no means soft on the criminal. On the contrary, the Haines measure would mean that no one convicted of first-degree murder could be paroled until he had served 30 full years of his sentence. Lifers paroled under the present law have served an average of less than 19 years. The difficult release procedure now recommended is especially deplorable, because murderers—who are seldom professional criminals—are generally considered particularly good parole risks. In New Jersey, only 10 of the 117 lifers released since the parole board was established in 1949 have violated parole. None of them committed another murder.

But although some think that life imprisonment, particularly in Assemblyman Haines' formulation, is based on the same outmoded theory as capital punishment, abolition of the death penalty would at least advance the line of scrimmage a little closer to the goal of rational penology. In

any event, some think the Haines bill is all the people will accept at the present time. Possibly, however, we give the public too little credit. One wonders what the attitude of the man-in-the-street might be if he was informed, in addition to the arguments outlined above, of the following:

Executions are not cheaper than life terms when one counts the cost of the lengthy trials and elaborate appeals to which capital cases almost invariably lead.

Thirty-three nations have discarded the death penalty without regrets, and Britain has recently abridged its catalog of capital crimes.

The death penalty used to be imposed for the most petty crimes, but it was scrapped upon the realization that it seemed to have little deterrent power even against these,

If the case against capital punishment is as overwhelming as the statistics and sound reason seem to indicate, immediate abolition would appear called for. If not, now is a good time for the death penalty's proponents to come forward and prove their

## Poison in Your Water-No. 93

EXTENSION OF REMARKS OF

# HON. JOHN D. DINGELL

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES Tuesday, June 2, 1959

Mr. DINGELL. Mr. Speaker, pursuant to permission granted I am inserting into the Appendix of the Congressional RECORD an article appearing in the Beaver (Pa.) Valley Times of December 27, 1957, entitled "Many Industries Are Polluting Streams":

MANY INDUSTRIES ARE POLLUTING STREAMS

Beaver County communities situated along the Ohio River and its tributaries are spending or planning to spend millions of dollars for the construction of sewage disposal systems in compliance with Pennsylvania's Clean Streams Act.

Similar projects are underway in seven other States which, with Pennsylvania, are signatories to a sanitary water compact. other States are Ohio, New York, West Virginia, Virginia, Kentucky, Indiana, and Illinois. Provisions of the compact are being carried out under supervision of the Ohio River Valley Water Sanitation Commission.

In its annual report, the commission cites the progress which has been made in cleaning up streams in the eight States. Municipal sewage-purification facilities serving 76 out of every 100 people living along the Ohio River are now in operation or being completed, according to the report. Nine years ago, the report said, the ratio was less than 1 out of every 100 persons.

The report also points out that 116 communities with a total population of more than 2 million people depend upon the Ohio River for their water supply. In the entire Ohlo River Valley, with a total population of approximately 7,600,000, less than 300 communities have not yet started construction of sewage treatment systems.

But there is a disturbing factor in the commission's report. It is the fact that industries are not keeping pace with municipalities in eliminating stream pollution. Although the number of adequate industrial waste purification systems has been more than doubled in the past 9 years, 1,431 plants still discharge waste directly into the Ohio and its tributaries, the commission reported.

Unless and until all municipalities, industrial firms and mining companies along the Ohio River and its tributaries above Beaver County cease dumping sewage and other waste matter into the streams the millions of dollars being spent by county communities for water purification facilities will be

## More Economic Folly

EXTENSION OF REMARKS OF

# HON. LEO E. ALLEN

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES Tuesday, June 2, 1959

Mr. ALLEN. Mr. Speaker, under leave to extend my remarks, I include the following editorial entitled "More Economic Folly," from the Freeport (Ill.) Journal-Standard of May 26, 1959:

MORE ECONOMIC FOLLY

The response of Congress to President Eisenhower's warning concerning mounting agricultural surpluses has been far from en-The House has produced only couraging. The House has produced only gestures that seem to promise some relief, but really spell out more economic folly.

One is a House vote to restrict individual price support loans to \$50,000. The other is a House vote to lop \$100 million from the appropriation for the Commodity Credit Corporation in order to put pressure on it

to dispose of present stocks.

These are deceptive passes at a problem of which the Nation has been increasingly aware over the past several years, and which is steadily growing worse. The more the Government holds up support prices, the more the surpluses grow.

It is true, the big producers got the biggest benefits, and the vote to limit loans to \$50,000 has the appearance of an effort to shut out the big fellows and aid the small farmers. But its effect will be to cause the big farmers to sell into the open market, thus tending to bring down prices and accentuate the plight of the small farmer, increasing his dependence on the supports and necessitating the same total outlays, while surpluses continue to mount.

The cut of \$100 million in the CCC appropriation appears equally illusory. Its principal object was said to be to force Secretary Benson to dump more cotton abroad, a policy which will create friction with all other cotton-producing countries, at a time when we have more than enough trouble with them. But the incentive to the smaller cottongrower continues, and skeptics believe that in the end the net price supports cost will rise.

Thus, Congress skirts about the edges of the trouble, which is in the price support system itself, applied at a moment of history when intensive farming and scientific progress have made it possible to produce on reduced acreage the biggest crops of all

Thus, John M. MacMillan, Jr., writing in the journal published by the University of Indiana School of Business, points out that since 1930, a depression year, corn acreage in this country has declined 25 percent, but production has nearly doubled. The increase per acre averages 160 percent.

Similar stories are to be told in soybeans and wheat. Although the wheat produc-tion per acre averages only 27 bushels, big commercial producers are getting 60 to 70 bushels, and new Pacific coast varieties are expected to reach 130 bushels,

A new and more factual approach to farm relief is obviously imperatively needed, to avoid further demoralization.

## United States Plans To Sift Science

EXTENSION OF REMARKS OF

# HON. JAMES G. FULTON

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 2, 1959

Mr. FULTON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the New York Times of Sunday, May 31, 1959:

UNITED STATES PLANS TO SIFT SCIENCE-BUT House Fund Cut Imperils Program of TRANSLATING PERIODICALS

(By John W. Finney)

WASHINGTON, May 30 .- The Government for the first time is moving to keep scientists informed on scientific developments in Communist China through translation of Chinese scientific publications.

The National Science Foundation, as the Government's central agency for dissemina-tion of international scientific information, is planning in the coming year to start trans-lating scientific publications from Com-

munist China.

The Foundation's plans have a significance far beyond the objective of dissemination of scientific information for they constitute one of the first official recognitions of the potential scientific challenge presented by the Peiping regime.

#### WOULD AVOID SURPRISE

By embarking now on a program of trans-lating Chinese scientific literature, Foundation officials frankly hope that the United States will not be caught by surprise by scientific developments on the Chinese mainland, as occurred in the case of Soviet

The Foundation's preliminary program for translation of Chinese scientific research results has become imperiled in recent weeks by \*conomy cuts made by the House in the Foundation's budget for the coming fiscal

Unless the House cut is restored in the Senate, the Foundation will have to abandon its initial attempts at translation of Chinese Communist publications. It also will have to scale down a planned expansion in the translation of Russian publications.

#### TRANSLATION FROM RUSSIA

One impact of the Soviet sputniks has been a marked increase in translation of Soviet scientific literature, with the Government now sponsoring translation of 70 publications, half of them by the Founda-

The Foundation had been planning to increase its share to 45 in the coming year as part of an overall Government program to raise the number to 100. Under the House cut, the Foundation will have to abandon plans to translate five of the additional Soviet scientific journals.

With Communist China, the Foundation had been planning to start off on a small scale with translation of two or three journals as a pilot project pointing toward a rapid expansion in 1961.

The modest program was explained by Foundation officials as resulting from diffi-culties posed by translation from the Chi-nese. One of the most critical problems is the lack of competent translators, and to meet this problem the Foundation is exploring the possibility of having the journals translated in some foreign countries, such as Nationalist China. Japan, or India.

as Nationalist China, Japan, or India.

According to a survey by the Foundation, there are about 450 scientific periodicals being published in Communist China. The Foundation does not plan to translate all of these, but it does hope that ultimately a good proportion of the significant Chinese scientific literature will be made available.

Over 200 Communist Chinese scientific periodicals are now being received by Government libraries in the capital, such as the Library of Congress.

#### MOST UNTRANSLATED

Most of these publications, according to Dr. Burton W. Adkinson, head of the Foundation's Office of Scientific Information, are lying on the shelfs untranslated—a condition reminiscent of the inattention provided Soviet scientific literature preceding the appearance of the first Soviet earth satellite.

In emphasizing the necessity for proceeding now with a Chinese translation program, Dr. Adkinson noted in an interview that while the situation, was not critical now, "in a few years Communist China may suddenly appear on the scene as one of the powers in the scientific and technical world."

"If we don't start translating their literature today," he said, "we are likely to be in the same position we were in 5 years ago with the Soviet Union, where we had a mass of untranslated material and were caught by surprise by Soviet scientific and technological advances."

As appraised by Government, technological progress in Communist China is hampered by lack of trained personnel. It is believed, however, that this is only a temporary handicap, since the Peiping Government is known to be training thousands of scientists, engineers and technicians.

An indication of the expanding effort in Communist China cited by officials is the report that the Chinese Academy of Sciences now has 68 research institutes—more than double the number existing in 1952.

## Lack of Courage

EXTENSION OF REMARKS

## HON. LEO E. ALLEN

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 2, 1959

Mr. ALLEN. Mr. Speaker, under leave to extend my remarks, I include the following editorial, entitled "Lack of Courage," from the Rockford (Ill.) Morning Star of May 27, 1959:

## LACK OF COURAGE

With the Democratic majority lacking the courage to face up to the financing problem confronting the Federal highway program, the House Public Works Committee voted to allow spending for construction to exceed receipts of the highway trust fund, which is running out of money.

The legislation approved 24 to 10 by the committee would empower the bureau of public roads to borrow money from the treasury, if necessary, to pay for construction under the existing program, rather than curtail the program or raise taxes. The committee recommended suspension, for 2 more years, of the pay-as-you-go provision sponsored by Senajor Byno of Virginia. The Byrd amendment to the 1956 law creating the highway

program provides that the Federal Government could not spend any more money than it had in the trust fund. Congress last year suspended the amendment for 1959 and 1960.

The politically minded Democrats have refused to accept President Elsenhower's request that the Federal gasoline tax be increased from the present 3 cents to 4½ cents a gallon to provide the revenue needed to keep the program going full scale. The President wants to keep faith with the public, which was assured when the plan was adopted that it would operate on a pay-asyou-go basis through the highway trust fund. Dipping into the General Treasury is not a proper alternative.

#### Panama Carral Alternative

EXTENSION OF REMARKS

## HON. DANIEL J. FLOOD

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 2, 1959

Mr. FLOOD. Mr., Speaker, under leave to extend my remarks in the Record, I include the following editorial in the May 9, 1959, issue of the Fort Worth, Tex., Star-Telegram:

THE PANAMA CANAL PROJECT AND AN ALTERNATIVE

An effort by the U.S. Government to decide what to do about enlarging and modernizing the crowded Panama Canal is coinciding with a Panamanian presidential campaign whose principal issue is apt to be greater participation in the canal's earnings and a reversion of the Canal Zone to Panama.

Before the United States commits itself to improvement of the canal the question of its future should be settled to the satisfaction of the national interest. What the Panamanians perhaps need to be reminded of forcefully is the fact that alternatives to improvement of the canal exist, the fact that the United States can exist without the canal but that Panama cannot.

If nothing except costs were involved, enlargement of the Panama ditch and perhaps its reduction to sea level would be the cheapest method of accommodating the growing traffic and bigger ships. But if control of the waterway and incessant demands for a greater share of its earnings are to complicate its administration it may be wiser to accept the additional expense and cut another canal in another place.

Treaty rights through Nicaragua already exist, but a lock canal through that route would cost some \$4 billion compared with \$1 billion for widening the Panama lock system and \$2½ billion for reducing the Panama Canal to sea level.

The Panamanian insistence upon rights to the canal have increased since the Egyptian seizure of the Suez Canal and its revenues. The claim to ownership may be more political than genuine, but it constitutes an incessant embarassment to U.S. relations in the Central American area. Through it, the Panamanians apparently hope to exert sufficient pressure upon Washington to compel a more even distribution of the revenue from the waterway, since Panama should be the first to recognize that it lacks the ability to operate it or the means of financing the necessary improvements.

Certainly, in the circumstances, the Nicaraguan alternative should be fully explored, for it can be used as a lever to compel the wihdrawal of Panamanian harassments of the U.S. position in the Canal Zone. An

example of these is the claim of a 12-mile limit for Panamanian waters. This, if it could be enforced, would leave the United States with a 3-mile limit at the canal entrances and blocked by 9 miles of Panamanian water before open sea is reached. Panama presumably could collect tolls from vessels seeking passage through its territorial seas in order to reach the canal.

It would do no harm, and might do a lot of good for Panamanian thinking, if exploratory talks with Nicaragua were undertaken. A \$4 billion canal through that country under proper safeguards might be a better investment than further expenditudes in Panama, which was a mosquito swamp until the canal was built and which easily could revert to that state if the transisthmian traffic were taken elsewhere.

## Another Honor for Joe Salerno

EXTENSION OF REMARKS

# HON. THOMAS J. LANE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 2, 1959

Mr. LANE. Mr. Speaker, Joseph A. Salerno has been chosen as one of the seven American delegates to the International Labor Organization Convention at Geneva, Switzerland.

Mr. Salerno is New England director of the Amalgamated Clothing Workers Union.

His 30 years of experience in the labor movement have equipped him with the skill and understanding that represent organized labor at its best,

A man who believes deeply in the economic freedom that is expressed through collective bargaining, and is blessed with the personality and the character that inspire cooperation, he has been most successful as a laborleader.

The harmony between labor and management in the clothing manufacturing industry of New England has been of mutual benefit to workers and employers.

We who are friends of Joe Salerno, are confident that he will make many contributions to the proceedings at Geneva that will enhance world respect for the American labor movement and its achievements.

Under leave to extend my remarks, I want to insert in the Congressional Record the following story of Joe Salerno's career that was published in the May 29, 1959, issue of La Gazzetta del Massachusetts:

JOSEPH A. SALERNO HONORED BY APPOINT-MENT AS A U.S. DELEGATE TO WORLD LABOR MEETING

Joseph A. Salerno, one of the outstanding representatives of organized labor in the United States, has been named one of the seven top-ranking representatives of the United States at the convention of the International Labor Organization in Geneva, Switzerland, next week.

Representatives of every nation in the world where labor is organized will participate in the convention. The objective is to seek an acceptable program for the solution of problems affecting labor and management throughout the world.

The signal honoring of Salerno is a tribute to his high standing among U.S. Government and labor officials of the Nation.

He has been identified with organized labor for more than 40 years. In the last decade he has gained national recognition as one of the most dedicated and qualified spokesmen for labor in the Nation. His knowledge of world affairs gained by constant reading, and a great deal of travel is not excelled by any other American spokesman for labor.

For years he has been the New England director of the Amalgamated Clothing Workers union. His influence has extended throughout the Nation. He not only commands the loyalty and support of the membership of his union but the confidence and friendship of employers with whom he has participated in many bargaining and other issues.

He was born in Italy in 1897 and came to Boston with his family in 1907. He was a worker in a clothing factory at the age of 12 and was a participant in the first strike of pants makers in 1910.

He had an unquenchable thirst for knowledge to supplant his 2 years of regular schooling. He spent much of his idle time reading in the Boston Public Library. Aware that ability to speak would be of great aid, he studied at two schools of expression and later enrolled in the Suffolk Law School.

In 1921 he became an organizer for the clothing workers and 15 years later he was named New England Director. He has refused to seek political office or to accept appointments to public positions but he made an exception last year when he became a member of the State Board of Education by appointment of Governor Furcolo.

There is no more avid reader than Salerno. He is not interested in fiction but in books, magazines, and newspapers that keep him constantly informed about conditions throughout the world. He is a fluent and convincing orator. His insistence upon discussing facts has gained him prominence so that he is one of the most sought after speakers in the country.

Salerno is rated as a conservative. He has done much for the members of his union but has never been accused of making exorbitant and unjustified demands.

In the past decade he has developed a deep interest in educational problems. He believes that curricula calculated to be of permanent value to a student should be offered by every college.

He is no stranger about the campuses of colleges. Regardles of how his union business demands his time, he never rejects an invitation to address the student body and the teaching personnel of any college that selects him. He is a distinct novelty in the colleges. He makes it his practice to talk to the faculty and then to the student body and he invites questions which he answers frankly and intelligently. It is not the rule that professors agree with him but they always concede that he presents supporting facts for any argumentative answer he

Salerno has always been interested in Italy. He has been an extremely important contributor to the Boys' Towns in Italy movement. In fact, when Italy needed rehabilitation from outside, he led the movement to have the Amalgamated Clothing Workers establish a factory in Italy. It was originally supervised by Americans who taught American methods of production. The project became a profitable business but the union was not interested in deriving any profit and turned over the plant to a group of interested Italians who operated it for the benefit of Boys' Towns.

## Trends in American Agriculture

EXTENSION OF REMARKS

## HON. CLIFFORD G. McINTIRE

OF MAINE

IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 2, 1959

Mr. McINTIRE. Mr. Speaker, many are the times we hear these questions raised: What is the true position of the American farmer on the economic totem pole? What are the evident trends in American agriculture?

Because many persons are today groping in the dark for the answers to these questions, I submit to the Record a Cooperative Extension Service publication that serves to shed considerable light in this area:

FARM PRICES AND THE COST OF LIVING

The question is often argued at to what effect increases or decreases in farm prices have on the consumer's cost of living.

The figures that follow refer to food only. Over the last 20 years, on the average, it has worked out that when the farmer got \$1 more for a given amount of foods or food ingredients the consumer paid \$1.68 more for them.

The story wasn't the same when farmers' prices dropped. When the farmers' prices dropped so that he got \$1 less for a given quantity of food the consumer paid 72 cents less.

In other words, savings in wholesale costs are only partly passed on in retail prices but increases are passed on plus a substantial margin.

It should be pointed out that these are averages. There was quite a variation in the way individual cases worked out. For instance, about a third of the time cuts in wholesale prices were fully passed on at retail and about one time out of five increases were not all added to consumers' prices. But, on the average, whichever way farmers' prices went, handlers got a bigger slice.

These are U.S. (not Maine') figures.

Farmers can more justly be credited with holding down the cost of living than charged with raising it.

#### INCOMES OF FARM FAMILIES

According to estimates published in the April 1959 Survey of Current Business, the percentages of families of farm operators compared with those of nonfarm families in the United States with various family incomes were as follows in 1957:

Family income	Percent of farm operators' families	Percent or nou- farm families
Under \$1,999 \$2,000 to \$2,999	30.3	5.1
\$3,000 to \$3,090 \$4,000 to \$4,009	15.1	6. 1 11. 2 14. 2
\$5,000 to \$5,000 \$6,000 to \$7,490		14.2
\$7,500 to \$9,900 \$10,000 to \$14,009	5.0	16.0
\$15,000 or more	1.8	5.8

The farm family income figures include the estimated value of farm produced food and fuel, the rental of the farm home, etc.

The median family income of the country in 1958 was \$5,050. That means that if all the family incomes were arranged in order of size the middle figure would be \$5,050.

The average was \$6,220. The average left after Federal taxes of \$610 was \$5,610.

GROWING DOUBT ABOUT PRICE CYCLES

A basic faith in price cycles used to pretty well dominate the thinking among many who were students of farm prices.

High prices would lead farmers to increase production which in turn would knock prices down again. Low prices led farmers to reduce production and the resulting scarcity raised prices.

How long it took to get from high to low prices depended on how long it took farmers to make up their minds and to get the production increase or decrease made. That varied, naturally, with the kind of production. With annual crops like potatoes it could be done quickly and there was a short cycle. At the other extreme were orchard crops like apples that took a long time.

The same thing was true of livestock. With chickens and eggs scarcity could be replaced with surplus in a hurry. Hogs took longer and cattle much longer. So, we had short, medium, and long cycles. What there was of the dairy cycle rode along with the cattle cycle—still rides for that matter.

#### BUT TIMES CHANGE

Two (perhaps more) changes have entered in to alter the old cyclical pattern in recent years.

#### SPECIALIZATION

One is specialization with the accompanying mechanization and large-scale production in farming. Under it the farmer builds up a big investment in specialized plant and equipment. Fixed costs are high. If the farmer reduces production below the scale that gives him lowest cost per unit he raises his unit costs. He actually can't afford to cut unless the price is going to be less than that part of his costs per unit that are called variable or out-of-pocket costs.

To illustrate: These out-of-pocket costs for potatoes are those of purchased seed, fertilizer, spray materials, gas and oil, perhaps a little additional machine repairs, more or less of the hired labor, and what he could net from an alternative. Sometimes there are other minor items. When the price is going to more than cover these things the farmer (unless he is going to quit and take a job or has some attractive alternative) will be better off financially to plant up to his normal capacity. He may not cover the costs of taxes, depreciation, his own labor, insurance, fixed interest, and so on. But he will come nearer to doing it than he would by reducing.

Just the same story is true for egg production and many other lines that used to react quickly to prices. In the old days when they were more or less sidelines, something else that looked more promising could be substituted for them and assume most of the fixed costs. Now there is such a heavy investment in buildings, equipment, personal knowledge, and skill in the one line that it makes any transfer hard and costly. So adjustments and cycles aren't what they used to be. Obviously, in cases where farming has not gone through the change to specialized, highly capitalized production, the old type of price cycles may still persist. These cases, however, grow fewer year by year.

#### INTEGRATION, TOO

Then, there's another thing—integration ("vertical intergation" if you want to be fussy about names)—that appears to be a

The broiler business right now is an illustration. Instead of contracting when prices got bad as production would be expected to do in an old-fashioned farming business, the

number of broilers produced has been pushed up and up, with no end still in sight.

Apparently those who really control broiler production (and we wouldn't be so bold as to say who the final controllers are) reach their decisions on other grounds than the profit or loss in raising broilers up to the point of processing. There appear to be undercover issues that are a lot more complex than those in the mind of a farmer's wife when she was deciding how many chicks to start. What the final conclusions will be we wouldn't be bold enough to estimate. But it is safe to say that when integration takes over you can't count on the old cycles any longer.

And, the way it looks now, integration is on the march.

For agricultural economists, all this means rebuilding cycle theories—as and when the evidence accumulates and looks as though it would stay put for a while. As for the farmer, he has apparently pretty well learned not to trust the old rules. As to what to trust he is about as much at sea as the rest of us, except that intentions to plant information, etc., give him some basis for judgment as to what is likely to lie ahead in the way of production and prices. With that he can make up his mind whether to go ahead full steam or make the shift to something else—on the farm, or off. He usually can't afford to pare down a little, except in the rare cases where he is already overexpanded.

## The Dulles That Lives On

EXTENSION OF REMARKS

# HON. JOSEPH W. MARTIN, JR.

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 2, 1959

Mr. MARTIN. Mr. Speaker, under leave to extend my remarks in the Record, I include an article on John Foster Dulles by George Todt in the North Hollywood, Calif., Valley Times of May 27, 1959:

THE DULLES THAT LIVES ON (By George Todt)

"Call no man happy till he is dead."
Aeschylus—Agamemnon.

Today the mortal remains of the great American statesman who was John Foster Dulles will be lowered gently and sorrowfully into the earth.

But only last Sunday the immortal spirit of John Foster Dulles ascended joyously into heaven.

He is therefore not dead, neither are the other members of the human family who have preceded him in the overwhelming sleep which we have named death in this present existence of ours.

Perhaps the forbidding term might better have been labeled "the open door"—the passageway to eternal life.

For that is what death really is.

If we knew more about it, would we fear it so much?

Happy indeed is that soul which carries such a record of service to his fellow men into the beyond as did John Foster Dulles when he left this life on planet earth 3 days ago.

What else than this may a man take with him when he goes into the realm from which none return?

Material riches, as we know them in our world, will buy nothing for us at the inevitable next port of call. The only kind of riches which will count will be those of the spirit, or inner man—and Foster Dulles had these in abundance.

There is only one honest way to demonstrate our love of God, if it is real, and that is to serve unselfishly the spiritual children of God; and these are our fellow men.

Few men in history, here or elsewhere, have proven themselves better along such lines than has the recently deceased American Secretary of State.

He conducted a great global crusade whose objective was to relieve the misery and suffering of countless millions of people on both sides of the iron curtain.

He was a true friend of freedom and an enemy of tyranny wherever it might be encountered.

Above all, he was a man of courage and intellectual honesty.

He had to be all these things—and more. For never before in the history of this planet had a nation such as ours, and her allies, been forced to stand guard against so gargantuan a threat to the very liberty of all mankind as that presently descending upon the free world from the direction of the vast Eurasian steppes.

Not since the days of Genghis Khan have the ancient cultures and civilization of Christendom, Judaism, Islam, and Buddha the lands of Europe, Africa, the Near East, India, and the Far East—been threatened so simultaneously with the same bolt of conquest and destruction.

Never before have the pagan forces of anti-religion been welded so successfully together to accomplish the downfall of those who believe in God.

The mainspring of the effort to withstand the mighty onslaught of world atheism against religion of all descriptions has been no less than John Foster Dulles in recent

Until this time, it may be doubted if any man has ever faced such a powerful array of naked force on a global scale as he.

He has fought the good fight, using the weapons of intelligence, courage, forebearance, patience, and character—and the last has not been the least of these.

Being possessed of a giant's character, as well as courage, Foster Dulles stood for morality over expediency in his dealings with men and nations.

That is the legacy he has left us.

Let's do our share to preserve it in the days ahead of us.

The life and works of John Foster Dulles may best be summed up in the immortal words of John Milton in his epic poem, "Paradise Lost," wherein 'tis spoken so succinctly and well:

"Servant of God, well done. Well has thou fought The bitter fight."

## Senator Douglas Leads the List

EXTENSION OF REMARKS

# HON. IRIS FAIRCLOTH BLITCH

OF GEORGIA

IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 2, 1959

Mrs. BLITCH. Mr. Speaker, under leave to extend my remarks in the Record, I include the following editorial from the Savannah Morning News, Savannah, Ga., of May 28, 1959:

SENATOR DOUGLAS LEADS THE LIST

With the announcement by the FBI that it has completed its investigation of the lynching of Mack Charles Parker in Poplarville, Miss., and turned its findings over to State authorities for further action since no Federal statute had been violated, we confidently waited to see which of the professional South-baiters in Congress would be first to revive the old demands for enactment of a Federal anti-lynch law.

ment of a Federal anti-lynch law.

We didn't have to wait long. The honor of leading the list goes to that arch-foe of States' rights with a quick political eye to minority bloc support, Senator Paul Doug-

LAS, of Illinois.

"This proves we need a Federal anti-lynch law," declared Senator Douglas, a leading apostle of the school of latter-day liberals who feel that the States south of the Mason-Dixon line are incompetent to handle their own affairs without the guiding influence of Federal custodians.

Let's take a look at this crime of lynching which has the Senator from Illinois so upset. We, like Senator Douglas, are opposed to it, in all its forms. But in reality it belongs to a bygone era of American history.

The name is derived from the acts of one Judge Charles Lynch, of Virginia, who in 1780, during the American Revolution, permitted the flogging of British loyalists without what we now call due process of law. Today it is applied only to capital offenses, and usually to cases in which mobs take the law into their own hands and kill a person for a felonious offense before the victim is tried in a court of law.

Since 1900 there have been nearly 2,000 crimes officially listed as lynchings in the United States, and they have occurred in 42 different States of the Union. Because of full publicity, the punishment of those responsible for lynchings, and a growing public disgust for this form of meb action, lynchings are disappearing.

In 1951 there was only one lynching, and in 1952, for the first time since records were begun on the crime, no lynchings occurred. The battle against lynchings had been won, not because of Federal intervention, but because the people themselves turned against it. There were no lynchings in 1953, 1954, 1956, 1957, and 1958.

The lynching in Poplarville, Miss., last April 25 was the first that has occurred since 1955.

Lynching, therefore, may only be described as a vanishing crime on the American scene. Its occurrence is isolated and infrequent—the Poplarville case was the first in 4 years.

Does this, then, sound like a serious National problem calling for the immediate enactment of Federal laws? Of course not—but that isn't the factor that motivates the Senator Douglases and others who do not hesitate to condemn an entire region of the Nation through guilt by association. Theirs is a political crusade against the South, not against any crime. Lynching is just their excuse this time—and a poor one when statistics are taken into consideration.

Whatever action is taken with regard to the Poplarville case is now up to Mississippi—no Federal law can be made retroactive to it, although we wouldn't be surprised to see Senator Douglas try. We hope those guilty can be convicted and punished, but it is up to the people of Mississippi. They cannot be encouraged to assume their responsibility for this crime by Federal intervention intended to take that responsibility from them.

This lynching may be the last—we hope it is—or it may not. If another lynching or lynchings occur, they, too, will be isolated and rare, and in time we will hear of the crime only in history books. Senator Douglas knows this. That is why his loud demand for Federal antilynching laws is a cheap demagogic appeal for minority support. To attribute sincerity, under the circumstances, would be to insinuate that he is stupid.

## Seven Anthracite Coal Miners Lived Because of a Mule

EXTENSION OF REMARKS

# HON. DANIEL J. FLOOD

OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 2, 1959

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the Record, I include the following article which appeared in the May 8, 1959, issue of the newspaper, Anthracite Tri-District News, published in Hazleton, Pa. This historical narrative was written by Mr. James J. Corrigan, a well-known anthracite historical researcher from the heart of the anthracite industry, Wilkes-Barre:

ANTHRACITE HISTORIAN TELLS OF DIFT IN 80TH ANNIVERSARY ACCOUNT OF THE 6-DAY ORDEAL OF SUGAR NOTCH MINERS

(By James J. Corrigan)

Eighty years ago on April 23, seven mine workers found themselves compelled to gorge on a form of subsistence not exactly suited even to their coal dust-clogged, non-epicurean tastes—mule meat. And they were glad to obtain and even relish that leathery diet which they were fortunate to have at hand and "on the hoof"—because they were entombed for 6 days, with but faint hope of ever again seeing daylight or the semblance of a square meal.

Their meager food gone, the only hope for continued existence of the seven entombed was to slay and devour the fiesh of an animal—the lowly mule—that for decades, it was alleged the coal owners would prefer having harm befall 20 mine workers rather than one of these hybrids, the most productive transportation muscle at the anthracite collieries, in those distant times.

The most unique entombiment of hard coal workers in Wyoming Valley's history commenced Wednesday, April 23, 1879, at the Sugar Notch No. 10 Colliery slope workings of the Charles Parish Coal Co.

In his report on the occurrence T. M. Williams, then State mine inspector for the Wilkes-Barre district, stated: "Seven human beings were entombed, which created great excitement, that did not abate until the glad tidings of their almost incredible rescue was received and the prisoners permitted to relate their awful tale of suffering and experience under strange circumstances."

The entrapped men, and boys, were: Patrick and James Green, brothers, of Ridge Street, Ashley; John Clark, 13, of Hartford Street, Ashley, a doorboy; William Kinney, a driver of Maffet's Patch; Ernest Relly of Sugar Notch and Edward Price and Charles Hawkins, cocontractors for mining a passage-way through the Sugar Notch No. 10 workings.

A local newspaper commented, following the rescue: "It is many a day since any event has so stirred the people of Wilkes-Barre as did the bringing back to life of these entombed miners."

After sensing that hope for rescue was alim, after the extensice cave-in, it was agreed among the seven entrapped on Thursday, April 24, only the second day following the entombment, to kill the lone mule engulfed with them, as immediate and future source of subsistence.

This was done. It was related after the rescue that one of the Green brothers struck the animal with a hammer no less than seven times before he fell dead. Young Kenny is said to have cut off the mule's head

with an axe. Contractor Hawkins in turn amputated the animal's right leg. On this 'tasty morsel' the entrapped workmen made their first satisfying repast after their "dinner bucket" contents had been early consumed. They had taken the lids from their "dinner cans" and placing their lamps beneath, cooked the mule meat to an appetizing degree.

Day followed day, mostly in silence among the entombed, often in open prayer. Occasionally they gathered faint hope when they thought they heard the drill of the rescue squad. Thirteen-year-old John Clark, the doorboy, "cried a little at first, for his mother's sake, but soon grew composed and was in good spirits until released."

Rescuers had halted blasting, fearing that ignition of gas or further danger to falls of roof and sides. The entombed men waited hopefully and quietly, hearing clearer and clearer the sound of the rescuers' drill. Bit by bit the carcass of the mine mule dwindled.

Then, about 9 o'clock on Monday morning, 6 days following the cave-in and entrapment, the heroic rescue crew feverishly penetrated a deep barrier after overcoming many personal dangers. The rescuers found the missing workers, "seated on chunks of coal, silently eating their mule-meat breakfast."

Contractor Hawkins later reported his belief that the entombed workers "could have lived 10 days longer on the food they had. He thought the mule rather good. He said all the men prayed."

On reaching the surface, young mule driver Kinney of Maffet's Patch "bounded off briskly, jumping a high collier fence, and never resting until he reached home where his elderly mother awaited him with open arms."

A sequel to the entombment is that all of the seven entombed workers appeared at a benefit performance—25 cents admission—held at Wilkes-Barre Music Hall on the night following their rescue. In this remarkable drama, the rescued workers reenacted the events of the entombment—such as repeating plans discussed for possible escape, testing the air for suffocating or explosive gas; walltapping to attract possible rescuers; attitudes while praying; during which all of the time the theater's lights were turned extremely low to simulate the darkness of what, miraculously, was not destined to be the tomb of the seven men and boys from the Sugar Notch Colliery.

The last survivor of the seven entombed at the Sugar Notch mine was William Kinney, a colliery driver, who passed away on November 14, 1947, at the age of 88.

As a result of his remarkable experience, Kinney became extremely interested in local anthractic mine history and was a frequent visitor for many years at the Wyoming Historical and Geological Society on South Franklin Street, where he repeated his entombment experiences to Miss Ernestine Kaehlin then and for half a century the head historical librarian.

California Assemblymen Support 160-Acre Limitation in San Luis Project Rill

EXTENSION OF REMARKS

# HON. JAMES ROOSEVELT

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 2, 1959

Mr. ROOSEVELT. Mr. Speaker, recently I received a telegram signed by 15 members of the California Assembly in which they urge that the pending San Luis project bill contain the 160-acre limitation provision.

I am pleased to offer the views of some of the members of the California Assembly. Among those who signed the telegram are assemblymen representing two of the three assembly districts within my congressional district.

The telegram follows:

SACRAMENTO, CALIF., May 27, 1959. The Honorable James Roosevelt, Member of Congress, House Office Building, Washington, D.C.:

We, the following members of the California Assembly, urge the insertion of a 160-acre limitation provision in the San Luis project bill. Large land-owning interests spending thousands to prevent State from adopting acreage limitation in California

water program.

Phillip Burton, 20th District; William A. Munnell, 51st District; George E. Brown, Jr., 45th District; Jerome R. Waldie, 10th District; S. C. Masterson, 11th District; Edward E. Elliott, 40th District; Lester McMillan, 61st District, Charles W. Meyers, 19th District; Augustus F. Hawkins, 62d District; Vernon Kilpatrick, 55th District; Vincent Thomas, 68th District; Nicholas C. Petris, 15th District; Edward M. Gaffney, 24th District; John A. O'Connell, 23d District; Joseph M. Kennick, 44th District.

# Right To Work Laws Sow the Seeds of Depression

EXTENSION OF REMARKS

# HON. THOMAS J. LANE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 2, 1959

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the Record, I wish to include the very interesting remarks of the Honorable Herbert H. Lehman, former Senator from New York and now associated as cochairman of the National Council for Industrial Peace: [From the AFT.—CIO American Federationist] RIGHT TO WORK LAWS SOW THE SEEDS OF DEPERSISION

#### (By Herbert H. Lehman)

During more than 30 years in public life, I have been guided by the belief that our laws should serve the common good. When a law is punitive or discriminatory in its intent or application, it can do great harm. Even though its evils may be quickly recognized, much time may pass—sometimes years—before public opinion can be aroused and legislative processes reinstituted to-remove the offending law. We know this to be especially true where constitutional amendment is involved.

Some unwise laws have come into being at times of great emotional stress. Others have resulted from pressures brought by powerful lobbies that have not always represented the public interest. And many have been enacted because of a lack of public awareness of their purpose or effect,

lic awareness of their purpose or effect.

In public office, from which I am now retired, I fought such unwise legislation with all my strength. In that fight I was privileged to be closely associated for many years with a very great man, President Franklin

Delano Roosevelt. We fought together for the welfare and rights of ordinary men and women.

I am still carrying on this fight as co-chairman of the National Council for Industrial Peace, an organization devoted to the defense of the public interest, which includes the rights and welfare of working men and women and their unions. This organization has opposed the falsely called right to work laws which are being advocated by antilabor elements in a number of our States.

In this present fight against the so-called right to work laws, I am associated with President Roosevelt's widow, a great woman, Mrs. Eleanor Roosevelt. She is cochairman of the National Council for Industrial Peace.

In the campaigns in various States by the advocates of the misnamed right to work laws we have seen attempts by a small but powerful group to enact laws under the cloak of States rights that would hold wages down and take away decent working conditions.

One of the reasons right to work is so difficult to combat is the campaign of halftruths and misleading statements waged by its sponsors.

Aldous Huxley has described the technique in these words:

"In their antirational propaganda, the enemies of freedom systematically pervert the resources of language in order to wheedle or stampede their victims into thinking, feeling, and acting as they, the mind manipulators, want them to think, feel, and act.'

In blunter terms, it is known as the tech-

nique of "the big lie."

In the campaign seeking public acceptance of right to work laws, the most misleading claim of all is the name. Such legislation does not provide a right to work. Where this misnamed proposal has become law, its effect has been to restrict freedom of contract between labor and employers by outlawing the union shop.

I believe that responsible labor unions are the greatest single safeguard of the right of the worker to be employed and to be treated fairly on the job. Right to work laws are aimed at crippling and destroying the means by which labor can safeguard these rights.

It should be pointed out that the Supreme Court has held that the Constitution secures to all a freedom of association, which includes the right to join a trade union and to bargain collectively with employers on the terms and conditions of employment.

The right to work promoters would have us believe their proposals really don't hurt a bit, that their purpose is not to wreck the collective bargaining process or to destroy unions or to legalize the exploitation of cheap labor so that some segments of industry can produce goods at 1920 wages to sell at 1959 prices.

To hear the right to work advocates tell it, the only reason the National Association of Manufacturers, the Chamber of Commerce and the so-called National Right to Work Committee spend such huge sums in efforts to enact these laws is to save working people from union bosses.

But let's see who is really exploiting whom. Nineteen States have enacted these laws. With a single exception, these are either Southern States where low wages, child labor, and substandard working conditions have been traditional parts of the economy or agricultural States where problems of labor-management relations are relatively unknown or not understood and where comparatively few people are employed in

What has happened to working people in these States? I would like to discuss some of the results of right to work laws that have come to the attention of the National Council for Industrial Peace.

I have studied a number of letters and advertisements in national publications. The letters are from mayors or chambers of commerce in southern communities addressed to industry executives in the North. The advertisements are from development groups addressed to the same audience.

Let's see what they say. Selecting at random, here is a letter signed by the chairman of the industrial division of the chamber of commerce in an Arkansas community. Another is from the mayor of a Mississippi town to a Connecticut manufacturer. full-page advertisement in a "class" publication is sponsored by a group in North Carolina. Arkansas, Mississippi, and North Carolina are all right to work States.

The Arkansas letter, marked "personal,"

says:
"I would like very much to come and have a confidential talk with you. There is much to know about the favorable labor situation here that cannot be publicized. There is plenty of darn good labor within commuting distance, now making the bare minimum

wage.
"These thousands of rural dwellers have little or no rent to pay and grow or raise most of the food they eat. They enjoy low living costs. There are no better workers anywhere. They will be with you and for you and listen to no leaders except your own.

"Closed shops are in violation of Arkansas"

freedom-to-work law."

And this is what the Mississippi mayor said about working people in his commu-

"Our wonderful labor, 98 percent native born, mostly high school graduates, will average hourly industrial wage rates 6 to 49 cents below other Southern States and from 50 to 95 cents below Northern States.

'You will also get a much higher average man production, some plants even getting double what they got in their northern plants.

"This labor is truly American, not afflicted with the something for nothing idea, and works together joyously with management for the success of both. \* \* \* No one will tell you whom you must employ, and all detrimental State laws for industrial opera-tions have been repealed. The closed union shop has been outlawed in Mississippi."

And the North Carolina advertisement read as follows:

"Within 6 months after our southern work force was hired, it was producing at greater efficiency in North Carolina than we had ever experienced. And the majority of workers are operating machines completely foreign to them. \* \* I have nothing but the highest praise for North Carolina workers. They learn rapidly, appreciate their jobs and are anxious to give a day's work for a day's pay."

An outraged secretary, reading this advertisement, wrote across it:

"People for sale-best quality-cheap." We see here a studied appeal to industry to move to right-to-work States where, shackled by such oppressive laws, a docile labor force will accept whatever wages and working conditions are thrown to them.

Then we have the recent opinion of the attorney general of South Dakota on the meaning of his State's right-to-work law.

This official ruled that the South Dakota law grants a nonunion worker the right to work for a lower wage than union workers and gives the employer the right to prefer him in promotions over union members despite provisions in an existing contract for seniority rights.

Under the right-to-work law in South Dakota, this could be used to destroy the entire structure of union contracts, to lower wages, and to wipe out the seniority system.

The question naturally arises: Have the right-to-work laws been used for union-cracking purposes, to beat down wages and to worsen working conditions in the States in which they have been enacted?

The answer is "Yes." The story is one of lost jobs, impoverishment, and heartbreak the past 12 years since section 14(b) of the Taft-Hartley Act encouraged passage of right-to-work laws in individual States. shall cite a few instances.

In the little town of Winchester, Va., 300 men and women workers of the O'Sullivan Rubber Corp. have been out of work since 1956. Their controversy with management began in the spring of that year when the workers voted 343 to 2 to be represented by the United Rubber Workers. The union asked for an increase of 15 cents an hour. pensions, paid holidays, and impartial arbitration of unresolved grievances.

The union contended the O'Sullivan workers were being paid 40 to 60 cents an hour under the scale of similar plants elsewhere in the United States.

The company countered with a 3-cent offer. Negotiations dragged and got no-where, and about 400 production workers walked out.

About 3 weeks later the company threatened to fire the strikers and replace them. permanently. About 75 employees returned to work, and the company made good its threat and hired 165 new employees off farms in West Virginia and the Carolinas.

The employer then told union negotiators that strikers would be given jobs only as new ones opened, but without seniority.

The company spurned offers of the Federal Mediation Service. State troopers patrolled the plant gates.

The strike dragged into 1957. The company then used a device that has become a familiar maneuver in "right to work" States. It asked the National Labor Relations Board to hold an election to see if the union represented the majority of its work-

Under section 9(c)(3) of Taft-Hartley, the striking workers had no vote. In October of 1957 the election was held and the strikebreakers voted, 288 to 5, to have no union.

At Darlington, S.C., the owner of a textile mill employing 523 workers went a step further. He closed his mill and sold its machinery at auction when workers voted for a union to represent them.

The mill machinery—\$1,850,000 worth—went on the block in December 1956. One bidder offered \$1,600,000 for the complete mill, but the owner insisted that the machinery be sold piecemeal in order that the mill could not be reopened to provide jobs for the workers he was punishing.

In the cotton industry the Darlington mill was known as a moneymaker. One of the secrets was low pay and a high-pressure speed-up that began in the weave room of the mill.

In April 1956 the hard-pressed workers decided they needed a union to represent them and appealed to the Textile Workers Union of America. A National Labor Relations Board election was held in September, and a majority of the workers voted for union representation despite threats by the management.

The mill owner, who held 110,000 of the 150,000 shares of common stock, then called a stockholders' meeting and announced the mill was to be closed and liquidated. The mill was shut down and its machinery sold despite NLRB orders, the suffering of more than 500 workers, and distress to the entire community.

Right to work laws have been used elsewhere to force down wages of workers as well as to break unions or prevent unionizattion of plants. The story of the Walker

County Hosiery Mill at Lafayette, Ga., is an example.

The Georgia right to work law went into effect in 1947. The hosiery workers previously had a contract with the Walker County company providing maintenance of membership.

With passage of the right to work law, the maintenance of membership clause became inoperative. In 1948 the company demanded as the price of a new 2-year contract that it be made cancellable upon 2 weeks' notice. The company also demanded the right to reopen negotiations on wages at will. The union reluctantly agreed.

union reluctantly agreed.

In June of 1948, the company demanded acceptance of a wage cut of 10 cents an hour. The union refused, since wages were already too low and the cost of living had risen sharply after the end of the war.

The company retaliated with an antiunion campaign in which it enlisted the aid of local merchants. It advised workers to get out of the union and threatened to close the mill unless this was done.

Some workers were frightened into quitting the union. The company then gave notice of contract cancellation. Faced with pressures from community leaders, the workers panicked and the union was unable to rally support for defensive action.

The company then put the wage cuts into

There are many other instances where right to work laws have been used against ordinary workingmen and women.

These laws have been used as a weapon by the southern textile industry virtually to destroy the collective bargaining process and to force cancellation of a pension plan covering thousands of workers. In some communities the right to work laws have been reinforced by even more restrictive laws and ordinances.

A Baxley, Ga., ordinance required that any organization, union, or society, that solicits members and has a membership fee system must take out a local license costing \$2,000 annually and must pay the town \$500 for each member signed up.

An organizer of the International Ladies' Garment Workers Union was convicted and sentenced to jall for refusing to comply with the Baxley ordinance.

In South Carolina six countles wrote identical ordinances requiring "a permit in writing \* \* \* before any person shall solicit membership for any organization."

A 1953 Alabama statute stated that "any public employees who joins or participates in a labor union \* \* \* shall forfeit all rights afforded him under the State merit system, employment rights, reemployment rights and all other rights, benefits, or privileges which he enjoys as a result of public employment."

Similar antiunion ordinances have been in effect in Mississippi, Florida, Tennessee, and Virginia. They have required lengthy and expensive litigation to combat. In the Baxley case, a Supreme Court decision was required to protect free speech.

What is the effect of these oppressive measures on the economy and living standards of the right-to-work States?

No set of statistics can tell the whole story of suffering and want resulting from job loss or from income insufficient to meet human needs. But in other ways they are highly revealing.

The U.S. Department of Commerce Survey of Current Business, which gives the U.S. per capita personal income average for 1957 as \$2.027, shows that income in right-to-work States was in one instance as much as \$1,069 below the national average.

The Federal survey showed these States trailing behind the national average as follows:

	Mark Control Co.
Alabama	\$703
Arizona	277
Arkansas	876
Florida	191
Georgia	596
Iowa	221
Mississippi	1,069
Nebraska	209
North Carolina	710
North Dakota	592
South Carolina	842
South Dakota	496
Tennessee	644
Texas	236
Utah	333
Virginia	367

Another set of Government statistics is equally revealing. These are the figures showing the average weekly wages for the Nation and for the individual States. They are contained in the Department of Labor's official report, "Employment and Earnings."

Here, again, the Federal Government re-

Here, again, the Federal Government reported many right-to-work States lagging far behind the national average weekly wage.

For instance, North Carolina, where right to work has been in effect since 1947, had the Nation's lowest average weekly wage—\$55.25—in spite of the fact it has been a highly industrialized textile and furniture manufacturing State for many years.

These right-to-work States were below the national average weekly earnings as follows:

	Less
Alabama	\$15.87
Arkansas	25.76
Florida	14.45
Georgia	24. 16
Mississippi	23.83
Nebraska	3.49
North Carolina	28. 28
South Carolina	27, 56
Tennessee	17.67
Virginia	18.03

In startling contrast to this depressing record of the right-to-work States is the story of steady economic progress by States that have not been shackled by these oppressive laws.

The 1957 average per capita personal income in California, one of our newest industrial States, was \$2,523, or nearly \$500 more than the national average. And the weekly earnings average of Californians was \$97.22. compared with the national average of \$83.53 and the North Carolina wage low of only \$55.25.

The per capita personal income in California jumped \$62 in 1957 over the previous year, while in other States without "wreck" laws, such as Colorado, Washington, and Ohio, it went up \$126, \$81, and \$71, respectively.

The figures also show that New Mexico, another State without right to work, had a gain of \$151 in per capita personal income, or from 2 to 2½ times that of two neighbor right-to-work States, Arizona and Texas.

As we examine the purpose behind the right-to-work laws and the manner in which this legislation is being widely used to undermine the processes of free collective bargaining, it becomes clear that "wreck" laws are not of benefit to the general welfare.

When the Wagner Act became law it was with the understanding of Congress that collective bargaining would be legalized throughout the Nation in industries which were in the flow of interstate commerce or which affected interstate commerce. The principle of free collective bargaining was reaffirmed by Congress in the Taft-Hartley Act of 1947, although this law contained built-in provisions which, as I have pointed out, have been used to do great harm

to the rights and welfare of working men and women.

During the past two decades the process of collective bargaining between the employer and workers, represented by responsible unions of their choosing, has become the accepted basis for stable labor-management relations.

Progressive employers have found it is to their advantage to deal with workers collectively through a strong and well-disciplined union instead of with workers individually. Such an arrangement promotes industrial peace, provides the employer with a stable, dependable force of skilled workers, and results in higher production and a better fabricated product.

The Taft-Hartley Act legalizes the union

The Taft-Hartley Act legalizes the union shop, which makes possible a strong and effective union that can represent all workers in a plant responsibly

ers in a plant responsibly.

Yet section 14(b) of the act provides that if a State enacts legislation concerning union security that is more restrictive than Tatt-Hartley, then the State law takes effect. This permits a State to override and nullify the intent of Federal labor-management policy, for the so-called right-to-work laws outlaw the union shop. Thus in the 19 right-to-work States workmen are denied security against the watering down of a union's strength and bargaining rights.

There is no parallel for such action in Federal law. Ordinarily, it is the rule that Federal law supersedes State law and applies equally to each State—not the reverse.

As I have shown, employers in right-towork States can and do make war on workers behind the shelter of these laws. In the process, they force wages down. This dries up purchasing power.

And, in an economy dependent upon mass consumption, the seeds of depression are sown.

Right-to-work laws are bad laws. Section 14(b) of Taft-Hartley likewise is unwise legislation. In the public interest, both should be removed from the statute books.

Rural Redevelopment Areas Prescribed by House Banking and Currency Committee in Proposed Area Redevelopment Act

EXTENSION OF REMARKS

# HON. DANIEL J. FLOOD

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 2, 1959

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the Record order. I include the following list of the rural counties throughout the Nation who would qualify for assistance under the provisions of the Area Redevelopment Act as reported to the Rules Committee by the House Banking and Currency Committee. This information was compiled by the Area Employment Expansion Committee with headquarters in New York City:

RURAL REDEVELOPMENT AREAS PRESCRIBED BY THE HOUSE BANKING COMMITTEE IN PRO-POSED AREA REDEVELOPMENT ACT

(Nore.—The bill recommended by the House Banking Committee declares that among the rural redevelopment areas "\* \* \*

shall be included \* \* \* any county (1) which is among the 500 counties in the United States ranked lowest in level of living of farm-operator families; or (2) which is among the 500 counties in the United States having the highest percentage of commercial farms producing less than \$2,500 worth of products for sale annually.")

The counties listed below conform to these categories.

Congressman and rural county

#### ALABAMA

Andrews: Barbour, Bullock, Coffee, Geneva, Henry, Houston, Lee, Macon, Russell. BOYKIN: Choctaw, Clarke, Marengo, Monroe, Washington, Wilcox.

ELLIOTT: Blount, Cullman, Fayette, Frank-lin, Lamar, Marion, Pickens, Walker, Winston.

GRANT: Butler, Conecuh, Covington, Crenshaw, Escambia, Lowndes, Montgomery, Pike.

JONES: Jackson, Lawrence, Limestone, Morgan.

RAINS: Chambers, De Kalb, Etowah, Marshall, Randolph, Tallapoosa.

ROBERTS: Autuga, Clay, Coosa, Dallas, El-

more, St. Clair.

SELDIN, JR.: Bibb, Chilton, Greene, Hale, Perry, Sumter, Tuscaloosa.

#### ARKANSAS

ALFORD: Conway, Faulkner, Perry, Pope, Yell.

GATHINGS: Clay, Crittenden, Greene, Lee, Phillips, St. Francis.

HARRIS: Ashley, Bradley, Calhoun, Clark, Columbia, Hempstead, Howard, Lafayette, Little River, Miller, Montgomery, Nevada, Ouachita, Pike, Polk, Sevier, Union.

Mills: Cleburne, Fulton, Independence,

Izard, Lawrence, Monroe, Randolph, Sharp, Stone, White, Woodruff.

Norrell: Chicot, Cleveland, Dallas, Desha, Drew, Grant, Jefferson, Lincoln, Lonoke.

Taimele: Baxter, Boone, Johnson, Logan,
Madison, Marion, Newton, Scott, Searcy,
Sebastian, Van Buren.

## FLORIDA

MATTHEWS: Baker, Gilchrist, Hamilton, Lafayette, Madison, Suwannee, Union. Sikes: Calhoun, Holmes, Jackson, Jefferson, Leon, Okaloosa, Walton, Washington.

#### GEORGIA

BLITCH: Appling, Atkinson, Bacon, Brantley, Charlton, Clinch, Coffee, Echols, Jeff Davis, Lanier, Pierce, Telfair, Wayne. Brown: Elbert, Greene, Hart, Lincoln,

Oglethorpe, Taliaferro, Warren, Wilkes.

DAVIS: Rockdale.

FLYNT, Jr.: Butts, Carroll, Clayton, Coweta, Fayette, Heard, Henry, Lamar, Meriwether, Newton.

FORRESTER: Clay, Dodge, Harris, Marion, Quitman, Randolph, Stewart, Taylor, Wilcox. LANDRUM: Fannin, Gilmer, Rabun, Towns, Union, White.

MITCHELL: Chatooga, Dade, Douglas, Har-

alson, Murray, Walker.

alson, Murray, Walker.

PILCHER: Baker, Brooks, Decatur, Early.
PRESTON: Bryan, Burke, Evans, Liberty,
Long, Montgomery, Screven, Trattnall, Treutlen, Wheeler.

Vinson: Baldwin, Crawford, Glascock,
Hancock, Jasper, Johnson, Twiggs, Wash-

ington, Wilkinson.

#### ILLINOIS

Gray: Hardin, Johnson, Pope.

#### KENTUCKY

CHELF: Adair, Green, Metcalfe. NATCHER: Allen, Breckinridge, Butler, Edmonson, Grayson, Hopkins, Ohio.

PERKINS: Breathitt, Carter, Elliott, Floyd, Greenup, Johnson, Lawrence, Lee, Magoffin,

Menifee, Morgan, Pike, Rowan, Wolfe.
Sn.gr. Clay, Clinton, Cumberland, Jackson, Knox, Laurel, Monroe, Owsley, Pulaski, Rockcastle, Russell, Wayne, Whitley. SPENCE: Lewis.

STUBBLEFIELD: Crittenden, Graves, Mc-Cracken, Marshall.

WATTS: Casey, Estil, Powell.

#### LOUISIANA

BROOKS: Mienville, Claiborne, De Soto, Red River, Webster.

McSween: Avoyelles, Grant, La Salle, Natchitoches, Sabine, Vernon, Winn.

Morrison: East Feliciana, Livingston, St. Helena, West Feliciana.

Passman: Caldwell, Catahoula, Concordia, Franklin, Lincoln, Morehouse, Richland, Union, West Carroll.

THOMPSON: Beauregard, Evangeline, St.

#### MICHIGAN

BENNETT: Iron.

CEDERBERG: Alcona, Clare, Iosco. GRIFFIN: Wexford.

MINNESOTA

BLATNIK: Itasca. MARSHALL: Aitkin.

#### MISSISSIPPI

ABERNETHY: Alcorn, Attala, Calhoun, Chickasaw, Choctaw, Clay, Itawamba, Lee, Lowndes, Monroe, Noxubee, Oktibbeha, Pontotoc, Prentiss, Tishomingo, Webster, Winston

COLMER: Covington, George, Greene, Jefferson Davis, Jones, Lamar, Lawrence, Marion, Perry, Wayne.

SMITH: Bolivar, Coahoma, Holmes, Humphreys, Issaquena, Leffore, Quitman, Sharkey, Sunflower, Tunica, Washington.

WHITTEN: Benton, Carroll, De Soto, Grenada, Lafayette, Marshall, Montgomery, Panola, Tallahatchie, Tate, Tippah, Union, Yalobusha.

WILLIAMS: Adams, Amite, Claiborne, Copiah, Franklin, Hinds, Jefferson, Lincoln, Pike, Walthall, Warren, Wilkinson, Yazoo.

WINSTEAD: Clarke, Jasper, Kemper, Lauderdale, Leake, Madison, Neshoba, Newton, Ran-kin, Scott, Simpson, Smith.

#### MISSOURI

Vacant: Vernon.

Brown: Douglas, Ozark, Stone, Taney, Wright.

CARNAHAN: Carter, Dent, Howell, Iron, Madison, Oregon, Reynolds, Shannon, Washington, Wayne.

JONES: Bollinger, Butler, Ripley.

#### NEW MEXICO

MONTOYA and MORRIS: Mora, Rio Arriba, San Miguel, Sierra, Socorro.

#### NORTH CAROLINA

ALEXANDER: Alexander, Alleghany, Ashe, Stanly, Watauga.

BARDEN: Duplin, Onslow, Pender.

BONNER: Hyde, Tyrrell, Washington, FOUNTAIN: Halifax, Warren.

HALL: Buncombe, Cherokee, Clay, Graham,

Haywood, Jackson, Macon, Swain, Transyl-

Jonas: Avery, Burke, Catawba, Lincoln, Mitchell.

KITCHIN: Anson, Davidson, Montgomery, Scotland, Wilkes.

LENNON: Bladen, Brunswick, Columbus, New Hanover.

Scott: Caswell, Person.

WHITENER: Cleveland, Madison, McDowell, Polk, Rutherford, Yancey.

#### OHIO

HENDERSON: Guernsey, Noble. MOELLER: Gallia.

## OKLAHOMA

Albert: Atoka, Choctaw, Latimer, Le Flore, McCurtain, Pittsburg, Pushmataha.

Edmondson: Adair, Cherokee, Delaware, Haskell, McIntosh, Okmulgee, Sequoyah.

STEED: Coal, Creek, Hughes, Lincoln, Okfuskee, Seminole.

#### SOUTH CAROLINA

ASHMORE: Greenville, Laurens, Spartanburg, Union.

Donn: Abbeville, Anderson, Edgefield, Greenwood, McCormick, Newberry, Oconee,

Pickens, Saluda. HEMPHILL: Cherokee, Chester, Chester-field, Fairfield, Kershaw, Lancaster, York.

McMillan: Georgetown, Horry, Lee, Williamsburg.

RHEY: Barnwell, Lexington, Orangeburg. Rivers: Allendale, Beaufort, Berkeley, Charleston, Clarendon, Colleton, Dorchester, Hampton, Jasper.

#### TENNESSEE

BAKEE: Anderson, Blount, Campbell, Loudon, Morgan, Roane, Scott, Union. Bass: Dickson, Giles, Hickman, Houston,

Humphreys, Lawrence, Lewis, Perry, Stewart, Sumner, Wayne.

EVERETT: Haywood, Lauderdale.

Evins: Cannon, Clay, Cumberland, De Kalb, Fentress, Jackson, Lincoln, Macon, Moore, Overton, Pickett, Putnam, Rutherford, Smith, Van Buren, Warren, White, Wilson.

Frazier, Jr.: Bledsoe, Grundy, McMinn, Marion, Meigs, Monroe, Polk, Rhea, Se-

quatchie.

MURRAY: Benton, Carroll, Decatur, Fayette, Hardeman, Hardin, McNairy, Madison. REECE: Carter, Claiborne, Cocke, Grainger,

Greene, Hamblen, Hancock, Hawkins, Jefferson, Johnson, Sevier, Sullivan, Unicoi, Washington.

#### TEXAS.

BECKWORTH: Camp, Panola, Rusk, Upshur, Wood.

Brooks: Newton, Sabine, San Augustine. Dowby: Anderson, Angelina, Cherokee, Henderson, Houston, Madison, Polk, San Jacinto, Trinity, Walker.

PATMAN: Bowle, Cass, Franklin, Harrison,

Marion, Morris, Red River, Titus.

RAYBURN: Rains. TEAGUE: Freestone, Leon, Robertson, Som-

ervell. THOMPSON: Lavaca.

THORNBERRY: Bastrop, Burleson,

Young: Duval, McMullen.

#### VIRGINIA

ABBITT: Appomattox, Buckingham, Greensville, Lunenburg, Mecklenburg, Prince Edward.

DOWNING: York.

HARRISON: Bath, Highland.

JENNINGS: Buchanan, Dickenson, Lee, Russell, Scott, Tazewell, Washington, Wise.

POFF: Alleghany, Bedford, Craig, Floyd. SMITH: Fluvanna, Greene.

Tuck: Carroll, Charlotte, Grayson, Hallfax, Henry, Patrick.

#### WEST VIRGINIA

BAILEY: Braxton, Calhoun, Clay, Dodd-Balley: Bruxton, Calmoth, Cary, Bodd-ridge, Fayette, Gilmer, Harrison, Lewis, Nicholas, Ritchie, Upshur, Wirt. HECHLER: Cabell, Jackson, Lincoln, Mason, Pleasants, Putnam, Roane, Tyler, Wayne,

KEE: Mercer, Monroe, Summers. MOORE: Brooke, Marion, Taylor, Wetzel. SLACK, JR.: Kanawha, Raleigh.

STAGGER: Barbour, Monongalia, Randolph, Tucker, Pocahontas, Preston.

## More Dollars Isn't Always the Answer

EXTENSION OF REMARKS OF

# HON. E. Y. BERRY

OF SOUTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

, Tuesday, June 2, 1959

Mr. BERRY. Mr. Speaker, under leave to extend my remarks, I wish to include an editorial which appeared in the May 31, 1959, edition of the Huron, S. Dak., Plainsman, pointing out some of the problems that would result from an increase in the minimum wage law.

I share the conviction of Editor Robert Lusk that an increase to \$1.25 per hour would have the effect to removing job opportunities for young people, result in further price increases and inflation, and further price the American worker out of the foreign market.

The editorial is as follows:

More Dollars Isn't Always the Answer

. Youngsters who are having a difficult time finding work for the summer will find the task even more difficult if the proposed Federal \$1.25 an hour minimum wage law is put into effect.

Even in this era of the exceedingly cheap dollar, affected employers are going to hesitate before hiring youngsters at that price. It would mean paying the "kids" the equivalent of \$65 a (48-hour) week.

Before an employer would hire a youngster at that price, he would seek a more adult person—a housewife, perhaps—to fill the job.

This would take more mothers out of the homes and turn more youngsters out on the streets—a bad combination.

And such a measure could not help but have an inflationary effect on an already in-

flated economy.

It isn't just the minimum wage that would be raised by this action. There would have to be some salary adjustments all along the line if the more valuable employees were to be paid in proportion to their worth.

So in the end, the extra \$.25 an hour that workers on the lower end of the scale would receive would be eaten up by the higher prices which the employers would have to charge for their goods and services in order to pay the higher wages.

And that means more inflation, of course. Persons who advocate such an arbitrary minimum wage lose sight of a fundamental principle of economics—that production, not dollars, determines our ultimate wealth.

Although the dollar has become a symbol of wealth, any number of them aren't worth a plugged nickel on a desert island where a man has to create his comforts through his own work—production, in other words.

It is the overconcern with dollars and the underconcern about production on the part of some segments of our economy which has created and expanded the inflationary tendency in our currency.

It has reached a point now where inflation at home is affecting the markets abroad. The American worker, by demanding more and more dollars for less and less production, is pricing himself out of the export market which was the source of his prosperity.

Introducing the \$1.25 minimum wage would further aggravate an already perilous foreign market situation and further reduce the Nation's exports by making the relative price of American merchandise even higher in comparison to goods produced by the Japanese, Swiss, Germans, and other foreign Workers.

There is more that could be said on this subject—how certain small businesses would be endangered, how more unemployment would result—but what has been said so far should be enough to make the point which is: Raising the \$1 Federal minimum wage from \$1 to \$1.25 would help no one and would harm a lot of people—so why do it?

## Interstate Library Cooperation

EXTENSION OF REMARKS

## HON. CLIFFORD G. McINTIRE

OF MAINE

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 2, 1959

Mr. McINTIRE. Mr. Speaker, many are the benefits that have flowed from the Library Services Act, which was passed by Congress in 1956, for this authority has, in providing a modest amount of Federal funds, served to promote a substantial expansion of library services in rural America.

An immediate outgrowth of this Federal encouragement has been the development of cooperative endeavors, with many of our States coordinating their efforts toward the end of developing a comprehensive library service.

Three unique cooperative ventures are presently in process in New England, and I submit to the RECORD the following extract from the May issue of the Wilson Library Bulletin, which lucidly points up this exciting cooperative exercise in providing better library service:

INTERSTATE LIBRARY COOPERATION

(By Wilfred L. Morin)

Three very interesting cooperative ventures are being attempted in New England under the Library Services Act. Librarians have long realized the value of multicounty and regional units and have worked more or less successfully in this direction for better library service, but cooperative ventures among States constitute an area which has not yet begun to realize its full potential. In New England, where the States are relatively small geographically and relatively homogenous, experimentation with interstate cooperative ventures has every chance for success.

For some time it had seemed feasible to several of the New England State librarians that some cooperative library activities could be performed which would mean a great saving of time, effort, and even money. However, several problems continued to block progress. First, it was a question of money. Each State is small; each State needed all the funds in had for the basic State library services, and the extra amount needed to launch such a project was not forthcoming. Secondly, there was a strong legal objection to the States entering into contractual relationships with each other to carry out the desired projects. The attorney general of one State said that such a contract amounted to a treaty among sovereign state and such an action would require the permission of the U.S. Congress.

## FILM COOPERATIVE

With the enactment of the Library Services Act, and the availability of Federal funds, however, the projects seemed nearer to realization if the methods could be found whereby the States could cooperate legally. It took nearly a year of negotiation but the first cooperative venture, a film cooperative, was activated in June 1958 among the three northern New England States—Maine, Vermont, and New Hampshire. The most feasible way to achieve this cooperation, it was

found, was for the State agency, as well as the individual units within the three States, to make its own contract with the audiovisual center at the University of New Hampshire. Hence, there is no contract binding the participating agencies one with another, the only contract being between the libraries and the center.

The agencies which make up the film cooperative are the New Hampshire State Library, the Vermont Free Public Library Commission, the Maine State Library, as well as the libraries of the following New Hampshire cities: Nashua, Manchester, Concord, Laconia, and the Gordon-Nash Library of New Hampton. So far, no city libraries in the other two States have expressed a desire to join the circuit at the present time. Sixteen rural libraries in New Hampshire have taken advantage of the films available and a number of these have instituted a regular schedule of programs.

ADVANTAGES

The three State agencies decided to deposit their film collections with the audiovisual center at the University of New Hampshire because it has several points in its favor: personnel and equipment to handle the films and a location that places it nearly in the center of the three participating States. The films already owned by the center are essentially educational but these also have been made available if the States care to use them against their payments to the center.

The participating libraries sign a contract in which they agree to purchase each year at least one film to be deposited in the film library of the center. There is also in the contract a release clause, enabling any library to withdraw from participation by giving notice by April 1 of any year. In such case, the films it had on deposit at the center would be returned to it by July 1 of that

For the first year, it was decided to purchase only children's films and in the second year to expand into the adult field. The films are to be used initially for programs within the libraries but eventually the hope is to make them available to organizations and groups in the community on the same basis as books. It is estimated that the three States, at their next committee meeting, will vote to expend close to \$5,000 for the purchase of films to be deposited at the center.

A participating library is entitled to the free use (under established rules and regulations) of all films deposited in the film pool by all participating libraries to a total of the normal service charges equal to the initial cost of the films deposited by the using library during any 1 year. At the conclusion of the annual booking date, all films belonging to the participating libraries become available to the center for general circulation.

The service charge, to cover the cost of handling (postage, shipping containers, and regular care of film), amounts to 50 cents per film during the initial period of building up a backlog of films, since the tenter is self-supporting. This service charge may eventually vary according to the number of films released by the participating libraries to the center for rental.

Libraries in communities of over 10,000 population must become participating agencies in order to benefit under its provisions. Communities of under 10,000 population are enabled to borrow these films free of charge, except for return postage, against

the credit accumulated by the State library with its purchase of films. As an aid to the small rural libraries, the State library will book films and attempt to meet requests from these libraries. It is hoped that, later on, the libraries may apply directly to the audio-visual center for the films as they become more familiar with procedures.

In many cases, the State library supplies the operator and projector for the programs, Again this is a service performed initially by the State library in the hope that in the near future the local community will be able to provide these essential services.

In the spring of 1959 a series of six regional workshops will be held in New Hampshire to acquaint the librarians with the best and most economical use of films and equipment. Margery Stroud, public library consultant on the New Hampshire staff, will handle the workshops for the State. Miss Stroud is also secretary of the preview committee which selects the films.

#### PUBLISHING COOPERATIVE

The second cooperative venture is a publishing one between Vermont and New Hampshire. For many years, New Hampshire and Vermont each published a quarterly library bulletin. Exploration of the idea of merging the two publications was begun. Again, the Library Services Act made it possible to give real thought and effort to this project with the result that, in December 1957, North Country Libraries began to appear. This is published every month, except July and August, with a circulation of 3,000 copies, 1,500 for each State. It is mailed to every librarian and trustee in the two States.

Since many of the librarians do not subscribe to book review publications, the bulletin is especially strong in this area. There is also material on how-to-do-it for the non-professional librarian. If requests for reprints and extra copies are any indication of interest and worth, this little publication has already earned a reputation for itself.

In order for the two States to put into effect this cooperative project, a gentleman's agreement was worked out by the purchasing agents of both States so that duplicate requisitions for the printing of the publication would allow for bids by printers in both States. The first year a firm in Montpelier, Vt., got the order and the second year a firm in Littleton, N.H. The printer divides the bill in half and bills each State agency for one-half of the cost.

The editor, Louise Hazelton, is employed on a part-time basis. She is a professional librarian, the wife of the law librarian at the New Hampshire State Library. She is paid a flat fee per issue and, as in the case of the printer, bills each State for half the amount. The bulletin is mailed from Montpelier by the staff of the Vermont Free Public Library Commission and the New Hampshire State Library is billed one-half of the mailing costs.

The third cooperative project is the production of a film to promote library development in New England, taking into consideration its special problems and characteristics. There is a steering committee of six, one drawn from each of the New England States, exploring the possibilities of a film that would be geared to New England library needs. The committee has met several times and at this writing they have decided that the film should be in color, about 20 minutes long, with a narrator.

In New England, the administrative prob-

In New England, the administrative problem of the county is absent. There is a move on at the present time, in one State at least, to abolish the county as a unit of Government since it has practically no functions to support or funds to administer. Therefore the county base, upon which so many other library films have been made, is not an effective method of presentation. Script writers are in touch with members of the committee and Bill Allen of the New Hampshire State Library, chairman of the committee, reports that one basic idea presented by the script writers for handling the problem of presentation is most exciting and imaginative.

In this brief discussion of these three cooperative ventures among the New England
States, the cooperative spirit, the hard work,
and the determination to make the projects
worthwhile cannot be adequately delineated.
Suffice it to say that these necessary ingredients must be there or else the projects
would not have matured so rapidly and so
well. All librarians are looking forward to
these cooperative projects among the New
England States because of a feeling that
library service cannot be isolated in the community, in the county, or even in the State.

# Oklahoma House of Representatives Commends Congressman Boggs for His Efforts on Behalf of Taxpayers

EXTENSION OF REMARKS

## HON. HALE BOGGS

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 26, 1959

Mr. BOGGS. Mr. Speaker, under leave to extend my remarks in the Record, I include the following resolution adopted by the House of Representatives of the State of Oklahoma, May 21, 1959:

#### RESOLUTION 549

A resolution taking official notice to the efforts of the U.S. Government to combat communism by-bolstering the economies of foreign underdeveloped countries; taking further notice of a bill introduced in Congress by the Honorable Hale Boggs, of Louisiana, to encourage investments abroad by American industry through the establishment of reasonable taxes on foreign earnings; and officially commending Congressman Boggs on his efforts with respect to this legislation

Whereas in an effort to contain the spread of world communism, the United States is committed to a policy of bolstering the economies of friendly but underdeveloped countries by a massive foreign aid program; and

Whereas this policy results in a most heavy tax burden upon citizens of Oklahoma and on all United States taxnavers; and

on all United States taxpayers; and
Whereas it is the policy of the United
States to encourage Oklahoma and all American industry to supplement, assist, and ultimately replace such foreign aid by expending private foreign investment; and

Whereas in practice Oklahoma and all American industry seeking to make such foreign investment are at times placed at a competitive disadvantage by the adverse impact of United States taxes imposed upon the profits of foreign ventures already weighted with a heavy burden of foreign taxes; and

Whereas there has been introduced into the Congress of the United States by Congressman HALE BOGGS, Democrat of Louislana, a bill titled H.R. 5 and otherwise known as the Boggs bill; and

Whereas such bill encourages Oklahoma and U.S. industry to invest abroad by establishing reasonable U.S. taxes upon foreign earnings, taking into account the risks of such investments; and

Whereas such investment demonstrates merits of private enterprise as opposed to

communism and permits the easing of onerous rates of taxation imposed on citizens of Oklahoma and on all U.S. taxpayers for support of this direct foreign aid; and

Whereas such encouragement gives Oklahoma industry an improved opportunity to place Oklahoma manufactured products in foreign markets, all to the economic wellbeing of Oklahoma: Now, therefore, be it

being of Oklahoma: Now, therefore, be it Resolved by the House of Representatives of the 27th Legislature of the State of Okla-

SECTION 1. That Congressman HALE BOGGS, Democrat of Louisiana, is hereby officially commended for his diligent efforts on behalf of the taxpayers of Oklahoma and the United States, and upon his introduction of H.R. 5 in the United States, House of Representatives; and

SEC. 2. Be it further resolved that properly prepared copies of this resolution be mailed to Congressman Boggs and to each Member of the Oklahoma congressional delegation.

Adopted by the house of representatives the 21st day of May 1959.

CLINT G. LIVINGSTON, Speaker of the House of Representatives.

Statement in Explanation of H.R. 7496, a Bill To Charge the Costs of Administration of the Longshoremen's and Harbor Workers' Compensation Act to Carriers and Self-Insurers Under the Act

EXTENSION OF REMARKS

## HON. CARROLL D. KEARNS

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 2, 1959

Mr. KEARNS. Mr. Speaker, the American system of workmen's compensation is not financed out of general taxation but places its costs only on those members of the public who are also employers. In accordance with this concept, employers are charged with the costs of payments to injured employees either as self-insurers or through insurance carriers. In many States employers are also charged with the administrative costs of the workmen's compensation program, Under the Longshoremen's and Harbor Workers' Compensation Act, however, a Federal statute which applies to certain private employments in much the same manner as a State workmen's compensation law, the costs of administration are borne by the Federal Government. This places on the Federal Government a burden inconsistent with a basic concept of workmen's compensation.

The draft bill would charge administrative costs of the workmen's compensation features of the Longshoremen's Act to the industry covered by that act. Under the proposed bill the funds necessary for administrative expenses—direct expenses and the applicable share of indirect and overhead expenses—would continue to be fixed and appropriated annually by Congress. However, at the end of each fiscal year, the cost of administering the workmen's compensation provisions of the act during that year would be determined by the Secre-

tary of Labor and prorated among insurance carriers writing insurance under the act, and among self-insurers. The assessment would be based on the total money benefits paid by such carriers and self-insurers during such year. They would not be charged with cost of administering the recently enacted amendment to the act which authorizes the issuance and enforcement of safety standards

It is estimated that this proposal, if adopted, would result in a reimbursement to the Federal Government of over \$700,000 a year. The cost for administering the law was \$701,657 during the past fiscal year and because of the recent Federal pay increase it is estimated that the administrative costs will be somewhat higher during the 1959 fiscal year.

The rights of a self-insurer or carrier would be protected by an administrative hearing on assessments, if requested, and by a right to judicial review.

If it failed to pay the amount assessed when due, a carrier or self-insurer would be liable to fines and interest on unpaid balances. Similar penalties and possible suspension or revocation of its authorization to insure are provided where a carrier or self-insurer misrepresents material facts or fails to furnish information called for by the bill or by regulations of the Secretary.

This proposal would also apply to all extensions and applications of the Longshoremen's and Harbor Workers' Compensation Act with the exception of the War Hazards Act (42 U.S.C. 1701 et seq.). The existing extensions and applications to which this proposal would apply are the District of Columbia workmen's compensation law, the Defense Base Act, the Outer Continental Shelf Lands Act, and the act of July 18, 1958, amending section 2 of the act of June 19, 1952 (5 U.S.C. 150k-1), applying the Longshoremen's Act to certain civillan employees of nonappropriated fund instrumentalities of the Armed Forces. The reimbursement to the Federal Government, estimated above at over \$700 .-000, includes reimbursement for the administrative costs involved in all extensions and applications of the act except for the administration of the District of Columbia workmen's compensation law.

An additional sum of approximately \$200,000, now included in the budget of the municipal government of the District of Columbia, is transferred annually to the Department of Labor for the administration of the District's workmen's compensation pay. The draft bill would credit to the District government its shares of the reimbursement received from the carriers and self-insurers.

The Secretary would also have authority, in his discretion, to establish a single, consolidated administration fund for the act and its extensions and applications, or to have separate administration funds for the act and the respective extensions and applications,

## My True Security

EXTENSION OF REMARKS

# HON. W. J. BRYAN DORN

OF SOUTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 28, 1959

Mr. DORN of South Carolina. Mr. Speaker, the U.S. Junior Chamber of Commerce sponsors annually a contest on the subject "I Speak for America." It was my privilege Saturday, May 30, at the Virginia Jaycee Convention to hear Miss Barbara Jean Crenshaw of Roanoke deliver her reading "My True Security." One hundred and twenty-five Jaycee chapters in the Commonwealth of Virgina sponsored participants in this contest. Miss Crenshaw was selected to represent Virginia at the national convention in Buffalo, N.Y., in July.

Mr. Speaker, I was tremendously impressed with Miss Crenshaw's delivery and the contents of her speech. I commend it to the attention of the House and the country. I might add, Mr. Speaker, that the Jaycees of the great Commonwealth of Virginia have this year rendered a particularly outstanding service:

MY TRUE SECURITY

(By Barbara Jean Crenshaw)

When God created the world, He did not intend that we should have all of our heart's desires. In making the oyster, He gave it a shell for protection and the ability to open that shell when it was hungry to admit food. The oyster has economic and social security.

However, when God created the eagle, He made the sky his limit. The eagle may choose for his home the most dangerous mountain craig. Each day he is faced with destruction and desolation, but he rebukes them and continues to build his own life.

The eagle, not the oyster, has become the symbol of America. As long as we possess the spirit of the eagle we will continue to lead the way toward the light for the rest of the world.

What element allows Americans to be happy, to love to work, to strive to make themselves better than their neighbors? Is it not found within the heart of a person in the form of security?

What does security mean to me and to you? To most Americans, security has become the ultimate achievement through which they can find happiness and avoid misfortune.

The majority of us search in the same general areas. The alluring and promising field of wealth appears to be the greatest challenge. The old idea that the more one accumulates the happier and more secure he will be is quite false. It is absurd to believe that money will bring security when it cannot even hold its own value. Many times insecurity is the byproduct of elaborate possessions.

Second to money, man searches in the field of public programs for security. Our political leaders have promoted the idea that it can only be found through plans and programs which they provide. Some of the best known landmarks are social security and unemployment compensation. These represent probably our greatest delusion—

the belief that we can obtain security by voting for it.

Today a job applicant is usually more concerned with pensions, vacation schedules, and the certainty of seniority than the opportunities for advancement.

We Americans believe that we are the envy of the world; however, few of us have found what we are really looking for.

As teenagers, we place popularity high on the scale of achievement. We have no feeling of security unless we are one of a group. It has been said many times by many teenagers that the reason they go steady is that they feel secure. What are these same teenagers going to rely on 20 years from now? Is this where they find security?

Today we have more money, more sky scrapers being built, more machines, and more mental cases. Ours is the age of anxiety. Americans are buying enough barbiturates each year to put the entire Nation to sleep for a month.

Our search is pathetic in the sense it is self-defeating. We tend to rely on physical things. Even though we have a powerful Army, Navy, and Air Force, we can still be overcome by ignorance and decay from

within.

Each of us must realize that he is a rather drab animal composed of elements worth less than the price of a good meal at

rather drab animal composed of elements worth less than the price of a good meal at a restaurant.

If that were the end of it, security would

he simple. Money and possessions and public programs would be adequate; however, there is one more thing. It is the solid fact on which all the things that gives us assurance and protection hinge. It is strong and safe and permanent enough to provide the security we seek. All these things exist in only one place—and that is inside ourselves.

Someone has said that security is built on ideals, not dollars; principles, not pensions; character, not convenience or expediency. Character is our one possession that only we ourselves can damage. Our code of life should be the wonderful teachings of the Ten Commandments or the Sermon on the Mount. These are laws about unselfishness, honesty, truth, and love. The Golden Rule should be our motto. Each of us must be willing to give in abundance that which is the most important thing in all the world to him—himself. An eternal law has been that what a person gives to others is forever his.

The greatest thing in the world is believed to be faith. Faith is the greatest gift a person can receive. In order to find true security and peace of mind our hearts must be right with God.

## Labor Reform Legislation

EXTENSION OF REMARKS

# HON. JAMES B. UTT

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 2, 1959

Mr. UTT. Mr. Speaker, under leave to extend my remarks, I would like to insert my Washington Report of June 4, on the subject of labor reform legislation:

#### WASHINGTON REPORT

(By your Congressman James B. Urr)
The so-called labor reform legislation known as the Kennedy-Ervin bill, passed

by the Senate and now before the House, has generated more correspondence than any other single issue. Most of the letters oppose passage of the bill, but for different reasons. Some want no labor legislation whatsoever, but in most of the letters constituents are demanding a strong labor reform bill. This might be called a split-level attack.

As originally introduced in the Senate, the Kennedy-Ervin bill was a resurrection of the Kennedy-Ives bill which the House buried last year without ceremony and with little weeping. This year when the legislation came to the floor of the Senate, Senator Mc-CLELLAN, Democrat, of Arkansas, and chairman of the Labor Rackets Committee, introduced a set of amendments which he termed "labor's bill of rights." These amendments provided for: (1) Equal voting rights and equal protection of all union members under their own rules; (2) freedom of speech, so that a union member could express his views without fear of reprisal; (3) freedom of assembly; (4) freedom from an arbitrary levy of dues and assessments without a malority vote of the union members in a secret ballot, or a majority vote of delegates at a regular meeting; (5) the right of a member to sue his union for violation of the member's rights; (6) protection of members against improper disciplinary action; and (7) the right of a candidate for union office or his agent to inspect the union membership list.

These simple rights would seem to me to be desired by the rank and file of union members, and there is nothing therein to which each is not entitled, and I can conceive of no fair-minded American citizen who would deny a union member these rights. This list of amendments was adopted late one night, only after Vice President Nixon cast the deciding vote in favor of them after a 45-45 tie. Great rejoicing was heard on the part of millions of working people who have long suffered under labor bossism, but the rejoicing was not forlong. International labor leaders read in these amendments a threat to their dictatorship and in less than a day's time a handful of Senators became conscience stricken because they had bitten the political hand which had been feeding them for lo, these many years, and a hasty retreat was executed. A set of compromise amend-ments was offered and adopted, leaving the form but changing the substance, so that the bill of rights was made lifeless. The body was there but the soul was gone. Senator Kennedy gleefully admitted that the union bosses had prepared the tricky wording in these amendments.

Two years of hearings, and thousands of pages of testimony from the Labor Rackets Committee, were gone but not forgotten by the American people. The labor lords had permitted in this bill only as much as they thought necessary to satisfy an outraged public that had witnessed on TV and in the press the hearings of the McClellan committee, exposing as they did the corruption, the arrogance, the racketeering, and the conspiracy of the international labor bosses, many with long criminal records including arson and murder, to control this great Republic by force and violence.

After this stunning retreat, the brave Senators passed the bill by a vote of 90 to 1, even though it had more holes in it that a fresh swiss cheese. Senator Barry Goldwarer, of Arizona, was the lone member to vote "No." President Eisenhower congratulated the Senator on his vote, and said that if he were a Senator he would also have voted "No."

President Eisenhower said in his message to Congress, and has since affirmed, that no labor reform bill is acceptable which does not prohibit blackmail picketing, eliminate secondary boycotts, grant State court jurisdiction in cases where the National Labor Relations Board refuses to assume jurisdiction, and which does not require the smaller unions, which constitute 60 percent of all labor union membership, to report on their welfare funds. To this should be added, so far as I'm concerned, "featherbedding," as about 20 percent of the selling price of a home is made up of "featherbedding."

As an example of blackmail picketing, I have on my desk a letter from local 710 of the Teamsters Nnion addressed to a large trucking firm in Indiana which reads in part as follows: "Local 710, IBT, has decided to embark upon a campaign to organize your office and clerical employees. To induce your employees to join this union, we shall begin to picket your establishment on or about the 11th of May 1959. \*\*\* \* Local 710 does not represent a majority of your employees. \* \* \* The purpose of our picketing is solely to call to the attention of union members and supporters of organized labor that your office and clerical employees are not members of local 710." The next move would be a secondary boycott and "hot cargo." Any one of these procedures, and surely the combination of all three, has the power to destroy any American business which refuses to pay tribute to the international union.

People were astounded at the arrogance of Jimmy Hoffa in stating that he would call a nationwide strike if Congress dared to enact labor legislation, but most of these same astounded people prance down to the polls and vote for the puppets of Jimmy Hoffa.

Citizens are shocked to witness the spectacle of Harry Bridges hiding behind the fifth amendment on questions concerning his Communist activities, and in the next breath declaring that he would call a work stoppage if this country dared to oppose Red China. Again I say, many of these same Americans hurry to the polls to vote for his puppets, just because they have the designation "Democrat" after their names. This is truly split-level logic.

# The Late Right Reverend Monsignor John L. McNulty

EXTENSION OF REMARKS

# HON. HUGH J. ADDONIZIO

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 2, 1959

Mr. ADDONIZIO. Mr. Speaker, the death of the Right Reverend Monsignor John L. McNulty, president of Seton Hall University, South Orange, N.J., on May 27, has taken from our midst one of the truly outstanding churchmen and educators of our times. The tremendous growth of the university during the 10 years of his presidency is eloquent testimony to his brilliant leadership and capacity. He rendered remarkable service to the cause of education during a most challenging period, and a foremost development was the establishment of the college of medicine and dentistry. college, the first in the State, will always be a monument to his memory.

Monsignor McNulty combined with his intellectual attainments and administrative ability, a great love and compassion towards the poor and unfortunate. The cause of civil rights was very dear to him, and his valiant and untiring efforts in this field were most fruitful.

Like all who had the privilege of his friendship, I shall sorely miss Monsignor McNulty. He was a wise and indefatigable servant of humanity and his loss is deeply felt by his fellow citizens of all races, creeds and color.

I should like to insert at this point the following editorial tribute from the Newark Evening News and the Newark Star Ledger of May 28:

[From the Newark Evening News, May 28, 1959]

#### MONSIGNOR MCNULTY

Msgr. John L. McNulty was president of one of the East's larger universities, yet no one in need of help ever knocked at his door in vain. He gave unsparingly of himself to distressed neighbor and to charitable, civic and cultural causes alike.

Under his 10-year administration Seton Hall grew rich in prestige, in usefulness, in size and scope. He leaves many monuments to a dedicated life—the university's medical and dental college, its law school and the 8 million in new buildings that grace the campus in South Orange.

Yet as enduring as any of these is the heritage of good works, not of brick and stone, but of the spirit, that Monsignor McNulty left to countless friends and his community.

He was an implacable foe of intolerance, which he fought not with words, but with deeds. A man of humility, he was warm, sympathetic and sincere. And above all, Monsignor McNulty was a man of profound devotion, imbued with limitless faith in God, his church and his fellow man.

[From the Newark Star-Ledger, May 28, 1959]

## A DEEPLY FELT LOSS

New Jersey will deeply feel the loss of Msgr. John L. McNulty, president of Seton Hall and one of the most respected and loved leaders in religion and education in the State.

Above all, Monsignor McNulty was a great humanitarian. His door was always open to all—no matter how high or how low their station in life.

He was very effective in community relations. His tenacity and drive knew no bounds in fighting for causes which he knew to be just and deserving. Above all, he labored untiringly so that students of all races and creeds would have a more equal opportunity for a higher education. That is why he was so interested in expanding the State's scholarship program. He worked unceasingly for this program—a program which finally was approved less than 2 days before his untimely death.

As head of Seton Hall, he carried the university through one of its periods of greatest expansion. Once a small suburban college, Seton Hall today is one of the great universities of the country. To Monsignor McNulty goes much of the credit for its outstanding record.

Although burdened with heavy responsibilities, he still found time for innumerable charities, philanthropy and good works of many kinds.

He leaves behind a world that is richer because of the 60 short years he spent with us. the Mails

EXTENSION OF REMARKS OF

# HON. RICHARD H. POFF

OF VIRGINIA

IN THE HOUSE OF REPRESENTATIVES Tuesday, June 2, 1959

Mr. POFF. Mr. Speaker, I have today introduced in the House of Representatives a bill designed to give the Post Office Department a new weapon in its war against the flow of obscene and fraudulent material in the U.S. mails.

The bill complements H.R. 1877, which I introduced on January 9, 1959, and which was referred to the Committee on the Judiciary. H.R. 1877 deals with the criminal provisions of the United States Code-specifically, with section 1461 of title 18.

The bill I have introduced today deals with the administrative aspects of the problem. Specifically, it provides:

That there shall be in the Post Office Department a Judicial Officer, who shall be appointed by the Postmaster General, who shall perform such quasi-judicial duties as the Postmaster General may designate. This officer shall be the agency for the purposes of the requirements of the Administrative Procedure Act (5 U.S.C. sec. 1001 et seq.).

Mr. Speaker, Congress must at this session legislate to reduce the flow of obscenity in the mails. I have studied the problem in detail. I have conferred with members of the Committee on Post Office and Civil Service, with the Postmaster General, the Honorable Arthur E. Summerfield, with the General Counsel of the Post Office Department, the Honorable Herbert B. Warburton, and

with lawyers on Mr. Warburton's staff. On May 18, 1959, I appeared before the Subcommittee on Postal Operations of the Committee on Post Office and Civil Service, which was holding hearings on the general subject of obscene literature in the mails. At that time I expressed some of my thoughts concerning the need for amending the Criminal Code as proposed in my bill, H.R. 1877, and I also discussed the possibility of a uniform antiobscenity statute to be adopted by individual States and localities along the lines of the Uniform Negotiable Instruments Act, the Uniform Reciprocal Enforcement of Support Act, and others.

The bill I have this day introduced attacks the problem from another approach. At first brush, it might appear the bill had nothing to do with the fight against obscenity. The fact of the mat-ter is that the bill is designed to aid the Post Office Department in a very practical way, and perhaps only those who are familiar with some of the administrative law problems confronting the Post Office Department will appreciate the full significance of the bill.

What does my bill do?

It establishes in the Post Office Department as a matter of statute a position which already exists as a matter of

A New Weapon To Combat Obscenity in administrative decree, viz, judicial officer for the Post Office Department. The judicial officer renders the final agency decision on all obscenity and fraud matters for the Post Office Department. He is the alter ego of the Postmaster General in that respect. He is, by necessity, experienced in the legal and practical problems of curbing obscenity and fraud in the mails. He is an independent officer of the Post Office Department in the sense that he is not responsible to the General Counsel, to the inspectors, or to any person in the Post Office Department except the Postmaster General himself. Normally he renders his decisions as to whether a mailing is obscene or fraudulent on appeal by either the complainant-who is the General Counsel of the Post Office Department-or the

However, the Post Office Department has only two hearing examiners, and it is not likely that in the foreseeable future it will have any more hearing examiners. Therefore, as a matter of economy and practicality, inasmuch as these hearings are held all over the country, it is sometimes advisable to have the judicial officer preside at the reception of evidencethat is to say, at the trial-and render one decision which is both the trial decision and the administrative appellate decision.

More important, however, is the fact that sometimes it is impossible for the General Counsel of the Post Office Department to seek successfully an interim impounding order; or, as often happens, after the General Counsel once obtains the order, a purveyor of obscenity goes to court and gets the order dissolved or restrained. In such cases, it is some-times advantageous for the General Counsel to be able to move the judicial officer to hear the case and render the final agency decision all in one proceeding, thereby avoding a long delay, during which the purveyor of obscenity is successfully distributing his pornographic poison to the homes of America. This procedure for bypassing the hearing examiners has in the past been utilized selectively by the Post Office Department. However, I believe it is a weapon that the Post Office Department should have and employ as a matter of statute. After all, if a purveyor can make all his profits during the pendency of the administrative proceeding, what good is the administrative proceeding?

The rules of procedure for administrative hearings in the Post Office Department already provide that the judicial officer has this authority. However, a Federal district court in New York City, in the case of Borg-Johnson against Christenberry, held that the judicial officer, not being statutory and not being a regular hearing examiner within the purview of section 11 of the Administrative Procedure Act, could not be permitted to preside at the reception of evidence.

Thus, my bill is simply designed to overcome the effect of the Borg-Johnson decision, and to reestablish the authority of the judicial officer as the Postmaster General had established it by the regula-

tions published in the Federal Register prior to this court decision in New York City.

The need for these procedures was mentioned by the General Counsel of the Post Office Department in his April 23, 1959, statement. Accordingly, I feel confident that my bill will receive the complete endorsement of the Post Office Department.

## A Real Service Project

EXTENSION OF REMARKS OF

# HON. JAMES E. VAN ZANDT

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES Tuesday, June 2, 1959

Mr. VAN ZANDT. Mr. Speaker, my recent experience with a real service project has impressed me to the extent that I feel compelled to speak about it. Distressed because of having lost my set of keys for my automobile, house, office, safety deposit box, and so forth, I was about to undergo the rather bothersome task of getting them all replaced, if possible. Then I received a package from the Identotag Department of the Disabled American Veterans, 5555 Ridge Avenue, Cincinnati, Ohio, containing my set of lost keys. A brief letter indicated that someone, having found them, had dropped them into a mail box, whereupon, because of my miniature auto license tag being attached, the Post Office Department delivered them to the DAV. Its Identotag Department thereby ascertained my name and address; hence their speedy trip back to me.

I have been receiving such an Identotag each year for many years, and had faithfully responded with my successive dollar donations. It had not occurred to me that such Identotags were any more than a clever attention-getter to arouse the generosity of the recipient to help the DAV to maintain its nationwide personalized rehabilitation services for discouraged disabled veterans, their dependents and their survivors. This much needed DAV rehabilitation service, extended each year to scores of thousands, is of great humanitarian value to those directly affected, which also converts them into assets for their respective communities.

This personal experience aroused my curiosity to try to find out some pertinent facts about this DAV Identotag project. As the result of my inquiries I have come to the personal conclusion that it is a real service project, in three important ways to, first, automobile owners, second, those employed thereby, and third, those distressed disabled defenders of our country whom the DAV is thereby enabled to help with their multifarious

As to automobile owners, since 1942, some 1,400,000 sets of lost keys have been returned to them, because of attached Idento-Tags, at an extra cost to the DAV. on the average, of more than \$1 for each set returned. Incidentally, without any effort whatsover by the DAV first to find out whether the owners had previously sent in donations for their Idento-Tags. it was very surprising-and almost disillusioning as to the gratitude of some people-to learn that only about 21 percent of those persons to whom sets of lost keys have been returned have responded with any donations to at least reimburse the DAV for its extra expenses thereby incurred, Moreover, only about an additional 8 percent sent back "thank you" letters, with no accompanying donations. More than 70 percent failed to even express any appreciation. Every such return of a set of lost keys, it would seem, ought to result in a real generous donation, for the services received from this service-giving organization, the DAV.

It was even more surprising to learn that only about 15 percent of those who received Idento-Tags respond with donations. Fortunately, those who do so respond, with donations in many various amounts, have done so with such average liberalness as to have enabled the DAV to pay for: First, the costs of the carefully compiled lists of auto owners, their addresses and their auto license numbers, the Idento-Tags material, and incidental equipment; second, the salaries of its Idento-Tags employees, and third, the expenditures involved in maintaining some 140 full-time accredited trained national service officers, and their secretaries, in all of the 63 regional offices, and three district offices, and the central office of the U.S. Veterans' Administration where they have ready access to the official claim folders of all VA claimants.

Another eye-opening bit of information has been received as to "those employed thereby." The DAV policy is to extend preference of employment opportunity to its own members-all of whom, of course, are handicapped war veterans—its DAV Auxiliary members, the dependents and survivors of disabled veterans, and to other handicapped Americans. Among the 442 persons employed at the DAV national headquarters, according to a very recent compi-lation, 329, or 74.4 percent, are either DAV or DAV Auxiliary members. Moreover, most of the 113 with no veteran status are severely handicapped em-

This exemplary record of useful employment of handicapped Americans ought to be regarded as a vocational rehabilitation project in itself. Their salaries, in fairness, ought not to be charged up as a part of its fund raising expense. although that's the classification of any auditor. If such salaries were not charged up as an expense of the project, then the fund raising percentage cost would naturally be at a much lower fig-

Even more important, if a higher percentage of the Identotag recipients, and of owners of returned lost keys, would respond with substantial donations. then the percentage figure as to its fund raising costs would go drastically down, and the percentage of its net income would be proportionately higher. Such

sorely needed additional net income would maintain its national service officer setup on a more adequate basis and possibly enable it to put into effect its long cherished objective—to maintain one or more full-time national service representatives in each of the 173 hospitals operated by the U.S. Veterans' Administration, where they could accomplish so much for so many disheartened disabled veterans.

Detailed monthly service reports, required to be sent in to the DAV national director of claims, located at 1701 18th Street NW., Washington, D.C., by all of the DAV's some 140 national service officers, reveal that, during a recent 10year period, they had reviewed 3,453,604 claim folders, made 1,382,863 appearances before VA claims and rating boards, obtained 537,367 favorable awards, including 99,054 disability service connections, and so forth, thus each year bringing additional thousands of dollars of governmental benefits into every community throughout the Nation.

If each auto owner were to go to the nearest VA regional office, and there contact one of the DAV's expert special advocates, who advise and assist less well informed handicapped war veterans, then I feel sure that thereafter every such Identotag recipient would respond generously, when he receives an Identotag or the return of his lost keysknowing that his generosity will thereby help the DAV to obtain justifiable disability compensation, medical treatment, physical and vocational rehabilitation for distressed disabled war veteranswho deserve the opportunity to surmount their service-incurred handicaps, in order to be enabled to live in our American

Service to, for and by America's disabled defenders is the one-purpose program of the DAV-as its best contribution to them, to all of their communities and to America. The DAV's unique Identotag project combining a real service for automobile owners, handicapped DAV employees and to all DAV serviced claimants-deserves the enthusiastic and generous support of all Americans.

Anniversary of the Italian Republic

EXTENSION OF REMARKS OF

# HON. EMILIO Q. DADDARIO

/ OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES Tuesday, June 2, 1959

Mr. DADDARIO. Mr. Speaker, June 2 marks another anniversary in the brief but determined recovery of Italy since World War II. It was on this date in 1946 that the Italian people voted in favor of a republic and King Humbert II went into exile.

The conditions in which the Italian Republic took root were not auspicious. There was dissension among the peoples of Italy as a result of the war. Some hoped ardently for a full restoration of

the monarchy. Others wanted a more progressive democratic constitution than they seemed to have been promised. And the Communists, cynically hoping to deliver Italy into the hands of a foreign power, were hard at work trying to frustrate the workings of any government.

Italy had many natural difficulties to overcome. The residue of the war, the damaged countryside, was a major problem. The restoration of rail lines, public works. agricultural production, all loomed large. In addition, there were the natural problems of Italy with the great need to overcome economic depression and poverty.

The Italian Republic, in this less than encouraging position, faced up to the challenge. It set to work to secure political stability, and has done so. It set to work to rebuild its military strength on a sound base, and is today a valued ally in the North Atlantic Treaty Organization. Recently it was announced that Italy is preparing to establish Jupiter missiles as part of the NATO defenses. Thus, Italy is one of the two countries establishing missile bases on the forward lines of the western defenses.

Italy has also set to work to rebuild enterprise and a sound economy and has put people back to work.

The results have been amazing. In recent years, there has been a sharp rise in industrial activity averaging an annual 8.2 increase from 1954 to 1957. In 1958, although industrial production slowed, a rise in agricultural production stimulated the increase in gross national product to 3.5 percent, keeping it on the upward curve.

With all this, Italy has also taken a position of leadership among the European states. She has been active in the cause of European integration and has announced her willingness to study direct elections to a European Parliamentary Assembly. She upholds the peaceful resolution of international disputes in the United Nations.

She has been a friendly host to millions of Americans who have gone to visit her as tourists and it has become one of this Nation's favorite excursion and holiday points. Of some 15 million people who visited Italy last year, almost a million were Americans.

Italy has gone on working to improve her domestic economy and society. She has done much to house her people, combat unemployment, and promote the economic welfare of the south as well as fight other problems.

In education, a 10-year plan has been created to make schooling compulsory for all children through the age of 14. In the past, facilities have unfortunately not been available to do this. Now a special appropriation of \$2 billion has been earmarked over and above ordinary appropriations. It should provide 150,000 new classrooms, and 70,000 more teachers.

So, in this anniversary of the founding of the Italian Republic, it is fitting to stop and salute what has been ac-complished. We should renew our welcome to Italy as a great ally and a progressive nation and wish her well as she continues working to improve herself and the lot of her people.

Monsignor McNulty: A Great and Dedicated Priest, an Eminent Educator, and a Great Leader

EXTENSION OF REMARKS

OF

# HON. PETER W. RODINO, JR.

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 2, 1959

Mr. RODINO. Mr. Speaker, the many moving tributes which appeared in the press of New Jersey in expressing a deep sense of loss over the passing of Msgr. John L. McNulty, president of Seton Hall University, eloquently echo the sentiments of all who knew him.

Regardless of race, color, or creed. men and women learned to admire and revere this man of cloth for his great warmth and his deep sense of humility.

Monsignor McNulty was endowed with a richness of understanding and a penetrating wisdom that come from his never-ending toil in behalf of his fellow man and an inner feel and instinct for nurturing the bords of friendship and brotherhood among men. This humble and gentle priest was truly gifted with a greatness that was both inspired and inspiring. Men of all faiths respected and admired this dedicated servant of God. Civic and community leaders, leaders in the field of education and culture, government officials-all recognized his great contribution to our way of life-and to the preservation of our great institutions both spiritually and materially. And all of us shall ever be grateful

Monsignor McNulty has moved from this passing scene to a greater one—but the monuments, not alone of stone and mortar, but of the spirit, which he has left behind will remain as an everlasting tribute to a great, good, and gentle soul.

Under leave to extend my remarks, Mr. Speaker, I include herein the editorial tributes which appeared in the Newark Evening News and the Newark Star Ledger of May 28, 1959.

[From the Newark Star-Ledger, May 28, 1959]

#### A DEEPLY FELT LOSS

New Jersey will deeply feel the loss of Msgr. John L. McNulty, president of Seton Hall, and one of the most respected and loved leaders in religion and education in the State.

Above all, Monsignor McNulty was a great humanitarian. His door was always open to all—no matter how high or how low their station in life.

He was very effective in community relations. His tenacity and drive knew no bounds in fighting for causes which he knew to be just and deserving. Above all, he labored untiringly so that students of all races and creeds would have a more equal opportunity for a higher education. That is why he was so interested in expanding the State's scholarship program. He worked

unceasingly for this program—a program which finally was approved less than 2 days before his untimely death.

As head of Seton Hall, he carried the university through one of its periods of greatest expansion. Once a small suburban college, Seton Hall today is one of the great universities of the country. To Monsignor McNulty goes much of the credit for its outstanding record.

Although burdened with heavy responsibilities, he still found time for innumerable charities, philanthropy, and good works of

many kinds.

He leaves behind a world that is richer because of the 60 short years he spent with us.

[From the Newark Evening News of May 28, 1959]

#### MONSIGNOR MCNULTY

Msgr. John L. McNulty was president of one of the East's larger universities, yet no one in need of help ever knocked at his door in vain. He gave unsparingly of himself to distressed neighbor and to charitable, civic, and cultural causes aliké.

Under his 10-year administration Seton Hall grew rich in prestige, in usefulness, in size, and scope. He leaves many monuments to a dedicated life—the university's medical and dental college, its law school, and the \$8 million in new buildings that grace the campus in South Orange.

Yet as enduring as any of these is the heritage of good works, not of brick and stone, but of the spirit, that Monsignor Mc-Nulty left to countless friends and his community.

He was an implacable foe of intolerance, which he fought not with words, but with deeds. A man of humility, he was warm, sympathetic and sincere. And above all, Monsignor McNulty was a man of profound devotion, imbued with limitless faith in God, his church, and his fellow man.

## HON, STEVEN B. DEROUNIAN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 2, 1959

Mr. DEROUNIAN. Mr. Speaker, not only Europe, but I and millions of other American citizens wonder, too, what is going on in the Senate. In this regard, I commend Mr. David Lawrence's article which appeared in the New York Herald Tribune today:

STEAUSS CONTROVERSY SAID TO MAKE EUROPE WONDER

#### (By David Lawrence)

London, June 1.—The spectacle which the U.S. Senate is making of itself nowadays is causing a good deal of comment in Europe. It is incredible to most Europeans that a President is evidently not allowed to select his own Cabinet officers without getting the consent of the opposition political party.

consent of the opposition political party.

Newspaper accounts telling how the Senate Foreign Relations Committee has undertaken to pass on the qualifications of ambassadors tend to reenforce also the criticisms which have long been made of the American form of government as lacking a sense of responsibility because it permits divided authority.

It was more than 100 years ago that Lord Macauley wrote his famous treatise on the American constitutional system and said it was "all sail and no anchor." Even allowing for the differences between European and American concepts, the fact remains that the prestige of the United States suffers when such picayunish matters as the Senate Foreign Relations Committee has been dealing with lately in passing on ambaseadorial appointments are reported in the press of Europe.

#### STRAUSS ROW STIRS COMMENT

There is more than a passing interest, moreover, in the case of Lewis Strauss, whose appointment as Secretary of Commerce has stirred up such a controversy in the U.S. Senate. Over here, where they heard tales of witch hunting and persecution under the era of so-called McCarthyism, newspapermen on European papers are asking what is back of the apparent vendetta launched against Mr. Strauss. In Europe they know him as the man who helped to prevent Communists from getting atomic secrets and as an official who has had the most cordial relations with Western governments on atomic matters. It is asked whether the pendulum has swing the other way and if the anti-Communists now are the ones being persecuted.

When some of the newsmen who inquire about the issues involved in the Strauss case are told that much of the opposition comes from Senators who favor Government ownership of electric-power projects, and that the present Secretary of Commerce has been opposed to their views, the question then raised is whether the Democratic Party is America's Socialist Party, and whether this is going to be the issue in the 1960 campaign.

#### OPPENHEIMER CASE REVIVED

There is a revival naturally of the discussion about the celebrated case of J. Robert Oppenheimer, noted scientist, who was denied security clearance while Mr. Strauss was Chairman of the Atomic Energy Commission. But it was an impartial board which revealed that Dr. Oppenheimer had contacts with Communists while he was at the head of a secret laboratory project of the U.S. Government and that, when intelligence officers questioned him about these contacts, he misled them for a long while and then, 3 years afterwards, confessed that he had lied to the American intelligence officers. in the final analysis, matters involving Dr. Oppenheimer's judgment and discretion which led to his being barred, rather than any question about his loyalty. But to the European it looks like Mr. Strauss is about to be punished by the adverse votes of many Democratic Senators for the performance of his duty as a public official.

The case has come to be talked about abroad as one that is not likely to end if the Strauss nomination is rejected. For, despite the statements of various Senators who say they are giving objective consideration to it, the fact remains that rarely ever is a Cabinet officer rejected by the Senate and almost never has there been an instance where he was rejected ostensibly for his views on public policy.

## RESPONSIBILITY FOR CONDUCT

The controversy establishes an interesting precedent in that it helps to support the case for some form of parliamentary government which would provide America with a way to fix directly on one or the other of the major political parties the responsibility for the conduct of both the executive and legislative branches of the Government at the same time.

The handling of the Strauss appointment is equivalent to an "impeachment" of the Secretary of Commerce, who took the oath of office 7 months ago and has been perform-

ing the duties of his office satisfactorily ever since. But the adverse vote of Senators now means that these Senators would remove him from office not for what he has done at his post but for views he held prior to entering the Cabinet.

#### SAYS APPROACH IS UNFAIR

This is an obviously unfair approach. Conceivably it could, in time of war, take away from the commander-in-chief the power to promote a worthy military officer to a higher command post. It certainly is a means of frustrating executive operations by interfering with the right of a President to select his own advisers and aids.

It's small wonder that so many Europeans who study the abuses permitted under our constitutional system think that America

hasn't quite matured.

## The Church Speaks Out in Nicaragua

EXTENSION OF REMARKS

# HON. CHARLES O. PORTER

OF OREGON

IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 2, 1959

Mr. PORTER. Mr. Speaker, under leave to extend my remarks in the Record, I include the following articles emanating from Nicaragua, which appeared in recent issues of Diario Las Americas, a Spanish language daily published in Miami, the first from the issue of May 27, the second from the issue of May 29:

BISHOP ASKS THE LORD TO SOLVE THE SAD SITUATION OF NICARAGUA

Matagalpa, Nicaragua, May 26.—"It is indeed sad to see how some rulers get carried away by egotism, how, in order to attend to their personal interests, they ignore the people, the people who are hungry, the people whose worldly goods are taken away from them, the people who clamor to be heard: 'No more corruption,' "said the Iliustrious and Very Reverend Monsignor Dr. Octavio Jose Calderon y Padilla, Bishop of Matagalpa and a figure of great moral and intellectual standing among Nicaraguan citizenry, speaking in the Matagalpa Cathedral.

The Prelate Calderon y Padilla had convoked his parishioners to a special mass at 4:30 in the afternoon in the cathedral, for the purpose of "asking wholeheartedly, with the weapons of prayer, of our Lord Jesus, that there be peace in Nicaragua, as the fruit of a peaceful and decorous arrangement, a peace which is the fruit of justice and order."

"We are gathered here," Monsignor Calderon and Padilla said, "as good Nicaraguans who love our Fatherland, to ask from the Highest that peace reign over the land, and you, as good Christians, must endeavor for the welfare of Nicaragua, because he who is indifferent to her fate is not a good Christian; he who selfishly clings to his own interests and does not seek the Fatherland's welfare, is not a good Christian."

"The purpose of this mass which you have just heard is to ask our Lord Jesus that the minds of those at the top and those at the bottom be enlightened, so that the sad situation through which Nicaragua traverses may be solved without need for the prime of youth to give of their blood; so that we may live in peace, but not in the peace of a sepulchre, but in peace based upon justice and law; so that we may all live free from fear and with our livelihoods assured. We

want peace in the form of justice, not an imposed peace. But to crystallize this ideal, it is necessary that you ask the Lord that everything be solved without bloodshed. With the weapons of prayer we will arrive at a day when we Nicaraguans will live in peace and with order."

"When I see a serviceman with his golden insignias, I think to myself: That man is responsible for the national order, quiet, for peace. He belongs to an institution useful to the citizenry. But when that serviceman serves only certain interests, when he exists at the expense of vices, he is a traitor to his mission, he dishonors the military uniform. It is not redundant to emphasize that there are many good servicemen, who are assured of the gratitude of honest Nicaraguan citizens."

"In the case of the State, subordinates, that is to say, the people in general must be served, and those who are in power are the servants. It is indeed sad to see how some rulers are carried away by egotism, how, in order to attend to their personal interests, they ignore the people, the people who are hungry, the people whose worldly goods are taken away from them, the people who clamor to be heard: 'No more corruption.' My beloved brothers, all these eylls must end, they must be resolved, but not with bloodshed. Pacific means have not yet been exhausted. As I have said, we have the best weapons, the weapons of prayer and we will not cease to knock at Heaven's door until our desires have come true. Let us pray, then, that God our Lord, may enlighten the minds of those above and those below so that all aberrations be deposed; so that the sad situation of Nicaragua may be solved through peace based upon justice."

# FATHER ALMENDARES DEFENDS CIVIC ATTITUDE OF NICARAGUAN CLERGY

Managua, May 28.—From the pulpit of his church in Diriamba Parjah, Father Luis Antonio Almendares C. gave his support to the attitude assumed by the Iliustrious Bishop of Matagalpa, Monsignor Dr. Octavio Jose Calderon y Padilla who recently, at a special mass to which he had convoked his parishioners with patriotic intentions, asked them to pray to God "to solve the sad situation of Nicaragua."

Referring to certain accusations made by a labor leader against the President of the Republic, Colonel and Engineer Luis Somoza Debayle, to the effect that his government was a three-legged stool, two legs being the army and the clergy, Father Almendares said:

"The three legs on which the present government of Nicaragua rests are not exactly as described by labor leader Roberto Gonzalez. A correction should be made because the clergy in general, the clergyman in a black cassock, has nothing to do with that; and if there is amongst us a vilified priest, one swallow does not make a summer."

Referring to the fact that in certain government sectors supporting the regime of the brothers Luis and Anastasio Somoza, insinuations have been made that the attitude of the opposition would result in violence and that both government supporters and the opposition might end up 'against the wall,' Father Luis Almendares said: "The story that I might end up against the wall is a tale of the road. If there is a Luis who is in danger, it is not I," and he added that he was "without care, walk alone, without bodyguards, anywhere, with only the protection of God."

Father Almendares stated that he gave his "humble moral support" to the sermon of Monsignor Calderon y Padilla in the mass he celebrated a few days ago in the Cathedral of Matagalpa. The attitude of Bishop Calderon and Father Almendares has been the subject of great civic discussion throughout the country.

## The Intellectual Frontier

EXTENSION OF REMARKS

# HON. ROBERT W. LEVERING

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 2, 1959

Mr. LEVERING. Mr. Speaker, in the words of Tom Paine, "These are times that try men's souls" and if we are to survive as a free people, we must with ever increasing vigor, pursue the de-velopment of our intellectual resources. The prominent position of Soviet Russia in the world today reflects significantly her recognition of a modern educational system. In the U.S.S.R. the teacher is regarded on a high level socially and economically, on a par with other professional people. The system has paid and continues to pay dividends. Under leave to extend my remarks in the Appendix in the RECORD, I should like to include a cogent editorial from the May 31, 1959, edition of the Columbus Citizen which points up the vital necessity of this country's providing the means of developing every good mind in this land as the sine qua non to ultimate survival against the threat of the times. The editorial follows:

## THE INTELLECTUAL FRONTIER

The ability of the United States to survive in an increasingly complex, competitive, and dangerous world depends on the quality of education made available for young people and for adults.

Few would deny grave shortcomings in our present educational system. And in the long run of history they may be a greater threat to the United States than the missile gap.

gap.
"The race which does no value trained intelligence is doomed"—so wrote the great philosopher-mathematician, Alfred North Whitehead, back in 1916. The President's special panel on scientific and engineering education wisely chose this quotation as the basic thesis of a report on education which warns:

"Today the frontier is intellectual; the scholar, the research worker, the scientists, the engineer, the teacher are the pioneers \* \* \* our intellectual resources will be adequate to meet our needs only if all the brain-power of our population is fully developed and utilized."

The distinguished scientists and educators who wrote the report leave no doubt that in their opinion American brainpower is not being either fully developed or utilized, and that much of the fault lies in an educational system which is inadequate both in scope and quality.

The report is a mine of ideas for men and women interested in bringing about the revolution needed in American education—changes in curricula, attitudes toward teachers and the intellectual, a whole new approach to science and technology, and the need for educating adults long out of school to an understanding of the modern world.

Not the least of the problems in meeting the challenge of modern times in education, according to the President's special panel, is financial—more particularly the need to make the American people generally aware that they must spend a lot more money on education if they want the quality necessary for survival.

"Doubling our current annual investment in education (now about \$15 billion a year) is probably a minimal rather than an extravagant goal," the panel concluded.

The ability of this country to double its expenditures for education is not in doubt. To double the quality of our education is more difficult—although the goals outlined in this report are in the right direction of the so-called "educationists" can be kept at

## Public Works Appropriation Bill

EXTENSION OF REMARKS

# HON. MERWIN COAD

OF IOWA

IN THE HOUSE OF REPRESENTATIVES Thursday, May 28, 1959

Mr. COAD. Mr. Speaker, the public works appropriation bill is scheduled for consideration by the House on Friday of this week.

I wish to commend Chairman Cannon and the members of his subcommittee for the very thorough consideration they have given to each of the items in that bill. I wish to urge my colleagues to vote for the bill.

There is one item in the bill which is of the greatest importance to my district and to all of western Iowa.

The item to which I refer is an appropriation to enable the Bureau of Reclamation to commence construction of an electric transmission line from Sioux City, Iowa, to Spencer, Iowa, and from Sioux City to Creston, Iowa.

Many of the REA cooperatives and municipalities have been unable to receive allocations of low cost electric power from the Missouri River Dams because there has been no transmission system available to deliver the power to them. Such a transmission system has been provided in the other Missouri Basin States. In anticipation of the new projects on the Missouri commencing togenerate power, new allocations of that power are shortly to be announced. The line provided for in the public works appropriation bill will enable that power to be delivered to the places where the cooperatives and municipalities need it.

Studies show that Bureau power results in savings to the cooperatives and municipalities to be served by the proposed line of more than two and onequarter millions of dollars per year. It should be emphasized that the construction of this line will not cost taxpayers one penny. The entire cost of the line, together with interest, will be amortized over a period of 50 years by the cooperatives and municipalities through the rates they pay the Bureau of Reclamation for power. After pay-ing all costs, including replacement costs, the Government will make a profit of more than \$12,000 per year.

When the original allocations of power were made several years ago, many of our cooperatives and municipalities were told they could not receive an allocation because no transmission was available. The power companies in the area made no offer to provide such transmission and those cooperatives and municipalities have had to do without the benefits of Missouri River power. Now, with new allocations about to become available, they have come to Congress asking for an appropriation to enable the Bureau to build the necessary transmission system so that they might share in the benefits of that power. What do the power companies do now? They rush in here to oppose the line and in an attempt to block the line offer to wheel the power to the cooperatives and municipalities over the company's lines. This would be fine if their proposal would fill the needs of the preference customers. Unfortunately, it just would not do the job.

The company's lines over which they propose to wheel do not go to the places where the power is needed by the co-They operatives and municipalities. would be forced to expend large sums of money to connect to the company's systems. The proposed Bureau lines would take the power to where it is needed.

The company's wheeling arrangement would cost the cooperatives and municipalities more than \$600,000 per year in excess of their costs if the Bureau line is built. This is a staggering amount to these small consumer owned organizations, and would have a most detrimental effect on the farm economy of Iowa.

There is no assurance excess capacity will be available in the company's lines sufficient to wheel the Bureau power in the future. Also there is no firm commitment to wheel dump and secondary

The following article appearing in the Iowa Farm Bureau Spokesman on Saturday, May 16, 1959, sums up the benefits to be deprived by the construction of these lines:

URGE CONSTRUCTION OF POWERLINES FROM MISSOURI DAMS

The Iowa Farm Bureau Federation has recommended that Federal funds be used to help construct transmission lines to bring electric power into Iowa from Bureau of Reclamation dams on the Missouri River.

Farm Bureau approval of the new project came following a study by the IFBF board of directors which indicated that further delays would be costly to farmers and private funds from farmer-owned rural electric cooperatives and municipal power companies in the western one-third of Iowa were not immediately available.

In making its recommendation, the board of directors pointed out that allocation of power for this area is already available from the Department of the Interior.

The proposed transmission lines would carry power from the Bureau of Reclamation facilities near Sioux City to the Corn Belt Power Cooperative's station near Spencer. One other line would carry power to the Southwestern Federated Power Cooperative's station near Creston.

It is estimated the new transmission lines would serve 60,000 people reached by municipals and 299,000 people reached by rural electric cooperatives.

#### Poison in Your Water-No. \$4

EXTENSION OF REMARKS .

# HON. JOHN D. DINGELL

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES Tuesday, June 2, 1959

Mr. DINGELL. Mr. Speaker, pursuant to permission granted I am inserting

into the Appendix of the Congressional RECORD an article appearing in the New York Times of October 3, 1958, entitled "Water Pollution Called U.S. Peril":

[From the New York Times, Oct. 3, 1958] WATER POLLUTION CALLED U.S. PERIL—FEDERAL AID SEES INCREASE LIKELY IN TALK TO PARLEY ON DELAWARE RIVER BASIN

(By Charles G. Bennett)

ATLANTIC CITY, N.J.—The likely increase in the pollution of the Nation's water over the next 25 to 50 years is a cause for concern, a Federal Public Health official warned here today.

A growing hazard was seen to be a tremendous rise in the discharge into the Nation's streams of persistent, little-under-stood contaminants that defy normal sewage treatment processes.

Sylvan C. Martin, regional director of the Public Health Service, discussed the water-pollution situation at the opening session of a 2-day conference of the Interstate Commission on the Delaware River Basin (Incodel).

The conference is being attended by about 200 persons at the Claridge Hotel. New York City derives part of its water supply from tributaries of the Delaware River.

Incodel officers reported that, largely because of effective pollution-control measures, the quality of water in the Delaware River and its tributaries is better now than at any time in the last 50 years.

Mr. Martin foresaw in the next 25 to 50 years vast increases in water use and the disposal into streams of organic and industrial wastes as the Nation's population and production grow.

He called for closing the gaps of scien-tific knowledge on the behavior of the substances that defy sewage treatment.

## Mr. Dulles Was a Man of Many Facets

EXTENSION OF REMARKS OF

## HON. CORNELIUS E. GALLAGHER

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES Tuesday, May 5, 1959

GALLAGHER. Mr. Speaker, Mr. under leave to extend my remarks in the RECORD, I include the following editorial which appeared in the May 26 issue of the Newark Evening News. It was written by a very able newspaper correspondent, Art Sylvester:

Mr. Dulles Was a Man of Many Facets-COULD SPEAK AS LAWYER, DIPLOMAT, OR CHURCHMAN; OFTEN AS ALL THREE

(By Arthur Sylvester)

GENEVA .- A man of stature is like a tree, its color changing as you view it in different lights and from different angles. Such a man was John Foster Dulles.

As president of the Federal Churches of Christ of America he could be unforgiving of a weekly magazine reporter who described him with a glass of liquor in his hand at a party in London given by his good friend, the late Senator Arthur H. Vandenberg, during the first meeting of the United Nations Security Council in early 1946.

Why? Because, as Mr. Dulles told the of-fender, the president of that organization

does not drink.

But as Secretary of State he could sit down before dinner with a group of Wash-ington newsmen on an "off the record" basis and enjoy with obvious relish a couple of bourbon old-fashioneds. One will always see him stirring the ice with his index finger, engaging in what was for him light conversation.

#### THREE PERSONALITIES

He could be as lucid as spring water on these occasions and he could also be as muddy as a brook after rain. One never knew whether he was concealing his true thoughts or trying them out on his dinner hosts for size.

Were you listening to the successful corporation lawyer, the cagey diplomat, the flexible Presbyterian, or, as seemed more

likely, all three?

As Secretary of State, Mr. Dulles seemed to be able to change policy direction as casually as if he were turning a corner in his car. It was in February that he talked at a press conference of the reunification of Germany, omitting the usual qualifying phrase "by free elections."

The matter-of-fact way he dropped reference to free elections signaled a major shift

in U.S. policy.

It was the same in 1955 when Mr. Dulles signaled another major shift in American policy. He and President Elsenhower had insisted for months that before meeting the Russians at the summit a foreign ministers' meeting should prepare the way. But Sir Anthony Eden, then Prime Minister, faced an election in May and believed he needed announcement of a summit meeting to insure victory for the Conservative Party.

Sir Anthony got it when Mr. Dulles casually told a group of American correspondents, covering the admission of West Germany into NATO in Paris that April, there was no reason a summit session couldn't precede a ministers' meeting. What did this mean?

ministers' meeting. What did this mean?
"How dumb can you be?" was the scornful reply of an Assistant Secretary. "Eden thinks he needs a summit meeting to win the election and we are glving it to him because we would rather see the Conservatives in power than the Labor Party."

Assistant Secretaries of State and lesser functionaries often indulged themselves in the luxury of hurt feelings because Mr. Dulles passed them in the corridor without recognition. He wasn't snubbing them, he was simply lost in his own thoughts. Despite an abruptness he was a considerate man when a situation was brought home to him.

#### CANCELED PLANE TRIP

There was the occasion in 1946 when this correspondent, with the late Bert Andrews of the New York Herald Tribune, who like Carl W. McCardle, formerly of the Philadelphia Bulletin and subsequently an Assistant Secretary of State, was a close friend of Mr. Dulles, flew with him from London to Berlin. Mr. Dulles was then an assistant to former Secretary of State Byrnes and was undertaking a mission to the American military commander.

Flying conditions were bad and on the return 2 days later the plane was forced to land in Paris. The pilot, a major who had survived combat, confided to this correspondent that he wouldn't think of taking the plane back to London under prevailing weather conditions were not VIP's involved.

When this was relayed to Mr. Dulles he immediately canceled the flight and the party proceeded by train and channel boat to Britain.

Mr. Dulles, however, had come away without his passport or identification papers and it fell to this reporter to wangle the U.S. delegate back into England. All went well with a young British customs official until an older superior sensed something was a bit irregular.

## LECTURED MR. DULLES

All in the party, except the Secretary of State-to-be, had gotten safely through the redtape. At that point the old civil servant intervened and read Mr. Dulles a lecture on playing "ducks and drakes" with British regulations. The man whom many thought, not

without reason, overbearing and rigid listened contritely and promised never to do it again.

This complex figure could be both crafty in negotiation and prickly in personal relationships, as straightforward as a Sunday school scholar and as considerate as the best friend. He could be as vain as any successful lawyer and at the same time seek the opinion of men he trusted. At close range he was a complex, difficult, talented, and challenging man.

## The 1960 White House Conference on Children and Youth

EXTENSION OF REMARKS

## HON. WILLIAM S. BROOMFIELD

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 28, 1959

Mr. BROOMFIELD. Mr. Speaker, the White House Conference on Youth and Children next year promises to provide answers to many of the problems which parents face in raising and educating their children. All of us are looking forward to the results of this very important conference.

Recently the Detroit Free Press published a series of articles on the coming conference and the pressures which modern civilization is placing upon our youth. Two of these excellent articles follow:

#### (By Warren H. Stromberg)

Included in the forthcoming 1960 White House Conference on Children and Youth will be a study of the relationship of parents to children.

It is in this area that the trends of the

times show most clearly.

In grandpa's day, when there wasn't room at the big table, a secondary table was set for the children.

Then there came the period when children were the center of all family life.

Now the pendulum has swung toward the middle.

This has brought hope to those who teach family life and serve as counselors for family problems.

They say that a happy medium between the two extremes means growth toward welladjusted family life.

Owen Morgan, who teaches other teachers as head of parent education at Merrill Palmer School. expresses this thought in more technical language.

"Let's call the old system adult-centered and the second system child-centered," he explains. "What we should aim to have is a people-centered family.

"Children should see themselves as having a real place but not to the exclusion of other people's interests. They are participating members rather than the whole kingpin.

"It's important for the husband and wife to find happiness in their life together. The parents have needs just as much as the kids."

He cites the case of the child-centered mother—a role that had its heyday prior to World War II—who "put all her emotional eggs in one basket."

"She was such a devoted mother that when the last of her children moved away she suffered a nervous breakdown," he said. "Her marriage relationship had been completely neglected."

Morgan winces when he thinks of some family homes,

"The members of the family are like segments—and we all tend to do it," he maintains. "Father goes one way, mother another, and the youngsters in still others.

"Daughter wants to ask her mother a question but mother has to go to a club meeting and has time only to say there's

a casserole in the oven.

"Father comes home and he can't hear either. He's wondering how he can get all his papers together to make out his income tax. Sometime during the evening he'll ask his daughter if she wanted more allowance.

"Then the parents are surprised when they find out their child is getting advice from others."

Morgan sees the house as a testing ground as to whether adults and children can achieve a happy medium.

"Adults are naturally orderly. Some people won't let the children in the living room because they're afraid it will be untidy when guests come.

"Kids normally like to mess the place up. If the children find no real place they are

not psychologically at home."

One woman who came to see Morgan felt her wire-husband relationship was slipping. "We even struggle over television," her case study relates.

Dick flatly refuses to let the children watch certain programs, with the result that they are left out of some neighborhood games because they don't know what the other children are talking about.

"You've got to let a child be a product

of his own times.

"Maybe books were important when Dick was small and there wasn't much else except movies, but I don't think books matter so much any more.

"The important thing is to belong to your own group and my kids are going to have that if I have anything to do with it."

Another paragraph gives the answer to some of their problem:

"Dick and I were brought up in good sized cities—his home was Cleveland and mine was Los Angeles—and we loathe suburbs.

"But here we are in a cheap little house surrounded by dozens of other cheap little houses and we're here for one reason—the children."

Early marriage, babysitters, and working mothers are other factors which seem to fit in with the times, according to Morgan.

This is one of six subject areas—current social trends affecting children and youth—selected by a group of educators upon which to build Michigan's report at next year's conference.

Will future trends cause even more misunderstanding? Can a well-adjusted home equip children to take these future trends in stride no matter what they may be?

These are key questions which concern all parents. Part of the answers will be found in future attitudes, in future legislation, in educational molds, in the values to be accepted by and the goals of the rising generation.

#### (By Warren H. Stromberg)

One boy yawned. A little girl fidgeted with her pen. It was almost lunchtime.

But Mrs. Tommie Maddox, the teacher,

But Mrs. Tommie Maddox, the teacher, continued with the math lesson, never losing her poise.

The 35 little heads in seventh grade, Durfee Intermediate School, were turned toward the blackboard. Mrs. Maddox showed how to multiply fractions.

The last few minutes were allocated to seat work. There was now hand raising for assistance.

But both Mrs. Maddox and Miss Edith Edwards, the assistant principal, who was observing, found it difficult to move in narrow aisles between the desks.

Was the classroom-in a building constructed 31 years ago-meant for 35 pupils? Could Mrs. Maddox adequately teach that many at one time?

Overtaxed facilities could be classified as physical handicaps. With the high birth rate since World War II it is a national

It will be high on the list to be considered in the 1960 White House Conference on Children and Youth.

In planning for Michigan's report to the conference many other areas are being examined. Some are not so obvious but equally important.

Miss Edwards, for instance, raises this issue:

"If automation is wiping out so many jobs today, what type of jobs will there be 10 years from now? How should we better prepare the large masses of students—those least likely to be top scholars and scientists?

"They will make good citizens too. But they can't do it alone. We in the schools are concerned about preparing them for the fu-ture. But what future will that be?"

At Durfee, both boys and girls are taught, in addition to academic subjects, household mechanics and foods.

"You might say we don't know whether the man will be called on to cook the supper or fix the plumbing," Miss Edwards said

Health checks, the handling of emotional disturbances at an earlier level and remedial reading are also urgent needs, according to Miss Edwards.

Not only a citywide reading clinic but training in this field for teachers in the secondary schools is necessary to plug an existing gap, Miss Edwards insisted.

In more spacious quarters with excellent lighting, 31 pupils at the Walt Whitman Junior High in Livonia were learning the components and functions of the human eye.

Science and Math Teacher Joseph Mueller-the trend is for more men teachers everywhere-found more than just the three pupils who had seen the eye surgery program on television the night before had questions.

He was taking advantage of spontaneous interest.

An exhibit in the back of the room pertained to the history of fire.

"We're also checking into the Livonia Fire Station, fire hazards and what equipment we have in our own school to put out fires,' Mueller stated.

Pupil-to-teacher ratio at Whitman averages five or six less per class than at Durfee.

"Without good physical environment, problems are added to other problems," 35-yearold William R. McMurtrey, the school's principal, said.

Livonai has also swung back to the selfcontained room principle and away from the platoon system in the teaching of younger children.

At Durfee in the seventh grade there are seven room changes. At Whitman each pupil is in two adjoining rooms 90 percent of the time.

A much higher percentage of the Whit-man pupils go on to high-school graduation and college than at Durfee.

Each school is somewhat typical of the setting in which it is located. Durfee, at 2470 Collingwood, is in the center of Detroit. Livonia, growing rapidly, is representative of suburban areas near Detroit.

But the wonders of suburbia also come to an end.

Fifty percent of the pupils at Whitman are bused in. Most of these pupils lost 2 days of school this winter because of icy pavements.

What is this new bus culture? Is it as much of a waste as father's long automobile trek to work each day?

Bus pupils make it hard to plan after-

school events. McMurtrey conceded that the number of activities between school and home hours was limited. He said more community services are on the way.

Work opportunities for young people in suburban communities also are limited. Then there's the question of values. Upward mobility? Does this mean pressure to keep up with the Joneses?

McMurtrey, too, is troubled over adult oc cupation trends. He foresees a shorter work week. This means more leisure. Pupils early in life have to be taught how to make

leisure hours worthwhile.

The congested city schools have multiple problems. Integration is one. But the spacious suburban schools also face the challenge of new issues equally as difficult.

Some trends such as audiovision techniques are spreading everywhere. tion by television is another. Teacher vistas are expanding-seem to reflect more vision and adaptability.

Parent groups and parent-teacher rela-tionships are encouraged. There's a closer school relationship to the community.

Administration is more deeply concerned with what can be done to meet the changing

There is a growing alertness with respect to education and in other institutions dealing with children.

This gradually will be reduced to concrete ideas in the Michigan report now being readied for the White House Conference. Information already is coming from some

There are 3 million children and youth in Michigan under 20 years of age—an increase of almost 50 percent in the last 10 years.

The birthrate continues high.

These also are physical facts that make Michigan's role in the conference significant.

# Thirteenth Anniversary of the Italian Republic

SPEECH

# HON. PETER W. RODINO, JR.

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 2, 1959

Mr. RODINO. Mr. Speaker, today is the 13th anniversary of the founding of the Italian Republic. It was on June 2, 1946, that Italy began her new life as a modern democratic republic. Anniversaries are days to remember the accomplishments of the past that give us inspiration for the future. The Italian people indeed can be proud of what they have done in these 13 years. There is no need to retell once more the impact of World War II upon the Italian nation. Suffice to say that widespread economic reconstruction was necessary and the foundations of a new political system had to be laid over the ruins of fascism. But beyond this were the personal wounds of more than 20 years of totalitarian dictatorship. These had to be healed with the balm of hope that Italian freedom would not once again be snuffed out.

In 1959, it is clear that Italian democracy is working. The center coalition has a broad basis of popular support and the Italian people have rejected the minor neo-Fascist groups. Although the Communists remain a deterrent to more effective national government, they

stand little chance of coming to power because even though they receive some 22 percent of the popular vote, the other parties have isolated them and rejected all Communist offers to form a coalition.

The Italian Republic has made a frontal attack upon the economic problems facing the country. The 10-year Vanoni plan for national economic growth aims at a 5 percent annual increase in the gross national product by 1964. In order to do this capital investment has been stepped up, the perennial unemployment problem tackled, and foreign trade expanded. Special attention has been given to development of the economically less-well-off parts of the country and in particular, to southern Italy. Progress has been made though much remains to be accomplished. In 1958, Italy had a 4.1 percent real increase in its gross national product and for the second time since the early 1900's Italy was a net exporter of goods and services, by some \$200 million. Investment is now increasing after a setback caused by last year's recession and the first victories have been recorded in the battle against unemployment.

The Italian Republic has also inaugurated a new life for the nation in foreign affairs. Economic and military cooperation are now the watchwords for the day. Italy has joined with the United States and most of the countries of Western Europe for the common defense in the face of the common threat presented by Soviet Russian. Italy has nine divisions in the NATO forces and some of the first NATO intermediate range missiles are to be placed on Italian territory. On the economic front, it is apparent that Italy is linking her economic future to that of the other Western European countries. One of the first examples of this was Italian participation in the Organization for European Economic Cooperation, set up in 1947 for the success of the Marshall plan. Italian cooperation has been continued in such groups as the European Coal and Steel Community, the Common Market, and Euratom. They all give new hope for improvement of the Italian economic future and the future of the whole of Western Europe.

Italy's great political advances which successfully stemmed the tide of communism and brought about this significant economic recovery can be attributed, in the main, to the determination and foresight of one of its ablest leaders, the late Alcide de Gasperi. It was he who set the course and happily his successors followed. And today, un-der the stewardship of Prime Minister Segni and the able Minister of Foreign Affairs, Pella, Italy looks ahead to even greater tomorrows.

It is important on this 13th anniversary of the founding of the Italian Republic to pause and remember how great the progress has been in little more than a decade. This progress also gives assurance to the Italian people and to all the free world that Italy is walking steadily down the road to democracy, economic progress, and international cooperation. Italy, we salute you.

Highest Honor Navy Can Bestow on Civilian

EXTENSION OF REMARKS

# HON. HENRY S. REUSS

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 2, 1959

Mr. REUSS. Mr. Speaker, Erwin C. Uihlein of Milwaukee, has recently received the Navy's Distinguished Public Service Award, highest honor which the Secretary of the Navy can bestow upon a civilian.

Rear Adm. E. P. Forrestal, commandant of the 9th Naval District, in pre-senting the award said it was in "recognition of the service of a great American" who has made "outstanding contributions to the Department of the Navy in public information, morale and welfare."

The Navy's official citation of Mr. Uihlein declared:

As director of the Navy League of Milwaukee and a leading figure in the formation of the Wisconsin State council of the league, Mr. Uihlein has been one of the Navy's strongest supporters in his State.

A member of the naval service in World War I, Mr. Uihlein has since provided innumerable volunteer services to the Navy which have been of great value to its mission and its personnel.

A strong supporter of the recruiting program of the Navy and the Marine Corps and the Reserve components of each, Mr. Uihlein has been equally helpful in his efforts to improve the morale and welfare of naval personnel at Great Lakes training center through his support of the USO program.

In these and other efforts, he has furthered the public awareness of the need for a strong and ready Navy and Marine Corps through the planning and promotion of Navy Day observances, naval air shows and appearances in Wisconsin of the Navy and Marine Corps bands.

Additionally, he has been personally responsible for his company's sponsorship of television productions with Navy back-grounds. In recognition of and appreciation of his valuable services, this award is approved.

During World War I. Mr. Uihlein served as commandant of a naval gun factory at Bedford, Ohio, which produced 3- and 4-inch guns for destroyers and merchants ships. While there he also developed an electric heat treating furnace for gun barrels and armor plate and was granted a patent, under which he gave the Navy a free license to the

Mr. Uihlein's World War I naval career also included a tour of duty as executive officer aboard the U.S.S. Hawk in the rank of lieutenant commander.

He is a member of the U.S. Naval Institute, a past national director of the Navy League, a member of the American Ordnance Association, American Legion, and Veterans of Foreign Wars, and president of Schlitz Brewing Co.

Milwaukee's Erwin C. Uihlein Receives Let's Train Citizens in the "Promise To Pay"

> EXTENSION OF REMARKS OF

## HON. JOHN V. LINDSAY

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 26, 1959

Mr. LINDSAY. Mr. Speaker, I should like to include in the Appendix to the RECORD an article by Allyn W. Schiffer, entitled "Let's Train Citizens in the Promise To Pay." Mr. Schiffer has been active in credit and collection fields for many years and is president of Allyn W. Schiffer, Inc., New York City. I think his comments will be of great interest to my colleagues:

From the University of Minnesota Gopher Grad, March 1950]

LET'S TRAIN CITIZENS IN THE "PROMISE TO PAY"

(By Allyn W. Schiffer)

James Bryant Conant, one of the foremost educators in the Nation, recently said that the primary concern of American education today is not in development of the apprecia-tion of the good life in young gentlemen born to the purple, but rather to cultivate (in the largest number of our future citizens) an appreciation both of the responsibility and the benefits which come to them.

I believe that one of the many benefits in our American way of life is the opportunity to buy merchandise and services on a promise to pay in the future.

Perhaps this may not strike many as a benefit peculiar to American living. A trip to Europe, however, will be sufficient to convince one that the Europeans are some of the greatest exponents of the cash and carry system. In fact-no cash, no carry.

This system of the promise to pay undoubtedly has had much to do with bringing a high standard of living to our population. We have broken down these implications of faith, trust, and the quality that commands belief in our fellow man into the single word-credit.

If you had been identified with the field of credit for more than 25 years, you would have observed the vitalness or need of credit to the economy of our country. According to reports, Americans have approximately \$40 billion in consumer indebtedness outstanding daily. If you were to remove that volume of business daily, production would stagnate. Such stagnation would affect our standards of living drastically. We would revert to possibly the late Eighties because the distribution of wealth and goods would be lessened to a point whereby it would be concentrated in the hands of a few rather than many.

Coincident, there is a responsibility upon those who seek a security commensurate with their ability to assume and fulfill obligations. But where is the training for such responsibility? Credit, as a business, is not being taught at secondary education levels, only to a very small degree is it taught at undergraduate levels. This is not necessarily the fault of college or universities. Rather, I think, it is the failure of business, generally, to recognize the need for credit educationits benefits and responsibilities from a business point of view.

Without question, the promulgation of education in credit is not only lacking but

also needed as a curriculum in our college and university system.

Presently, to my knowledge, there are approximately 40 colleges that offer a course in credit and collections. One university of which I am aware grants a major, but I have learned of none that offers a degree in credit management.

The correction of such failure must be presented to business and industry. The generosity to education by various foundations endowed by individuals and families who have acquired their income from business and industry are well known and deservedly appreciated. Also management has, at various times, supported and encouraged research through education in varied fields of endeavor, but the dissemination of knowledge in credit management is comparable to a neglected waif whose potentiality is bypassed and ignored.

The dean of a middle western university business school recently told me that the establishment of a 4-year course in credit management is not as simple as the fulfillment of a mere desire. The requirements necessary to establish a school of credit management require a wherewithal that must emanate from private or public resources. The budget under which a college or university must maintain itself is too meager in comparison to the present-day cost of operation and the demands placed upon the institution. Yet, the need for credit education is ever more apparent. use of credit in relation to business is becoming more complex. In addition, the causes of inflation or deflation of the monetary unit have frequently been accredited (justly and unjustly) to the extension or mitigation of the use of credit. We, in our country (with the possible exception of Canadians), are the only ones who utilize credit on a scale where it seeps down to consumer levels to a great degree. Education in credit management could hardly be given to others when our own educational system has not been able to include courses that might steer undergraduates and graduates into the study of credit, its potentialities and its vagaries. It seems obvious that business must be acquainted with this need in order to insure stability for the free enterprise system under which it operates. The Credit Research Institute of the National Association of Credit Men does contribute toward the teaching of credit for 6 weeks during the summer months at Dartmouth and Stanford, but these courses are open to credit men classified on a graduate level. Credit, as a study for the undergraduate, may be just as foreign as the study of Sanskrit might be to a major in physical education.

Thomas Carlyle once said, "An educated man stands, as it were, in the midst of a boundless arsenal and magazine, filled with all the weapons and engines which man's skill has been able to devise from the earliest times." Since Carlyle wrote this, the learning of 131 years has been added to the storehouse of knowledge.

Current events often necessitate further study of a subject. For example, the first World War brought the need to understand the difficulties of readjustment for men returning from service. Or, in 1924 the mur-der of a young boy whose body was found in the marshes of suburban Chicago helped precipitate more extensive studies in the field of psychology and psychiatry. Today, the advent of the sputnik has given rise to a reappraiseal of our scientific education. As a result, business, industry, and government appear willing to advance means so that our universities and colleges may expand the teaching of science and encourage

its study.

Do we need another depression, heaven forbid, to reappraise the value of the study of credit management? Surely such research and education must be encouraged and advanced in our colleges by all those engaged in economic activity, including every financial, commercial and productive enterprise.

James Russell Lowell points out that "in making education not only common to all, but in some sense compulsory on all," the

destiny of the "free republics of America was practically settled."

It is certain that if we intend to continue to be free and American, there must be a compelling force to maintain ourselves as leaders in the industrial, manufacturing, and production fields. The sale of our manufactured products is a potent factor in our economy, and credit is the avenue by which those sales take place. Because of this fact, it is my hope that the study of credit management will be given its proper place in the everwidening arsenal and magazine of knowledge.

## Francis Kane To Receive Interfaith Award

EXTENSION OF REMARKS OF

# HON. LOUIS C. RABAUT

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES Tuesday, June 2, 1959

Mr. RABAUT. Mr. Speaker, with pride I place in the RECORD an item from the pen of Gene Shumate, of the Washington Daily News, dated June 1. It refers to my friend Francis Kane. The article follows:

FRANCIS J. KANE, PRESIDENT OF KANE TRANS-FER CO., WILL RECEIVE THE 1959 DISTRICT INTERFAITH AWARD

The Washington Interfaith Committeerepresentatives from the Knights of Columbus, Almas Temple Shrine, and B'nai B'rith—would have had a hard time finding a nicer man for this honor.

#### OTHER SIDE

People know a lot about Francis Kane the successful businessman. Too few know of many things of no immediate concern to his business which he's done just because he wanted to.

A few months ago, the Daily News movie critic, James O'Nelll, Jr., got the ball rolling to have a park named after the late Edward J. Kelly, head of the Park Service. I called Mr. Kane and asked his support. He came through. And with the help of some of his friends on the Hill, the park was dedicated.

Just because he felt a few ruthless credit merchants were taking advantage of unfortunate people, he went to work to get a new

garnishment law for the District.

He failed last year. But the House unanimously passed it this year and the Senate is expected to do likewise.

#### PHILANTHROPY

A nursing home needed beds badly. Krancis Kane loaded up one of his trucks and sent some beds over.

His work with Catholic schools and charities earned him the Papal Knighthood of St. Sylvester a few months before Pope Pius XII died.

One of his trucks, loaded with candy, overturned in a poor neighborhood. He took the truck away but left the candy.

When he receives the award June 9, preceding the interfaith baseball game between the Senators and the White Sox, there'll be a lot of people in the stands who'll remember many things that Mr. Kane has done for Washington.

Memorial Day, a Day of Memory: Address of Brig. Gen. J. D. Hittle, U.S. Marine Corps

EXTENSION OF REMARKS

OF

## HON. EUGENE J. KEOGH

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES Tuesday, June 2, 1959

Mr. KEOGH. Mr. Speaker, under the leave to extend my remarks in the RECORD, I am pleased to insert the eloquent memorial ceremony address of Brig. Gen. J. D. Hittle, U.S. Marine Corps, which he delivered at the moving and colorful ceremonies for military veterans of the New York Life Insurance Co. and the Metropolitan Life Insurance Co. at the Eternal Light in Madison Square Park, on May 29, 1959:

MEMORIAL CEREMONY ADDRESS OF BRIG. GEN. J. D. HITTLE, HEADQUARTERS, U.S. MARINE CORPS, MAY 29, 1959, MADISON SQUARE PARK, NEW YORK CITY

This Memorial Day which we now cele-

brate is a day of memory.

A day of memories of past Memorial Days. From our early childhood each of us has our recollections of the Memorial Day parades which thrilled us. It may have been in a great city. It may have been in a quiet country town. But regardless of where it was-large city or a village at the crossroads-the observance of Memorial Day may have differed in magnitude, but it did not differ in spirit. The excitement we felt as children as we watched the marching veterans, saluted the passing colors, and tapped our foot to the pulsing rhythm of the military bands remains with all of us a pointed recollection.

Memorial Day was a holiday, a parade, a Sunday dinner for the family even if it Sunday. And yet, there was more wasn't than the excitement, the treat at the corner soda fountain, the chicken and dumplings.

There was something we felt even though we did not completely understand. Per-haps we sensed a silent message from the then sparse-and no extinct-ranks of the old "Boys in Blue." Perhaps it was the courageous and still spritely step of the then relatively young veterans of the Spanish-American War who had traveled to distant seas and faraway fields to fight for others' freedom.

Perhaps our awareness of the deeper meaning of the day came as we watched rank after rank of the then really young veterans who had only a few years before returned from the battles of what we were sure had been the last of the world's great wars. Yet, from somewhere out of those marching columns, waving flags, and brass bands there came an inescapable reminder that it wasand is-a day for remembering.

A day for remembering many thingsachieved and preserved by suffering, bravery, God-fearing, and God-trusting determination; that those who brought forth our independence on the bloody field of battle lit

the torch of freedom which has been handed down from generation to generation of our Nation's veterans; that each generation of our veterans has manned the shell-torn ramparts of freedom, holding high that torch.

Yes, a day for remembering the milestones

of our Nations' history.

We remember the blood-stained grass at Lexington where valor and martyrdom set off the chain reaction of freedom; and the snows of Valley Forge—where the poorly clad and ill-equipped Continentals passed the acid test of determination and faith.

We remember the cold waters of the Atlantic echoing with Lawrence's "Don't give up the ship"-words enshrined as the tradition of the succeeding generations of veterans who carried the U.S. flag to the distant

waters of the world;

We remember the inescapable tragedy of 1861 to 1865, with all the suffering and gallantry that is inherent in a conflict that pits brother against brother and father

against son;

We remember the Spanish-American War, with the sinking of the Maine, the charge of the Rough Riders up the shell-swept slopes of San Juan Hill, and the great naval victories at Santiago and Manila, which made our Nation, for the first time, a great global sea power. It was a short and victorious war, unique in that it brought victory withconquest and created free and independent nations.

We remember the magnitude and the effort of World War I, from which came the honored memories of gallantry at Belleau Wood, Chateau-Thierry, and the Argonne, and then the worldwide conflict that was triggered at Pearl Harbor, and waged in the jungles of Guadalcanal, the beaches of North Africa, the hedgerows of Brittany, the fogcovered water route to Murmansk, and across the black sand beaches of Iwo Jima;

We remember more recently the resistance to Communist aggression in the then all but forgotten peninsula of Korea, where the gunfire of Red aggressors suddenly shattered the uneasy quiet in the Land of the Morning Calm. The Pusan perimeter, Inchon, and the Chosan Reservoir took their places beside the other sacred names in the history of American valor.

The review and reverence of things past will continue to be an indispensable attribute of our Nation. But the memory of past greatness is truly meaningful only when, it serves as an inspiration for the present and the future, and a reminder that the task of assuring our national independence and survival is never complete. Above all, the veterans of past wars recognize the inescapable fact that in a world threatened by ruthless and godless communism, survival rests not only on good intentions but also upon the cold, hard willingness to defend our heritoge of freedom with all the force required.

While we have loyal and ready allies who, with us, comprise the free world, we must never forget that the United States is the bastion of strength in the long, hard struggle against the ceaseless thrusts of world com-

Today, as we recall the sacrifice and bravery by our Nation's veterans over many years and many fields of battle, there is one vast and unchallengeable conclusion that emerges: You veterans and the generations of American fighting men who have preceded you have achieved and preserved independence and freedom; yet its continuation has never been, and is not now, a certainty.

Truly, each generation in its time must be willing and ready to continue, with utmost determination, the struggle to preserve our independence and freedom. This, in essence, is at once the heritage, the responsibility, and

the task which has been passed to us and which we must pass on as intact and secure

as we received it.

On Memorial Day we pay tribute to the veterans who have fought our Nation's wars. While we recognize and revere our debt to those for whom the final taps have sounded, it is appropriate to recognize the great and continuing contribution of you and your fellow veterans who are so ably discharging the responsibilities of citizenship. Personally, I have long been of the opinion that veterans, individually, and collectively, through their great national organizations, constitute an indispensable element of our national life. No person or group is more intimately aware of the responsibilities of citizenship. No individual or group is more qualified to participate in the discharge of those responsibilities. Through the years of our national existence, veterans organizations have made a continuing contribution to the betterment of our Nation. They have taken an active interest in every significant aspect of our national life—education, housing, foreign policy, and national security.

The deep understanding and patriotic motivation that characterizes the veterans' interest in our Nation has helped shape and implement the decisions so vital to our continued existence.

At home and throughout the world our national policy is strengthened by the fact that our responsible leaders know that in furthering the cause of freedom and resisting the encroachment of communism they have the unqualified and continuing sup-

port of veterans.

In matters of national security the contribution of the veterans has been meaningful in peace as well as in war. The history of our times clearly demonstrates that veterans, who so well understand the necessity for military strength and readiness, have never been lulled or misled by the false belief that peace is eternal.

They remember full well the lesson they learned in the hard school of battle, that peace is not a unlisteral endeavor. They know that peace at any price is not

peace but oppression, violence, and destruc-

And so on this Memorial Day we remember those who have done their duty and marched on, leaving to us both the heritage they created and preserved, and the responsibilities of its stewardship.

The spirit that characterizes this Memorial Day ceremony to which you have given your time and your effort, and which is being repeated by other groups of veterans throughout the Nation, is elequent proof that the memory and reverence for our departed heroes is not just for a day but for the ages. By your ceremony here today you have demonstrated again the eternal truth that the memory of those who fought the good fight cannot die.

Greetings to the Slovak League of America

EXTENSION OF REMARKS OF

HON. JOHN H. DENT

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES Wednesday, May 20, 1959

Mr. DENT. Mr. Speaker, Slovaks in America have for many years been very active in many phases of our communal life. Through the medium of various organizations they have rendered valuable services. The Slovak League of America, as a leading civic and cultural organization, working primarily in Slovak-American communities, has been known for more than 50 years as the agency for ministering to the material and spiritual needs of these communities, and also educating immigrant Slovaks in the American democratic way of life. In greeting the 36th Congress of the league. I wish its organizing leaders success in their worthy endeavors.

## Choices for Air Defense

EXTENSION OF REMARKS OF

# HON, THOMAS J. LANE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 2, 1959

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following very timely editorial that appeared in the Christian Science Monitor on Thursday, May 28, 1959. Since it is not only a sensible statement but is most constructive, it may be most helpful during today's debate on the military appropriation bill:

CHOICES FOR AIR DEFENSE

The Pentagon's promise of an early master plan for North American air defense is welcome. A complete picture of the problem and coordinated solutions for it are badly needed. Service squabbles, such as the current one over the Army's Nike-Hercules and the Air Force's Bomarc, underscore the need.

But any real examination of the air defense situation should go well beyond the relative merits of these missiles. It should survey the whole complex of planes, missiles, radar installations, and communications.

But most of all it should seek answers to several larger questions: Are present de-fenses—designed to deal with attack by manned planes—worth anything against missiles? How useful is a 15-minute warning? Should billions be put into nearobsolescent weapons that will provide safeguards only for the next few months? Should effort be centered on developing a hard deterrent (one invulnerable to surprise attack) as the surest military defense? Will emphasis on defense foster a Fortress America attitude and tend to lose essential allies?

Advance information indicates that the master plan seeks a compromise of the Nike-Bomarc controversy by recommending both programs. The Nike-Hercules is a groundto-air missile with an 80-mile range. It is already operational. Bomarc has a similar function but a 200-mile range. It will be ready in the fall. Both can carry nuclear warheads.

In defense planning it is often wise not to put all your eggs into one basket. Both missile "baskets" could have a role—but only against planes. Neither is considered effective against missiles. So for anything except immediate defense purposes both baskets appear to have unsafe bottoms. Choosing either or both of them is unlikely to meet the chief requirement of air defense in the near future-stopping long-range missiles.

Admiral Haward, one of the Navy's re-search chiefs, has told Congress that \$25 billion has been poured into this kind of defense and that under present schedules the sum will be nearly doubled by 1963. Shouldn't these programs be cut back and more effort put into developing defenses against missiles?

Defensive thinking tends to fix only on one side of the defense problem. It would try to stop attackers in the air. Another (and it seems to us more hopeful) approach is to stop them before they get into the air. This approach relies on deterrence, convincing would-be attackers that an assault would be unprofitable. It deals with motives rather than missiles.

Under the first approach a desperate search is going on for effective antimissile missiles. So far it is not hopeful. More encouraging is the prospect for forms of retaliatory power which cannot be knocked out by surprise attack. If solid fuel missiles like Polaris and Minuteman develop as ex-pected it should be possible in 5 years so to set them up that any attacker would be suicidally triggering annihilating retaliation.

But even under such conditions it will be wise for the United States to give attention to the defense of other free peoples. And always it will be wise to count moral and spiritual as well as military factors in shaping defense.

## A Reflection of Public Sentiment

EXTENSION OF REMARKS OF

# HON. HAROLD R. COLLIER

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES Tuesday, May 5, 1959

Mr. COLLIER. Mr. Speaker, I would like to bring to the attention of my colleagues, a resolution adopted by the Riverside Drive Improvement Association of Berwyn, Ill., a strictly nonpartisan, nonpolitical organization dedicated to the betterment of the city of Berwyn.

I am doing so because I believe it reflects the concern of many Americans today over the dangers of inflation. Excessive Federal spending and inflationary tendencies must not be regarded as a political party issue but rather as a matter which is certainly everyone's concern. The high cost of living has no party label. It saps the funds of the pensioners and folks on fixed incomes regardless of whether they are Democrats or Republi-

The resolution follows:

Whereas the stability of the American dollar is in the best interests of our Nation;

Whereas inflation caused by ever-increasing spending will result in undue hardship to millions of our citizens; and

Whereas increased inflation can undermine the very foundation of our country;

Whereas Congress, as the duly constituted representatives of the people of the United States, can, through the exercise of its power, take the necessary steps to correct present inflationary trends: Therefore be it Resolved, That the Riverside Drive Im-

provement Association of Berwyn, Ill., consisting of 150 members at its regular meeting of May 15, 1959, voted unanimously to request our honorable Senators and Congressmen to exercise legislation to end present inflationary tendencies in the U.S. Government.

RIVERSIDE DRIVE IMPROVEMENT ASSO-CIATION OF BERWYN, ILL.

# The Greatest Age of All Time

EXTENSION OF REMARKS

# HON. OREN HARRIS

OF ARKANSAS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 2, 1959

Mr. HARRIS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article written by John Park Cravens, Sr., of Booneville, Ark.:

THE GREATEST AGE OF ALL TIME (By John Park Cravens, Sr.)

After the passing of many ages of time, mankind of this small planet on which we live, is at the dawn of exploring outer space. I believe successful exploration of this type, will be done within the next few years, and it will be for the glory of God first, and material gain for our world, and those of outer space second, and all the nations of our home sphere, in results, will only be able to equally benefit. Since the beginning of time for man on this our earth, he has perhaps always had a desire to explore the heavens, and I believe he now realizes, and knows this is possible.

The peoples of our earth with few exceptions, know that such as earthquakes, wars, cyclones, disastrous fires, volcanoes, hurricanes, and other things can happen, but they have faith, and believe our home planet will continue to orbit unharmed, and hold its proper place in the universe, and it will in no way be affected harmfully by scientific discoveries, or the exploring of outer spaces. And, throughout past ages, humankind has not feared or worried about anything going wrong with the rotation, and the laws of nature in general governing the existence of our home world, which is but a small cog in the machine of a vast universe.

Down through all time since the beginning of man, people have never feared that the Sun would not rise or set, and have looked upon the Moon, Mars, the Sun, and other things of outer space with awe, and thought that a great divine spirit was the ruler of and controlled everything in the vast heavenly panorama. A small percent of those of the past ages may have believed different as some of this day and age, but the percentage is negligible.

Today a greater part of the people of all countries of our Earth are living in fear of hydrogen bombs, and other weapons of war. I do not think we should live in such a state of fear, because all the leaders of our world know and realize the using of modern weapons in a world war would mean the extermination of humanity. I believe outerspace exploration will be done peacefully, and no harm will come to our home planet, or any part of the universe, in its process, and past and future scientific achievements will be of great benefit in all respects.

According to the Scriptures, "The heavens declare the glory of God; and the firmament sheweth His handiwork." Also, "The heavens declare His righteousness, and all the people As I see it, these are two of ace His glory." the most impressive verses of the Bible. From the beginning of mankind, the peoples of our home planet have had the privilege of looking up into the heavens, and seeing His great handiwork. And, as the ages rolled by, there have been countless millions of people who were never but a few miles from the places of their births. But the eyes of practically all of them, like those of today, had the privilege and the experience of gazing upon the Moon, the stars, and other things of the celestial firmament with the realization they were, as our Earth, controlled by a master hand. When we of the present gaze upward into the heavens of a clear night, we know that people from the beginning of time did the same in seeing everything in all its great impressiveness. When we behold the things of outer space, we are impressed with the glory of a creator of all we see. We can see the love of God about us, and the beauty of His creation on our Earth in countless ways, but though the heavens be far away, when we look up into them, we see His love and glory in greater form.

I will never forget when I was a little child, and there were no electric fans and air conditioners in our home in the Petit Jean Valley below the Great Mount Magazine of the Ozark and Ouachita Mountains. the summer months came, there were always a few dry and hot days, and my mother would make pallets with homemade pieced quilts on the grass lawn of our residential yard for members of our family to sleep on until after midnight cool breezes arrived, and we would go to our bedrooms to sleep the remainder of the night. As I lay on my pallet before sleep came to me, I would look up into the heavens while listening to the singing of the crickets, the low of cattle in fields nearby, the falls of a swiftly running creek, the singing of a mocking bird, the baying of a pack of dogs chasing a fox, and other sounds that were not strange to me, but my eyes would become transfixed at the sight of the Moon and the stars which greatly fascinated me until I fell asleep.

One morning after sleeping on our residential lawn, I told my grandmother what I had seen, and asked her many questions, and she answered them as best she could. She told me about God creating the Heavens, and our Earth, and explained to me His gift of eternal life. And many times after that, when I was a child, I would lie on my pallet on the grass lawn of a night, and look up at the Moon and stars grandmother told me were so far, far away, and I won-dered if anybody would ever be able to travel to them, and if they could, what a glorious thing it would be. Sometimes I would see flocks of wild fowl winging their way from Canada to South America, and wondered if it would be possible for them to fly to the Moon. Like millions of children that have lived before me, the sight of the heavens of clear night impressed me more than all other things, and I had a feeling that they meant as much to me as the Earth on which I lived, and I could not understand why man had not in the natural order of things been able to travel to them, and return. God has not denied any human creature of all the past ages with proper eyesight, the right to look up into His heavens, and behold His great work of His own creation. And now, after ages upon ages have passed, I think it is a wonderful thing for man to be on the verge of exploring outer space, which I believe will be the most important thing ever to come to mankind.

I believe when people of this Earth on which we live, travel to and return from a foreign planet, it will open up a new phase in the spiritual life of the peoples of our Earth. When I was a youth, and would look up into the heavens on a clear and calm Ozark and Ouachita Mountain night, I did not realize that in my day the peoples of our planet would send a manmade instrument past the moon to orbit the sun. Neither did I think I would live in a space travel age, which I look upon as the Golden Age of God when improved telescopes, radar, alreraft, rockets, and other things would be the forerunners of successful space travel soon to follow which I think will mean mankind getting closer to the Creator and eternal head of all things.

head of all things.

As the ages rolled by, many changes took place in our world, and were only known to those living about them, but when a new comet appeared in the skles, it was known to

all peoples of our entire globe. Alexander the Great wept when he believed there were no more countries on earth for him to conquer. I believe during his lifetime he may have many times looked up into the vast outer spaces as his armies slept, and realized the heavens were controlled by a Supreme and Divine power, and the planet on which he lived was only a small segment or part of a great kingdom of worlds mystifying to him, and beyond his reach. I would think that his opinion was that mankind would never be able to explore outer space, and how wonderful it is that we of this age of now are on the threshold of such exploration.

Great is the reward of man to overcome the laws of nature against him in his pursuit of science for the benefit of humanity and progress of civilization, and the general benefit and longevity of life upon this earth of ours, and greater still is the reward of those who overcome the temptation of sin, and pursue a path of pureness in heart and righteousness, as after death they will receive from God the gift of eternal life. And now that we have come to the space age, we have reached in my opinion, the most vital point in our earth's history since its creation. In successful space travel, much will be accomplished scientifically, but greater will our faith in an Almighty Creator become, our souls and our religions and our brotherhoods will become broadened, and strengthened as our outlooks upon life in general, and all the races of the earth will be brought closer to God in all respects, and I think there will be less jealousy and rivalry and hate among the countries and races, and there will be a better understanding in all things, and more good will.

I believe that after space travel is achieved, in the continued advancement and progress of this world on which we live, the im-portance of human souls and eternal life, will greatly, and naturally, take precedence over that of material things. "What profiteth a man if he should gain the whole world, but lose his own soul." I think that from 3 to 10 years from now, man will begin making trips to the Moon, the planet Mars and other planets, and from them make new discoveries about outer space that will be vital and important to continued exploration. It is possible planets unknown to us now will be discovered, and some of them could have a form of life similar to ours, and in time man will explore them, and from them he may discover other planets further on out into space. It may be that man could spent millions of years in a chain of such exploration, and outer space is composed of many galaxies, and it is possible there is no end to their numbers. And it could be that man of our Earth will be limited to his own galaxy in his travels to and return from outer space. And I believe in any case, the power and glory of God will be supremely recognized by man. And no longer will our planet on which we live be a small one isolated in a vast universe, but it will be the headquarters of a kingdom of planets.

After keeping them closed for countless ages of the past, the Divine Creater of our home planet and the heavens has opened up the paths of space travel to us, and this is the greatest challenge of all time ever to come to mankind. I believe the peoples of our Earth will succeed, and will use the resulting benefits for God's glory, and man's inhumanity to man will become negligible, and there will be peace on Earth and good will toward all men, women and children. Otherwise, everything on this Earth will perish by the hands of man, and not by the will of God, and I have faith that the political, military and scientific leaders know what the results of a world war would be if the latest scientific weapons were used, and will never enter into such a conflict, and there will be peace, and man will continue to go forward in his exploration of outer space for the benefit of all the peoples of our Earth, and those, if any, that should be living on other planets, and for the glory of God. JOHN PARK CRAVENS, Sr.

American Tariff League To Reorganize Under New Name: "Trade Relations Council"

EXTENSION OF REMARKS

# HON, CLEVELAND M. BAILEY

OF WEST VIRGINIA

IN THE HOUSE OF REPRESENTATIVES Tuesday, June 2, 1959

Mr. BAILEY. Mr. Speaker, under leave to extend my remarks in the Appendix of the Record, I desire to call attention to a recent news release announcing that the American Tariff League, with headquarters in New York, which for generations has been a strong advocate of adequate protection for American industries, has been reconstituted and will continue to carry on its very important work in the future under the title "Trade Relations Council of the United States."

At this time, I desire to include some pertinent facts that should be of considerable interest to the growing number of American industries that feel that our present international trade policies, as administered under our Reciprocal Trade Agreements Act, are not adequate and that a stable American that our present international trade polcles be reshaped so as to assure the necessary measure of protection that will restore the confidence of business and enable us not only to regain our lost export business, but will also curtail mounting imports, which at present exceed our export volume.

The news item, under a New York dateline, follows:

AMERICAN TARIFF LEAGUE TO REORGANIZE UN-DER NEW NAME: "TRADE RELATIONS COUN-CIL"

New York, N.Y., May 21.—One of the Nation's oldest producer organizations, the American Tariff League, has voted to reshape its policies, activities, and administration and to adopt a new name, "Trade Relations Council of the United States (TRC)."

Reorganization of the 74-year-old tariff league was announced at a news conference today by Ralph A. Butland, president of the present group and chairman-elect of the TRC board of managers. The reorganization will become effective July 1.

Butland said the league, representing several hundred industrial companies, farm organizations, and trade associations, held its final membership meeting Wednesday, May 20, and overwhelmingly endorsed the recommendations of a 15-man joint reorganization committee. The reorganization committee developed its proposals following a series of

launched last fall.

Explaining the decision to reorganize, Butland observed: "Patterns of international trade have undergone drastic changes in recent years, and members of the tariff league decided that a new organization with a broader program, reflecting their recognition

surveys and other studies that were

of these changes, would better serve the interests of healthy, mutually satisfying foreign commerce."

Butland said the name "The American Tariff League" was dropped because "it implied that our policies and activities were geared to the tariff alone. In reality, our interest has become much broader in a dynamic and ever-changing world."

namic and ever-changing world."

He declared: "The Trade Relations Council will seek to encourage an international atmosphere emphasizing freedom to trade, rather than free trade. No country has ever been able to sustain free trade for long. The realistic goal for all trading nations is fair and orderly competition in world markets."

Butland emphasized that "the TRC would continue to stress the prime importance of policies that will maintain domestic production in the interest of a diverse and healthy American economy, varied and extensive job opportunities, and a strong national security hase

"With a more descriptive name and a general understanding of the wide scope of our interests, we expect to attract widened support from industry, large and small, and from agriculture and labor."

Butland said the TRC plans to undertake a series of special fact-finding projects covering such key issues as foreign and domestic wage differentials; the Communist economic offensive; the rise of regional trading systems; disruptive trade practices here and abroad; cartels and dumping; the General Agreement on Tariffs and Trade; U.S. foreign investment policy; and U.S. Government purchasing.

From these studies will emerge the materials for the TRC's major mission, "a broadbased program of public information to alert Americans to the facts about world trade and to the principles governing trade economics."

Butland said the TRC will conduct extensive research on the drastic decline in U.S. exports and the outflow of gold and dollars, Considerable controversy has developed in business, labor, and Government circles as to whether the United States is pricing itself out of world markets.

"The single common denominator in this controversy is American jobs," Butland noted. "When our competitive position weakens, either in our domestic market or in oversea markets, a loss of jobs is always one of the first signs of distress.

"There have been recent indications that some labor groups are reevaluating foreign commerce in terms of its impact on American employment. The TRC hopes to be able to enlist the support of these organizations in search of a permanent and equitable solution."

Unlike its predecessor, the TRC will eventually be headed by a full-time, salaried president charged with implementing the policy decisions of the elected board of managers.

Butland will continue to serve as president until the new salaried job is filled. He said a special committee had been appointed to recommend possible candidates. It is doubtful that the post will be filled before the TRC's first annual conference in the fall.

TRC's first annual conference in the fall.

Direction of the TRC staff, research programs, and other day-to-day activities will be assigned to the executive vice president, another new position. Butland said Richard H. Anthony, executive secretary of the Tariff League since 1946, was the new organization's choice to become executive vice president.

Still another innovation will be the creation of an advisory council composed of top-level management officials. The advisory council will meet periodically to review and recommend TRC policies and programs.

For the present, the TRC will occupy the offices of the league at 19 West 44th Street,

New York City. Research and clerical personnel of the league will be retained in the new organization. Staff expansion is contemplated as new programs are developed.

Over the years the league has been one of the most vigorous and effective proponents of Federal legislation to curb unfair foreign trade practices and to safeguard American industry, labor, and agriculture from injury due to unreasonable import competition.

The league has been sharply critical of U.S. participation in the general agreement on tariffs and trade, viewing it as a supranational body that could thwart U.S. economic objectives. The league has urged a complete revision of what it has termed "our chaotic tariff structure."

Another long-time target of league criticism has been the Trade Agreements Act, originated in 1934. In recent years the league was instrumental in persuading Congress to amend the law by providing more effective measures to regulate imports injurious to the American economy or detrimental to the Nation's mobilization base, and to relieve injuries resulting from administration of the law.

Butland declared: "The Trade Relations Council agrees with Government leaders and others that a world family of prospering free nations is not only desirable but within reach. However, we are not all going to live under the same economic, political, and social conditions, no matter how prosperous we become.

"The TRC will actively support sound policies aimed at developing the economic vigor of all free nations. Moreover, we are convinced that such policies, if carefully and selectively carried out, need not sacrifice investments, jobs, and other economic opportunities in our country or any other."

Industries to be represented in the Trade Relations Council of the United States:

Adhesives, agricultural implements, alloys and tool steel, aluminum manufactures, antifriction bearings, bicycles, brass manufactures, brushes, buttons, candy, carpets and rugs, cast iron pipe, cement, chemicals, chinaware and earthenware, clocks and watches, clothespins, copper, cordage, cotton manufactures, cutlery.

Elastic fabrics, electrical manufactures, fasteners, felts, firearms and ammunition, fishing nets, floor covering, fruits and nuts, glass and glassware, gloves and mittens, gold leaf, hats, lace, lead, leather, linen manufactures, machinery, manmade fibers and fabrics, metal products, motorcycles, musical instruments, optical products.

Paints and pigments, paper and manufactures, pencils and pens, pharmaceutical preparations, plastics, refractories, rubber manufactures, salt, sanitary ware, scientific porcelain, scissors and shears, shoes, silverware, sugar, surgical instruments, thermostatic containers, thread, tiles, tools, toys, tungsten, wire cloth, wood manufactures, wood manufactures, vinc.

Justice for the Nisei

EXTENSION OF REMARKS

# HON. THOMAS J. LANE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 2, 1959

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the Record, I wish to include the editorial which recently appeared in the Boston Daily Globe, on a matter that may well be brought to the attention of the American people:

JUSTICE FOR THE NISEI

Dean Eugene V. Rostow of the Yale Law School said, "The law has no higher duty than to acknowledge its own errors." continued, "Today we confront the fact that as a Nation we are capable of wrong, but capable also of confessing our wrongs, and seeking to explate them." Attorney General William P. Rogers pointed out that the brief ceremony was an attempt to "make up for a mistake our Nation made,"

Thus in Washington, did the U.S. Government apologize to a body of its citizens the Nisel-for the grave injustice done them during World War II. The Nisci, Americans of Japanese descent, suffered badly. In all 72,000 were displaced from their homes and put in relocation centers. They had been given no chance to display their loyalty or any disloyalty. They were penalized on the same inhuman principle that we were seek-

ing to destroy—racism,
In early 1945, after 3 years of confinement, 5,766 renounced their citizenship. Subsequently, 5,409 applied for restoration. Of these, 4,978 have been granted. Some were denied reinstatement because of evidence of disloyalty, the Attorney General's office said.

The reinstatement program ended with the little ceremony in the office of the Attorney General. Accompanying property settlements of more than \$36 million have been made. In the material realm little more can be done. The years taken from their lives, the heartbreak, the humiliation, the disruption of home life, the opportuni-ties denied them—all this cannot be undone.

Yet these people were American citizens, and a battalion of their sons, fighting in Europe, were unsurpassed for heroism and devotion. The hope is that a similar hysteria will at no time again in the United States commit so grievous a wrong.

Judge Murtagh's Book on Drug Addiction

EXTENSION OF REMARKS

### HON. VICTOR L. ANFUSO

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES Wednesday, May 20, 1959

Mr. ANFUSO. Mr. Speaker, the problem of drug addiction remains a constant menace for our youth. Parents, teachers, welfare workers, civic leaders, and certainly legislators, have given much thought to this problem and possible ways for its solution. In March of this year I introduced a bill, H.R. 5304, to establish a Customs Enforcement Division in the Bureau of Customs to provide stricter enforcement of the antismuggling laws and thus put a stop to the smuggling of narcotics into this country. This would be a great help toward a solution.

The problem of solving drug addiction in the country and the treatment of drug addicts is, of course, a matter which should be solved primarily by our welfare workers, the courts, the enforcement agencies, and others who come in direct contact with the addicts and are thoroughly familiar with their problem.

A very interesting book on the subject has just been published, and I should like to call it to the attention of my colleagues, as well as to members of the judiciary, welfare workers, and others interested in the subject. The name of the book is "Who Live in Shadow," and its authors are Judge John M. Murtagh and Sara Harris. Some time ago they also coauthored a book "Cast the First Stone," which was an exposé of prostitution and the police approach to the problem.

Judge Murtagh is chief magistrate of the New York City Magistrates' Court. I have had the privilege of serving with him before entering Congress when I was a city magistrate in Brooklyn. He is an eminent jurist and a man who does not hesitate to express his views frankly and openly. These views are based in large measure on cases that have come before him or that he encountered in the course

of his work on the bench.

Who Lives in Shadow" is an exposé of another festering sore in American social life, drug addiction. Characterized as an inside view of the phantasmal world of "Narcotics, USA," its victims, racketeers, and police officers, the book uses vivid case histories of users and pushers of all ages and walks of life; and authentic, shocking information on the pathetically futile attempts to hunt dope smugglers and cure the addict. It is an angry, compellingly readable work of noholds-barred dramatic journalism.

Stiff fines and long jail sentences are not the answer, the authors claim. They only make the unfortunate addict feel more like a criminal. Instead, the authors suggest that clinics be set up to provide hopeless users with enough drugs to keep them from turning to crime and degradation. Take the profit out of dope, they argue, and smuggling will be cut down to almost nothing.

"A punitive, prohibitory approach to the drug problem," the authors say, "has been the official policy of the United States for 40 years. No other country in the world has been so sadistic in dealing with addicts. Still there are more addicts in the United States today than in all Western countries combined, and more juvenile users in New York City than in all Europe.'

The authors maintain further that the prohibitory approach as utilized by the Federal Bureau of Narcotics is in direct conflict with the law as stated by the Supreme Court of the United States. "There is nothing in the Harrison Act under which addicts are prosecuted," they say, "which precludes doctors from treating for addiction." Yet the Federal Bureau of Narcotics has, over the years, engaged in a reign of terror among physicians so that they have become intimidated and stopped treating addicts. Lawyers may interpret to doctors. as many of them do, the illegality of the Narcotics Bureau's position. But doctors can hardly be expected to rely on such opinions and to challenge the Narcotics Bureau. They would place in jeopardy their licenses to practice medicine. They would expose themselves

to the risk of temporary detention or even prolonged incarceration. And even though ultimately successful, they would meanwhile have incurred the cost and experienced the harassment, humiliation and embarrassment inherent in criminal litigation.

"And so, despite the pronouncements of the Supreme Court, the law of the land tends to be obscured by bureaucratic policy that is contrary to law, and the medical practitioner is effectively prevented from caring for addicts. Addicts must therefore seek their succor from the underworld instead of from legitimate society. And, of course, the price that the underworld exacts from them is so high that they are practically mandated to become criminals. How. except through criminal activity, can people with \$30, \$40, \$50 a day habits and no particular wealth or talent raise the money they need? And when they do what they are driven to, we prosecute them for their illness."

"The fact is," the authors say, "that addicts and petty pushers are practically the only ones being prosecuted today. The big moguls of the trade, who control importation and distribution, are neither caught nor stopped. In a way they must be grateful for the Government's single-minded attitude toward addiction. Our drug laws are immoral in principle and ineffectual in operation.

Calling for the Government to unshackle the medical profession, the authors cite the success of this approach in England. There they state that "there are less than 400 known drug addicts. In England, however, the words crimi-nal addict are never heard. And doctors are allowed to dispense drugs to users and to treat them either in their own offices or in clinics."

But the authors add that due to our policy we must now go beyond mere permissiveness toward the medical profession and evolve more aggressive methods

for coping with this illness.

Narcotic hospital facilities under Federal auspicies should be established in all large cities. These would institutionalize addicts for a period of at least 2 months, during which time they would be withdrawn from narcotics and exposed to a rehabilitative program, including contact with doctors, psychiatrists, social workers, vocational and recreational guidance personnel, and so forth.

After their release from the hospital. addicts would become outpatients in the clinical attachment of their hospitals. Efforts at rehabilitation would be continued, with the addicts receiving medical, psychiatric and social service. Those whose hospital withdrawal were successful would be treated without drugs; those who reverted after leaving the hospital and were proved to be in need of drugs, would get at cost the amounts their doctors prescribed for them. Gradual withdrawal would be re-attempted with them when their psychiatrists judged the supportive therapy to have taken sufficient hold so that they could rely on it instead of the drug. Those who were considered "incurable" by the clinic professionals would be released from therapy while still receiving indicated dosages of their drug.

### Dissemination of Scientific Information

EXTENSION OF REMARKS

## HON. JAMES G. FULTON OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 2, 1959

Mr. FULTON. Mr. Speaker, under leave to extend my remarks in the Record, I include the following testimony of Dr. Alan T. Waterman, Director, National Science Foundation, before the House Committee on Science and Astronautics, June 2, 1959:

DISSEMINATION OF SCIENTIFIC INFORMATION

#### I. INTRODUCTION

I appreciate this opportunity to present the National Science Foundation's views on the status of the dissemination of scientific information in the United States. My testimony will be divided into three parts. First, I shall describe briefly the nature and scope of the scientific information problem. Second, I shall indicate what the Foundation believes to be its role in this field. Third, I shall outline briefly the areas of scientific information in which the Foundation has programs and the principal kinds of activity in each of these.

### II, THE NATURE AND SCOPE OF THE SCIENTIFIC INFORMATION PROBLEM

The reason scientific information has bebecome a major problem, particularly since World War II, is that the spectacular growth in science and technology has multiplied the volume of scientific publication to a point where existing and well-organized systems are not adequate to provide for the information needs of the Nation's scientists and engineers. When one considers, too, that much of what is significant in science is being published in unfamiliar languages, it is clear that the working scientist is faced with almost insuperable problems in attempting to keep himself informed on what he needs to know. This double-edged problem has received increasing attention both within and outside the Government. Vigorous efforts to provide solutions are already underway, but much needs to be done to assure the ready availability to all U.S. scientists of the world's current and past output of significant scientific information.

Some idea of the volume of increase of scientific literature may be had from the fact, as reported in Dr. Mumford's testimony before this Committee, that the science and technology collections of the Library of Congress have doubled in the last 20 years and now total more than 1½ million volumes of books and periodicals. Statistics from other sources indicate that research literature in chemistry and related fields doubles every 8½ years. It is known that more than 55,000 scientific and technical journals are issued annually, containing about 1 million articles of significance for some branch of research and engineering in the physical and life sciences. This is the order of magnitude and growth of scientific information.

The language difficulty is reflected in the fact that more than one-third of the world's scientific and technical literature is produced in the U.S.S.R., China, and Japan. Statistics indicate this material can be read by less than 2 percent of U.S. scientists and engineers. It has been estimated that about 50 percent of all scientific and technical lit-

erature appears in English, but at least onethird of the world's literature is a closed book to U.S. scientists unless it can be approached through abstracting, indexing, and translating.

The system the Russians have developed for meeting their own scientific information problems in our judgment would not be equally effective in meeting ours. Our research efforts are organized and administered very differently, and it is illogical to suppose that a highly centralized organization for the dissemination of scientific information would serve our purposes equally well. Moreover, the Russians could not call upon the services of numerous highly developed scientific information organizations such as we find already in existence in the private enterprise structure of our country, III. BOLE OF THE NATIONAL SCIENCE FOUNDATION

I would now like to review briefly the role the National Science Foundation in the field of scientific information. As we see it the role of the Foundation is to identify and analyze the strengths and weaknesses in existing practices and then to take aggressive action both to develop solutions to present problems and to encourage and support a long-term program of research looking toward development of new and improved techniques of information handling. This involves the constructive evaluation of existing procedures and practices for the dissemination of scientific information, supplementing and assisting where necessary, and the development of solutions to problems through cooperation and coordination of the agencies and organizations concerned. We would retain the benefits of the existing complex of scientific information services while working at the same time toward remedying its defects. It is our belief in this direction lies the road leading toward effective national scientific information services.

Under the National Science Foundation Act of 1950, the Foundation has devoted special attention to the information needs of scientists and has developed a series of programs designed to help meet those needs to the extent of its limited resources. During the past year, actions taken by the legislative and executive branches have given the Foundation greatly expanded responsibilities in the field of scientific information. In addition to broadening its own programs in the area of scientific information, the Foundation has been asked to assume national leadership in efforts to improve scientific information services carried on both within and outside the Federal Government.

A. Coordination of scientific information activities within the Federal Government: The President approved on December 1958, a plan, proposed by his Science Advisory Committee, for the effective coordination of scientific information activities within the Federal Government and for the review, coordination and stimulation, on a nationwide basis, of activities in all areas of scientific information. By letter of January 22, 1959, the President asked the Foundation to carry the responsibility for the implementation of this plan. This letter was followed by Executive Order 10807, dated March 13, 1959, which not only created the Federal Council for Science and Technology, but also further delineated the role of the National Science Foundation in the scientific information field by stating as follows:

"The National Science Foundation shall provide leadership in the effective coordination of the scientific information activities of the Federal Government with a view to improving the availability and dissemination of scientific information. Federal agencies shall cooperate with and assist the National Science Foundation in the performance of this function, to the extent permitted by law."

In order to effect improved coordination

of scientific information activities within the Federal Government, the Foundation established the Federal Advisory Committee on Scientific Information which met first on January 20, 1959. The Committee is composed of senior members of 17 Federal agencies with significant information activities. Currently, this Committee has under consideration a range of matters dealing with problems involving the dissemination of unpublished research reports and the joint support and expansion of indexes to foreign scientific literature.

Considerable stress has been laid on furthering cooperation and coordination of scientific information activities among Fedral agencies. Almost every agency has a publications program, a library or an information service to collect and organize information. The three major research libraries in the country are the Library of Congress, the National Library of Medicine and the Department of Agriculture Library.

In addition to establishing a working mechanism to improve scientific information activities within the Federal Government, a number of direct actions have been taken by the Foundation's Science Information Service to coordinate Government information programs for maximum effectiveness. An example in point is the coordination and administration of budget estimates and programs for scientific information activities undertaken abroad by Federal agencies under Public Law 480 funds. We administer the program (sec. 104k) under a directive from the Bureau of the Budget and an amendment to Executive Order 10560 dated January 15, 1959. A total of \$1,200,00 was appropriated by Congress for scientific information activities under this program in fiscal year 1959. The Library of Congress administers a separate program (sec. 104n) on which we consult as to scientific information interests. Although a number serious administrative and procedural difficulties exist, the Public Law 480 program offers the possibility of making a notable increase in the quantity of foreign publications and translations available in the United States.

Another example of coordination of scientific information activities among Federal agencies includes steps taken by the Foundation to eliminate partial duplication in five federally supported bibliographies on coldregion research. All interested agencies were called together by the Science Information Service; joint temporary support was arranged to avoid a hiatus because of an immediate financial emergency; and plans were made for a study to work out a long-range solution before fiscal year 1960.

In order to provide an effective means for the exchange of information among groups working in the scientific information field, the Foundation has begun issuance of a bimonthly news bulletin, Science Information News. This bulletin reports national and international developments and it is hoped will assist in promoting increased cooperation and coordination among scientific information services.

B. Coordination of scientific information activities on a national basis: Passage by Congress of the National Defense Education Act of 1958 marked a milestone in this country's efforts to improve the availability of scientific information. Title IX of this act, which became law on September 2, 1958, directed the National Science Foundation to establish a Science Information Service which would (1) provide, or arrange for the provision of, indexing, abstracting translating, and other services leading to a more effective dissemination of scientific information, and (2) undertake programs to develop improved methods, including mechanized systems, for making scientific information available. In addition, the act provided

for the establishment of a Science Information Council to advise and make recommendations to the Science Information Service.

As one of the first steps in developing a program to provide really effective national leadership in the scientific information field. the National Science Foundation moved promptly to establish the Science Information Service and its two advisory committees. Establishment of the Science Information Service was announced on November 16, 1958. Appointment of the Science Information Council, provided in the National Defense Education Act, was completed on December 30, 1958, and the Council held its first meeting on February 2, 1959. The Council consists of the Librarian of Congress, the Director of the National Library of Medicine, the Director of the Department of Agriculture Library, the Head of the Foundation's Science Information Service, and 15 additional members drawn from various fields of science, librarianship, scientific documentation, and the lay public. The Council, which advises on overall programs, has considered a number of problems, including publication support policy, copyright of scientific information, and the mechanization of information processes.

The National Science Foundation is proceeding on the assumption that much is to be gained by close cooperation with and support of existing information services, both public and private, where they are functioning effectively. This guideline is implicit in applicable language of the National Defense Education Act and was emphasized strongly in the report of the President's Science Advisory Committee. In this connection, I believe all will agree that the Foundation's Science Information Service is not intended to be, and should not be, a large centralized agency operated by the Government which would take over and run the scientific information services of the United States. The scientific information services rendered by many of the scientific societies and pro-fessional institutions to the scientific community are world famous for their quality. It is essential that the Federal Government continue to cooperate with and assist such private groups in the achievement of longrange solutions to the scientific information problems.

The degree of organization and effectiveness of private information services varies Widely from field to field, and so the Foundation has been discussing with representatives of the various societies ways and means for increasing the effectiveness of information services in each field of science. Let me cite two examples. The Foundation pro-vided funds and staff work for a conference of major U.S. scientific abstracting and indexing services. The major accomplishment of the conference was the formation of the National Federation of Science Abstracting and Indexing Services which strives to co ordinate and improve the work of the various services and to encourage the development of abstracting and indexing services for those specialized subject fields not at present covered by such services. The National Federation has reeently employed a permanent staff, and working groups have started attacking problems requiring im-mediate attention. Major projects under-taken include compilation of a union list of journals covered by National Federation members and a world list of scientific abstracting services.

As an example of efforts to improve dissemination of a particular subject field, representatives of the Foundation's Science Information Service have met with committees estabilshed by the American Institute of Biological Sciences to discuss solutions to the many problems associated with communications among biological scientists. This forward-looking effort on the part of biologists to assess present and future needs for information services represents a truly significant development. Here is a pioneering at-tempt by scientists in a given field to develop a long-range and coordinated plan for optimum use of their information services. Successful development and operation of such a plan in the biological sciences would have far-reaching implications for other fields of science. The Foundation has sup-ported the work of the Biological Communications Study Group of American Institute of Biological Sciences which will shortly announce their recommendations.

The Science Information Service has also worked with representatives of several other professional societies in attempting to solve particular information or publication prob-

IV. FIELDS OF SCIENTIFIC INFORMATION ACTIVITY

The scientific information problem which the Nation faces has two principal aspectsfirst, improvement of present information services which use known and tested tech-niques and, second, development of new and more powerful techniques for coping with the rapidly expanding body of scientific and technical literature. With regard to the first aspect of the problem, the Science Information Service functions through effective coordination and cooperative efforts of public agencies and private organizations to improve existing facilities and techniques in such a way as to measurably increase the present availability of and access to scientific information. In the second instance, the Science Information Service encourages and supports a fundamental long-term program of research and development looking toward new and improved techniques of disseminating, processing and searching scientific information. The ultimate goal is to insure the ready availability to all U.S. scientists of the world's current and past output of significant scientific information.

With this preface, I would like to indicate in brief form the fields of scientific information activity in which the foundation has programs and the principal kinds of activity

in each of these

A. Documentation research: The broad objective of the documentation research program is to stimulate and support worthwhile research and studies that will lead to more efficient and more effective ways of disseminating, processing, and searching scientific information.

The research and the studies supported by this program are either fundamental in nature or are sufficiently general that the results can be expected to be of wide use to persons and organizations endeavoring to develop information systems for specific pur-

The more immediate goals of the program are to obtain a deeper understanding of the information requirements of scientists, to compare the effectiveness of existing systems, to devise ways of using mechanical aids to help in analyzing and organizing scientific information, and to develop systems for the mechanized production of translations that may be crude in some respects but accurate as far as they go.

The long-range goals are the development of systems, as fully mechanized as possible, for processing, storing, and searching very large volumes of information and the mechanized preparation of useful translations of foreign materials into English.

The work that has been supported to date by the Foundation falls rather naturally into three principal areas: operations research on and studies of present patterns of sci-entific communications; the organization and searching of scientific information; and mechanical translation.

A good deal of related research is being supported by a number of other Federal agencies and by private organizations both here and abroad. In order to foster coopera-tion and coordination among researchers and laboratories working on related prob-lems, the Foundation has taken the following actions:

- 1. A research Information Center and Advisory Service on Information Processing has been established jointly with the National Bureau of Standards and with some financial support from the Council on Library Resources.
- 2. Current research and development in scientific documentation is issued semiannually as a guide to current projects both here and abroad.
- 3. Nonconventional technical information systems in current use reports annually on information systems embodying new principles for the organization of subject matter or employing automatic equipment for storage and search.

Another important means of fostering cooperation among researchers and supporting agencies is the research conference, and the Foundation has supported and will continue to sponsor such conferences.

B. Foreign science information: The fundamental objective of this program is to assure the comprehensive availability to U.S. scientists of the results of foreign scientific research. Current implementation involves conducting or supporting six principal types of activity:

1. Acquisition of foreign scientific publications otherwise unavailable in the United States. Support is given to the Midwest Inter-Library Center in Chicago, a cooper-ative organization of 20 major midwestern research libraries, to acquire all hard-to-get foreign journals which are covered by "Chemical Abstracts". Journals in biology have recently been added to this program which provides service on a national basis. Foundation hopes to encourage organizations in other parts of the country to undertake similar efforts.

The Foundation is also represented on an interdepartmental committee on acquisi-tions which concentrates on the procurement of difficult-to-obtain foreign material in order to help make programs in foreign science more effective.

2. Translation of Russian scientific publications. Foundation support is now making possible the cover-to-cover translation of 35 U.S.S.R. scientific journals. These appear as English-language versions of the original periodicals and are offered for sale on a conventional subscription basis. It is planned to extend thist program to make available selected translations of important journals from other languages such as Chinese, Japanese, Polish, and Czech. Book and monograph translation also is being supported. A report on "Providing U.S. Scientists With Soviet Scientific Information" is issued and kept up-to-date by the Foundation.

As indicated earlier, just getting underway is a project whereby foreign currencies accruing to the U.S. Government through sale of surplus agricultural products will be used to pay for foreign-language-to-English trans-lation projects abroad. The first one is established in Israel; negotiations are now being pursued with Poland and Yugoslavia, and preliminary contacts have been made with Finland, India, and Indonesia.

- 3. Maintenance of information centers on translation. Clearinghouse operations of this kind enable scientists to find out what translations are available and aid them in obtaining access to copies. The Foundation is supporting, or has plans to support, projects of this kind under the direct administration of the Commerce Department's Office of Technical Services, the Special Libraries Association, and the American Institute of Biological Sciences.
- 4. Investigation of the scientific information situation in foreign countries. A

major responsibility of the Foundation's Science Information Service is to be fully aware of what goes on in the scientific information field throughout the world. A series of studies will provide information on the organization, characteristics, and generation of scientific information in every major area of the world. Those currently underway and planned concern Soviet Russia, Poland, Japan, Indonesia, mainland China, Czecho-slovakia, Yugoslavia, and Hungary.

5. Provision of bibliographic and reference aids. Current such projects being supported include maintenance at the Library of Congress of a source file of Soviet information; preparation of a variety of bibliographies and accession lists; studies of the availability and use in this country of Japanese scientific literature, including serial publications in science and technology; and investiga-tion of the foreign language-English dictionary situation.

6. Cooperation between United States and foreign nations. Separate meetings have been held by staff of the Science Information Service with representatives of the United Kingdom, Canada, Germany, the Scandi-navian countries, Israel, India, Indonesia, Japan, Poland, Yugoslavia, and the U.S.S.R. to discuss, plan and in some cases to take immediate action on cooperative scientific

information projects.

Significant discussions have also been held with international organizations such as the International Council of Scientific Unions, the European Productivity Agency of the Organization for European Economic Cooperation, the International Federation of Documentation, and the Advisory Group on Aeronautical Research and Development of NATO. The Science Information Service is cooperating with representatives of organizations in Europe looking toward the estab-lishment of a European translations clearinghouse analogous to and to operate in cooperation with the Office of Technical Services-Special Libraries Association clearinghouse in the United States.

C. Publication and information services: In this phase of the work, temporary or emergency aid is given to primary journals and abstracting and indexing services; also, funds are provided for the preparation or publication of significant monographs, reviews and reference works which could not be made generally available without subsidy. The basic considerations under which support of this kind is granted take into account the need of the scientific community and sound economic planning for the publication.

Examples of new and experimental types of journals partially supported by the Foundation include Physical Review Letters, published semimonthly by the American Physical Society, and Wildlife Disease, the official journal of the Wildlife Disease Association. The latter is jointly supported by the Council on Library Resources and is the first scientific journal ever to be published solely on microfilm.

Other efforts of the Foundation in this area concern data and information centers which compile and analyze research results, collect and organize information on research in progress, provide reference and literature searching service, etc. As total scientific knowledge has increased, the need for such information services has grown. Examples of support by the Foundation include the establishment of an Office of Critical Tables at the National Academy of Sciences-National Research Council to coordinate the activities of the various data compilation projects now in progress in this country and of the data centers currently in operation, and to stimulate new projects and centers in areas not presently being covered. The Foundation also joined with other Federal agencies to support the Bio-Sciences Information Exchange, which collects information on current research projects in the biological sciences, organizes and classifies this information, and makes it available upon request.

The third phase of the publications and information services program involves conducting, or supporting, studies of two general kinds. One is yardstick in nature, producing information useful in evaluating requests for publication and information center support. The other studies are conducted, or supported, in such areas as new publication methods, improved techniques of abstracting and indexing, optimum overall dissemination pattern for a given subject field, comparative usefulness of different kinds of publications, etc.

In the past few years several scientific societies have established programs to assess and to try to improve the entire publications pattern in their fields. The American Institute of Physics has established (with partial support from the Foundation) a research program to study the problems of physics publication and to look for solutions to these problems. Included in the program are consideration of new types of publications, more rapid and lower-cost publication methods, and studies of the publication needs of physicists. The American Chemical Society is studying new printing methods (such as the Photon) and has an active research department at Chemical Abstracts.

D. Unpublished research information: The Foundation seeks to increase the accessibility of unclassified, unpublished research information. The principal sources of such information are research reports and memoranda of Government and private institutions, theses and dissertations, and papers resulting from scientific conferences. Interested scientists frequently experience a great deal of difficulty in trying to locate such material, some of which may contain significant scientific information not otherwise found in published sources.

Support has been rendered to the Office of Technical Services (the Department of Commerce) and to the Library of Congress to increase the coverage and availability of unclassified Government research reports to the Nation's scientists and engineers.

There is a study underway with the Department of Defense and the Department of Commerce on relations between the Armed Services Technical Information Agency and the Office of Technical Services to determine whether such forms of cooperation as cataloging in a common system and coordinated acquisitions would not improve the services of both these important Federal information services.

The Foundation has accelerated its program for conducting inventory surveys of information activities of those Federal agencies operating major scientific information pro-The first inventory report, covering grams. information activities of the Department of Agriculture, has been published under title "Scientific Information Activities of Federal Agencies" (October 1958), and another issue on the Office of Naval Research is in press. The Foundation is also planning to support studies for assessing existing means of disseminating unpublished research in-formation and will assist in making arrangements for channeling the more important unpublished information into conventional publications.

Let me conclude this account of program actions taken and planned by the Foundation with a very short summary statement of administrative actions associated with establishing and organizing the Science Information Service. The need for staff ex-pansion to carry out the expanded scientific information responsibilities has been at-tacked vigorously. On July 1, 1958, 30 posi-

tions were assigned to the Foundation's Office of Scientific Information. This number has now been doubled and it is expected will be increased further before the end of this fiscal year. In order to initiate the development of our expanded programs we requested and were granted nearly twice the funds for fiscal year 1959 as for fiscal year 1958. A further increase of 40 percent has been requested for fiscal year 1960 over fiscal year 1959 expenditures. However, the request for additional funds for this activity in fiscal year 1960 was disapproved by the House Appropriations Committee earlier this month. The Foundation has appealed to the Senate for restoration of this cut amounting to \$1,480,000. If it stands, the reduction in funds would seriously handicap efforts of the Foundation to provide for improved scientific informa-tion services. In foreign science information, for example, the Foundation would have to curtail plans to translate Soviet scientific journals, abandon a program for translating important research results published in Communist China, and cut back the Foundation's research programs on mechanical translation.

### Poison in Your Water-No. 95

EXTENSION OF REMARKS

### HON. JOHN D. DINGELL

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 2, 1959

Mr. DINGELL. Mr. Speaker, pursuant to permission granted I am inserting into the Appendix of the RECORD an article appearing in the Hudson, Mass., Sun of January 17, 1958, entitled "Lake Williams Believed To Be Polluted":

LAKE WILLIAMS BELIEVED TO BE POLLUTED-KEROSENE SPILLED IN WATER MAY PREVENT Use for 3-4 Months

MARLBORO .- Lake Williams may have to be closed for 3 or 4 months if it is found to be polluted by kerosene which spilled yesterday from tanks at Lakeside Oil Co., opposite the body of water. Superintendent of the Water Department Harry P. Loftus said samples of the water will be sent each week to Boston to determine if pollution exists.

The accident occurred when an oil tanker spilled about 3,000 to 4,000 gallons of oil while filling tanks at the Lakeside Oil Co One of the partly filled tanks overflowed, according to John Kelleher, plant manager.

Millhain Pond, rather than Lake Williams, will be used for Marlboro's water supply during the next several months, it was disclosed by Mr. Loftus. Even though the spilled kerosene was sanded there is still a good chance of it sceping through the ground into the water, he explained.

It takes only four ounces of kerosene to pollute 1 million gallons of water. The last time Lake Williams was polluted it was closed for 10 weeks and it appears that it will be closed at least 3 to 4 months this

Mr. Loftus explained that the only way the kerosene will leave the water is through evaporation and this process cannot start until the lake is free of ice.

In the past when appealing for a new source of water for the community, Mr. Loftus pointed out the hazards of pollution of Lake Williams. This would present an especially precarious condition if it occurred during a dry spell when the water supply is at a low ebb, he explained.

# Appendix

### Disbursement of Government Funds by the Senate

EXTENSION OF REMARKS

### HON. CARL HAYDEN

OF ARIZONA

IN THE SENATE OF THE UNITED STATES
Wednesday, June 3, 1959

The PRESIDENT pro tempore. On May 23, 1959, I received a letter from Mr. J. R. Wiggins, president of the American Newspaper Editors Association, transmitting to me, as President pro tempore of the Senate, a petition for a redress of grievances, dated May 22, 1959.

I have delayed action on the petition because at that time there was pending before the U.S. Court for the District of Columbia a civil action filed on April 1, 1959, against the Secretary of the Senate, the financial clerk of the Senate, and the Sergeant at Arms of the Senate, by Vance H. Trimble, a newspaper reporter, in which the question at issue was practically identical with the request made by the American Newspaper Editors Association.

Since Hon. Alexander Holtzoff, U.S. district judge, on yesterday rendered a decision in the Trimble case, I now lay down the petition and refer it to the Committee on Rules and Administration.

If there is no objection, by unanimous consent, the U.S. District Court decision and the letter and petition will be printed in the Appendix of the Congressional Record.

There being no objection, the opinion, letter, and petition were ordered to be printed in the RECORD, as follows:

U.S. DISTRICT COURT FOR THE DISTRICT OF CO-LUMBIA—VANCE H. TRIMBLE, PLAINTIFF, v. FELTON M. JOHNSTON, SECRETARY OF THE U.S. SENATE, ROBERT A. BRENKWORTH, FI-NANCIAL CLERK, U.S. SENATE, AND JOSEPH C. DUKE, SERGEANT AT ARMS, U.S. SENATE, DE-PENDANTS—CIVIL ACTION NO. 921-59

OPINION

(Norman S. Jeavons, of Cleveland, Ohio, and Mark P. Friedlander, of Washington, D.C., for the plaintiff.)

(Donald B. MacGuineas, Department of Justice, Washington, D.C., for the defend-

This is an action brought by a newspaper correspondent against the Secretary of the U.S. Senate, the financial clerk of the Senate, and the Sergeant at Arms of the Senate, for a mandatory injunction requiring them to permit him to inspect and copy certain payroll records and other documents and papers relating to the disbursement of Government funds by the Senate of the United States. The case is before the court on a motion by the defendants to dismiss the complaint.

In order to deal adequately with the issues raised by counsel, it is necessary for us to revert to basic tenets on which the in-

stitutions of the Federal Government are founded. Although like all fundamental principles they are familiar and well known, they are nevertheless likely to be overlooked at times in the pressure of details connected with the routine activities of life. It is wholesome to pause in order to reflect and ponder over them anew at periodic intervals and thus to refresh ourselves at the fountain of our liberties.

At the foundation of the structure of the Federal Government lies the doctrine of the separation of powers among three independent coordinate branches—the legislative, the executive, and judicial departments. With certain specific, express exceptions generally known as checks and balances, each of the three departments is independent of the others. As a corollary, none of them may encroach on the powers of either of the other two.

The Federalist, one of the great sources of American political philosophy, refers to this principle as "the political maxim, that the legislative, executive, and judiciary departments ought to be separate and distinct" (No. 47). The author emphasizes the vital importance of this theory by stating that, "The accumulation of all powers, legislative, executive, and judiciary, in the same hands, whether of one, a few, or many, and whether hereditary, self-appointed, or elective, may justly be pronounced the very definition of tyranny." This discussion is expanded in paper No. 48 of the Federalist, as follows:

"It is agreed on all sides, that the powers properly belonging to one of the departments ought not to be directly and completely administered by either of the other departments. It is equally evident, that none of them ought to possess, directly or indirectly, an overruling influence over the others in the administration of their respective powers."

The judicial branch of the Government is independent of the other two departments. Its decisions and its business may not be controlled or influenced by either the legislative or executive branch. In fact, it has been often said that there can be no liberty without an independent judiciary. Recipro-cally, the judicial branch of the Government not control or direct the legislative or executive departments. Thus, the Federal courts may not issue an injunction or a writ of mandamus against the Congress. In order that there may be no interference with the business of the Congress, no Member of either House is subject to arrest, except for a criminal offense, during his attendance at a session of the House, or in going to or returning from it.1 It is recognized that for similar reasons no Member of either House may be required to respond to a subpena while the House is in session, as otherwise the quorum of the House may be broken. The estab-lished practice, the validity of which has never been successfully questioned, for a Member of Congress who is served with a subpena to appear as a witness, is to secure permission of his House to respond to the summons. Such permission may be granted by a formal resolution. Similarly, the courts may not enjoin or restrain the President, or compel him by means of a mandatory injunction or a writ of mandamus, to perform some act. It is recognized that he may not be required to respond to a subpens. In the early years of the Republic an attempt was made to subpena Thomas Jefferson when he was President, to testify as a witness at the trial of Aaron Burr. Chief Justice Marshall, who presided at the trial ruled that the subpena should issue, he expressed some doubts as to whether the President's attendance could be compelled. Jefferson took the position that he was not obliged to comply on the theory that it was not consonant with his office as President to do so, and the matter was dropped.<sup>2</sup>

It is no part of the judicial function to supervise or control the business of the executive or legislative departments of the Government. Otherwise the judiciary, instead of being one of three coordinate branches, would be supreme over the other two. We would then have a government by the courts, instead of by the Congress and the President. Manifestly the Founding Fathers did not contemplate such a result.

Chief Justice Taney remarked in Decatur v. Paulding, 14 Pet. 497, 516, that "The interference of the courts with the performance of the ordinary duties of the executive departments of the Government, would be productive of nothing but mischief; and we are quite satisfied, that such a power was never intended to be given to them." This comment is equally applicable to the business of the legislative branch.

It is a basic duty of the Federal courts zealously to maintain their independence and not to tolerate any encroachment upon it. By the same token, it is equally the obligation of the judiciary not to attempt to usurp or infringe on the powers or independence of either of the other two departments. The ringing words of Mr. Justice Stone, in United States v. Butler, 297 U.S. 1, 78-79, although uttered in a dissenting opinion, have made a deep impress on jurisprudence. He eloquently observed that, "while although unconstitutional exercise of power by the executive and legislative branches of the Government is subject to judicial restraint, the only check upon our own exercise of power is our own sense of self-restraint. For the removal of unwise laws from the statute books appeal lies not to the courts but to the ballot and to the processes of democratic government."

The nature of the judicial process and the function of the courts consist of deciding actual cases and controversies. The sole jurisdiction and duty of the courts is to pass on the individual legal rights that parties to litigation assert and seek to have vindicated. For example, the authority to declare statutes unconstitutional is not a plenary power to strike down any legislative enactment as invalid. It is merely the function of determining what law governs the actual case or controversy before the court. If one party relies upon a statutory provision but the court concludes that the statute is repugnant to a clause of the Constitution, the Constitution takes priority as the supreme law of the land. The court must then decide the case in accordance with the Constitution and ignore the statute that is incon-

<sup>2</sup> Constitution, art. I, sec. 6.

<sup>&</sup>lt;sup>2</sup> United States v. Burr, 25 Fed. Cas. 30, No. 14, 692d; Beveridge, Life of Marshall, vol. 3 n 454

June 3

sistent with it, thereby, and only to that extent, leading to the conclusion that the statute is unconstitutional and therefore unenforceable. Chief Justice Marshall demonstrated this chain of reasoning with the precision of Aristotelian logic in Marbury v. Madison, 1 Cranch 137.

While, as has been indicated, no suit lies against the Congress or against the President, actions may be maintained against their subordinates, but only if an individual legal right is involved. Thus, heads of executive departments are subject to suit in the Federal courts, but only if the head of the department is acting contrary to the law that circumscribes his duties, or fails to carry out a congressional mandate; and further provided the individual legal rights of the party who brings the suit, are violated by the officer's activity or failure to act. Such a suit may not be maintained, however, in respect to a political matter or a matter that the law leaves to the officer's discretion.4 Subject to the same limitations, actions lie against individual officers of the legislative branch of the Government, such as the Comptroller General, and the Public Printer.

In order that the plaintiff in the case at bar may maintain this action, it is essential for him to establish that the defendants have violated some personal right that the law accords to him. Whether any Government records are open for inspection by the public or some segment of the public is, in the first instance, to be determined by the Congress. This subject is within the legislative power. If the Congress legislates to the effect that certain specified records are to be open to the public, or to some specified members of the public, and a person to whom this right is extended by such an enactment, is denied access to the records by their custodian, then and only then, at the behest of such person, the courts may act and enforce the right of inspection that the Congress has given him. It is necessary, therefore, to examine and scrutinize the statutes bearing on this point, since the courts may not rule that the records in question are public and open to inspection unless the Congress first legislated to

The statutory provisions on this subject are found in title 2 of the United States Code, which relates to the Congress. Section 102 requires the Secretary of the Senate and the Clerk of the House of Representatives to prepare and submit to the two Houses, respectively, at the commencement of each session of Congress, a statement showing the names of all persons who have been employed in their respective offices during the preceding year, and those of the messengers of the respective Houses; the time that each person was actually employed; and the sums paid to each. Second, the Secretary of the Senate and the Clerk of the House of Representatives are required to submit a detailed, itemized statement of expenditures out of the contingent fund for each House.

Section 103 imposes a duty on the Secretary of the Senate and the Clerk of the House to require disbursing officers acting under their direction or authority, to submit a return of precise and analytical state-

\*Youngstown Sheet and Tube Co. v. Sawyer, 343 U.S. 579. The law reports are replete with actions against the Seeretary of the Interior involving title to public lands; and against the Secretary of Agriculture in matters involving his regulatory activities, but such suits may be maintained only in respect to matters involving individual legal

<sup>4</sup> Mississippi v. Stanton, 154 U.S. 554; State of Georgia v. Stanton, 6 Wall. 50.

\*E.g., Miguel v. McCarl, 291 U.S. 442. \*E.g., Duncap v. Blattenberger, 141 F. Supp. 513. ments and receipts for all moneys expended during the preceding year. The section further provides that the results of such returns and the sum total shall be communicated annually to Congress by the Secretary and the Clerk. It should be observed that under section 103, the only documents to be submitted to the Congress by the Secretary and the Clerk, respectively, are the results of the returns made by the disbursing officers and the sums total.

Section 113 requires the Secretary of the Senate and the Clerk of the House to submit full and complete statements of their receipts and disbursements showing the items of their expenses in detail. There is no express provision and none can be perceived as a matter of necessary implication to the effect that all of these financial statements are to be termed public records in the sense of being accessible to public inspection. The conclusion is, therefore, irresistible that no statutory right is granted to the plaintiff, or to any other member of the public, to have access as a matter of course to the records that he seeks to inspect.

The plaintiff, however, does not base his claim solely on an alleged statutory right. He asserts that he has a constitutional right to inspect the records in question. He predicates this contention on two grounds, each independent of the other. First, it is urged that the right to see the records in question is part of the constitutional freedom of the press, since he desires to inspect them in his capacity as a representative of the press. Freedom of the press is, of course, one of the basic elements of the Anglo-American concept of ordered liberty. It is considered of such vital importance that it is expressly protected by the 1st amend-ment to the Constitution as against infraction by Federal law, and is safeguarded by the due process clause of the 14th amendment, as against interference or transgression by the States.7 To discuss freedom of the press at length would be superfluous, for we have reached a stage in our development at which we take it for granted. It is no longer essential to vindicate and champion it as was valiantly and convincingly done by John Milton in his "Areopagitica, in the 17th century, when the idea seemed novel, dangerous, and almost revolutionary. The Anglo-American world has progressed so that even as far back as a century ago. it was observed by John Stuart Mill in his celebrated essay on "Liberty," that "the time, it is to be hoped, is gone by, when any defense would be necessary of the 'liberty of the press'" (chap. II). In the interest of clarity of thought, however, it is essential to define our terms and consequently the phrase, "freedom of the press" needs explanation and interpretation.

Freedom of the press comprehends a right to print and publish and to disseminate, circulate, and distribute matters that have been printed, without prior restraint, without license, without censorship, and without discriminatory taxation, but subject to the consequences of the law of libel and to the criminal penalties imposed by such laws, as those that ban obscenity, fraud, incitement to crime, espionage and the like, or that protect the needs of national defense and security. The press is not liberated, however, from amenability to law generally. For example, newspaper publishers and press associations are subject to the National Labor

Relations Act, the Fair Labor Standards Act, and the Antitrust laws. The liberty of the press does not include any legal right of securing assistance from public officials in procuring information that it is desired to print. It does not comprise any alleged right of access to material not available to others, any more than it would include the privalege of attending closed meetings at which news of interest might possibly be gathered.

It is a useful device for testing the cogency and soundness of an argument to endeavor to apply it to extreme suppositious cases and determine its possible effect on them. Thus, it would hardly be argued that the press, in exercising its constitutional privilege, may insist on the admission of its representatives to meetings and conferences that are not open to the public, such as, for example, executive sessions of congressional committees, meetings of the President's Cabinet, conferences of judges in deciding cases that have been argued before them, as well as other similar groups. Similarly, it would hardly be urged that the press is entitled to access to written material that the law does not regard as being automatically open to public inspection, such as, for example, staff reports submitted to congressional committees, until the latter choose to release them: letters to the President from his advisers. unless he sees fit to make them public: memorandas written to their superiors; executive departments to their superiors; or drafts of contemplated or tentative opinions of members of the judiciary until they take final form and are publicly handed down. Numerous other instances of a similar nature may be cited at length.

The conclusion is inevitable that the constitutional privilege of freedom of the press does not include a right on the part of representatives of the press to inspect documents not open to members of the public generally.

The second basis on which the plaintiff urges that the defendants have invaded his constitutional rights is that their refusal constitutes an interference with his right to pursue his occupation and, therefore, is a deprivation of a property right without due process of law. Manifestly, the defendants have done nothing to obstruct affirmatively the plaintiff's pursuit of his shosen calling. The most that can be said is that they have declined to aid him to see documents which Congress has not seen fit to make accessible to the public. Much that has been just said in regard to the constitutional freedom of the press is equally applicable here. The conclusion is inescapable that there is no basis for the contention that there has been any unlawful interference with the plaintiff's constitutional right to pursue his vocation.

In the light of the foregoing considerations the court is of the opinion that the plaintiff has no legal right to insist on seeing the records that he desires to inspect and that, consequently, the complaint does not state a claim on which relief may be granted.

Motion to dismiss the complaint is

Alexander Holtzoff, United States District Judge. June 2, 1959.

AMERICAN SOCIETY OF NEWSPAPER EDITORS, Washington, D.C., May 22, 1959.

The Honorable Carl Hayden, President pro tempore, U.S. Senate, Washington, D.C.

DEAR SENATOR HAYDEN: The board of di-rectors of the American Society of Newspaper Editors has directed me to present to you a petition to the Senate for the redress of grievances:

This petition is herewith respectfully submitted in conformity with the provisions-of Senate rule 7 with a prayer for the consideration of the Senate.

Sincerely yours,

J. R. WIGGINS.

President, American Society of Newspaper Editors.

A PETITION TO THE U.S. SENATE FOR THE RE-DRESS OF GRIEVANCES BY THE BOARD OF DI-RECTORS OF THE AMERICAN SOCIETY NEWSPAPER EDITORS, FRIDAY, MAY 22, 1959

Whereas the Secretary of the Senate, the financial clerk of the Senate, and the Sergeant at Arms of the Senate have refused to give citizens of the United States access to certain public records of the Senate; and

Whereas citizens and taxpayers of the United States are entitled to know how public funds are disbursed; and

Whereas the imposition of secrecy upon the financial transactions of the U.S. Senate protects against disclosure the acts of those who may have illegally, improperly, or recklessly disposed of pubic money; and

Whereas the cloak of secrecy which shields wrongdoers from public knowledge or indignation, at the same time spreads unjust suspicion as to the integrity of Members of the Senate who have never participated in any of the bad practices of the shielded minority; and

Whereas the Congress of the United States, historically, has been the sword and buckler of citizens endeavoring to obtain information about the transactions of the executive departments and independent agencies of government, and its effectiveness in this urgent and necessary purpose is diminished by secrecy in its own establishment: Therefore, it is

Respectfully urged, by the board of directors of the American Society of Newspaper Editors, that the officers of the U.S. Senate be directed by the Senate to disclose to the public those transactions concerning the disbursement of public funds for payrolls, salaries, expenses, and such other purposes as are a matter of record.

J. R. WIGGINS,

President, American Society of Newspaper Editors on Authority of the
Board of Directors.

### Women Adapt to a Changing World

EXTENSION OF REMARKS

### HON. PRESCOTT BUSH

OF CONNECTICUT

IN THE SENATE OF THE UNITED STATES Wednesday, June 3, 1959

Mr. BUSH. Mr. President, every day We see more evidence of the expanding opportunities which are available to American women. The ease with which these women adapt themselves to a changing world is amazing. We have seen in my own State of Connecticut the distinguished records made by many outstanding women in business, politics, teaching, and other fields.

Particularly interested in the welfare and future of women is Mrs. Alice K. Leopold, Assistant to the Secretary of Labor, James P. Mitchell, and formerly secretary of state in Connecticut, who devotes much of her time to guidance for working women of all ages.

I ask unanimous consent that an editorial from the Hartford Courant, reviewing Mrs. Leopold's address to the Business and Professional Women's Club of Hartford, be printed in the RECorn Appendix.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the Hartford (Conn.) Courant, May 13, 19591

WOMEN ADAPT TO A CHANGING WORLD

A new pattern for women that now regularly includes jobs and homemaking has taken shape as a result of trial and error over the years. Mrs. Alice K, Leopold believes that young women should plan for this type of career, combining private life with outside services to the community.

In a talk to the Business and Professional Women's Club of Hartford she predicted that young women may work outside of their homes for 25 years or more. If they face this prospect early in their lives, they will be more likely to take full advantage of their opportunities for education and specialized training. The modern custom is for women to get jobs before they are 20, work a few years following marriage and then, after their children are old enough to look after themselves, return to the work force. This may be at 35 or later. Whether it is a good trend is not the point. What is important is that it is here to stay. Mrs. Leopold's advice should be taken to heart by young people, for such a double existence requires different types of skills and can benefit by long-range planning.

At present there are shortages in teaching and nursing. These are the fields that tra-ditionally attract those who are willing to go through adequate training. In the fu-ture the Nation will need more professional and technical people. Engineering and science do attract some women, but the number is not likely to be large. Business and industry are the fields in which women can spend interrupted careers. It is safe to say that those with experience before marriage are more likely to fit into an organization when they return to work later in life than are those who don't work before

Mrs. Leopold's constructive approach to the problem was shown by her concern for the mature woman who has never worked or needs retraining. This is a field in which much remains to be done. One approach is earning-opportunities forums that are held in 14 communities throughout the country. Connecticut's program to attract mature college graduates to teaching is also a worth-while enterprise aimed at the same problem. Going to work is a hard adjustment for women who have not taken it into account until forced by family necessities. The young generation, having faced it from early years, will be ready for the change.

The 51st State

EXTENSION OF REMARKS OF

### HON. CHARLES A. BOYLE

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES Tuesday, May 26, 1959

Mr. BOYLE. Mr. Speaker, the right of the people to actively participate in the conduct of their government at all levels is of great concern to most of the people of the entire United States of America. It is the pressing desire of the residents of the District of Columbia to be given their rights as first class citizens. Recently, Mr. Leo A. Lerner, editor and publisher of Lerner Home Newspapers of Chicago, a crusader for the rights of man, ran the following editorial entitled, "The 51st State." Under leave to extend my remarks in the RECORD I should like to include this editorial in the RECORD:

[From the Sunday Star, May 24, 1959]

THE 51ST STATE (By Leo A. Lerner)

Now, children, gather close and daddy will tell you a story.
The State of Alaska contains about 100,000

people. Its 40,000 voters have elected 2 U.S. Senators and 1 Congressman to serve in the Congress of the United States.

The State of Hawaii has about 500,000 inhabitants. Its little more than 100,000 voters (fewer than the number eligible to vote in any of the Chicago congressional districts) will soon elect 2 U.S. Senators and 1 Congressman (maybe 2) to serve at Washington in the U.S. Congress.

The State of Nevada has about 250,000 people, including faro dealers. These citi-zens, including about 75,000 voters, have elected 2 U.S. Senators and 1 Congressman to the Congress of the United States.

The State of Arizona, a very fast-growing American State, has less than a million people in it, but elects 2 U.S. Senators, 3 Congressmen, and every village in it, including Indian pueblos, has its own government.

Hold still a minute. I'll soon be through with the statistics. The State of Wyoming contains about 300,000 people, and it, too,

elects 2 U.S. Senators and a Congressman. Now we will take a jetplane to the District of Columbia, where Washington, our Nation's Capital, is situated. A million people live in Washington. These people are Americans just like all the rest of us. They eat, sleep, dream, make love (when they get a chance), and eat banana splits in Woolworth's.

But there's one thing the people who live in the District of Columbia can't do. They can't vote.

And that's just one thing they can't do. The other is that they have nothing to say about governing their own city.

Washington, D.C., contains more people

than three States like Wyoming. Wyoming has two U.S. Senators and one Congressman. But the people of Washington, D.C., have no representation at all.

Oh, some Washingtonians, those with a permanent address elsewhere, vote in their 'home" towns, by mail or by making a special trip, but those who live in Washington have no home rule in their hometown and no voice in the American Federal Government.

Washingtonians have no aldermen, mayor, no Senators and no Congressmen. They are in the center of democracy, but as far as deciding their own destiny is concerned they might as well be living in the penal colony in French Guiana.

All that fuss about Alaska and Hawaii sounded hypocritical to me when I thought of the voteless, voiceless people in the District of Columbia.

My friend Herblock, the cartoonist, who lives in Washington, once drew a cartoon showing Nikita Khrushchev, saying, "I'll give the West a good deal—go tell them I'll guarantee West Berlin as much democracy as they allow the District of Columbia."

That hurts, mostly because it is so true. A committee of Congress runs Washing-ton, which means that Congressmen from far-off places like Nome or Howland Island

(total population four) control the destiny of a million people who can't vote.

It's nutty, but it's stranger than fiction.
What fiction writer in the 20th century would have such a fantastic imagination as to dream up this libel against the United States of America?

I am for making the District of Columbia the 51st State. The Americans who live there should be able to vote and run their

own municipal government.

If it weren't for a third baseman named Harmon Killebrew, Washingtonians could scarcely hold up their heads.

# Increased Cancer Research as Memorial to John Foster Dulles

EXTENSION OF REMARKS

### HON. RICHARD L. NEUBERGER

OF OREGON

IN THE SENATE OF THE UNITED STATES
Wednesday, June 3, 1959

Mr. NEUBERGER. Mr. President, the distinguished commentator of the American Broadcasting Network, Mr. Edward P. Morgan, described vividly on May 27 how the Senator from Alabama [Mr. Hill] and I have suggested that a vast program of cancer research be undertaken as a memorial to the late John Foster Dulles.

Senator Hill, of course, is more qualified than any other Member of Congress to take the lead in encouraging such a memorial.

Edward P. Morgan's commentary is so cogent and so persuasive that I ask unanimous consent, Mr. President, that it be printed in the Appendix of the Record.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

EDWARD P. MORGAN AND THE NEWS, MAY 27, 1959

Already a bill has been introduced in Congress to start the ball rolling for a national memorial to John Foster Dulles. And in announcing plans to build a great church edifice in Washington, the National Presbyterian Church—of which Dulles was a member—indicated the project might include a memorial of its own to him. But today, two Senators, both Democrats, urged Congress to authorize a broader program of cancer research in the name of the ex-Secretary of State. It would be hard to think of a more appropriate move unless it could be the creation of a fund to finance the scientific study of the psychological and other causes of war.

"What greater way could there be to honor Mr. Dulles' memory," said Oregon's RICHARD NEUBERGER in endorsing a suggestion by Alabama's Lister Hill, "than to launch a rast program through the National Cancer Institute aimed at vanquishing the disease which took his life?" He was testifying at a Senate Appropriations Subcommittee hearing, headed by Hill, on a money bill for the Department of Health, Education, and Welfare. Neuberger, who has been a victim of the disease himself, supported an expansion of Federal funds to the Cancer Institute from the present level of \$75 million, which President Eisenhower is satisfied with, to \$109 million, for the next fiscal year. The House has already raised the administration ante to more than \$83 million.

Senator H.L. noted that cancer had robbed the Senate alone of some of its greatest leaders in recent years, including Vandenberg of Michigan, Taft of Ohio, and Brian McMahon of Connecticut.

Support for more ambitious Government assistance came from an entirely different quarter today which, paradoxically enough, might have more influence in mobilizing public support than the most respected political voice in the land. Sobered by his recent brush with death in his operation for lung cancer, a broadcasting personality named Arthur Godfrey wrote the subcommittee urging a "crash program" of cancer research. Surely, he said, such a move "is as important today to America as similar projects now being pursued by nuclear fission, missiles, and space scientists."

For years some of the most prominent medical experts have urged far stronger backing, public and private, for research on many types of diseases-especially cancer. Today, Dr. I. S. Ravdin, a national authority on cancer who was consulted during Dulles illness, told the subcommittee he supported a more ambitious program. Today's testimony recalled another hearing several weeks ago before the Senate Labor and Public Welfare Committee at which Senator HILL, in support of his so-called health-for-peace bill to establish an international research clearinghouse, said the evidence at hand indicated that if all the world's current efforts to combat cancer could be coordinated a major breakthrough toward a cure might be expected in a short time. Next to heart disease, cancer kills more persons in the United States than any other cause—more than a quarter of a million a year.

Still, a lot of people wonder about the wisdom of putting more than \$100 million of Federal funds—tax money, that is—into the Cancer Institute whose research grants, incidentally, have been almost quadrupled in less than 5 years thanks to the efforts of such legislators as Senators Neuserger and

But, in a revealing article in the June issue of Harper's magazine, Neuerrager, after describing his own intimate experiences with the disease, gives us another reminder of the tilt in our values. Our total investment in cancer research is a pittance compared to what we pass at the parimutuel windows; two percent of what we spend on cigarettes, which, ironically, may hasten the onset of the malady.

His most convincing testimony is living proof of the effectiveness of research: himself. No wonder citizens like Senator Neubergger and Arthur Godfrey are for it. They wouldn't be alive without it.

### Military Air Transport Service in Peace and War

EXTENSION OF REMARKS

### HON. J. GLENN BEALL

OF MARYLAND

IN THE SENATE OF THE UNITED STATES

Wednesday, June 3, 1959

Mr. BEALL. Mr. President, each year the Congress holds special hearings on the position and use of the Military Air Transport Service. Throughout the year our newspapers and magazines contain many articles and statements by airlines executives, public officials, and other interested parties regarding the controversial charges of Government competition with commercial carriers. This is-

sue, I believe, should be discussed fully, and openly, so that all interested persons can know the facts. Therefore, I ask unanimous consent that a highly interesting and informative article on the subject from the Sun of Baltimore, be printed in the Appendix of the Record. The item was written by Mr. Albert Sehlstedt, Jr., the newspaper's aviation editor, and was printed in the editions of June 1, 1959.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

AIRPORTS AND AIRWAYS
(By Albert Schlstedt, Jr.)

One of the favorite whipping boys of the airlines and some other segments of civilian endeavor is the Military Air Transport Service.

Even some supposedly objective newspapermen have been known to knock or poke fun at this transportation arm of the Department of Defense.

Like the flowers that bloom in the spring, criticism of MATS seems to be a seasonal thing which bursts forth every year or so and then hibernates for another fling,

#### COMMERCIAL LINES COMPLAINT

Much of this criticism centers around charges that MATS is, in effect, the world's largest airline and takes legitimate business from the commercial carriers.

Instead of devoting the rest of this space to cataloging the latest barbs directed at MATS, we will list a few of the arguments on the military side of the long debate.

The MATS view is summed up in a recent

The MATS view is summed up in a recent statement by Lt. Gen. William H. Tunner. MATS commander, who 11 yeears ago, headed the British-American airlift that broke the Soviet blockade of Berlin.

#### BIG WARTIME JOB

"MATS, like the Strategic Air Command and the Air Defense Command, is in being only because it has a big wartime job," says General Tunner.

"This job is to fly hundreds of missions in support of the Department of Defense fighting agencies immediately after an emergency starts."

In order to be ready for such emergencies, he explains, it is necessary that MATS operate at a certain minimum level when no particular emergency exists.

### ALSO DOES USEFUL SERVICE

"While flexing our air transport muscles in peacetime, we are fortunate that we can perform a useful service to the Department of Defense because of the very nature of our job," he continues.

"We can carry a portion of our Defense Department military people, their families and cargoes overseas and thus reduce the overall cost of the Department of Defense to the taxpayers."

However, there is more business around than MATS can handle with its present size and minimum flying-hour rate, Tunner says. As a consequence, commercial air carriers get a lot of business.

SEVENTY MILLION DOLLARS WORK FOR LINES

This contract hauling done by the airlines for the military has increased annually to an all-time high of \$70 million this year. It was \$57 million last year; \$50 million in 1957, and \$43 million in 1956.

"It must be noted in passing that as MATS contracts for more business, more airlines organize and spring up to ask for a share of this business," Tunner reports.

"As a matter of fact, in the last 8 months, 17 new airlines have been added to our bidders list. Most of them are actually new airlines.

#### "WANTS HEALTHY INDUSTRY

"The real problem, of course, which we hear so much about today is, Why doesn't MATS give even more business to the airlines?

"MATS is in a tough spot here because MATS wants a healthy transport industry, one that it can depend on for support if war or other serious emergency were to come."

Tunner says there isn't any more business to give to the airlines at present unless MATS were to fly empty planes while maintaining its training program. Such an alternative would quadruple the present Defense Department airlift budget which now stands at about one quarter of a billion dollars.

#### PROPOSES MOVING MORE BY AIR

The general then asks for a solution to the problem and comes forward with his own proposal. He suggests that the military move more people and things by air than it does at present. Such a course would bring about greater utilization of people and things and create a good deal more air transport business.

"For example," he says, "today 93 percent of Air Force officers, airmen, and their familles move to and from overseas by both military and commercial air.

"This means a substantial monetary saving to the Air Force, compared to surface movements, as well as the saving of 12,000 personnel—or enough personnel to man 3 bombardment groups.

"If the Department of Defense, as a whole, were to adopt this policy it would increase our movement of Government passengers to and from overseas by almost 50 percent. This would result, of course, in increased commercial augmentation.

"Rapid airlift, cutting down on inventory costs and other outlays, already is practiced in the shipment of expensive items of military hardware, such as jet engine," Tunner says.

#### HIGHER COST ITEMS

"In this field of moving higher cost items, much more can be done and I estimate we could double the Department of Defense air movements of these items and save substantial initial procurement money—by buying a fewer number and seeing to it that these high-cost items didn't sit on the docks and decks in long, tortuous pipelines."

General Tunner declares that Americans can get full value for their tax dollars spent on military transport if MATS and the airlines settle their differences and cooperate in the development of air transportation to its full potential.

### A Tribute to Ens. Stanley W. Legro, of Houston, Tex., Honor Man at the U.S. Naval Academy

EXTENSION OF REMARKS

### HON. RALPH W. YARBOROUGH

OF TEXAS

IN THE SENATE OF THE UNITED STATES
Wednesday, June 3, 1959

Mr. YARBOROUGH. Mr. President, after his graduation from the U.S. Naval Academy at Annapolis this week, Stanley W. Legro, of Houston, Tex., was commissioned an ensign in the Navy.

He comes highly qualified for his naval service. He was first man in his 800-man graduating class and won awards for outstanding performance in English, seamanship, leadership, ordnance, and other subjects. Ensign Legro's record at the Academy reflects very favorably on himself, his family, his State, and the Nation.

Mr. President, I ask unanimous consent to have printed in the Appendix of the Record an article from the Washington Post and Times Herald for Tuesday, June 2, 1959, entitled "Houston Middie Walks Off With Six Prizes."

There being no objection, the article was ordered to be printed in the Record, as follows:

HOUSTON MIDDY WALKS OFF WITH SIX PRIZES

Annapolis, June 1.—Stanley W. Legro, honor man in the Naval Academy's graduation class, received six of the prizes awarded to midshipmen today for excellence in scholastics, leadership, sports, and extracurricular activities.

Legro, 22-year-old son of Mr. and Mrs. Wayne L. Legro of Houston, Tex., qualified for two awards by finishing at the head of the 800-man graduating class. He won four others for excelling in English, seamanship, leadership, and ordnance.

Seventy-one major awards were presented. They ranged from money, swords, and radios to lifetime memberships in Navy organizations.

The presentation of prizes and commendations highlighted the fourth day of June Week at the Academy. The festivities, attracting thousands of visitors from throughout the Nation, will culminate in graduation exercises Wednesday. William B. Franke, Under Secretary of the Navy, will give the commencement address.

Most of the prizes were handed out in the Academy's huge fieldhouse. Twenty-one letters of commendations for the most officer-like midshipmen were presented at a late afternoon parade.

Also on today's schedule were boat demonstrations, movies, the Superintendent's garden party for seniors, hops for all classes, and an "N" dance for varsity letter winners and their "drags."

Leaden skies threatened the parade and garden party but didn't seem to dull the spirit of the midshipmen, their families, sweethearts, and friends.

The day got off to a colorful start with a rehearsal for the traditional flag-passing ceremony which will take place at 5 pm., Tuesday. In one of the most crowd-pleasing events of the week, Susan Graham of Bloomington, Ill., will transfer the United States and brigade flags from the 3d Company to the 8th.

The pretty Penn State coed was chosen as 1959 Color Girl by Douglas Volgenau of Clarence, N.Y., commander of the 8th Company. His outfit's general excellence won it the right to lead the brigade at all functions next year.

A kiss climaxes the color ceremony. Volgenau and Miss Graham rehearsed that part about 20 times today for the benefit of photographers.

Volgenau got other rewards later on. He automatically qualified for the Forrestal award, a silver tray which goes to the commander of the color company, and he won the Weems wrestling prize.

### Job Outlook for Graduates

EXTENSION OF REMARKS

### HON. ALEXANDER WILEY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES
Wednesday, June 3, 1959

Mr. WILEY. Mr. President, with graduation from America's high schools and colleges now in progress, hundreds of thousands of students will be looking for jobs.

Imbued with zeal, enthusiasm and ambition, these young job hunters seeking employment—some temporary, some permanent—will be knocking on doors of business, industry, and farms throughout the country.

Today the Nation is recovering from its economic setback, with an increasingly large volume of formerly jobless people now being reemployed. However, there is still too large a number of jobless.

The flood of new potential workers on the market may indeed pose difficult problems, not only for the students graduating from our educational institutions, but for permanent workers and their families competing for the available jobs.

The Congress must continue to seriously examine this situation and do all it possibly can to improve the employment outlook. In addition, States, local communities, as well as labor and industry, also must attempt to make an effective contribution toward dealing with our unemployment problems.

To assist our young job hunters in finding work, a recent edition of the Milwaukee Journal carried a fine article, by Laura Pilarski, on tips to young jobseekers. The article also outlined the constructive efforts made by our Wisconsin State Employment Service in assisting these young people to find work.

Believing that these ideas contain helpful advice that will better enable graduates to make a useful contribution to community life—in Wisconsin and elsewhere in the Nation—I ask unanimous consent to have the article printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

TEENAGERS AND JOB TESTING—HOW TO FIND WORK? YOUNGSTEES GET TIPS—4,500 TO 5,000 HIGH SCHOOL GRADUATES TO LOOK FOR PERMANENT EMPLOYMENT

#### (By Laura Pilarski)

Some 4,500 to 5,000 teenagers graduating from Milwaukee area high schools next month will be looking for permanent jobs.

These are the young people who will not

These are the young people who will not continue their formal education. They represent a majority of the community's 8,000 total high school graduates.

Willett S. Main, district manager of the Wisconsin State Employment Service (WSES), estimates that during the last school year, the service has counseled and tested at least 4,500 pupils in some 25 high schools.

#### QUESTIONS ARE ASKED

This job probing was aimed at answering these questions of the voluntary participants:

Am I sure of the kind of work I want to do?

Do I know what my ability is to do the job?

Do I know all about the opportunities in the field of work I want to enter? Where can I find the job I want?

To aid young people further in job hunting, the State service has issued several pamphlets. These are available through the district headquarters at 634 North Second Street. They will be mailed to those who call Broadway 1-7682 and request them.

#### REQUIREMENTS ARE LISTED

"How To Get and Hold the Right Job" includes information on analyzing oneself for specific work requirements and what to do

letter of application is given.
"Job Tips for Teenagers" lists everything from jobs not permitted for those under 18 to how to apply for a work permit. It also emphasizes a WSES theme, which is that high schoolers should try to continue their education, through college or vocational

REASONS ARE GIVEN

These reasons for extending schooling are listed:

It will make it possible for you to obtain better opportunities in whatever field you enter.

It will help you develop skills that can be used in a future job.

It will help you mature and learn how to

get along with people.

Elaborating on this final point, the pamphlet points out that surveys show some 80 percent of those who lose jobs do so because they cannot get along with others.

#### CAN'T RUN ELEVATORS

The publication includes the information that those under 18 cannot work for street carnivals or other traveling shows, run elevators or other hoisting machines, be employed where alcoholic beverages or explosives are made, and work on outside construction and repair of electric and communication wires.

"The Road to the Right Job" and "How To Land That Job" list ways of selling yourself.

HERE ARE SOME TIPS

Here are suggested tips for the young jobseeker:

Prepare for the interview. Have at your fingertips your education and job record. Be prepared to give references.

Look presentable.

Be on time and go alone.

Speak with confidence and leave troubles at home. Don't bluff or exaggerate your experience.

Avoid arguments with the prospective employer, for you may win your point but lose the job.

ADVICE: BE DEPENDABLE

Once you are hired, the problem is to keep the job. These are recommendations on holding a post:

Be dependable, for your employer counts on you.

Be pleasant. Remember, you wanted the Job.

Do your best and do it willingly.

Learn everything you can about your job. Fit yourself to your job. Don't expect your employer to fit the job to you.

#### JOS PICTURE BRIGHTER

The employment picture is brighter now than it has been, according to State and local WSES sources.

For boys, opportunities mostly are in industry, the trades, service fields, and office and sales work. Typist and stenographer posts and sales and service work represent job fields for girls.

The district employment office estimates some 500 to 600 young people will be placed in summer jobs this year. These will include seasonal jobs tied in with agriculture and food processing.

### The Need To Halt Deficit Financing

EXTENSION OF REMARKS OF

### HON. STYLES BRIDGES

OF NEW HAMPSHIRE

IN THE SENATE OF THE UNITED STATES Wednesday, June 3, 1959

Mr. BRIDGES. Mr. President, I request unanimous consent to have printed It's a peach of an idea.

if one is interested. Advice on preparing a in the Appendix of the Record an editorial which was published in the Laconia Evening Citizen of May 28, 1959.

Mr. Edward J. Gallagher, the distinguished publisher and author of this editorial, has pinpointed the need for the enactment of Senate Joint Resolution 99, which I introduced on May 26, 1959, on behalf of myself, the Senator from Virginia [Mr. Byrn], and the Senator from Nebraska [Mr. CURTIS]. The editorial clearly points out that a nation, like a person, must live within its means or it will soon be in trouble and that the voters should be given a chance to impose their will in an effort to halt deficit financing. I commend to the attention of my colleagues the contents of this editorial, which so thoughtfully and realistically deals with one of the great problems of our time.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

DEFICIT SPENDING-A WAY TO END IT AT WASHINGTON

A dispatch from Washington in yesterday's Evening Citizen reported Senator BRIDGES this week proposed an amendment to the U.S. Constitution which would require balancing of the Federal budget. He introduced a resolution on the subject, cosponsored by Senator Byrn, Democrat, of Virginia, and Senator Curtis, Republican, of Nebraska.

The amendment would require the President to submit a balanced budget to Con-gress, and it would compel Congress to pass a balanced budget prior to adjournment. The only exception would be in time of war or a national emergency.

Ordinarily we would say the question of Federal spending is for Congress and the President, our duly elected Representatives to decide, and that they should not clutter up the scene with demands for a referendum. The present situation, however, is decidedly different. We welcome any device to give the people of the United States an opportunity to register their opinion as to deficit spending. Such spending which follows unbalanced budgets is the primary cause of inflation. If the people want a Government living within its means they could make their wishes effective by the simple expedient of approving the constitutional amendment which Senator BRIDGES and his two colleagues, representing both major political parties, have recommended. Sad experience indicates this may be the only way to introduce the much-needed pay-as-you-go policy at Washington. If the people actually want spendthrift Government, which we find it difficult to believe ever could be the case, barring the dark days of war, they could get it by voting down the suggested amendment to our Constitution. Political spenders will continue to degrade and eventually destroy the dollar unless stopped and it may be up to the voters themselves to deal the decisive blow that will halt the wreckers of the national economy. The Manufacturers' Trust Co. of New York in a recent publication said: "National economy is sound. But there is no assurance that it will remain that way unless we think and act to make it so. Nation, like a person, must 'live within its means' or it will soon be in trouble."

Senator Bringes is not passing to the people the sort of hot potato that Members of Congress and other legislators toss hither and yon. Far from ducking an issue, he is seriously requesting that the voters be given a chance to impose their judgment on the type of national spending that reduces the value of every dollar they earn, diminishes their life savings by cheapening our currency.

Reduction of the 271/2 Percent Oil Depletion Allowance Would Seriously Injure the Small, Independent Operator

EXTENSION OF REMARKS

### HON. RALPH W. YARBOROUGH

OF TEXAS

IN THE SENATE OF THE UNITED STATES Wednesday, June 3, 1959

Mr. YARBOROUGH, Mr. President, although oil has become a major industry in the United States since the first well was drilled 100 years ago, there has recently been a 17-percent drop in the number of oil wells drilled in the United States.

This is of vital interest to every American because oil is not only one of our most valuable peacetime resources, but is a vital link in our national defense chain,

Because of the special character of the oil industry-the risk of investing thousands of dollars in drilling to strike only dust-a 271/2-percent depletion allowance is provided to help oil operators stay in business and weather these staggering financial setbacks. As the distinguished Senator from Louisiana [Mr. Long] stated recently-

Our oil and gas industries are really no more profitable than the average manufacturing industry.

And the Nation's oil industry is threatened by a flood of foreign oil into this country, much of it from fields controlled by the international oil cartel.

The independent oilmen-the small businessmen of the oil industry-and the drillers and other workers in the fields, and the people in related jobs such as the manufacture of drilling tools and sales of supplies and transporting of oil, have been hurt by this flood of foreign oil. To cut the domestic 271/2 percent depletion allowance, would be a serious, perhaps fatal blow to a large number of small, independent oilmen. In addition, it would damage the oilproducing economy because of the loss of money which the oil industry distributes through lease and royalty payments and in a hundred other ways. Reducing the depletion allowance would put this Nation's independent producers in a worse position to compete with the importing companies and their tax-free foreign oil imports.

A reduction in the depletion allowance reduces the share of the consumer dollar that goes into domestic production and increases the share going into the pockets of foreign producers. When the share of the consumer dollar going for domestic production declines, to that extent American industry declines.

Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a resolution adopted by the Commissioners' Court of Ward County, Tex., on May 25, 1959, opposing reductions in the oil depletion allowance.

There being no objection, the resolution was ordered to be printed in the RECORD, as follows:

On this the 25th day of May, A.D. 1959, at 10 a.m., came on to be had a special meeting of Commissioners' Court of Ward County, Tex., held in the commissioners' courtroom in the county courthouse of said county in the town of Monahans with the following members present and presiding: Carl D. Estes, county judge; Warren Goode, commissioner, precinct No. 1; G. W. Thurston, commissioner, precinct No. 2; O. O. Williamson, commissioner, precinct No. 3; Le Roy Price, commissioner, precinct No. 4; Mary M. Childs, county clerk and ex-officio clerk of commis-sioners' court when and where the following

proceedings, were had to wit: 'Whereas it has been called to the attention of the Commissioners' Court of Ward County, Tex., that there is now pending in the Congress of the United States of America a bill, or bills, to reduce the depletion allowance on oil production over the Nation from 27½ percent to 15 percent, and the Commissioners' Court of Ward County, Tex., being familiar with the oil business due to the fact that the principal source of income of the citizens of Ward County, Tex., is derived from the production of oil, and further knowing the drilling conditions, production expenses, and other costs involved in the cost of securing and producing oil, is of the opinion that such reduction would be extremely harmful to all those persons engaged either directly or indirectly in the oil business, and seriously affect, not only the economy of Ward County, Tex., but of the entire Nation, in that such depletion allowance reduction would greatly curtail the drilling of new wells, the working over of old wells, and the production of oil generally. That the economy of this Nation depends greatly on the production of oil and that should such depletion allowance be reduced, it would seriously affect the standard of living of all of the citizens of our country: Wherefore, be it

"Resolved by the Commissioners' Court of Ward County, Tex., meeting on this 25th day of May A.D. 1959, That such commissioners' court is unalterably opposed to any such depletion allowance reduction, and that they urge the Honorable Lyndon B. Johnson and the Honorable RALPH YARBOROUGH, U.S. Senators from Texas, and the Honorable J. T. RUTHERFORD, Representative of the 16th Congressional District of the State of Texas, to oppose any reduction, and that they use their great influence to see that such bill, or bills, advocating such reduction, be defeated in the Congress of these United States of America. Further, that copies of this resolution be forwarded to the said Honorable Lynpon B. JOHNSON, the Honorable RALPH YARBOROUGH, and the Honorable J. T. RUTHERFORD, as well as to any other parties interested in said

Residents of British Columbia Favor Protection of Fraser River Fisheries

> EXTENSION OF REMARKS OF

### HON. RICHARD L. NEUBERGER

OF OREGON

IN THE SENATE OF THE UNITED STATES Wednesday, June 3, 1959

Mr. NEUBERGER. Mr. President, an article in the Vancouver, British Columbia, Sun of May 9, 1959, demonstrates that the people of British Columbia, as surveyed by a public-opinion poll, decisively favor development of the Columbia River for power production, rather than the Fraser River system.

This expression of sentiment by the residents of a great Canadian Province is of direct interest to those of us who live in the Northwest. Not only does it demonstrate public support of the decision of Canadian Government officials concerning power development on the Columbia River; it also indicates that Canadians are willing to sacrifice present power development on the Fraser River. so that the \$50 million salmon fisheries resource of that waterway can be protected. This attitude of our Canadian friends and neighbors is of special significance in connection with the decision, now facing people in the Northwest, as to whether we ought to sacrifice or risk the great salmon fisheries resource of our own Salmon River watershed of the Pacific Northwest, through present authorization-provisional or wise-of the high Nez Perce Dam.

British Columbia is willing to forego the kilowatts of the Fraser River, so that the valuable sockeye salmon runs can be preserved. We of the American Northwest should be equally vigilant in safeguarding the chinook salmon resource of the Salmon River in our own country. Our Canadian neighbors are setting a worthy and wise example.

Mr. President, I ask unanimous con-sent that the article on this very illuminating public-opinion survey in British Columbia, as published by the Vancouver Sun, be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Vancouver (British Columbia) Sun of May 9, 1959]

COLUMBIA FIRST, SAY TWO OUT OF THREE-FEW FAVOR POWER ON FRASER UNTIL FISH INDUSTRY PROTECTED

### (By Ben Crow)

The people of British Columbia, by a margin of 2 to 1 favor development of the Columbia River before the Peace.

Few persons even consider the Fraser until the salmon industry is protected.

A poll of more than 500 homes throughout the Province also showed interior residents are even more in favor of power on the Columbia first

"Jobs, industrial development, and business where people live-not in the north," they sav.

Citizens agree with recent Federal and Provincial government announcements that the Columbia should be developed by a Government agency.

#### LITTLE KNOWLEDGE

About one-quarter of respondents show little knowledge or concern.

Arguments for the power development of each of the three rivers were as follows:

People favoring the Columbia mention: 1. Must protect Fraser River salmon, 22

- 2. Nearer to lower mainland area, 11 percent.
- 3. Benefit from U.S. participation, 6 percent.
  - 4. A cheaper source of power, 6 percent. 5, A source of employment, 5 percent.
- 6. A large number of other answers include development of the surrounding area; downstream benefits; it's considered best by experts; more power potential; survey work has been done, 50 percent.

#### PEACE ARGUMENTS

Proponents of the Peace River counter: 1. Will aid in the development of the north, 35 percent.

2. To protect Fraser River salmon, 11 per-

3. Will provide jobs, 10 percent.
4. A large number of other answers include: an all-Canadian project, less controversy with United States, 44 percent.
Some people favor the Fraser, in spite of

the fish:

- 1. It's close to the lower mainland, 28 per-
- 2. Other answers include: for flood control, serves a larger area, 72 percent.

### Maintenance of a Fair System of Veterans' Benefits

EXTENSION OF REMARKS

### HON. ALEXANDER WILEY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES Wednesday, June 3, 1959

Mr. WILEY. Mr. President, on Memorial Day just passed, we paid tribute to the millions of veterans who, throughout the years, have sacrificed to defend the ramparts of our country.

As we all know, the ravages of war live long after the guns stop booming. Across the Nation, millions of lives of individuals and their families still bear the deep scars of war.

Today in Wisconson, for example, there are more than 479,000 living veterans; 312,000 of them from World War II.

In our tributes on Memorial Day we recounted "in words" the measureless sacrifices which these sons and daughters of America have made on battlegrounds around the world to defend freedom.

Currently, there are before committees a number of pieces of legislation dealing with veterans' benefits. A number of the measures would increase the benefits: others would reduce them.

If we mean what we said in our memorial services, let us very carefully and sympathetically consider legislation that would affect the welfare of our veterans and their families.

It is true that we are spending a substantial amount for veterans' benefits. As the conflicts for which these exservicemen are receiving benefits recede farther into the past, it may well be that we can take a new look at the overall program and make some equitable adjustments. Sometimes this may be desirable in the light of the needs of the veterans themselves, as well as in the interest of maintaining a good overall program.

However, we must remember that benefits cannot restore years of life given to the service of our country. Nor can they adequately compensate for wounds. or loss of "limb or life," in battle. Consequently, we must continue to review our veterans' programs in the selfless spirit with which the millions of guardians of liberty have sacrificed to keep our country free.

Recently the Milwaukee Journal carried a detailed article on the scope of the veterans' aid program in Wisconsin entitled "Thousands in State Getting Veterans Aid." In addition to reviewing the kind, and volume, of benefits received by veterans, the article is also a grim reminder of the thousands upon thousands of ex-service personnel among us who still bear the wounds of war. I ask unanimous consent to have this article printed in the Appendix of the

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THOUSANDS IN STATE GETTING VETERANS AID

Thousands of Wisconsin veterans and their dependents or survivors share in the benefits that the Nation has provided in its gratitude for war service.

The State has an estimated 479,000 living veterans of wars and armed conflicts, the largest proportion being 312,000 veterans of World War II, according to J. P. Cullen, Milwaukee, regional manager of the Veterans' Administration.

It has 94,000 living veterans who saw service in the Korean war but not in World War II, 71,000 living veterans of World War I and 2,000 veterans of earlier wars and peacetime service.

Expenditures of the Federal Veterans' Administration in Wisconsin in the last fiscal year for veterans or their survivors reached a record \$103,149,795.

#### GRANTS, LOANS MADE

In addition, the State of Wisconsin, through its department of veterans' affairs, disbursed \$5,153,771 in the fiscal year ended April 30 in grants or loans to veterans and assisted them in many other ways, according to Gordon A. Huseby, Madison, director of the department.

Wisconsin veterans also collected \$2,350.800 in 1958 in normal and emergency jobless benefits, paid by the Wisconsin Industrial Commission at Federal expense.

The largest sum expended for Wisconsin veterans or dependents of deceased veterans was \$58,047,855 in compensation or pension benefits paid to 56,618 living veterans and the dependents of 16,235 decreased veterans.

### GET PENSION BENEFITS

Wisconsin no longer has any survivors of the Mexican war but the Veterans' Administration is paying benefits to 2 survivors and to 6 dependents of the Indian wars, to 62 dependents of Civil War soldiers and to 773 survivors of the Spanish American War and to 1,233 dependents.

Compensation or pension benefits are being paid to 22,400 veterans of World War I and to 8,800 dependent survivors of World War I They are being paid to 27,614 vetveterans. erans of World War II and to dependents of 5,234 deceased veterans of that war.

Korean' war benefits are being paid to 4.273 servicemen and to 575 dependents of decreased servicemen. Benefits for peacetime service are being paid to 1,556 service-men and to 316 dependents.

For administration and hospitalization in Wisconsin in the last fiscal year, the VA paid \$21,736,680. This was largely for the operation of the four veterans hospitals at Wood in Milwaukee, Waukesha, Tomah, and Madison, and numerous VA clinics.

Dependents of Wisconsin servicemen last year received \$7,453,241 in death benefits from GI insurance policies.

#### HELPED TO TRAIN SELVES

Under its vocational rehabilitation program for disabled veterans, the VA paid \$735,-538 last year to help 465 former servicemen in Wisconsin train themselves for useful lives.

A total of 9,554 Wisconsin veterans of Korean service took advantage of the GI till last year for training, education, and aid in readjustment to civilian life. The expense was \$13,790,869.

Wisconsin still had 3 World War II veterans receiving training under the GI bill last year and it aided in the college education of 44 orphan children of World War II veterans for an additional cost of about \$75.000.

Under the Government's program guaranteed loans to veterans, through April 30 had made 89,524 loans to Wisconsin former servicemen in a total amount of \$735,488,828. The administrative cost of this program in Wisconsin last year was \$1,124,186.

Certain disabled veterans are eligible for aid in purchasing automobiles. The sum of \$24,000 was spent for this in Wisconsin last year. The VA also provides housing assistance for paraplegics. This program in Wisconsin cost \$127,286 last year.

#### EMERGENCY AID GIVEN

In the year ended April 30, the State paid \$55,291 in grants to 491 veterans of World War II and the Korean war where emergency financial aid was deemed necessary to prevent want and distress.

The State made 915 rehabilitation loans to veterans last year, totaling \$599,775, and made 1,534 housing loans totaling \$4,498,705.

Wisconsin last year started a mortgage guarantee life insurance program for veterans with housing loans. The cost to the veteran is 22 cents per \$1,000 of his unpaid balance. Since last September, the State has paid up the unpaid balances of 13 mortgages for deceased veterans at a cost of \$23,950.

The Wisconsin Department of Veterans' Affairs also assists Wisconsin veterans in claims against the Federal Government. Last year, as a direct or indirect result of this service in Wisconsin, the Federal Government made additional awards of \$1,141,000 in compensation and pension benefits to Wisconsin veterans of all wars.

#### Equitable Taxes

EXTENSION OF REMARKS OF "

### HON. STYLES BRIDGES

OF NEW HAMPSHIRE

IN THE SENATE OF THE UNITED STATES Wednesday, June 3, 1959

Mr. BRIDGES. Mr. President, the concern of the American people over our patchwork Federal tax structure is becoming more and more apparent each day. Last month the distinguished senior Senator from Wisconsin [Mr. WILEY], I, and other colleagues, introduced S. 1885, which provides for the establishment of a commission to investigate the fundamental tax policy and tax structure of the Federal Government. This proposal was met with overwhelming approval by the people of my State.

A representative indication of the response from the newspapers in New Hampshire is manifested in the editorial from the Concord Daily Monitor of June 1, 1959. I ask unanimous consent that this editorial, entitled "Equitable Taxes," be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

#### EQUITABLE TAXES

Examination of the Nation's tax structure is getting attention in Washington and gives some hope to taxpayers in all economic brackets that injustices will be remedied.

Senator Bamges is joining with Senator ALEXANDER WILEY of Wisconsin in sponsoring legislation designed to review the tax setup with the objective of necessary reforms. A committee in Congress is also making a tax

Senator Bamges wants a Hoover-type commission created which would report to Congress. Such a commission presumably would make a more detailed examination of taxes than the congressional committee. which is scheduling public hearings.

The Federal income tax structure has grown and grown since the 16th amendment to the Constitution gave Congress the power to lay and collect taxes on income.

During the Second World War there was a phenomenal rise in income taxes to levels undreamed of 30 years ago. Rate increases were accompanied by myriad exemptions and deductions. These catered to one group or another, but often were unfair to taxpayers as a whole.

Tax relief is long overdue for parents who are sending sons or daughters to college. While Washington is demanding more education for American youth, the least it can do is to lighten the heavy financial burden on parents who foot the bill.

Lack of adequate exemptions for insurance costs and-medical expenses also needs to be reviewed. More consideration should be shown by the Government for the plight of those struggling to provide essential secu-rity and health protection for themselves and their families.

The income tax system should encourage financial success and thrift. Now it penalizes them by confiscatory taxation. Incentives for private investments should be strengthened to provide more jobs and eco-nomic growth. Present levies are discouraging these investments.

High income taxes are disliked by almost everyone. It is a responsibility that would be borne more willingly if inequities in present laws were eliminated and loopholes closed to minimize evasions.

### Loans Under the Cooley Amendment to Public Law 480

EXTENSION OF REMARKS OF

### HON. HAROLD D. COOLEY

OF NORTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES Wednesday, June 3, 1959

Mr. COOLEY. Mr. Speaker, hardly a day passes that I do not receive at least one inquiry about the progress of operations under the so-called Cooley amendment to Public Law 480. This is the provision which authorizes loans of foreign currency acquired under Public Law 480 for the expansion of private American business enterprises in foreign countries or for the development in those countries of expanded commercial markets for our agricultural products.

In order that I might make available to Members of the House and others interested in the latest information on this program, I have asked the Export-Import Bank, which handles the program, for a current report on its opera-

I now have the information requested: a letter from Mr. Lynn U. Stambaugh, First Vice President of the Export-Import Bank, to which is attached a brief summary of operations of the loan program to date and a statement showing the amounts of foreign currencies available for this program. Mr. Speaker, I ask unanimous consent that the letter and attachments be printed in the Record immediately following my remarks.

Mr. Speaker, this program of loans of foreign currency to private industry is turning out to be one of the more successful parts of the whole Public Law 480 operation. It is playing a very important part in stimulating the development of commerce and trade between other countries and the United States and to develop new, private, commercial markets abroad for our agricultural products—two objectives which the Committee on Agriculture considered paramount when it wrote this law.

I understand that the Bank is now considering the possibility of combining foreign currency loans with dollar loans under its regular program. This strikes me as a constructive and sound principle.

Altogether, Mr. Speaker, I think the Export-Import Bank is to be most highly commended for its intelligent, sympathetic, and—above all—imaginative handling of this foreign currency loan program. I am pleased to note from Mr. Stambaugh's letter, in response to my specific inquiry, that the Bank is not unhappy with this additional responsibility which Congress has imposed on it and has no desire to rid itself of the program.

For my part, I think that Congress made the wisest possible choice in placing responsibility for this program in the Export-Import Bank and I am completely unsympathetic with proposals that it be transferred to any other agency:

EXPORT-IMPORT BANK OF WASHINGTON,
Washington, D.C., May 21, 1959.
Hon. Harold D. Cooley,
House of Representatives.

House of Representatives, Washington, D.C.

DEAR CONGRESSMAN COOLEY: The attached memorandum is intended to keep you informed on the current status of our work under the amendment of section 104(e) of Public Law 480, which authorizes this Bank to make foreign currency loans to private enterprise.

We believe that we have made good progress to date, that the 104(e) loan program has been and will be of great assistance to many U.S. businesses, and that these loans can be an important force in attracting sound dollar investments by U.S. businesses in the foreign countries. To some extent these loans can also assist in financing the expansion of markets abroad for U.S. agricultural commodities.

It has come to our attention recently that an impression exists that this program is unwelcome at the Export-Import Bank. In fact, our attitude is just the reverse. We feel a considerable sense of accomplishment with respect to the credits that we have authorized and those which we have put before the foreign governments for their approval. We regard the loans made under this program as a useful adjunct to our basic dollar credits. Combinations of dollar and local currency loans will provide more complete financial assistance to sound proj-

ects abroad than was possible when the Bank's facilities were limited to dollar loans.

The Bank has made numerous arrangements with foreign governments and commercial banks in the foreign countries through which loans are now being made in an expeditious manner. The bulk of these arrangements would have to be renegotiated if the program were to be transferred to another agency and we are, therefore, strongly of the opinion that such a transfer would be a wasteful and time-consuming process, seriously interrupting the continued flow of loans made under this program.

As further evidence of the Bank's desire to continue the successful implementation of the section 104(e) loan program, it has been seriously considering making a formal recommendation that the Bank's share of the sales proceeds be designated a revolving fund. Since the law is not clear on this point the Bank has been assuming that the funds made available to it for such loans were not revolving. Our experience indicates that putting them on such a basis would permit the Bank to make better use of the funds.

Sincerely yours, LYNN U. STAMBAUGH, First Vice President.

STATUS OF WORK UNDER SECTION 104(E) LOAN PROGRAM

To date the Export-Import Bank has authorized 64 credits under this program in 9 countries for a foreign currency equivalent of approximately \$30.7 million. The Bank has also recommended for the approval of the respective foreign governments nine additional credits in five countries, aggregating the equivalent of \$4.7 million. Thus, to date the Bank has acted favorably on 73 credits involving a foreign currency equivalent of \$35.4 million. This would absorb at least 35 percent of the funds which we estimate to be actually available to us at this time. Three-fourths of the uncommitted funds consist of Indian and Pakistani rupees for which very few applications have as yet been received. The Bank is continuing to seek appropriate borrowers for these curcencles and has sent a representative to New Delhi who will devote a substantial portion of his time to this program.

The amounts which this Bank might receive for 104(e) loans under commodity sales agreements announced since August 1957 are shown in the attached table. The table also indicates the currencies for which applications are now being received and the amounts, in foreign currencies, of the credits authorized to date. You will note that commodity sales agreements have been negotiated with 25 countries; in 20 some provision was made for loans under section 104(e); and in 15 the full 25 percent authorized by the law is provided for. Whenever less than 25 percent is called for under

the sales agreement, other agencies of the Federal Government certified that there were compelling reasons for the departure from 25 percent.

Under the agreements announced to date the Bank could eventually receive the foreign currency equivalent of about \$200 milion. This is, of course, a ceiling figure. If the foreign country does not purchase all that it can under the sales agreement, the amount received by the Bank is reduced. Moreover, the foreign currencies actually become available for 104(e) loans only after the commodities have been delivered and paid for in the foreign country and a share of the deposits has been apportioned to the Bank. We estimate that at the outside we could actually obtain for loans at this time only about half of the foreign currency equivalent of \$200 million which is the maximum receivable under the existing sales agreements.

All but 5 of the 64 credits authorized to date have been made to U.S. firms or their affiliates. The exceptions are four credits to Israeli firms for grain storage facilities and one credit to a Peruvian firm for a malt factory. In these five cases the Bank has been advised by the Department of Agriculture that the credits would assist in improving the markets abroad for U.S. agricultural commodities.

Most of the credits are of comparatively modest size, the equivalent of between \$100,-000 and \$500,000. Only 9 of the 64 are equivalent to \$1 million or more.

The credits will assist firms in a wide variety of industries, including the manufacture of refractory brick, boilers, farm machinery, electrical supplies and machinery, pulp and paper products, detergents, livestock feeds, aluminum products, pharmaceuticals, shoes, tires, carbon black, automobtive parts, industrial pumps, and petrochemicals. Credits have also been authorized for a dairy in Peru, a retail enterprise in Mexico, a hotel in Colombia, distributors of petroleum products in Israel, Greece and Finland, and a supermarket in Milan, Italy.

The loans continue to be repayable in the local currency in which they are made, without maintenance of value. The interest rates are equivalent to those charged on similar loans by comparable institutions in the host country and range from 6 to 10 percent. The term of repayment ranges from 5 to 10 years including a waiting period when appropriate. Nearly half of the credits authorized have been made on the general credit of the borrower. When additional security is required the general practice to use the guarantee of the U.S. firm with which the applicant is affiliated. In some cases the guarantee of a local bank is used instead. In every case the Bank has satisfied itself that the security or assets behind the loan offer reasonable assurance of repayment.

### Scientific Information Activities of the U.S. Department of Commerce

EXTENSION OF REMARKS

### HON. JAMES G. FULTON

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES Tuesday, May 26, 1959

Mr. FULTON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement of Mr. John Green, Director of Technical Services, Department of Commerce, before the House Committee on Science and Astronautics, June 3, 1959:

ACTIVITIES OF THE U.S. DEPARTMENT OF COMMERCE

A brief history of the scientific information activities of the Department of Commerce since 1945 will be of value. I will restrict these comments to the efforts carried out by my own office. However, you will recognize that the Department's important scientific and technical agencies such as the National Bureau of Standards, the U.S. Coast and Geodetic Survey, and the Weather Bureau each have extensive information programs pertinent to their responsibilities.

At the close of World War II, it was considered that the military research and development which had been held secret during the war years should be declassified and distributed. Such a measure was intended to speed conversion from a wartime to a peacetime economy. Accordingly, on June 8, 1945. President Truman signed Executive Order No. 9568. The language of this order defines a national policy which favors the declassification and dissemination of scientific research when considerations of national security so permit.

A Publication Board, comprising five Cabinet officers is described in the order. At the first meeting of the Board, operational responsibilities were entrusted to the Department of Commerce and this resulted in the creation of the Office of Technical

Shortly-after we had begun to function under this Executive order, President Truman signed a second Executive Order No. 9604. This substantially expanded the scope of our efforts to encompass German and Japanese science and technology. It was under this latter order that we, and the Department of the Army, collaborated on a most intensive exploitation of foreign scientific and technical information.

At the height of that activity, there were nearly 1,000 people, a combination of German and American, actively functioning in this program. We had location teams which leapfrogged across Germany visiting scientists, research institutes and industry, locating personnel to be interrogated and records to be analyzed. These teams were followed up by investigators accompanied by microfilm teams who photographed the original records for cataloging and dissemination here.

Some 600 Americans experts participated in this activity, preparing reports in English based on their findings. Equipment was removed and brought here for demonstration and tests. Outstanding German scientists were transferred. In addition, all pending patent applications were photographed in the Berlin patent office. Perhaps most important, 600 outstanding German scientists were recruited to write reviews on scientific developments. When accomplished, these reviews totaled 84 volumes and summarized the significant developments in Germany from 1939 to 1945—the years when she was cut off from general communication.

The job of collection was substantially accomplished and the job of organization was in the early stages when the Congress raised a legislative point of order questioning the authority for the effort. This resulted in a speedy close down and disposal of the unanalyzed records. The Department felt that the Executive Order had spelled out a desirable authority. Therefore, we sought specific legislation. This was obtained when the 81st Congress passed Public Law 776 in September of 1950. It will be noted that this legislation directs the Secretary of Commerce to set up a clearinghouse for scientific and technical information and gives him broad authority with respect to the collection of the materials to be included in such a clearinghouse.

Since the Federal Government is financing roughly half of the total scientific effort in this country, it seemed to us that the best use of our resources was in the announcement and distribution of Government-sponsored efforts. Accordingly, we established close cooperative links with the four primary sponsors of research within Government—these are the three armed services and the Atomic Energy Commission. Our program in disseminating Government research has occupied our major attention until this fiscal year. Under it we announce about 10,000 titles and sell 300,000 reports annually.

Shortly before the Russians announced the first sputnik, our friends in the National Science Foundation called all pertinent Government agencies together to see what might be done to speed the release of translations, abstracts, reviews, and similar materials prepared by Government units for internal use. It was generally agreed that the Department of Commerce was the logical communications mechanism between the Government and the scientific commu-When this matter was brought to the attention of the Secretary of Commerce, he agreed to seek funds for a clearinghouse of foreign science and technology to collect. catalog, announce, and supply such information. Our request for the clearinghouse was approved and we began this operation in the current fiscal year.

Since I understand the emphasis at these hearings is on the accessibility of foreign scientific information to the American scientist, I will go into some detail on what we are now doing.

First, we are offering English translations of three series of the abstract journals known as Referativnyi Zhurnals produced by the Soviet Institute of Scientific Information. These three series are physics, biology, and chemistry. These translations will be increased to encompass additional areas of science shortly.

Second, twice each month we distribute

a report prepared by the Central Intelligence Agency which summarizes significant Soviet scientific developments.

Third, we are distributing a weekly journal on Soviet activities in the international geophysical field.

We are distributing cover-to-cover abstracts of 90 leading Soviet scientific and technical journals. These abstracts, obtained under a cooperative program with the Air Force, are available in a short period of time after the original Russian journals are issued in Moscow.

We distribute Government prepared translations of selected Soviet bloc materials. Current estimates are that these will run about 10,000 titles a year.

We are producing a carefully indexed journal titled, "Technical Translations," which identifies translations made in and out of Government. This journal relies in large measure on the cooperation of the Special Libraries Association, other Government agencies, private translators, and cooperating foreign governments. For example, through the Special Libraries Association's Cooperative Center we obtain translations made by private industry, universities, and

others. Commercial translators assist us by making their activities known to our clear-

inghouse.

We have a network of six depository libraries, including the Special Libraries Association Center at the John Crerar Library in Chicago. They are as follows: Massachusetts Institute of Technology, Georgia Institute of Technology, Pennsylvania State University, Carnegle Library in Pittsburgh, and the University of California at Los Angeles.

We are providing a reference service for these materials whereby inquiries as to translations completed or contemplated can be furnished. (I should also have mentioned that Technical Translations contains a section titled "Works in Progress" to avoid duplication of effort in translation.)

A new and significant development is the "State of the Art" publication which brings together information on outstanding Soviet bloc scientific developments. It seems to us that such reviews will be the keys which help make useful the large amount of foreign scientific information being released.

We anticipate between 25 to 50 of these a year.

Another point I should mention is that we are not restricting our efforts to information produced in Government, as we do on the domestic side of our program. We are approaching a true clearinghouse on Soviet science and technology since we include materials from industry, from universities, from other governments, and from commercial translating firms and publishers.

Our program is essentially a cooperative one. We do not produce translations ourselves. We collect them from all sources and provide a communicating link to the scientific community. Although we are still in the early stages, we have some substantial figures to report in the way of distribution. For example, since August 1958 over 13,000 issues of the International Geophysical Year Weekly have been sold, 2,750 copies of the Scientific Information Report, and over 16,000 copies of the English abstracts of the 96 leading U.S.R. journals. For the period January 2, 1959 to May 25, 1959, individual articles, monographic and book translations sold in paper copy form (plus a few items sold in late 1958) have reached total figure of 8,835.

In closing I should say that we do not rely in Government efforts alone to announce the availability of the material. We have enlisted the cooperation of the technical press and the major abstracting and indexing societies. In fact, we consider their interest and cooperation to be one of the most important factors in prompt and effective distribution.

#### Improving the Rural Life of America

EXTENSION OF REMARKS

### HON. ALEXANDER WILEY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Wednesday, June 3, 1959

Mr. WILEY. Mr. President, my colleagues will recall that recently I introduced proposed legislation to establish a Country Life Commission. The purpose of the measure would be to take a longrange look at problems and challenges in agriculture, and come up with some sound solutions on the problems we face today.

Fortunately, the Agriculture Committee in the House of Representatives has seen fit to hold hearings on similar proposals pending before that body.

I have respectfully urged that similar action be taken as early as possible in the Senate.

In view of the fact that we have been unsuccessful in resolving our farm problems—as evidenced by the discussions currently now going on in the Senate—a long-range, objective look at the agricultural scene, I believe, is definitely merited.

As always, I am of course delighted to see individuals and groups, on their own initiative, attempting also to deal with challenges in a particular field.

I am especially referring to the activities of the American Country Life Association, which has as its objective the encouragement and promotion of more satisfactory and wholesome rural life in America.

The annual conference of this association is scheduled for July 13 and 14, 1959. The theme of this conference is, "Making the Most of Human Resources Through Community Development."

Among the specific topics to be discussed at the meetings are:

Economic adjustments in rural life and agriculture:

The rural community as a unit for rural development:

Rural educational institutions and agencies responsible for development.

Recently, I received from Roy C. Buck, president of the American Country Life Association, a statement of the purposes and objectives of that organization. Believing that this represents a thoughtful, constructive approach to dealing with the problems now in agriculture, I ask unanimous consent to have the statement printed in the Appendix of the Record.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

The purpose:

To study and promote discussion of the problems and objectives in country life.

To clarify and integrate the objectives and efforts of various agencies and organizations that work with rural people.

To facilitate means of the attainment of these objectives.

To sponsor meetings for discussion and media for analysis of problems, trends, and influences affecting the pattern of American country living.

To evaluate the special contributions of country people to American citizenship and freedom.

To aid in rural improvement.

### Our Agricultural Program

EXTENSION OF REMARKS

### HON. CLARK W. THOMPSON

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 3, 1959

Mr. THOMPSON of Texas. Mr. Speaker, it is unfortunately true that it

has become popular to be against agriculture and to oppose the efforts of those of us who seek to solve the many and perplexing problems of this important phase of our economy.

It is deplorable that much of the publicity so unfavorable to our farmers is based on information coming from the Department of Agriculture. The impression left on casual readers of press and periodicals is that farmers are chiselers and seekers after handouts. If the truth were told in full, the public would have a far different picture.

The current newsletter of the gentleman from Texas [Mr. Ikard] tells in a clear and concise manner some of the favorable aspects of the agricultural program which ought to be read and remembered as the Congress prepares to wrestle with some of our most troublesome problems.

The newsletter follows:

(By Congressman Frank Ikard)

Recently the House acted upon the appropriation for the Department of Agriculture. While there can be no real question but what our present agricultural program needs to be changed in many respects-in fact, probably completely reworked—there is a great deal of misunderstanding about the program, and about the use for which funds appropriated are used. Many implications recently in the press leave the impression that all of the money spent by the Department of Agriculture goes directly into a farm subsidy program. The truth of the matter is that a great number of activities are carried on by the Department of Agriculture for the benefit of the public generally and should not be charged to the farmer or to those engaged in farming exclusively. In the first place, the Department is the largest regulatory body in the Federal Government. It administers over 50 different laws, many of which protect the consumer, such as insuring clean, healthy meat and poultry through Federal inspection, and the grading of meat products. Second, all of the farm commodity export the Department is is handled through the Department. program is is handled through the Department. Third, millions of dollars in form of loans are made annually through the Farmers Home Administration and the REA. This money is all in the form of loans, and the rate of repayment has been very high. The Department also conducts an extensive market research program which has developed new handling methods of farm produce and has provided the technique for reducing food handling costs, all of which are of primary benefit to the consuming public, and about \$22 million a year is spent on the eradication of brucellosis which is primarily a program to protect the health of the public. The Department of Agriculture also disposes, through sales to friendly foreign countries, of a substantial part of our agricultural surpluses. Up to now they have sold over \$7½ billion worth. It also administers the school lunch program and the program which provides dairy products to veterans in Armed Forces hospitals. In addition, the Department also handles soil and water conservation work which is one of the most vital and important programs to those of us living in the Southwest. The simple point is that even though there is a need for substantial revision in our agricultural program, much of the expenditures that are allegedly charged up to the farmer never reach him but are spent on programs for public benefit.

Text of Remarks by the Honorable Sumner G. Whittier, Administrator of Veterans' Affairs, Memorial Day Services, May 31, 1959, VA Center, Mountain Home, Tenn.

EXTENSION OF REMARKS

### HON. B. CARROLL REECE

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 3, 1959

Mr. REECE of Tennessee. Mr. Speaker, each year, Memorial Day is observed in a fitting manner at the Veterans' Administration facility at Mountain Home, Tenn. The setting, the program arrangement, and the whole atmosphere make this an inspiring occasion. We were delighted to have as the principal speaker for the Memorial Day services this year the Honorable Sumner G. Whittier, the able Administrator of Veterans' Affairs. He delivered a wonderful address. It moved and inspired a large audience. The address is of such importance I feel that it should be included in the Congressional Record, that it might be widely available.

Text of Remarks by the Honorable Sumner G. Whittier, Administrator of Veterans' Affairs, Memorial Day Services, May 31, 1959, VA Center, Mountain Home, Tenn.

"I will lift up mine eyes unto the hills, from whence cometh my help. My help cometh from the Lord, which made heaven and earth."

How fitting seem the words of the warriorpoet King David on this Memorial Day, 1959; at this spot hallowed by the even rows of graves of men fallen in battle; with these majestic hills standing silent watch over the dead.

And how comforting are the words as we stand here and ponder the meaning of life and death on this earth—a small planet spinning around a small star in an infinite universe with an infinite number of stars.

As I look out over these even rows of white markers, and at this replica of the Tomb of the Unknown Soldier, framed in the fresh new green of springtime, how much, I think, is this Memorial Day, 1959, like the Memorial Days I used to know as a school boy in New England.

The setting may be different, but what memories these silent graves evoke!

Veterans of the Grand Army of the Republic, in faded uniforms, visited my school and delivered their speeches, and we went out to the cemetery—past the forsythia bursting in explosions of gold and the perfumed purple of the illacs—and scanned the white graves, so much like these graves at Mountain Home, and listened to the speakers intoning their message of everlasting remembrance of the dead.

Only there was a difference between those Memorial Days and this. Then, we were very young, and war was something out of the past. Its sacrifices and heartaches were ghosts of half-remembered days long ago. We who were young had not known war. The spring was so fresh with a burst of new life that we did not dwell long on the memories of death.

But today we live in a different world, and we cannot look upon these graves with the detachment of youth. For in our own time this generation has come to know war at first hand, in all its stark terror and destruction; and not just once, but two times, three times, and for some of you here today, four times. Four wars in a single life-span. We have known entire cities razed to dusty rubble: and torture camps where fine young Americans were subjected to brainwashing, more vicious than anything dreamed of by the Inquisitors of Spain; and the dry heat of furnaces where men and women were roasted to death by the millions; and bombs lazily floating down from the blue sky on a spring day like this, exploding in a deafening roar of twisted metal and shrieking, maimed mankind.

metal and shricking, malmed mankind.

Today, as we stand here, we see not the graves of remote warriors, but the graves of our brothers, our fathers, our sons, our fellows-in-arms. We know how they died, for war is still fresh in the minds of our generation.

And sorrowing for the loss of our departed comrades, we ask ourselves, "Why did they die?" And we cannot be content with the answer in this uneasy hour of Geneva and Quemoy and Berlin, that "They died to make the world safe for democracy."

For how safe is the world for democracy, when Soviet Prime Minister Nikita S. Khrushchev boasts to a visiting group of newspaper editors that his country has the power to wipe the Western nations off the face of the earth?

How safe, when Soviet First Deputy Premier Anastas I. Mikoyan, revealed during his recent visit to America: "I have seen a secret motion picture made of the results of a hydrogen bomb explosion. We are building and building, and yet one explosion would be enough to annihilate everything"

Just think. The blockbuster, the biggest bomb in World War Two, measured six tons of TNT. Then came the atom bomb, and the ton of TNT became absolutely useless as a measure. A new unit was devised—a kiloton, a thousand tons of TNT.

And then came the hydrogen bomb, and the kiloton went out of date. We created still a new measure—a megation, a million tons of TNT.

Can you picture one megaton? If you loaded TNT on freight cars, you would have a string of cars stretching all the way from Mountain Home to Union Station in Washton, D.C. One megaton.

How safe is the world for democracy, when man finally has unleashed the dark secret of complete and total annihilation? When the countries of the world scramble furiously to increase the deadly might of their weapons of war? When conferences among nations turn into wrangles of "nyets" of stony-eyed leaders from behind the Iron Curtain? When Russians cast not-so-subtle hints of their power to destroy entire countries?

Is this "peace"? No. Our brothers who lie forever still in these graves, and in graves the world over died to maintain freedombut liberty is still being threatened. The nations of the world teeter dangerously on the edge of eternal oblivion. After all the thousands of years of his existence, man inally holds in the palm of his hand the means of ending life on this whirling planet.

We know no easy answers, no quick panaceas, to this dilemma of the modern world. We know there are none. Though our hearts fervently desire a just and lasting peace in which men can live together in true brotherhood.

When each of us proves equal to the present challenge, as the men here buried proved their courage and love at the cost of life, then shall we have made their sacrifice secure.

Then shall we know that the sacrifice of these honored dead, will not have been in vain. In death, they contributed something even more precious than life itself—a way to peace, and with it liberty and justice, not just for our generation, but for all the generations to come. As each of them in his hour sought an answer to the demands of liberty, so each of us in our moment of challenge must seek our understanding.

Today we search our hearts for answers here at Mountain Home, lifting our eyes to these strong and serene hills, from whence cometh the help of the Lord our Creator.

Here, in this great Volunteer State of Tennessee, the glories of America's past are intertwined with the dreams of her vast future. We can gain fresh, new perspectives, as though we were standing on a hillton.

Here the past becomes real and meaningful. We can almost see Robert Young, hero of the American Revolution, who lived on these very grounds and who joined Tipton at Sycamore Shoals. We can almost smell the gunpowder at Kings Mountain, where the Americans conquered the British—a battle considered by many historians as a turning point in the war.

We can almost sense the excitement of 112 years ago this month, when Governor Brown called on Tennessee to furnish three regiments to serve in the War with Mexico, and 30,000 willing volunteers stepped forward. Every schoolboy knows how Tennessee earned its proud title, the "Volunteer State."

We can almost feel the fierce sense of supreme individuality of those early citizens who formed the independent State of Franklin. with Jonesboro its capital, a bare 6 miles from here.

And we can still savor the pride of Tennessee at sending three of her sons to the White House—salty Andrew Jackson, James K. Polk, and Andrew Johnson.

And here, amid these ghosts of a glorious past, are the bright promise and rich anticipation of the future, shining as clearly and invitingly as the sun overhead. For only a little to the west of here is Oak Ridge, the atomic energy capital of the world.

Here man is looking ahead. Here is the heart of research and development that can harness the mighty energy of the atom for the good of mankind—for the same source that can create nuclear bombs can also create health and well-being for all the people of this globe.

Think what Oak Ridge has contributed to medicine—radioisotopes to disgnose illness and disability more thoroughly and more accurately than ever before; and how proud I am of our VA researchers who, with atomic scientists at Oak Ridge and elsewhere, have led the way.

And now, with the inspiration and guidance of your atomic energy capital of the world, our own VA hospital in Omaha, Nebr., soon will become the first hospital in the United States to get a nuclear reactor of its own—a small brother of the giant reactor at Oak Ridge.

Buried deep in the ground for the sake of safety, think what this reactor can mean to the march of medicine. Now we will be able to probe the secrets of life itself—how the food we eat becomes energy and muscle and bone and sinew; what the human body does with its chemicals. Now we will be able to make more progress in treating brain tumors with radio active boron, a substance available only in the immediate neighborhood of a reactor.

Yes, this is as much a part of the atomic age in which we live as are atomic power-plants and atomic submarines and atomic bombs. And we are only on the threshold; what we have known is but a slight sampling

of what we shall know in the days and decades ahead.

What lessons can we learn from the past as it has been written on the pages of history, and from the future which we can see nov but as through a glass darkly? What lessons can we learn as we stand before these graves, surrounded by these hills, where past and future merge in a mysterious symphony of human existence?

I think one important lesson is this:

What has distinguished America in the past, and what will distinguish her in the future, are the dreams and ideals that burn richly and steadly in the hearts of her cit-We do not shape our ideals to fit our lives; we shape our lives to fit our ideals. And further, if the need arises, we have always been and shall always be willing to die the high principles upon which this Re-

public was founded and built.
Robert Young and all the other heroes of the Revolution; the 30,000 Tennessee vol-unteers of the Mexican War; those rugged individualists of the State of Franklin; the dedicated scientists at Oak Ridge; the men who lie in this sacred ground—they knew and understood this truth. They knew the strength and the power of an idea-a tiny impulse of the brain powerful enough to

reshape a world.

We who are Americans, are idealists; we are dreamers. Yet at the same time we are a people of action. We do not fear bold visions; of striking westward across uncharted for-ests and plains and deserts; of conquering the atom; of sailing under the ice to the North Pole; of training men for flights into the cold silence of outer space; of dredging the St. Lawrence River so that massive ocean liners can travel to the heartlands of America; of searching for cures for diseases once thought incurable; of probing into the very nature of life itself.

And now we are coming to what I believe is the deep, underlying meaning of the sacrifice of these heroes who lie here; and of our war dead who lie in graves the world over.

They sacrificed their lives for the cause of liberty and freedom on this earth-for without liberty and freedom, there can be no ideals: there can be no dreams.

The mind of man cannot live in a straitjacket. It must be free to soar to limitless heights. It must be nourished in the sunlight of liberty and freedom. If it is not, it will wither and we shall end up, not with man, but with a living robot.

Man must be free. It is as simple as that. Man must be free.

When man is free, when his mind is free to think and to dream, he need not live in constant cringing fear of Russian threats, of hydrogen bombs, of the total annihilation of war. For he can meet the challenges, bravely and with the infinite richness of his imagination.

Not long ago I stood in Tillyschantz, a little German town on the Czechoslovak border. There in all its ugliness and terror, I saw what fear can do to men and to nations. I saw the brutal thing that Winston Churchill

called the Iron Curtain.

I saw, every 200 yards, towers with booted guards with rifles slung over their shoulders, or tommyguns in their hands. I saw elec-trifled barbed wire strung for hundreds of miles. Touch it and die. I saw land mines spread to blow off the legs of any man who dared to try to escape. And trip flares—catch your foot in that wire and a shooting rocket makes you a brilliant target for those gunsights overhead.

I saw the great strip of plowed earth, inspected morning and night. They plow the land so that inspecting teams can see the footprints of anyone able to muster the courage to wander those terrifying acres.

This is the Iron Curtain, or more literally, the curtain of fear. This is what can hap-pen when freedom is allowed to die.

What a contrast between that land and this.

In America, in freedom and liberty, man has met challenges before. Witness the greatness and might of our beloved country. And he can meet them again and again.

But he must be free. This is the message of the brave men who lie beneath these rows of white markers, watched over forever by these hills. -This is the meaning of their sacrifice.

As the poet said:

"May we, their grateful children, learn Their strength, who lie beneath this sod. Who went through fire and death to earn At last the accolade of God.

In shining rank on rank arrayed. They march, the legions of the Lord; He is their Captain unafraid,

The Prince of Peace who brought a sword."

### H. R. Gross, Taxpayers' Friend

EXTENSION OF REMARKS OF

### HON. CRAIG HOSMER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES Tuesday, June 2, 1959

Mr. HOSMER. Mr. Speaker, our colleague from Iowa [Mr. Gross] has earned and received the deep respect of the Members of this body for his unflagging attention to the details of all legislation reaching the floor. His dedicated work and study has, in instance after instance, resulted in the improvement of bills before they are passed. In almost every one of these instances a savings to the country's taxpayers has resulted. Although no accurate reckoning of the total amount Mr. Gross' efforts have saved the taxpayers, undoubtedly it runs into the hundreds of millions of dollars. As a taxpayer myself, I take this means of expressing my deep appreciation to him, and in so doing know I reflect the similar appreciation of many millions of his fellow citizens. Staff Reporter Jack Eisen of the Washington Post and Times Herald took note of Congressman Gross' commendable work in the following article appearing in this morning's paper:

REPRESENTATIVE GROSS TILTS AGAIN IN BEHALF OF THE TAXPAYER

(By Jack Eisen)

The House was about to vote \$100 million yesterday to keep things humming on Capitol Hill in the coming fiscal year.

It looked as if nobody was going to talk cainst it. Such things just aren't done against it. among gentlemen.

Then up popped a wiry little man from Waterloo, Iowa. If nobody else was going to ask the embarrassing questions, he would. And he did.

The man was Representative H. R. Gross, a Republican whose favorite topic is the taxpayers' money and whose aim is saving it. He's been at it now for 10 years in the House.

How much Gross wanted to know, will "this new dream castle down here on Independence Avenue"-the third House Office Building-cost when it's finished?

When, after insistent prodding, he got the figure-\$82 million-Gross shook his head. That's worse than I thought," he said.

But he admitted that any attempt to keep from spending the latest \$16.5 million installment would be hopeless, considering that 3-block hole in the ground where the building will be erected.

Somebody reminded Gross that the project was a special pet of House Speaker Sam Ray-BURN, Democrat, Texas, who heads the House Office Building Commission.

"I understand that perfectly." Gross replied. "It's still the taxpayers' money being spent."

The bill, which carries \$42.4 million for operating expenses of the House and the balance for other Capitol Hill costs, was voted unanimously. By this time Gross was eveing some suspicious language in the next bill coming up on the floor.

Gross is a never-ending source of amazement among his colleagues for spotting pro-spective leaks from the Federal Treasury.

"I don't spend much time fishing or golfing or at the beach," the 59-year-old former newspaperman and radio newscaster explained to a reporter.

He thinks the District has to be frugal, too, and that the Federal Government must be frugal with the District beyond what he calls "an adequate annual contribution,"

### Military Discharges

SPEECH

### HON. LEON H. GAVIN

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES Tuesday, June 2, 1959

Mr. GAVIN. Mr. Speaker, as a member of the Armed Services Committee. I have followed with great interest the development of the bill H.R. 88 with respect to military discharges, introduced by the gentleman from California [Mr. DOYLE].

I fully support this measure because I believe that it will, if enacted, provide relief for some people who today have derogatory discharges which are not truly reflective of their character and worth as American citizens.

At this point I would also like to indicate my understanding of H.R. 88 and the necessity for its enactment.

The proposed legislation, as recommended by the committee, will make the following changes in the law with regard to the review of discharges of service personnel:

First. It will require the Boards of Review, Discharges, and Dismissals, as well as the Boards for the Correction of Military, Naval, and Air Force Records to operate under uniform procedures established by the Secretary of Defense, That uniformity does not exist today.

Second. It will require the boards to take into consideration the following factors in all cases that are being reviewed by the respecive boards:

(a) The conditions that prevailed at the time the incident, statement, attitude, or act which led to the original discharge or dismissal:

(b) The age of the individual at the time of the incident, statement, attitude, or act which led to the original discharge or dismissal:

(c) The normal punishment that might have been adjudged had the act or incident been committed in civilian life:

(d) The moral turnitude if any involved in the incident, statement, attitude, or act which led to the discharge or diemiecal.

These will be the minimum criteria for all future reviews. The boards may es-

tablish other criteria.

authorized to award an Exemplary Rehabilitation Certificate in those cases where the individual requesting a review of his discharge or dismissal introduces evidence of not less than 3 years of exemplary postservice conduct in justifica-tion of his request for a review of his discharge or dismissal. The same criteria will be applicable in these cases as in all other cases reviewed by the boards. But under the proposed legislation, the boards will be required to take into consideration, as a factor, postservice conduct indicating that the individual has rehabilitated himself, that his character is good, and that his conduct, activities, and habits since discharge have been exemplary for a period of not less than 3 years following discharge.

Fourth. The committee also recommends two additional changes in existing law dealing with the Boards of Review.

Discharges, and Dismissals.

At present these boards do not have authority to review the sentences of general courts-martial since discharges isissued pursuant to a general courtsmartial can be reviewed by the Boards for the Correction of Military, Naval, or Air Force Records. However, an indi-vidual with a dishonorable or badconduct discharge issued pursuant to a general courts-martial will, under the proposed legislation, be able to submit his case to the Boards of Review, Discharges, and Dismissals in order that that Board, composed entirely of military officers, may first review the case before it is again submitted for review by the Board for the Correction of Military, Naval, or Air Force Records, which is composed entirely of civilians.

In addition, the committee has eliminated the termination date, contained in present law, for the filing of applications of review by the Boards of Review. Discharges, and Dismissals. Under present law, the review must be requested within 15 years after discharge, or 15 years after June 22, 1944, whichever is

later.

More than 278,000 persons have received administrative undesirable discharges since 1940.

More than 200,000 persons have received bad conduct and dishonorable discharges since 1940.

### Pressure Groups and Race Relations

EXTENSION OF REMARKS

### HON, GEORGE HUDDLESTON, JR.

OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES Monday, June 1, 1959

Mr. HUDDLESTON. Mr. Speaker, this morning I received a copy of the Sunday, May 31, 1959, issue of the Herald, South Carolina's leading Negro newspaper, published in Anderson, S.C. This outstand-Third. In addition, all boards will be ing newspaper contained a front page editorial in which Publisher Davis Lee comments on the adverse effect which pressure groups are having on race relations in the South and throughout the country. This editorial is of great importance to the thinking people of this country, and I feel privileged to insert it herewith in the Congressional Record. under leave heretofore granted:

> PRESSURE GROUPS HAVE AROUSED PREJUDICE. BITTERNESS, AND HATRED NEVER HEARD OF BEFORE IN THIS NATION

> > (By Davis Lee, publisher)

Racial prejudice, bigotry, and intolerance is on the increase in this great country of ours. Rape, murder, floggings, denial of elementary rights, and a rising tide of hatred is sweeping our land.

The black man and the white man have squared off at each other. The smiles and the friendly feelings that once existed between the two races have disappeared. The lines of communications, that once was a great help to both groups, have been broken

It appears on the surface that our highly developed educational system, and our religious institutions, have all failed in doing the job of disseminating knowledge and the true spirit of brotherhood that they were established to do. There seems to be no educational, religious, moral, or economic force in existence in this Nation to restore the reason, sanity, and balance that both races need so badly at this time.

One begins to wonder just what has happened to our people. No one has more to lose than us, and we have everything to gain by being sensible, intelligent, and reasonable.

Let me state here that I am not an Uncle Tom, and I feel that I am a full-fledged, true-blooded American, who is entitled to enjoy every right, every privilege, and oppor-tunity that is enjoyed by any other Ameri-But I don't believe that we will ever achieve our full potentiality by pressure, agitation, and force. I am opposed to forced integration, and I am opposed to forced seg-You don't enjoy the friendship, help, counsel, and good will of those that you make mad.

This race issue has gotton out of hand to the extent that our race has been set back from 15 to 25 years, and the only ones who have benefited are the pressure groups and a few unscrupulous politicans. Those of us who have gone abroad with these agitators have become willing tools of the Communists. They have set out to divide us, and then conquer us.

Practically everyone knows how some Negro newspapers and the NAACP have tried, and are still trying, to destroy me because of my

views. They have, by pressure, forced many people to shun me, and have caused me to lose thousands of dollars worth of business.

Recently Mr. Constantine Brown, famous columnist for the Washington Evening Star, quoted an editorial of mine. He wrote me that the NAACP hit the ceiling, and that a Negro paper in Baltimore told him to stay clear of me that I am not the owner of Lee Publications. However, it doesn't matter to me who hits the ceiling, I am going to lay it on the line in this editorial.

The white man has done more for the Negro than the Negro would have done for him had their positions been reversed. The southern white man has done more for the Negro than the Negro was able to do for himself, and there are thousands of southern white people who are still doing for the Negro more than he can do for himself.

When we were first brought to this country we could not speak the English language, but the southern white man through patience and understanding taught us the grand Anglo-Saxon language. When we were first brought to this country we were worshiping the cow, the sun, and the mooneverything was God to us but the true and living God.

The southern white man taught us to believe in the real God, and in Christ, the Saviour of all men, black and white. one revelation changed us from a savage into the likeness of God with a soul to save.

Once we embraced Christianity we became a different people, and through our simple religious concept, thousands became our friends and benefactors. We had God on our side and in our corner. White people began to cultivate us as friends, as trusted and loyal people. The slaveowners had so much faith in us, that when they went off to the War Between the States over us, that they left black men behind to care for their wives and children

They could not have paid us a finer tribute than this No slaveowner was afraid that we would force our attention upon his wife. We were people of character: we had demonstrated that we could be trusted.

The southern white man, after emancipation, did not inaugurate this system of segregation that we have now. The separate church was started by Richard Allen, founder of the great African Methodist Episcopal Church. In fact, by his doctrine in which he urged Negroes to establish their own churches, schools, and businesses, he may rightfully be regarded as the father of Negro progress in this Nation.

Following his teachings and examples, Negroes everywhere began to establish their own churches. One hundred years ago there were more Negro members at the First Baptist Church in Newnan, Ga., than there were white members, but the Negro members wanted their own church, and they asked their white pastor for letters to join a Negro

Right after emancipation Negro and white kids attended the same schools in many southern communities. It was the Negro leaders of that day who felt that our kids would do better in our own schools.

No fairminded person, black or white, will deny that the Negro has made his greatest strides in the South, and the only Negroes who are leaving the South today for other sections of this Nation, are the misfits, the square pegs in round holes. The educated, intelligent Negroes realize that the South offers our race its greatest opportunity, and that our best friends are here.

The Negro enjoys the kind of individual respect in the South that he does not enjoy in any other section of this Nation. There are a very few banks in the South that Negroes do not carry the keys to. In many towns and cities, the leading white businessmen never go into a barbershop operated by whites. They go to the barbershop operated for them by Negroes.

Recently I interviewed a Negro in Lawrenceville, Ga., who graduated from the University of Georgia at Athens, Ga., 40 years ago. No one objected to him attending the university because everyone knew that he was seeking an education, and not

forced integration.

Because of the interest that southern white people have in us, the southern Negro owns more businesses, more homes, has finer schools, and controls more wealth than do the Negroes anywhere else in the world.

In our city we have a total population of 42,000. About 9,000 of these are Negroes. We employ more Negroes than any other Negro business. And all of the Negro businesses combined in our city do not employ 100 Negroes. This means that our people are dependent upon the white people for their livelihood and survival. This is true throughout the South, and throughout this Nation.

One begins to feel that the southern Negro has not only been misled, but he is a tool. He has been poisoned against true, tried, and trusted friends and benefactors. He has been made to feel and to believe that white people are his enemies, that they are against his best interest. These pressure groups have sowed well the seeds of suspiction. Their mass appeals have created in our people the kind of bitterness and resentment never seen before in this Nation. They have done such an effective job that many Negroes who knew better won't listen to a Negro leader now unless he carries two guns and curses white people out.

Many Negro preachers are preaching integration and race hate instead of preaching Jesus Christ and true brotherhood. A large number of our teachers are for forced integration even though it may result in them losing their jobs. Yet no sensible person is going to take biscuits off his own table.

Unemployment among Negroes has reached an alarming stage, and is still mounting because of pressure, agitation, and because of the changed attitude of our people.

We can enjoy the dignity of man, and receive all of the courtesies, respect to which we are entitled if we will just use a little commonsense. Be tactful, diplomatic, courteous and act intelligent. You can still catch more flies with molasses than you can with vinegar.

There is one thing that should keep us on an even keel during this crisis. If you need several hundred dollars, need your home financed, need a car financed, or need any real help, to whom will you have to go to get it?

The Negro who has money, property, and security is not going to help the less fortunate members of his race. Eighty percent of the Negroes in the South are wholly dependent upon the white people for survival, and this is true throughout the Nation. When you are the other fellow's equal then you don't have to go to him for help. So be sure that you don't need him before you start popping off. You don't have to be an Uncle Tom, be a man, but be a sensible man.

Pressure and agitation are not going to solve our problem.

### Progress in Air Transportation

EXTENSION OF REMARKS

### HON. JOHN C. KLUCZYNSKI

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 3, 1959

Mr. KLUCZYNSKI. Mr. Speaker, it is a well-established fact that the continued progress of commerce and industry in the Chicago area is predicated on the continued advances made by our airlines. Pan American World Airways has applied to the Civil Aeronautics Board for authority to operate between Chicago and Tokyo and beyond by way of Alaska.

Fortunately, this application has been greeted with enthusiasm by the newspapers of Chicago and by various civic bodies. Certainly it behooves us all who have an interest in the continued growth of Chicago to be concerned with this application of Pan American.

Editorials from the Chicago Daily News issue of May 21, 1959, entitled "Bring in the Jets," and from the Chicago Sun-Times issue of May 20, 1959, entitled "To Link Chicago and Tokyo," now follow:

[From the Chicago Daily News, May 21, 1959]

#### BRING IN THE JETS

The domestic airlines are fighting the application of Pan American World Airways to give direct service from Chicago to the Orient by jet aircraft. The motives of the objecting carriers are neither mysterious nor censurable; they naturally want to haul passengers to the west coast for the Pacific takeoff.

But such business considerations should no more influence the decision of the Civil Aeronautics Board than the desire of the railroads to handican the sirlings.

railroads to handicap the airlines.
Swift, high-capacity jetiliners can now bring Tokyo within 15 hours of Chicago—a saving of 16 hours over present schedules. The advantages of this to Chicago and the traveling public appear overwhelming. In the forthcoming hearings, we trust the CAB will keep first things first.

[From the Chicago Sun-Times, May 20, 1959]
To Link Chicago and Tokyo

The Civil Aeronautics Board has agreed to hold hearings on a proposal for direct onestop jet flights between Chicago and the Orient. Permission for such flights, via the Great Circle route, is sought by Pan American Airways, which also wants to provide similar service from five east coast cities and Detroit.

At present, passengers from Chicago and the other cities must first fly to the west coast and transfer to transpacific planes. Pan Am's plan to originate flights from Chicago and the other cities was opposed by domestic airlines, but the CAB wisely brushed the objections aside.

There is no reason whatever why Chicago should not be a gateway for direct flights to the Far East, just as it is a gateway for direct flights to Europe and Mexico. This arrangement might cut into the domestic

lines that haul passengers from Chicago and the other cities to the west coast gateways, but that is hardly sufficient cause for denying Chicago its right to be an international air center.

What with transfers and conventional piston-engine planes, the total elapsed time from Chicago to Tokyo is now about 30 hours. The direct jet flight, with a refueling stop at Anchorage, Alaska, would reduce this by more than half—to a scheduled 14 hours and 45 minutes.

Northwest Orient Airlines is presently the only American carrier authorized to fly the Great Circle route, while Pan Am flies the longer island-hopping route. But President Eisenhower rightly has called for competitive transpacific service, along the lines proposed by Pan Am. The CAB's decision to consider Pan Am's plan in its original form is a step in the right direction and good news for Chicago.

### Feeding the Hungry

EXTENSION OF REMARKS

### HON. GEORGE S. McGOVERN

OF SOUTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 3, 1959

Mr. McGOVERN. Mr. Speaker, as one vitally interested in the use of American farm surpluses to meet some of the widespread human hunger which afflicts our world, I was very much impressed with a letter sent to me by a vacation church school class of the First Congregational Church of De Smet, S. Dak. This letter, signed by Bernadine Penney, Ricky Williamson, Margaret Pratt, and Bob Montross, embraces sound Christian ethics and, in my judgment, good commonsense.

If properly used, our food surpluses can become a great instrument for peace and freedom. Most of the people of the world are more impressed by America's agricultural productivity than by our factories and laboratories. As the author of legislation designed to make greater use of our food reserves in feeding the hungry, I am especially pleased that young people in my home State share the same concern. Believing that it will be of interest to my colleagues in the Congress, I include at this point in the RECORD the letter sent to me by the four above-mentioned church school students:

FIRST CONGREGATIONAL CHURCH,
De Smet, S. Dak., May 27, 1959.
Hon. Representative George McGovern,
House of Representatives,
Washington, D.C.

DEAR REPRESENTATIVE McGOVERN: Our vacation church school class has been studying how people live all over the world. We learned in our lessons that most of the people in the world are much poorer and hungrier than we are.

We have found out that our country raises much more food than we can eat and that the extra is stored away instead of being given to those who are hungry. We were told that storing the extra food costs millions of dollars. Why can't that money be used to give out the food and feed the starving people in our country and in the rest of the world? Jesus taught people to share what they had with others. Why can't we do what he taught us to do? We were told that the problem is not this simple, but we feel that things should be changed.

We also read many terrible things about war. We looked at pictures of people whose homes were bombed. We heard the story of how our country killed many, many people in two cities in Japan in World War II with atomic bombs. We didn't know that our own country had done such bad things.

We don't think it is right for the United States to spend so much money on weapons and so little to help others. Can't this be changed soon?

Please write and tell us what you think about these things and what you are doing about them.

Sincerely,

BERNADINE PENNEY (Age 11). RICKY WILLIAMSON (Age 12). MARGARET PRATT (Age 12). BOB MONTROSS (Age 12).

Excerpts From Address by Paul M. Butler, Chairman of Democratic National Committee, Before the Western States Democratic Conference

EXTENSION OF REMARKS

### HON. HUBERT H. HUMPHREY

OF MINNESOTA

IN THE SENATE OF THE UNITED STATES
Wednesday, June 3, 1959

Mr. HUMPHREY. Mr. President, during the Western States Democratic Conference, which was held in Denver in May, a fine address was given by the charman of the Democratic National Committee, Paul M. Butler.

Mr. Butler voiced an impressive call to action in support of the principles to which our party is dedicated; and he echoed many of the sentiments I have expressed about the necessity to have our party fulfill its pledges if it expects a vote of confidence in 1960.

Mr. President, I ask unanimous consent that excerpts from his fine address be printed in the Appendix of the Rec-

ORD.

There being no objection, the excerpts from the address were ordered to be printed in the RECORD, as follows: EXCERPTS FROM SPEECH OF PAUL M. BUTLER,

CHAIRMAN, DEMOCRATIC NATIONAL COM-MITTEE, BEFORE WESTERN STATES DEMO-CRATIC CONFERENCE, DENVER, COLO., MAY 16, 1959

The great victory won by our party at the polls only a few short months ago placed upon us an enormous responsibility. It constituted a stimulating challenge and a tremendous opportunity.

It was a stimulating challenge to the ingenuity of our leadership, to the creativeness of our imagination, to the caliber of our vision, and to the boldness of our courage. Rarely before has the need for these qualities been more clearly evidenced by the nature of the times in which we live.

It was a golden opportunity for our party to further the great ideals espoused by peaceful, awe inspiring social, economic and political revolution of the Roosevelt and Truman eras. It was an opportunity to enlarge the boundaries of human freedom and cooperation. It was an opportunity to establish once again the right of our party, based squarely on the record, to lead the Nation once again in 1960 from the White House.

While the results of last November were extremely gratifying, they were not without their difficulties for our national party. The repudiation of the lethargy and lack of leadership of the administration was overwhelmingly clear. Our mandate for positive government by the Democratic Party was strong. But the peculiarities of the American political system, while greatly increasing our majorities in the Congress of the United States, left us short of the required two-thirds in each House necessary to override a veto of a lame duck Republican President.

This was demonstrated vividly only recently when the House failed by only four votes to override the President's antifarmer veto of the important bill concerning Rural Electrification Administration loans.

Since then we Democrats have been the objects of a great outpouring of free advice from recently repudiated Republicans, from some elements of the press friendly to the administration and from the U.S. Chamber of Commerce and the National Association of Manufacturers, to the effect that we had better abandon any ideas we had about progressive legislation. We are told that we should water down any proposals that we might have for expanding the economy, building schools, reinvigorating depressed areas, developing our resources. that we should give up this talk about moving America forward and settle for what is practical, what is attainable, and what is realistic.

In other words, we are being counseled to repudiate our promises, ignore the wishes of the electorate as expressed in the November elections, and not even to make a try to match our promise with our performance.

What we are really being told is that a lameduck Republican administration and a decimated Republican congressional minority, having suffered one of the worst repudiations in modern electoral history, should call the tune on legislation.

And what is startling and frightening is the extent to which some Democrats have swallowed the hook, balt and all.

I am positive that I speak for the overwhelming membership of our party in all sections of the Nation when I say that the Democratic Party is not content to let the Republican administration or its minority forces in the Congress determine what shall be the Democratic legislative achievements in the present 86th Congress. We are not content to have our legislative efforts circumscribed in advance by the Republicans telling us what bills the President intends to veto

The Democrats are not willing to give up or surrender on what should be the minimum legislative program of the Democratic majorities in the Congress simply because we are led to believe that it is not possible of attainment under existing conditions.

We are realistic enough to know that the very real problems which our Nation faces both at home and abroad must be met with a greater concern and more adequate remedies than those yet offered by this tired, unimaginative administration.

We are practical enough politicians to know that it was the Democratic Party that won the last election, and we know that the only way we could lose the next one is to act and perform just like the Republican Party. There could be no more certain guarantee of defeat.

To those who would say that it is un-

reasonable, because of a threatened Presidential veto, to push for the enactment of the vital Murray-Metcalf bill for aid to education, I say that it is disgraceful that today, 10 years after President Truman listed Federal aid to education as a must piece of legislation, that we are far short in schoolrooms and teachers, and still we have no Federal action on education.

To those who claim that it is impractical to make a fight for increased defense appropriations or more adequate funds for the vital Development Loan Fund, and other items of national security, I say that it is playing with national safety not to do these things.

To those who say that the Sparkman-Rains housing bill and the Monroney airport bill are irresponsible pieces of legislation, which must be watered down or eliminated completely, I ask you how responsible it is to keep on ignoring the vital needs of our Nation in these areas.

Should we in the name of "respjonsibility" refuse to even try to write a decent farm program to rescue American agriculture from the depths to which it has been dragged under this administration?

Should we abandon any attempts to reverse this administration's do-nothing policies with regard to the development of the great natural resources of the West?

I believe with all my heart and soul that the greatest mistake our party could make is to be intimidated in any way or to any extent by the threatened vetoes of a standpat administration and to water down our vital program on the grounds that it is all that is attainable.

If our Nation or our party had ever been satisfied to strive only for what some timid people believed to be attainable, we would be a much poorer people.

History is replete with examples of people who bettered the lot of mankind by refusing to stop striving for what some other people thought could not possibly be achieved.

If he had been guided by what was attainable, Christopher Columbus never would have discovered the New World.

If Thomas Jefferson had been satisfied to settle for what was then thought to be attainable, he never would have written the Declaration of Independence.

The American colonists never would have fought the Revolution; Andrew Jackson never would have fought the Bank of the United States; the slaves never would have been freed; Woodrow Wilson would not have fought for a new economic freedom; Franklin Roosevelt never would have enunciated the economic bill of rights or the four freedoms; Harry Truman never would have proposed his program of human rights.

And you and I would not be gathered here in Denver tonight if Lewis and Clark had listened to those who believed that it was not worth going west beyond St. Louis.

The great genius of our party has always been that we have shown the American people how by their own efforts they could attain the things previously thought to be unattainable.

Ours has been a party which has always assumed it to be a part of its task to educate the people to the facts, to elevate their sights, and to lift their hearts to higher aspirations for a better life.

Our party still believes in these things today.

Our course must be to remain firm but just in our determination to stand for the right as we see it.

We must remain faithful to our pledges to the people and take as our proper standard of judgment of our policies not what is the most expedient, not what someone believes to be attainable, not what merely gives an appearance rather than a reality of action, but rather how fully do our acts measure up to the real needs of our Nation

and our people.

The Democratic Party is not a party of accommodation or attainability or compromise. People who are willing to accommodate themselves and the objectives of the Democratic Party to existing obstacles and obstructions to achievement do not typify the real spirit, the true courage, or the genuine zeal of our party. Those who are genuine zeal of our party. Those who are content to seek only what is believed to be attainable, rather than to strive to achieve essential goals for our country and our people which are absolutely necessary even though difficult or impossible of attainment, do not typify the qualities of the great leaders of our party—Jefferson, Jackson, Wil-

son, Roosevelt, and Truman.

The Democratic Party is a party of principle. It is a party with deep convictions and, as Woodrow Wilson once said, a party of great emotions. The Democratic Party is one that believes strongly in positive government and vigorous leadership in both the executive and legislative branches of our Federal Government. It is a party which recognizes its responsibility to work and fight for the achievement of those things which are vital to our national security and

well-being.

What is done by the Democratic majorities in the 86th Congress will bear heavily upon the presidential election of 1960. Positive and aggressive action by our party will redeem our pledges and weigh heavily with the voters.

The needs of our people and of our Nation should be the proper determinants of the program for which we stand and for which

we are prepared to fight.

Only upon this foundation can our party, drawing upon the heart, mind, and conscience of our people, create abroad in the land a new stirring and a new spirit and condition of excitement which has always been the necessary prelude to the moments of our greatest advancements as a Nation.

Let us Democrats win in 1960, only because we deserve to win. Let us win only because we have demonstrated to the American people, by the way we have handled the trust which they reposed in us in 1958, that ours is a party not alone of great men, not so much of outstanding personalities, but above all a party of great principles and steadfast dedication to them.

### John Foster Dulles, the Century's Greatest Diplomat

OF NEW HAMPSHIRE

IN THE SENATE OF THE UNITED STATES

Wednesday, June 3, 1959 Mr. BRIDGES. Mr. President, on

Tuesday of last week I stood before this body to join with my colleagues in paying tribute to the late John Foster

The service which this great man rendered to his country as Secretary of State during the most trying period in our history is the subject of an article written by Constantine Brown, entitled "The Century's Greatest Diplomat," which was published on May 26, 1959, in the Washington Evening Star.

This penetrating article outlines in detail the sincerity and firmness of Mr. Dulles' approach to foreign policy. I ask unanimous consent that this article be printed in the Appendix of the RECORD, and I commend it to the attention of my

There being no objection, the article was ordered to be printed in the RECORD,

THE CENTURY'S GREATEST DIPLOMAT-DULLES' RANK SEEN IN DETERMINATION, UNFLINCH-INGNESS, AND SINCERITY

#### (By Constantine Brown)

Flags all over the free world are at half staff as a last token of respect for John Foster Dulles. The chroniclers of the future will surely describe him as the greatest diplomat in his strife-torn century.

Mr. Dulles died with his boots on. though he resigned as soon as he realized he would no longer be able to keep a firm hand on the tiller, he continued to give advice almost until his last breath.

Although in agonizing pain, Mr. Dulles refused until 10 days ago to take strong sedatives lest they interfere with his thinking. He wanted to serve his own country and the free world for as long as it was humanly possible. He accepted powerful pain killers, which kept him in torpor most of the time, only when he realized that his end was at hand and the will of the Almighty was to be accomplished.

People have wondered what made Mr. Dulles tick and why he remained so uncom-promising in his fight against international communism. Some said that it was his ambition to run America's foreign relations the way he wanted. Others said that he was just stubborn and paid no attention to con-The few intimates who structive criticism. had been at his side for many years knew that it was his strong religious conviction and his godliness which made him impervious to criticism and cajoling. A man who believes in God as deeply as Mr. Dulles did could have no truck with the enemies of religion, the Red atheists.

Mr. Dulles was a pillar of the Presbyterian Church in which he was born and one of the most prominent Protestant laymen in the country. Yet, while a devout Presbyterian, he was not parochial. When his son Avery wanted to join the Catholic Church, Mr. Dulles did not remonstrate. He told him that if he believed that he would thus best serve the Lord he had better follow his convic-Avery was ordained a few years ago. The father was in the church and the first to congratulate and embrace the new pastor.

Mr. Dulles was able to carry on his mankilling task with devotion, energy, and re-lentlessness only because he was a devout man of God.

Mr. Dulles' greatness as a Secretary of State came not only from his determination to remain unflinching in the face of the danger from international communism but also from the fact that he was able to carry his sincerity to the rest of the administration and thus become the real policy maker of our foreign relations.

Despite President Eisenhower's affection .for some of the White House advisers who did not agree with the Dulles "brink policies," he trusted his Secretary of State so implicitly that he seldom went counter to his recommendation. This was in contrast with the position of another chief of the State Department. Cordell Hull, President Franklin D. Roosevelt insisted on being his own Secretary of State. There were occasions after Pearl Harbor when Mr. Hull was informed only much later about certain diplomatic moves made by the Chief Exe-cutive with the advice of Harry Hopkins. No such unpleasantness ever occurred during Mr. Dulles' tenure.

There is no doubt that Mr. Dulles made mistakes. Only the timid and innocuous

can go through life without blundering. But considering the many facets of our for-eign relations, the credit side is far longer than the debit side of the ledger.

This country has had a number of able Secretaries of State in this century. One of the most outstanding was Charles Evans Hughes. But he ranks far behind as second best to Mr. Dulles. The problems which Mr. Hughes had to face from the turn of the century to the outbreak of World War I were paltry compared with the complexities we have had to face since, particularly in

the last 6 years.
In Mr. Dulles term of office the United States not only had to resist the onslaught of the Russians and Chinese Communist enemies but had to walk a tight rope in relations with our own allies. A person with less determination and real dedication to the cause of the free world than Mr. Dulles could never have succeeded in keeping the existing tenuous alliances together.

There was the great effort by a number of our allies and neutrals to give Communist China a seat in the United Nations. Mr. Dulles worked tirelessly and successfully to prevent this crime against the principles for which the free world is fighting.

In the past the chief adviser on foreign affairs to the White House had to be pretty well conversant with only one sector of the world. Mr. Dulles had to deal simulta-neously with increasingly complex problems

all over the globe.

And until his last days on earth Mr.

Dulles handled his tasks with as much success as a human being was capable of, considering the violent tugs and pulls of the era in which we live. He was accused of being inflexible. He accepted this accusation as a compliment for he understood that under existing world conditions flexibility is synonymous with surrender.

### Lodge's Leadership in U.N.

EXTENSION OF REMARKS OF

### HON. THOMAS J. LANE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES Thursday, May 7, 1959

Mr. LANE. Mr. Speaker, under leave

to extend my remarks in the RECORD. I wish to include a very interesting report by the editor-in-chief of the Hearst newspapers, William Randolph Hearst.

LODGE'S LEADERSHIP IN U.N.

(By William Randolph Hearst, Jr., editor-inchief, the Hearst Newspapers)

The other evening, in New York, the Overseas Press Club held what it called "Hearst Media Night" at its attractive new clubhouse. This fancy title covered the fact that editorial executives and staff members from our various enterprises were present—our two New York newspapers, the Journal-American and The Mirror, The American Weekly, King Features Syndicate, Hearst Headline Service. Hearst Radio, News of the Day, Hearst Metrotone News, and so on.

Also present to speak briefly was our able American Ambassador to the United Nations, Henry Cabot Lodge. He was kind enough to say that in his opinion the editorial support of the Hearst Newspapers had played a deci-sive role in changing the attitude of the American public toward the United Nations from a sparse 40 percent who thought it was doing a good job a few years ago to a solid 90 percent in support of it at the present

While there is probably some truth in Cabot's generous statement, the whole truth is that Cabot himself is the person most responsible for changing the opinion of the American public toward the United Nations.

His tough tactics, his skillful diplomacy, his swift rebuttal whenever the Communists launched a propaganda balloon have earned the support of many people who previously held serious reservations about the U.N. Little by little Americans began to understand that Uncle Sam could more than hold his own on the world stage when represented by an alert, forceful personality of Cabot Lodge's caliber.

Now I'll let you in on one of the chief reasons why I myself gradually changed my own personal attitude toward the U.N. In my travels through the world, in conversations with diplomats, journalists, and leaders of many nations, it slowly became apparent that they regarded it not as the place where sophisticated foreigners took the gullible Americans into camp, but as an agency run and dominated by American policymakers. "Why, it's nothing but an arm of your State Department," the brilliant English publisher, Lord Beaverbrook, once said to

Those Americans who still take a dim view of the U.N. might consider the fact that we have never suffered a major reverse in its councils, thanks largely to the tough but patient diplomacy of Cabot Lodge. Red China is still on the outside looking in and I'm sure we'll be able to keep her there until there's a marked change in her present belligerent attitude toward the free nations.

Speaking of Red China, the Communists scored a major breakthrough on Thursday when the world committee which runs the Olympic games voted to bar Nationalist China as the Chinese representative and indicated that Red China would soon be recognized at the Olympic games.

You may remember that when we returned from our 1955 visit to Russia we emphasized that the Communists had em-barked on an "all fronts, all fields" strategy. We specifically pointed to the sports world as one area earmarked for an ambitious Russian penetration. The first real evidence of this policy came at the Olympic games in 1956 and it has not yet reached its full impact. In July a Russian track and field team will compete with an American team in Philadelphia and all along the sports front the Reds are stepping up their activity.

Now they have achieved a spectacular victory and one that will have deep political repercussions. Using the customary Communist tactics of threat and bluster, Soviet representatives at a meeting in Munich succeeded in forcing Nationalist China off the committee.

Avery Brundage, the American represent-ative, appears to have been asleep at the switch and for no apparent reason concurred in the committee vote without lodging a protest. He must realize that the United States will now have to reconsider its whole attitude toward the Olympic games-in fact, consider whether it will participate at all in the 1960 games at Rome.

You'd be surprised how often we get a blank stare from our leading public figures and politicians when we mention the sports field as one in which the Russians have launched a determined program. Now they can see for themselves how the Communists convert such an area into a political conquest. Lincoln White, State Department spokesman, correctly called the committee vote a "political action of a discriminatory nature."

The new "surrender at Munich" which, I repeat, will have serious political ramifications, could never have happened if we had a planning board coordinating American overall policy in all fields—what we called for want of a better title a "competitive coexist-ence council." Maybe the Communist political victory in the Olympic Council will open people's eyes to the true scope of Mr. Khrushchev's program.

In all the excitement generated this week by the magnificent achievement of bringing two monkeys back alive from 300 miles in space, a significant part of the story received little attention.

That was the perfect teamwork of the U.S. armed services in accomplishing the feat The Army shot the missile and trained one of the monkeys for the flight. The Navy trained the other monkey. The Air Force helped the Navy rescue the monkeys from the sea.

Just to make the cooperation even more notable, all the services worked with the National Aeronautics and Space Administration, the civilian agency which was running the show as preparation for eventually sending a man into space.

This unified job was in sharp contrast to the interservice jealousies and squabbling which have been running high again, to the distress of the great American public.

The unhappy fact is that, although the United States has had unification of the armed services in name since it was made law in August 1949, it has been unification in name only. The services have not yielded their independence or rivalries.

A few years ago the big bone of contention power and the bickering services was air were the Air Force and the Navy.

Recently the quarreling has been over missiles, and currently that has narrowed down to a hassle over rival antiaircraft missiles, the Army's Nike-Hercules and the Air Force's Bomarc.

In fact, in taking on the role of referee, the House Appropriations Committee on Thursday sharply rapped the knuckles of the Joint Chiefs of Staff, the group that is supposed to make unification work.

"The President, the Secretary of Defense, the Congress, and the American people," the committee declared, "have a right to expect a better job from the Joint Chiefs of Staff in the way of military guidance."

The committee report quoted from testimony of Army Chief of Staff Gen. Maxwell D. Taylor that the chiefs don't look at problems horizontally and determine whether each function is properly supported by the appropriate forces of all contributing serv-

In other words, each chief is in there plugging for the prerogatives of his own service. Defense Secretary McElroy on the same day

rebuked the services for their quarreling. It seems to me that there is more than just the waste of money and effort involved in service rivalry and duplication.

We won World War II by the greatest teamwork of services. If there is another big war the potential enemy is Soviet Russia. And let's not kid ourselves-everything in the Soviet's warmaking apparatus is unified.

We would all do well to heed the words of Vice Adm. Hyman G. Rickover, who got us the atomic submarine by overriding the protocol of Navy brass. Admiral Rickover does not mince words and gives short shrift to service jealousies. He told newspapermen

"Depending on the color of your uniform, you follow a different party line. There is something fishy about that. I think we would be better off if we all wore the same uniform. You have three outfits that feel they must each defend the United States all by themselves \* \* one organization should be responsible for the offensive forces of the United States.'

I'm with Admiral Rickover 100 percent on this, and I think the American people are, too.

It's one United States and it should be one U.S. Service Command.

One uniform would help get that point across to the squabblers.

WILLIAM RANDOLPH HEARST, Jr.

### The Politics of Agriculture: A Dilemma

EXTENSION OF REMARKS OF

### HON. GEORGE S. McGOVERN

OF SOUTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES Wednesday, June 3, 1959

Mr. McGOVERN. Mr. Speaker, the inimitable Doris Fleeson has written a most incisive piece on the current political dilemma confronting those concerned about the agricultural crisis. I commend it to the attention of my colleagues.

Miss Fleeson's column appeared in the Washington Star, June 2, 1959, as follows:

DEBATING THE AGRICULTURE BUDGET-SENATE CRITICIZED AS DRIFTING ON ISSUE AND NOT CHALLENGING ADMINISTRATION

#### (By Doris Fleeson)

The Senate debated the Agriculture Department appropriation bill this week with all the enthusiasm of schoolboys confronted with oversize doses of castor oil.

It is going ahead with an indefensible program under a Secretary it hates and a President whose intentions with respect to farm policy it mistrusts. Yet it is failing to challenge either one strongly enough to get action, and it has proved unable or unwilling to devise a decent alternative of its own.

Politicians have their faults and their standards of what is permissible in a free society are no better than those of anyone else-and no worse. But they really do not like bad government and they are aware that the farm policy mess in Washington is the king of them all on the domestic side.

A new Library of Congress study shows that Agriculture Secretary Benson, now occupying his high office for the seventh year, is the biggest spender in the Department's history. Its expenditures from 1932 to 1953 were \$25.2 billion. Since Mr. Benson came in with Mr. Eisenhower net budget expenditures have reached \$31 billion.

Yet the President and Mr. Benson did not offer Congress a new program this year, much less plan, work and fight for it. Their curious apathy, occurring as it does in the midst of administration anti-inflation, antispending ballyhoo, has given rise to a deep, dark suspicion on the part of many observers that they are content to let the present system become disastrous so that they can junk it altogether.

Such an act is not the political impossibility it would once have seemed. Mr. Benson's price support payments are an expensive luxury for the taxpayer and he is practically an untouchable in politics, but he has been richly successful in his divide-andconquer maneuvers with respect to the farm bloc. It has disintegrated and the big consumer States have bought the fallacious idea that prices of farm products are mainly responsible for the high cost of living.

This is the main reason even the most conscientious Members of the House and Senate shrink from trying to frame a farm bill in the legislative branch and subject it to revision on the floor. They are afraid the farmers will be outvoted at every turn on a measure vital to their well-being.

Rather than let that happen, they drift. Yet they bitterly concede that they have failed to force the President and Mr. Benson to make the basic decision on which any reform of farm policy must rest.

That decision is whether farmers can today be turned loose in a free market, subject to supply and demand, or whether the Government is obliged to protect the Nation's food supply as a matter of public welfare and national defense. With increasing boldness some business and industry sources suggest the former; by far the majority here still gives at least lip service to the latter thesis.

Yet the results are almost universally condemned and nothing substantive is being done about it. Whether the strange quiet of the budget-balancers at the White House as the price support billions slip away can last through November 1960, is questioned by a Congress all to fatalistic in its own attitudes toward the problem.

#### Pie Plates by the Hundreds

EXTENSION OF REMARKS OF

### HON. IRIS FAIRCLOTH BLITCH

OF GEORGIA

IN THE HOUSE OF REPRESENTATIVES Wednesday, June 3, 1959

Mrs. BLITCH. Mr. Speaker, Mr. Tenney Griffin, staff writer for the Valdosta (Ga.) Daily Times has written a most interesting story containing an account of the establishment of a branch of the Standard Container Corp. in my

hometown of Homerville, Ga.

The citizens of Homerville are justly proud of this industry. While they raised the money for the building itself, they are already receiving 3 percent interest on their loan and they rightfully feel a proprietary interest in the plant. I would also point out that Standard Container receives no special local or State tax benefits. As responsible citizens, the plant officials wanted none nor were they offered any. What they did want was a community in which they would be welcome, and a labor resource that could be relied upon. The success of the operation proves that they received both-and we, in turn, received excellent citizens. I might say, Mr. Speaker, that all industry of the same high caliber as Standard Container would find just as warm a welcome in any of the 20 counties of southeast Georgia which comprise the Eighth Congressional District that I have the honor to represent.

Mr. Griffin's story follows:

PIE PLATES BY THE HUNDREDS-HOMERVILLE CONTAINER PLANT SPREADS PRODUCTS FAR BEYOND BUG SPRAYERS

(By Tenney Griffin)

HOMERVILLE.-Homerville's Standard Container plant started its operation just a little more than a year ago, making only insect sprayers for home use.

Now after a plant expansion program and the installation of much new equipment, Standard Container is making a lot of other things.

But sprayers are its biggest item of manufacture that the more than 150 workers produce each day.

Standard Container, the pride of every citizen of Homerville, is now operating four production lines for the manufacture of its

basic product. Its present capacity is 25,000

sprayers a day—and that is a lot of dead bugs.
In addition to its sprayer lines, the metal fabricating firm also produces canisters for movie film, parachute canisters for the Armed Forces, pie plates, dust caps for natural gas lines, ammunition cans for the Government and a few other related items. And to produce its sprayers and other prod-

ucts takes a lot of steel.

Presently Standard Container here is consuming about 100,000 pounds of tin steel month, most of which comes from Birmingham, Ala.

The steel tin plate is received, in many cases already printed with the appropriate trade name, and from there is cut, stamped,

rolled and fitted into the particular product. But not only does it take tremendous amounts of tinplate to produce the firm's many products, it also takes a vast amount of lead solder.

Like the tinplate the monthly consumption of solder is in the thousands of pounds. Under its present operating load, the plant uses about 4,000 pounds of the metal solder a month.

The history of the company in Homerville is a tremendous success story. It started with a fire—one which wiped out several thousand acres of Clinch County's most valuable product-pine trees.

With much of the county's principal in-come cut off and hundreds out of work, Clinch leaders began looking around for payrolls. They found one in Standard Container and through public subscription raised the necessary moneys to construct the handsome building just west of the city.

Then the firm, whose home offices are in New Jersey, moved in and with about 35 workers began making fly sprayers. Today the story is the same—success all the way through.

The firm has been good for Homerville and Clinch County and they have been good for the firm.

### Texas Salutes Colorado

EXTENSION OF REMARKS

### HON. BYRON L. JOHNSON

OF COLORADO

IN THE HOUSE OF REPRESENTATIVES Wednesday, May 27, 1959

Mr. JOHNSON of Colorado. Mr. Speaker, with your permission I should like to insert in the RECORD the impressive document I received this week from the Senate of the State of Texas-it is Senate Resolution No. 13, passed May 21, congratulating my State on its centennial this year. This typical Texan gesture is a poetic masterpiece not often encountered in dry political circles, and I submit the full text:

SENATE RESOLUTION No. 13

(By Dorsey B. Hardeman, State Senator, District No. 25, San Angelo, Tex.)

Whereas it is with interest that the Senate of the State of Texas notes the centennial of the founding of one of the younger members of the Union of States of these United States; and

Whereas the romantic land of majestic mountains and verdant valleys furnish a recreational playground for vast and increasing numbers of visitors annually, as well as for its own people, to enjoy and share its cool and invigorating climate and unparalleled and picturesque vistas; and

Whereas, it includes such natural and scenic marvels as Glenwood Canyon, with its brilliant colorings, the Royal Gorge, with its sheer granite walls, and the majestic Black Canyon of the Gunnison; also the Red Rocks near Denver, the Garden of the Gods at the foot of Pikes Peak, and the Seven Falls at Colorado Springs, to mention only a few of nature's handiworks; and

Whereas this fine State, familiarly known as "cool, colorful, Colorado," has made great contributions to the welfare of America from the days of the earliest fur traders. Jean de la Maisonneuve and a Swiss named Preneloupe, who arrived at the present site of Denver on July 20, 1799, through the period of the explorers, James Purcell in 1803, Capt. Zebulon M. Pike in 1806, Maj. Stephen H. Long in 1820, Capt. John C. Fremont in 1842, and Capt. John W. Gunnison. all noted explorers and pathfinders, followed by the trappers, scouts, and Indian agents and fighters which included such romantic and historical figures as Kit Carson, Jim Bridger, Charles and William Bent and

Thomas Fitzpatrick; and

Whereas following the establishment of the "Terriory of Jefferson," as it was originally known, great builders and political leaders appeared with William Gilpin, the first Territorial Governor and John Evans, railroad builder and second Governor of the Territory, also the founder of the University of Denver; Gen. William J. Palmer, founder of Colorado Springs and builder of the Denver and Rio Grande Rairoau; nearly R. Teller, U.S. Senator and Secretary of the Interior in President Arthur's Cabinet H. A. W. ("Haw") Tabor, colorful, fabulous, legendary pioneer mining operator, speculator and U.S. Senator, together with such later-day celebrities as Homer Lea, soldier, author, and adviser to Sun Yat Sen, in establishing the China Republic in 1912, Helen Hunt Jackson, author of "Ramona," Anne Parrish, author of many novels, including "The Perennial Bachelor"; Eugene Field, poet and journalist, Gene Fowler, journalist and playwright, Fred Stone, of musical comedy fame. Douglas Fairbanks, Sr., stage and screen star and Paul Whiteman, "the King of Jazz" have made lasting contributions to the development of the State: and

Whereas, as a land abounding in natural resources, it plays an important part in the economy and recreation of her own people, as well as of the entire country with her two national parks and six national monuments with their mauve and snow-capped peaks, the most famous being Pikes Peak, more than 14,000 feet into ethereal blue, greeting and radiance of the morning light at the first blush of dawn and stripping the splendor from the sunset's golden blow, then to be followed by the lengthening shadows of darkening purple, fading insensibly into neutral twilight, as night gathers her gentle mantle over its awesome stillness and the grandeur and magnificence of this wildly weird domain, she stands as the highest State in the Union, with an average altitude of 6,800 feet; and

Whereas that part of Colorado lying south and west of the Arkansas River was ceded by Mexico to the United States by the Treaty of Guadalupe Hidalgo in 1848, which Treaty also related to lands within the State of Texas thereby providing, to some extent, a common background for these two great American commonwealths; and

Whereas that part of Colorado lying south and west of the Arkansas River was ceded by Mexico to the United States by the Treaty of Guadalupe Hidalgo in 1848, which treaty also related to lands within the State of Texas thereby providing, to some extent, a common background for these two great American commonwealths; and

Whereas it is the desire of the Senate of the State of Texas to join with the people

of Colorado in their centennial observance and to express the hope for another and other centuries of progress therefor: Now, therefore, be it

Resolved by the Senate of the State of Texas, That its good wishes be, and they are hereby, extended to the State of Colorado and her people on the occasion of their first centennial and the hope for additional centuries of progress for this romantic and picturesque commonwealth; and, be it further

Resolved, That copies of this resolution, under the official seal of the Senate of Texas, be forwarded by the secretary of the senate to the Governor of Colorado, the Lieutenant-Governor of Colorado, the Speaker of the house of representatives of Colorado, the United States Senators and the Members of the U.S. House of Representatives from Colorado, and the secretary of state of Colorado.

BEN RAMSEY,

President of the Senate.

I hereby certify that the above resolution tion was adopted by the Senate on May 21,

1959. [SEAL]

CHARLES SCHNABEL, Secretary of the Senate.

#### Cartoonist

EXTENSION OF REMARKS

### HON. A. S. HERLONG, JR.

OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 3, 1959

Mr. HERLONG. Mr. Speaker, in my Fifth Florida District, an honor has come to a friend of mine who is one of the great editorial cartoonists of our age. His name is Lynn Brudon. Since 1943 he has worked for the powerful newspaper of central Florida, the Orlando Sentinel.

Now the Sentinel has two honors. The first, of course, is having my friend, Lynn Brudon, on its staff. The second is this: the Orlando Sentinel is the only newspaper in the United States which 7 days a week—year in and year out—publishes a color cartoon on the front page.

After making another of its studies on mass communication, analyzing the influence of the Brudon cartoons, the Center for Practical Politics, located at Rollins College and organized under a grant from the Maurice and Laura Falk Foundation, invited Mr. Brudon to stop by for a visit. When he arrived the conference room was overflowing with central Florida leaders from my district.

Under the signatures of Mayor Robert Carr, of the city of Orlando, Mayor J. Lynn Pflug, of the city of Winter Park, Prof. Paul Douglass and Miss Alice Mc-Mahon, who guide the policy of the distinguished educational enterprise which contributes so much to Florida politics, presented to my friend, Lynn, a plaque on which were inscribed these words:

Lynn Brudon, editorial cartoonist, the Orlando Sentinel sincé 1943, cynical protagonist of public rectitude, whose acid pen exposes folly, sham, and pretense and champions integrity, competence, and sound judgment in leadership.

As a part of this study the Center for Practical Politics sent interviewers all over the metropolitan area to find out whether they read the Brudon cartoon and whether they agreed with it. The statistical tabulations of the interviews showed that the Lynn Brudon cartoon is a major influential feature of communication.

From the content analysis of the cartoons, Judy Baez, center analyst, described the cartoon idiom of Lynn Brudon as—

both goodnatured and constructive, which in general is a tonic acid helping people to see their problems so that they can laugh 'at themselves while others laugh at and with them.

I wish you could know Lynn Brudon, Mr. Speaker. On the day the Center for Practical Politics was going to honor him he was so overwhelmed with work that he said he couldn't leave his drawing board. And he wouldn't—until Henry Balch and William Conomos called him into Martin Andersen's office and ordered him to take a half hour off. And that's all the time he did take off.

With a modesty which characterized his life, Lynn Brudon was touched by the tribute to him—so much so that he made one of the few talks of his life. With a sincerity expressive of the highest ethics of journalism, Lynn said to the distinguished citizens—and my constituents—who had gathered to honor him:

I never intend in any of my drawings to put any venom in what I cartoon. Sometimes people come to me and say: "You say you weren't mad at me when you drew that. God help me if you had been." What I try to do is pick an incident and help a man to see his folly and laugh at himself. I can laugh at myself. My drawings are like an editorial. Time and time again I've sat there drawing and said to myself: "No, that's not it. I've flopped this time." The next day the man calls up for the picture.

The Sentinel likes to bring out issues. If it's right, we stand up and say so. If it's wrong we holler. Mr. Andersen says: "I can hire all the big national cartoonists in the country—but we don't live in New York or Chicago or California. Our beat is central Florida."

Now what I do is keep track of issues. It is my job to keep the record straight. It's not a big job. But it's an important job. And best of all it's my job. I like it.

Mr. Speaker, because of my job here in Washington, I missed that conference to honor Lynn Brudon just as he almost missed it himself because of his duty to the Sentinel. I merely want to call the attention of this House to my hope that our world can have more men like Lynn Brudon in it. For 16 years I have known him and respected his courage and his political judgment. For more than a quarter of a century I have known his publisher, Martin Andersen, and worked with him to make central Florida become the great region that it is. Lynn Brudon I send my own personal greetings and congratulate the Center for Practical Politics on the outstanding research in communication which identifled the work of this great visual journalist to honor.

### DAV Services in Indiana

EXTENSION OF REMARKS

### HON. EARL HOGAN

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 3, 1959

Mr. HOGAN. Mr. Speaker, an exceptional record of vital rehabilitation services freely extended to thousands of Indiana citizens has recently come to my attention. These splendid humanitarian services are not sufficiently appreciated by those who have benefited thereby, directly or indirectly.

Among the several congressionally chartered veteran organizations, which have State departments and local chapters in Indiana, is the Disabled American Veterans. The DAV is the only such organization composed exclusively of those Americans who have been either wounded, gassed, injured, or disabled by reason of active service in the Armed Forces of the United States, or of some country allied with it, during time of war. I have been a member of the DAV since 1946.

Formed in 1920, under the leadership of Judge Robert S. Marx, DAV legislative activities have benefited every compensated disabled veteran very substantially. Its national adjutant is John E. Feighner, of Cincinnati, Ohio. Its national legislative director is Elmer M. Freudenberger, its national director of claims, Cicero F. Hogan, and its national director of employment relations, John W. Burris—all located at its national service headquarters at 1701 18th Street NW., Washington, D.C.

Inasmuch as less than 10 percent of our country's war veterans are receiving monthly disability compensation payments for service-connected disabilities-some two million-the DAV can never aspire to become the largest of the several veteran organizations. Nevertheless, since shortly after its formation in 1920, the DAV national headquarters, located in Cincinnati, Ohio, has maintained the largest staff, of any veteran organization, of full-time trained national service officers, 138 of them, who are located in the 63 regional and 3 district offices of the U.S. Veterans' Administration, and in its central office in Washington, D.C. They have ready access to the official claim records of those claimants who have given them their powers of attorney. All of them being war-handicapped veterans themselves. these national service officers are sympathetic and alert as to the problems of other less well-informed claimants.

DAY SERVICE FACILITIES IN INDIANA

The DAV presently maintains one national service officer in Indiana, Mr. John H. Weiss, located in the VA regional office, 36 South Pennsylvania Street, Indianapolis. The department adjutant is Mr. Gerald M. Smitley, 436-438 K of P Building, Indianapolis, Ind. The Department service officers are Mr. George McWilliams, 117 South Williams Street,

South Bend, Ind.; Mr. Ralph Kincaid, Post Office Lock Box 248, Indianapolis, Ind., and Mr. John Roth, Courthouse, Boonville, Ind.

Four hospitals are maintained by the Veterans' Administration in Indiana; a 200 bed general and medical hospital at Fort Wayne; a 486 general and medical hospital at Indianapolis, a 241 bed tuberculosis hospital at Indianapolis and a 1,650 bed neuropsychiatric hospital at Marion.

The DAV department of Indiana has nationally appointed representatives to the Veterans' Administration Voluntary Services Advisory Committees at each of the Veterans' Administration hospitals servicing Indiana veterans. These DAV representatives and the hospitals are as follows: Fort Wayne VA Hospital, Leo N. Cashdollar, 9091/2 Powers Street, New Haven, Ind.; Indianapolis VA Hospital, Mrs. Helen Miller, 257 East Minnesota Street, Indianapolis, Ind., and Mr. Bernard Van Sell, 219 South Arlington Avenue. Indianapolis, Ind.; Marion VA Hospital, Mrs. Mary Schmidt, 705 West Franklin Street, Hartford City, Ind.

During the last fiscal year, the VA paid out \$106,493,000 for its veteran program in Indiana, including \$30,729,528 disability compensation to its 36,031 service disabled veterans. These Federal expenditures in Indiana furnish substantial purchasing power in all communities.

About 19 percent—7,092—are members of the 69 DAV chapters in Indiana.

This 19 percent record is strange, in view of the very outstanding record of personalized service activities and accomplishments of the DAV national service officer in behalf of Indiana vetgrans and dependents during the last 10 fiscal years, as revealed by the following statistics:

Claimants contacted (esti-	
mate)	50, 486
Claims folders reviewed	42,072
Appearance before rating	
boards	20, 275
Compensation increases ob-	0.000
tained	3,370
Service connections obtained_	
Nonservice pensions	2, 116
Death benefits obtained	
Total monetary benefits ob-	209
tained	\$1,989,250.71

These above figures do not include the accomplishments of other national service officers on duty in the central office of the Veterans' Administration, handling appeals and reviews, or in its three district offices, handling death and insurance cases. Over the last 10 years, they reported 83,611 claims handled in such district offices, resulting in monetary benefits of \$20.850,335.32, and in the central office, they handled 58,282 reviews and appeals, resulting in monetary benefits of \$5,337,389.05. Proportionate additional benefits were thereby obtained for Indiana veterans, their de-pendents and their survivors.

#### SERVICES BEYOND STATISTICS

These figures fail properly to paint the picture of the extent and value of the individualized advice, counsel and assistance extended to all of the claimants

who have contacted DAV service officers in person, by telephone, and by letter. Pertinent advice was furnished to all

disabled veterans-only about 10 percent of whom were DAV members-their dependents, and others, in response to their varied claims for service connection, disability compensation, medical treatment, hospitalization, prosthetic appliances, vocational training, insurance, death compensation or pension, VA guaranty loans for homes, farms and businesses. and so forth. Helpful advice was also given as to counseling and placement into suitable useful employment-to utilize their remaining abilities. Civil service examinations, appointments, retentions, retirement benefits, and multifarious other problems.

Every claim presents different problems. Too few Americans fully realize that governmental benefits are not automatically awarded to disabled veteransnot given on a silver platter. Frequently, because of lack of official records, death or disappearance of former buddles and associates, lapse of memory with passage of time, lack of information and exeprience, proof of the legal service connection of a disability becomes ex-tremely difficult—too many times impossible. A claims and rating board can obviously not grant favorable action merely based on the opinions, impressions or conclusions of persons who submit notarized affidavits. Specific detailed, pertinent facts are essential.

The VA, which acts as judge and jury, cannot properly prosecute claims against itself. As the defendant, in effect, the U.S. Veterans' Administration must award the benefits provided under the laws administered by it, only under certain conditions.

A DAV national service officer can and does advise a claimant precisely why his claim may previously have been denied and then specifies what additional evidence is essential. The claimant must necessarily bear the burden of obtaining such fact-giving affidavit evidence. The experienced national service officer will, of course, advise him as to its possible improvement, before presenting same to the adjudication agency, in the light of all of the circumstances and facts, and of the pertinent laws, precedents, regulations, and schedule of disability ratings. No DAV national service officer, I feel certain, ever uses his skill, except in behalf of worthy claimants, with justifiable claim.

The VA has denied more claims than it has allowed—because most claims are not properly prepared. It is very significant, as pointed out by the DAV acting national director of claims, Chester A. Cash, that a much higher percentage of those claims, which have been prepared and presented with the aid of a DAV national service officer, are eventually favorably acted upon, than is the case as to those claimants who have not given their powers of attorney to any such special advocate.

Another fact not generally known is that, under the overall review of claims inaugurated by the VA some 4 years ago, the disability compensation payments of

about 37,200 veterans have been discontinued, and reduced as to about 27,300 others at an aggregate loss to them of more than \$28 million per year. About 1.7 percent of such discontinuances and reductions have probably occurred as to disabled veterans in Indiana with a consequent loss of about \$476,000 per year.

Most of these unfortunate claimants were not represented by the DAV or by any other veteran organization. Judging by the past, such unfavorable adjudications will occur as to an additional equal number or more during the next 3 years, before such review is completed. I urge every disabled veteran in Indiana to give his power of attorney to the national service officer of the DAV, or of some other veteran organization, or of the American Red Cross, just as a protective measure.

The average claimant who receives helpful advice probably does not realize the background of training and experience of a competent expert national service officer.

#### COSTS OF DAV SERVICES

Measured by the DAV's overall costs of about \$12,197,600 during a 10-year period, one would find that it has expended about \$3.50 for each claim folder reviewed, or about \$8.80 for each rating board appearance, or, again about \$22.70 for each favorable award obtained, or about \$123 for each service connection obtained, or about \$54 for each compensation increase obtained, and has obtained about \$14.10 of direct monetary benefits for claimants for each dollar expended by the DAV for its national service officer setup. Moreover, such benefits will generally continue for many years.

#### METHODS OF PROVIDING SERVICES

Evidently, most claimants are not aware of the fact that the DAV receives no Government subsidy whatsoever. The DAV is enabled to maintain its nationwide staff of expert national service officers primarily because of income from membership dues collected by its local chapters and from the net income on its Idento-Tag-miniature automobile license tags-project, owned by the DAV and operated by its employees, most of whom are disabled veterans, their wives. or their widows or other handicapped Americans-a rehabilitation project in thus furnishing them with useful employment. Incidentally, without checking as to whether they had previously sent in a donation, more than 1,400,000 owners of sets of lost keys have received them back from the DAV's Idento-Tag department, 13,917 of whom, during the last 8 years, were Indiana residents.

Every eligible veteran, by becoming a DAV member, and by explaining these factors to fellow citizens, can help the DAV to procure such much-needed public support as will enable it to maintain its invaluable nationwide service setup on a more adequate basis. So much more could be accomplished for distressed disabled veterans, if the DAV could be enabled, financially, to maintain an expert service officer in every one of the 173 VA hospitals.

MEMORIAL HONOR ROLL

During the last 10 years, the DAV has also relied on appropriations from its separately incorporated trustee, the DAV Service Foundation, aggregating \$3,-300,000 exclusively for salaries to its national service officers. Its reserves having thus been nearly exhausted, the DAV Service Foundation is therefore very much in need of the generous support of all serviced claimants, DAV members and other social-minded Americans-by direct donations, by designations in insurance policies, by bequests in wills, by assignment of stocks and bonds and by establishing special types of trust funds.

A special type of memorial trust fund originated about 3 years ago with concerned disabled veteran members of the DAV chapter in Butte, Mont., which established the first perpetual rehabilitation fund of \$1,000 with the DAV Service Foundation, to which it recently added another \$100. Since then every DAV unit in that State has established such a special memorial trust fund, ranging from \$100 to \$1,000, equivalent to about \$5 per DAV member—an excellent objective for all other States. Benefactors from 29 States have, up to this time, become enrolled on the memorial honor

Inasmuch as only the interest earnings from special donations will be available for appropriation to the DAV for its use in maintaining its national service officer program in the State of residence of each such benefactor, this is an excellent objective also for Indiana. Each such special benefactor is enrolled on a permanent memorial honor roll which, updated, is then included in the annual report of the DAV and of its incorporated trustee, the DAV Service Foundation, to the U.S. Congress.

Each claimant who has received any such free rehabilitation service can help to make it possible for the DAV to continue this excellent rehabilitation service for other distressed disabled veterans and their dependents in Indiana by sending in donations to the DAV Service Foundation, 631 Pennsylvania Avenue NW., Washington, D.C. Every such serviced claimant who is eligible can, and should, also become a DAV member, preferably a life member, for which the total is \$100-\$50 to those born before January 1, 1902, or World War I veterans-payable in installments within 2 full fiscal year periods.

Every American can help to make our Government more representative by being a supporting member of at least one organization which reflects his interest and viewpoints-labor unions, trade associations, and various religious, fraternal, and civic associations. All of America's veterans ought to be members of one or more of the patriotic, servicegiving veterans' organizations. All of America's disabled defenders, who are receiving disability compensation, have greatly benefited by their own official voice—the DAV. I consider it a privilege and an honor to belong to the Disabled American Veterans.

### International Ladies' Garment Workers' Union

EXTENSION OF REMARKS

### HON. HUBERT H. HUMPHREY

OF MINNESOTA

IN THE SENATE OF THE UNITED STATES

Wednesday, June 3, 1959

Mr. HUMPHREY. Mr. President, when one calls the roll of the great unions which have contributed to the building of the American labor movement as we know it today, high on the list is found the International Ladies' Garment Workers' Union of the American Federation of Labor-Congress of Industrial Organizations.

Since its formation in 1900, the ILGWU has worked tirelessly and in a spirit of dedication to lift the living standards of the fine men and women who make up

the workers of the industry.

The story of this great union is told in a supplement of the New York Times of May 17. It is, I might say, an excel-lent recital. I hope that it will be widely read, especially by our young people, who, I am afraid, are not too well aware today of the hard work, suffering, and sacrifice which went into the building not only of this union, but of so many others. Today, we tend to take for granted a strong and vigorous American labor movement. We forget that it was but a few years ago when the vast majority of American workers were without the benefit of a trade union to represent them in collective bargaining with management. The organized labor movement has been one of the great and effective instruments of bringing higher living standards to the people of our country.

The ILGWU has not grown old and tired with the coming of its great successes. It still displays imagination and vigor to meet the new problems which face the people of its industry. The president of the ILGWU, David Dubinsky, points out just what the problems are which the union faces today, in an article which he wrote for the New York Times supplement.

limes supplement.

Mr. Dubinsky is one of the outstanding men of our country—a great citizen, a labor statesman, and a respected civic leader. His union, the ILGWU, has earned the same respect and admiration.

I ask unanimous consent, Mr. President, that this article by David Dubinsky, entitled "The Problems of Success," be printed in the Appendix of the Record.

I take this opportunity to salute David Dubinsky and the International Ladies Garment Workers. They serve as an inspiration to the young men and women who are today entering the labor movement.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THE PROBLEMS OF SUCCESS—GROWTH OF UNIONS OPENS NEW AREAS OF RESPONSI-BILITY FOR LABOR LEADERSHIP IN AMERICAN LIPE

(By David Dubinsky)

A little boy of about 12 strayed from his home in a slum tenement on the Lower East

Side and found himself in front of Macy's Department Store. As he saw the huge store with its vast display of merchandise, the scores of busy salesgirls and the mass of customers, he was so overcome that he raised his hands to his head and stared incredulously. A passerby, observing the boy's apparent bewilderment, inquired what the trouble was. The boy replied, "Mister, my mama has a little grocery store and she worries all the time about debts, the rent, bills, and collections." Shaking his head sadly, the boy said, "This Mr. Macy, by golly, he must have more worries even than my mama."

Looking down at the boy, the man smilingly replied, "Yes, your mama has problems of poverty and smallness but Macy too has its problems—the problems of bigness and success."

The International Ladies' Garment Workers' Union which is entering the 60th year of its existence, and is a recognized and respected force in our community, is reputed to be a success as a union.

On this occasion, however, I should like to discuss not our successes, but the problems arising from our success. These are the problems of being grown up, of maturity, of responsibility to the community. I want to review these problems not only because we are facing up to and trying to cope with them, but also because I believe that sooner or later the entire American labor movement must also deal with and resolve the same or

similar problems.

Our union, like most unions in America, came into existence in response to a deep human emotion: the worker's passion to be respected as a human being and to participate in determining and improving his working and living conditions. For this passion they required no evidence from statisticians, economists, time-study experts or lawyers. The garment workers' burning aspiration for economic freedom was born in the foul air of the sweatshop, in the bark of the boss, in the cold pangs of hunger. Out of this anger and frustration arose the union. It was the union which first voiced the workers' cry of protest against the evils of the garment jungle. The contract was a measure of the degree to which the protest was heard: recognition, wages, hours of work. By the 1920's, however, it was clear that the industry itself was so unstable that the contracts rested on quicksand. To write a contract that was firm and enforceable it was necessary to bring some stability to the industry.

The basic instability of the garment industry arose from the auction block system under which the jobber—the creator of style and the merchandiser of apparel to the retail market—encouraged such intense cutthroat competition for the work of producing the garments that each season Seventh Avenue was strewn with bankruptcies.

Thousands of workers employed in the contracting shops were forced to make deals with their desperate employers to submit to substandard wages in order to grab a few "bundles" of work. The workers often lost wages when a fly-by-night contractor could not meet the payroli or filed for bankruptcy. And the great jobber—the lord of the garment manor—washed his hands of all responsibility to the contractors and to the workers.

A special commission, appointed by Governor Smith in 1924, recommended that a limitation be placed on the number of contractors a jobber might use and that the jobber be made primarily responsible for the wages and work conditions in contractor shops to protect both the workers and the public interest in decent conditions in a vital industry. It was some time later that these reforms became part of the industry-wide collective agreements. This placed upon the union the responsibility of serving as the great stabilizing factor in the trade. This role required accurate knowledge about

scientific approaches to the problems of pay rates and factory production and the overall economics of the garment trade and all its branches.

As the need for factual information increased our union created and expanded various departments. We set up a research department to provide factual ammunition for bargaining and the overall statistical information needed for stabilizing the industry. This was followed by the creation of a management-engineering department—timestudy men with a union heart.

In recent years the statistician and the industrial engineer have been added to the staff of many unions. They are more than new departments; they represent a new age of unionism.

Another mark of the new age is the labor When our union first came into lawver. being, labor-management relations were a jungle, without law and without order. In primitive form, a group of workers-in a moment of anger and despair-would get up from the machine, walk out of the factory, picket the plant, and try to work out an understanding with the boss on the sidewalk. In modified form, this was the core of collective bargaining for many years. With the passage of time, these shapeless relations began to take form. In place of the spoken deal on the sidewalk came the written contract. In place of the repeated stoppage to enforce the contract came the umpire, the impartial chairman in the in-dustry. The lawyer began to play a role now in labor relations. It was not until the enactment of the National Recovery Act in 1933 that the labor lawyer began to come into his own. Collective bargaining was made the law of the land and the fostering of industrial peace became the declared public policy of the United States. Section 7a of NRA, followed by the Wagner Act and then the Taft-Hartley Act, established a basic body of legislation on labor-management relations, on top of which was raised a giant structure of Labor Board and court decisions. Labor law—until then a specialty only of a few radicals with trade-union connections-became a respected category of the legal profession.

Today there are many lawyers engaged by our union and other unions on retainers and fees. But, in addition, the ILGWU has a legal department and a sizable legal staff, operating at both the local and national level, as an integral part of the union, counseling with us on policy and advising with us on strategy, as well as arguing cases before boards and courts.

The need to operate within a legal framework—through the labor lawyer and a legal staff—is characteristic of modern unionism in the new age.

Another problem of union success is the handling of its growing and highly complex financial affairs. This was very definitely no problem years ago when unions had plenty of nothing. But as unions have grown, as dues payments have become more regularized, income and treasuries have expanded. At the same time, health, welfare, and retirement funds have come into existence. These developments have accentuated the need to devise ways and means for safeguarding and conserving large resources. The modern union must set up well policed accounting procedures to insure the honest and economical use of its funds. Union moneys are dollars held in trust. They are not the personal property of the union officer. They are the property of the union membership with the union officer in the role of a trustee who is accountable to his rank-and-file, under uniform and systematic bookkeeping procedures.

Our union was the first to set up, many years ago, an elaborate accounting department, routinely and periodically checking on the books of every local union in every area and hundreds of localities throughout the country. This is more than a policing procedure; it is a method of budgeting, allocating available financial resources and getting the maximum return for every dollar.

A special problem arises in connection with the investment of reserves. To get good returns, under conditions of safety, our union employs a full-time investment counselor.

We prefer to invest our money in projects that not only yield a fair return, but are socially useful. New cooperative housing has, therefore, been one of our major sources for investment. It is gratifying to know that our investments help to promote a cleaner and happier community.

The management of health, welfare, and retirement funds, most of which were established after World War II, requires the union—as trustee for these funds—to manage millions of dollars of income, of expenditures and of reserves. There is the problem of collecting the funds, disbursing payments to provide proper medical care and financial assistance during illness; sending monthly pension checks to those who have retired; investing surpluses. In miniature, the union becomes a tax collection agency, a clinic, a department of social security and disability payments, a capital investor. To do this work in a responsible way, our union established two new departments; a health and welfare department

and a death benefit department.

While welfare funds represent a tremendous advance in providing added security for wage earners, they also present a problem of management requiring a high degree of administrative skill and integrity. In developing its codes of ethical behavior, the AFI.—CIO devoted much of its attention to the handling of union and welfare funds as a public trust with proper accounting and accountability. This, too, is a mark of the new age.

Two generations ago, the organization of workers into unions on the American industrial frontier was a rough business. Employers were arrogant and unyielding. Workers were bitter and angry. Violence was inevitable.

When employers, accustomed to unquestioned rule, brought in their paid strike-breakers, their coal-and-iron police, or their gangsters, workers did not know where to turn. They could not turn to the Government, because the Government—police and courts—were hostile. They could not turn to the public conscience, because the unions, especially during a strike, were regarded as social outcasts. And the press—the channel for public appeal—was overwhelmingly antilabor. In desperation, some unions organized their own physical defense. And, in the extreme, some unions tried to neutralize the employer's gangsters with their own mercenafies.

For many decades, the union was an outcast and, inevitably, the outcast is driven to the methods of the outlaw. To the extent that unions become accepted and integrated into the community, to that extent the unions follow the law and custom of the community.

In recent years, unions have leaned ever more heavily on the power of public persuasion to advance their cause. They have appealed to the self-interest of the worker, to the conscience of the community, to the responsibility of government, even to the employer who wants a productive and happy

The attempt to handle labor relations in this more civilized way is not without difficulties. There still are employers who insist upon the attitudes and the methods of the past. Unfortunately, in many communities they are backed by the local citizenry and sheriff. In some cases, gangsters

still make their living from the protection racket or may even be the legal and respected owners of factories. Where these conditions exist, violence inevitably breaks out.

To move ahead into the new era of labor relations requires the cooperation of a labor movement that respects the laws of the community and a community that respects the rights of labor. Our union has recently initiated a major move to establish such a relationship; an appeal to the conscience of the community to war against the unethical elements in the garment industry. We are appealing to the American women to buy apparel bearing the ILGWU label, because by such a judicious use of their purchasing power as consumers, they can strike a blow at the chiseller and the gangster shop.

For our part, we are convinced that as the conscience of the community is aroused and as this democratic will is expressed through government we can create the social climate for modern labor relations. There will be those who cling to past methods, but the future belongs to those who realize that both industry and labor can prosper most in an atmosphere of mutual respect.

As can be seen from this account, as we grow, our problems grow. First, our problem was confined to the shop. Then, we had to worry about the industry. Then our concern spread to the local, and national, and ultimately, the international community.

To play our expanding role properly, we could not limit our efforts to the shop and the shop contract nor even to the industry contract. We had to play a part in the community. And that means creative participation in politics, for it is through government that we shape the life of our community.

When a union enters politics, however, much more than a resolution is required. It is necessary to teach the workers his responsibility and rights as a citizen.

To discharge this duty in a constructive way is another of the problems of maturity, involving lectures, literature, trips to State capitals, and Washington, canvassing, registration drives, publications, rallies, committees and conferences. This is part of a vast movement to raise American democracy to a high new level by encouraging men and women, many of whom were habitually nonvoters, to participate actively in the electoral process. To conduct this full-time "course in civics" we have a Political Department—another mark of the age.

To deal with the problems of success, the union needs the right kind of personnel. And this is in itself probably the greatest problem of all.

In the early days of our union, a man could be elected to almost any post if he could make a speech. An open mouth was often the open door to a union post. If, by this means, a man won popularity, he could be elected to a variety of positions, for none of which he need have any special competence. Hundreds of men were elected to the position of financial secretary although they didn't know the difference between dues and debit.

On one thing almost every union did insist: that the elected officer carry a union card in the trade. The theory was that the man, coming from the work bench himself, would know the feelings and needs of the rank and file. In part, this theory was correct. But being a craftsman in his trade does not make a man competent in the craftmanship of running a union, especially a modern, complex union with its many problems of success. A dues card alone is hardly a diploma for a license to practice union administration, involving among other things, complex financial affairs.

Many of these old-line "leaders"—loyal card carriers and amiable politicians—were devoted and honest, even if uninspired and uninventive. But there have been others in the labor movement such as the Bioffs, Browns, Scalises and Fays who lacked these virtues but whose rise to leadership was based on their reputation as muscle men and their facility with the blackjack and the brass knuckle. And more recently, there have been somewhat refined versions of this prototype who, with more polish than their predecessors, nevertheless treat the union as a business for private gain.

The problem of developing modern union leadership for a new age is one of the most important facing the American labor movement. The modern union officer must be much different. He must have more than a smile, a line of talk, a paidup card. He must have a devotion and dedication, intelligence and inventiveness, social vision and public concern. To him a union is not a business but an opportunity for service. The ABC of union leadership is ability, brains, and

conscience.

In the past, many able people have risen out of the union ranks. But, there is a need for men of liberal view and intellectual power in unions in which they do not necessarily carry a membership card of the craft. The integration of such "outsiders" into the unions has been a slow evolution. It began timidly with the use of brain trusters as hired hands for special skills. I remember the time when the former Teamster president, Dan Tobin, employed a highly skilled economist as research director and apologized because he had to engage an intellectual instead of a dues-paying teamster.

For a number of years now the ILGWU has been enlisting outside blood to work in a variety of capacities. Indeed, the executive secretary of our international was, for a full generation, a man who did not come from the trade, but whose background in law, finance, and administration made him a superb man for the post. Many key posts in the union requiring special skills—administrative, publicity, research, education, engineering, and legal—are held by professionally qualified people who are not members of the ILGWU but are devoted to the union and to the objectives and principles of the labor movement.

In recent years, this concept-the right man for the right job-has been extended. The regular union officer-not simply the outside specialist-has greater ultimate use in a modern union if he has a better understanding of the economic, social, and political environment within which he moves. modern union officer cannot do his best job by just leaving the work bench, getting himself elected, serving a brief term and then returning to the workbench. No serious efficient organization would risk its existence by turning over its key posts to such random transient administration. Likewise, union leadership today is and should become a career and only through career development can the skills involving union administration be acquired.

Because we believe that the officers of a union should be both dedicated and trained, our union established its own "West Point" about a decade ago. Each year, about 2 dozen young men and women are put through a solid year of training on a full-time basis. About 130 of these now serve in the union.

In the development of staff members and officers of the union, we endeavor to find qualified men and women who reflect the many ethnic, linguistic, geographic currents in our trade. The work force in the garment industry is highly fluid, with a rapid turnover and great inflows of new population groupings. To develop a corps of officers who reflect these changes, we do not rely solely on our training institute, but

develop rank-and-filers through activity in piece rate determinations, in posts as shop stewards, executive board members, convention delegates, organizers. Through such experience and training, these rank-and-filers mature for appointment and election to full-time posts with the union.

This emphasis on developing honest and able people at all levels is part of our union's blueprint for progress in the new age. The policies we formulate to guide us in this new era are not self-enforcing. No policy is worth much if they are not convinced and conscientious people behind the policy. We therefore believe that the answer to many of our problems of success is to develop men and women of high caliber for union posts.

This review of our problem of success does not exhaust the subject. I have discussed several phases to show that union maturity—like human adulthood—solves some

problems and brings others.

This means that a union, like any growing and living thing, must be ready to change in changing times. Within the American trade unions there is an inner development creating new concepts and actions. In the last quarter century, organized labor has accepted the concept of social legislation and has added the idea of industrial unionism to the older craft form. More recently it has modified its notion of "autonomy" to discipline racketeer-ridden affiliates; has supported corrective legislation governing the conduct of union affairs; has spelled out ethical codes; has displayed a greater responsibility to the community and a sensitivity to international problems.

As labor has grown, it has shown a remarkable flexibility. But, even this flexibility can be a problem, for together with its adaptability, labor must possess a kind of rigidity of purpose. In fitting into modern times, labor dare not forget the old times, the original principles. It is just too easy for success to dull the memory of the days

when.

When unions are being born, the great aim is clear, for men and women, leaders and rank-and-filers alike must make vast sacrifices to create the union out of the existing chaos. This act of birth is painful but inspiring. With the passage of time, however, the original pain and purpose are sometimes forgotten.

As we look ahead, therefore, we must also look back; to our origin, to our reason for being, remembering that a union does not exist simply to perpetuate and perfect itself. A union is not an end in itself. A union comes into being as a means toward an end, the end being the full development—economic, political, cultural—of free men in a free society. No matter what successes we experience, they must not dull our sensitivities to the unfinished business on the agenda of a democratic civilization.

Only in this way, by a constant return to the original well of ideals, can we derive the necessary spiritual nourishment for constant growth and renewal.

Let's Back Smathers

EXTENSION OF REMARKS

HON. A. S. HERLONG, JR.

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 3, 1959

Mr. HERLONG. Mr. Speaker, under leave to extend my remarks in the Record, I want to include an editorial which appeared in the Sarasota (Fla.) Evening Journal of Monday, May 11, 1959:

LET'S BACK SMATHERS

On further thought, why not push the name of Senator George Smathers, of Florida, for nomination as Democratic candidate for President?

There has been much mention of Senator Kennedy, of Massachusetts, and Senator

HUMPHREY, of Minnesota.

Certainly our Senator SMATHERS would qualify quite as well as those two, and even better.

In these days and times of minority rule, there is a tendency to write off any possible candidate from the South on the assumption that he might not be able to swing the big minority blocs up North.

But this would not necessarily be the case. Senator SMATHERS has now served more than 8 years. He has performed well and has gained much experience, after serving in the House.

Florida could not be considered as one of the "solid South" States, since there are now hundreds of thousands of former northerners living in the State.

In addition, the State bolted the Democratic ticket in 1952 and 1956 to follow the magic of the name of Dwight D. Eisenhower.

What's more, Florida has come of age. Back there several decades ago, the State had only four Congressmen. Now there are & and after next year there will be 12.

In other words, Florida will have a much greater voice at the Democratic convention

than it did in former years.

A good ticket for the Democrats would be George Smathers for President and Gov, Pat Brown, of California, for Vice President. A Florida-California combination would be a natural.

That ticket should certainly sweep the South and West, and pick up enough other votes to beat any Republican combination.

Florida politicians still have an inferiority complex in talking about the Presidential race. They talk about Gov. LeRoy Collins or Senator SMATHERS for Vice President. Senator SMATHERS is a terrific campaigner

Senator SMATHERS is a terrific campaigner and is a liberal with conservative leanings, or vice versa.

Let's boost him for the top spot.

### Address by Secretary of the Treasury at University of Houston Commencement Exercises

EXTENSION OF REMARKS

### HON. PRESCOTT BUSH

OF CONNECTICUT

IN THE SENATE OF THE UNITED STATES

Wednesday, June 3, 1959

Mr. BUSH. Mr. President, I ask unanimous consent to have printed in the Appendix of the Record an address delivered by Secretary of the Treasury Robert B. Anderson at the commencement exercises of the University of Houston, at Houston, Tex., on Saturday, May 30.

There being no objection, the address was ordered to be printed in the Record, as follows:

REMARKS BY SECRETARY OF THE TREASURY
ROBERT B. ANDERSON AT THE COMMENCEMENT EXERCISES, UNIVERSITY OF HOUSTON,
HOUSTON, TEX., MAY 30, 1959

This evening I should like to talk about a trilogy—men, money, and minds. The effective merger of men, money and minds is crease in our standard of living to technolan aim of the educational process. It pre-sents pressing problems with which you as university graduates are particularly concerned.

The most obvious characteristic of a civilization, society, or nation is that it is an association of people. It is directly concerned with human beings-their wants and needs, their fears and hopes, their capacities and limitations. We in this country believe that the sole purpose of a political economy is to make life for people more We believe decent and rewarding and free. further that by giving the individual the maximum chance for expression, the whole community-whether one nation or manymay more nearly reach the goal of fulfillment for all its members. This is our objective, however imperfectly we may have realized it so far.

One of our greatest challenges today arises out of the fact that the human community is growing very fast—and its needs are growing in proportion to its numbers. There are well over two and a half billion people, By the time you have been living today. out of college as long as I have there will easily have been added a billion more. That means, if you please, one hundred million more Americans by the time your children sit where you do now.

Talk about growth. Your generation is

obviously in for a lot of it.

Within the next 25 years we will virtually double the producing capacity of America. We are going to have to create some 35 to 40 million new jobs. We shall need something like 1 million additional school-rooms and 30 million more homes. We shall have to build hundreds of thousands of miles of new highways and thousands of new hospitals, and somehow find room for 60 million more automobiles and trucks. must develop more than 10 million acres of bare land for homes and streets in our spreading metropolitan areas. The development and conservation of water resources will be a major task, and so will the development of an energy base to meet a demand which may well triple.

These are a few of the problems with Which the process of growth will confront us. We must solve them in terms of benefits to people—and in ways which maintain and strengthen our traditional freedoms. We know that our growth will not be even; there will be difficult problems of time and adjustment. Some of the answers must Wait on yet undiscovered scientific truths; others on the refinement of data already known. All require the coordinated action of millions of Americans and all require staggering amounts of money, running to the hundreds of billions of dollars.

This brings me to the second point: money. From what source are we going to accumulate the necessary capital for a doubling of output over a 25-year period?

From just one place: savings. The excess of what we earn as a people over what we spend. There is no other acceptable source.

To achieve these savings, individuals must set aside a part of their earnings. Corporations must retain some earnings for capital account. Improvements and techniques which enable us to increase our savings potential through using our resource more efficiently must be constantly sought. are the principal sources of investment funds, Whether they are used to build a steel mill, a highway, a university, or a space ship to Mars.

Wealth is not created merely by increasing the number of dollars in the economy. It cannot be brought into being by Government decree. Wheels must turn, hammers must fall, and people must work with mind and hand, before anything definable as wealth emerges. We owe the handsome in-

ogy, invention, and hard work—not to any fiscal or monetary legerdemain. We live better than we used to because we produce

There are hopeful signs in our economy that Americans are becoming increasingly aware of that simple but important fact. They are becoming increasingly alert to both the dangers and the futility of trying to bring about greater growth during periods of prosperity by simply pouring more money into the economy. With gov-ernments, as with individuals, spending in excess of income must be financed by means of loans. During periods of high activity, when the private demand for loan funds is high, a considerable part of Government borrowing must come from the banking system. Such borrowing is inflationary-it increases the number of dollars in the economy without necessarily increasing the things that can be bought with them.

Backed by public opinion, outstanding leaders of both parties in Congress are now giving strong support to a program for sound management of the Government's fiscal af-One of the significant developments behind this attitude is the resilience which our economy has recently demonstrated. Despite the predictions of many, the change from recession to recovery occurred with little direct Government intervention. In most sectors of activity the economy has now advanced beyond its former record highs. While there are still areas of employment dislocation, it is heartening that employment generally continues to improve noticeably contrary to some predictions that large-scale Government intervention would be required to open up job opportunities for many of those out of work.

These experiences have served to demonstrate once more a long-standing characteristic of the American economy. Reasonable stability of prices is not the enemy of a high rate of economic growth. Rather, we find that economic progress has thrived on the basis of sound money when the inflationary impact of war finance is taken out of the picture.

A notable example is the tremendous economic growth which took place in this country during the latter part of the 19th century. when prices were in a general downtrend following the rise associated with the Civil War. Again, from 1910 to 1915, manufacturing production expanded by almost one-third auginst a background of moderate price decline. In the 1920's, also, national output increased 50 percent during an 8-year period characterized by remarkable price stability. More recently, between 1951 and 1955, a high level of prosperity was accompanied by relative stability in the broad indexes of wholesale and consumer prices.

In the face of this evidence, there are still some who unwisely argue that continual deficit spending and the inflation which it promotes are somehow necessary to encourage growth. But what really happens when inflationary forces are at work in the economy?

First of all, the buying power of both current earnings and accumulated savings begins to shrink. This brings cruel hardship to those who cannot bargain effectively for wage and salary increases and to those living on past savings-annuities, pensions and so Savings eroded through price inflation command fewer goods in exchange. They have less ability to transform human effort and ingenuity into productive capacity and in consequence their potency as a positive instrument of economic growth is seriously weakened

Second, continuing inflation brings about maladjustments in the economy which beget recession-and recession is the enemy of sustained; rewarding economic growth. When we dilute the worth of the standard by which we measure value, dislocations necessarily result. Businessmen who must replenish their inventories and capital equipment at higher prices raise their prices in turn. Labor demands and gets higher wages which add further to costs. People are discouraged from saving-indeed, many in the fixed-income groups find it impossible to save. With declining savings, sufficient capital to finance normal growth is not forthcoming, and the cost of available capital is high. Programs for expansion and improvement are cut back, and output may be restricted-at the same time that costs are rising. And so the spiral goes.

Now the most hopeful aspect of this entire situation is that it happens to be one of the major problems that we can-and must-do

something about.

As a primary step, we can exercise the discipline and restraint needed to keep Government spending within Government income during prosperous times like the present. The evidence of growing support on the part of Congress and the public for sound fiscal policies gives hope that we can be successful in reaching this goal in fiscal 1960.

In other areas, also, it is within our power to keep inflationary pressures from growing so strong as to disrupt the process of growth. Any practices which act as a continual spur costs and prices must be carefully examined. Waste and inefficiency must be eliminated—not only in Government, but wherever they may be found. In all of our affairs, public and private, we must endeavor to look at the whole economy; not just at the sector of it with which we ourselves are most concerned.

This is a task for the mind-the third element of the merging process I mentioned earlier.

What a person does is something which comes from the inner part of his being. It is the fruit of his mind. And in a free society, each individual has a personal responsibility for developing his powers of judg-ment and decision to the fullest.

Goethe has said that what one inherits from his father he must earn all over again. or it will not be truly his. This is a penetrating commentary on the quality of wisdom required in our own day. We must earn, all over again, the freeedom and security, the capacity for growth and adaptability to change, which constitute our American heritage from the past.

It is true that there are periods in an individual's life, as in a nation's, when change seems to be occurring almost imperceptibly. At these times, little seems to be required beyond the application of established rules and precepts received unearned-as Goethe

would say—from the past.

But when change takes place rapidly or abruptly, a crisis may occur. Decisive new actions may be required. It is not enough, then, to look only to patterns of the past. What we require are principles which have been developed from historic precedents and out of our own experience and ingenuity. In the absence of such principles, the tendency will be to take a negative attitude. Generalities will be sought which can obscure the need for action, and reasons will be found why things should not be done.

Let me give you an example right out of recent newspaper headlines. There are those few who are coming forward with reasons why we should not maintain a balanced budget, why we cannot plan to pay off any of our huge debt at any foreseeable time. They cloak their arguments with the generality that more growth is needed—and then move on to the false assumptions that infiation stimulates growth and that a creeping erosion in the value of the dollar need be of little concern. The end result

of what they are advocating is a destruction of values which will advance so slowly that it will not be noticed by the naive and

trusting.

How long could we expect the habits of thrift and savings which have built this country to survive in such an atmosphere? How could we, under any circumstances, morally justify a program which is a continuing invitation to unsoundness as a way of purporting to meet our obligations? leave these questions with you. As educated people, I hope and believe that you will never be deluded by those who say that safe-guarding the value of our money isn't really very important.

It is the responsibility of each one of us to develop convictions strong enough to replace a shallow approach of this kind. And this can only be done by dedicated thoughtby the application of mind to the experience of the past and the problems of the present. More than four centuries ago, Leonardo da Vinci wrote: "Wrongly do men cry out against experience and with re-proaches accuse her of deceitfulness. \* \* \* Experience is never at fault; it is only your judgment that is in error."

Today, a great deal-probably more than any of us can now comprehend-depends on the judgment of the American people. It is not too much to say that the future of freedom in this world may depend on what we do and what we achieve here in America

during your lifetimes.

We are living in a time of great international tension-but it is also a time of great promise. Our particular system of competitive enterprise is superbly equipped to meet the growth needs which are clearly foreseeable in the period just ahead. the maintenance of discipline in both our public and private affairs, the possibilities for the further development of the American economy are truly dazzling.

We are starting off on firm ground—a

fact, you may be sure, which is being carefully evaluated in other countries as well as

in our own.

The American private enterprise system is sound.

It is healthy.

It is growing.

It is capable of adjusting to changes which are inherent in the growth process.

It is capable of adjusting—we have re-cently seen—without resort to the dangerous stimulus of massive Government intervention.

Economic growth is compounded from many ingredients. It requires basic research-in an atmosphere of free-ranging in-It requires technological advance, following closely on the leads provided by It requires an efficient producresearch. tion process-and the planning which goes with successful marketing and distribution. It requires mobility of resources, so that the old and outmoded can give way to the new and improved without crippling after effects. It requires, finally, sufficient savings and investment to make all of these things possible.

Let us never forget that the merger of men, money, and minds which is the essence of the growth process can be fruitful only if we keep steadily in view this important truth: Values, in whatever form they may take—a political system, a university education, a powerplant—have no meaning except in relation to people.

Woodrow Wilson once said, "Sometimes people call me an idealist. Well, that is the

way I know I am American."

In the eyes of the world, America stands freedom and humanity, as it has throughout our history. We can be rightly proud of the fact that the first postage stamps issued by the Republic of Indonesia turned out to bear the portraits of Washington, Lincoln, Franklin, and Hamilton, side by side with the founders of the new republic.

But we cannot rest complacently on the achievements of our forefathers. During the past 15 years 700 million people in 20 countries have won political independence. Whether these new nations swing toward East or West will depend largely on youon what you in your generation do to help them achieve the conditions of living which give scope for the inventiveness and resourcefulness of the human mind.

This, then, I conceive to be our Nation's charge to all of us: Enter your chosen professions with a keen awareness of the lessons of the past and the challenges of the future. Apply your minds not only to the problems of daily living but also to the pressing national and international issues which must be resolved if freedom is to be preserved at home and furthered abroad. In so doing may we remember the inquiry of Edwin Markham, the American poet who was deeply dedicated to the cause of his fellow men;

"Why build these cities great If man unbuilded goes. In vain we build the world Unless the builder also grows."

### Lest We Forget

EXTENSION OF REMARKS OF

### HON, PHILIP J. PHILBIN

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES Wednesday, June 3, 1959

Mr. PHILBIN. Mr. Speaker, speaking at Memorial Day exercises at Westminster, Mass., I hailed the unforgettable contributions of American heroes in every generation, who, by their devotion and sacrifice, preserved the Nation.

I said in part:

All of us living in this period of great stress and great threat to our precious liberties must give something more than lip service to perpetuate the ideals and principles for which these heroes fought and died.

We have special and urgent responsibilities, not only to exercise vigilance, but to work unceasingly to guard and defend the Nation and the Government from the great perils of the hour.

If we would adequately protect the free-doms we cherish, we must exert every effort, and be prepared to make every sacrifice, to safeguard the way of life bequeathed to us by the noble defenders of the country we honor today.

Military strength alone, though essential and vital, will not meet this challenge. Economic prosperity, though imperative, will not of itself preserve this Nation.

Only the indomitable will and fierce determination of free Americans to live by the spiritual tenets of religion and patriotism that have nurtured and built our national greatness can stem the surging tides of revolution and moral deterioration that are beating upon our shores, threatening to destroy institutions and invading our very

It is for all of us, regardless of class, creed, or station, as never before, to cease petty bickering, bury inconsequential differences, renounce selfishness and greed and rally as a united people resolved and dedicated to defend the peerless edifice of American liberty, if we hope to preserve freedom and spirit-

ual values in a world where tyrannical, powerful forces are marching to enslave mankind. Victory will be ours, if we emulate the inspiring example of those who gave their all that American freedom might live.

### Everybody Prays at Sholl's

EXTENSION OF REMARKS OF

### HON. JOHN A. BURNS

DELEGATE FROM HAWAII

IN THE HOUSE OF REPRESENTATIVES Wednesday, June 3, 1959

Mr. BURNS of Hawaii. Mr. Speaker, under leave to extend my remarks in the RECORD. I insert herewith an article entitled "Everybody Prays at Sholl's," in the May 1959 issue of Good Business.

This article emphasizes the inspiring life story of Evan Andrew Sholl, whose name is a familiar one to legislators and to many thousands of visitors to the National Capital, for they have eaten in his cafeterias and have come away impressed at the reasonable prices and the atmosphere in these places. He has set a fine example for the program of religion in everyday life which we all need.

The article is by Larston D. Farrar, the noted author whose books are read throughout the United States and overseas. Mr. Farrar is among the best known writers for magazines in the United States today, with articles featured in big and little publications in all parts of the country. He is known to Members on both sides of the aisle on Capitol Hill.

The article is as follows: EVERYBODY PRAYS AT SHOLL'S (By Larston D. Farrar)

More than 2 million persons a year eat breakfast, lunch, or dinner in one of the two cafeterias operated by Evan Andrew Sholl, in Washington, D.C. There is no telling how many millions of persons in the past 30 years have enjoyed a quiet, clean repast at a cafeteria operated by Sholl, who never went past the second reader, and is noted today as one of the most religious restaurateurs in the Nation's Capital.

Actually there are several cafeterias in the various areas of Washington that bear the Sholl name, but these are businesses which he once owned and then sold to his employees. He is working now toward disposing of his two present cafeterias to his employees, who, he says, helped him to build his business and helped greatly to make his wealth possible. Sholl feels keenly his responsibility to his employees. his fellow men, and his church.

When you learn of the tremendous handicaps he had to overcome to become a success you understand the value of the word that serves as his guiding light in business. The word is give.

"I have always gone on the belief that if I am to get, I must first give-give of myself, give to my employees, give the best to my customers, give service and give quality." he said recently.

'The word 'give' is one of the magic words in the English language, and absolutely indispensable in any businessman's philosophy. Until I truly learned to give, I never really was able to get. When I did learn to give, I was rewarded most generously in every way.

"Later, when I gave my heart to God and the church, I learned the value of another word. It is truth. The poet said: For truth and duty, it is ever the fitting time.' I made these two words—'give' and 'truth' the kingpins of my life, and since I have done so, I have had peace always."

At Sholl's cafeterias there are prayers for Roman Catholics, Protestants, and Jews, on a little printed card at each table. Eating in the cafeterias can indeed be a spiritual experience, due to the cleanliness, the decor of the surroundings, and the attitude of the employees. The quality and quietness of Sholl's personnel, and their gentle courtesy, have impressed many, who ask, "How can you find people who will work at low wages and yet be so efficient and clean and courteous?"

"Our first reply to that question is that 'low wages'—for our employees—is a myth," Sholl points out. "We pay a bus boy \$65 or \$75 a week, whereas he would get \$45 a week at some other place. We pay counter girls and those in similar jobs \$75 a week and up, again compared to about \$45 or \$50 they might get elsewhere.

"We screen our employees carefully in hiring them, but not according to faith, for we hire Catholics, Protestants, and Jews. The screening refers to their attitude about serving humanity, and to background and home life. We do hire people who are regular in church attendance and devout in the practice of their faith, rather than people who have no interest in spiritual matters.

"Seldom, if ever, in our long experience, have we had any slight altercation with our employees. Our experience has proved to us that spirituality promotes cleanliness in our employees, a devotion to their daily work far above the average, and thoughtfulness toward our customers, who of course appreciate such good service at once."

A prayer service is held for all the employees, from Evan Sholl to the newest member of his 180-person payroll. Attendance, of course, is voluntary, but usually 75 to 90 percent of all workers are in attendance.

Once a year a retreat is held, for those who want to attend, and an annual, interdenominational communion breakfast is held at the Mayflower Hotel.

"All of these things are just ribbons leading to the ideas which I want to disseminate," Sholl says. "There must be a spirit in all things, and we strive to promote the good

spirit."

Evan Andrew Sholl opened his first Washington restaurant in the late 1920's in the All-State Hotel. It was a cafetoria designed to serve the regular and transient guests of that hostelry.

"We were going to charge them so much a month for their meals, and we were able to persuade many of them to put up \$12.50 apiece in advance for two tickets giving them the right to eat every meni for 2 weeks. This gave us more capital and actually enabled us to stay in business during the first months, when expenses were heavy."

From then on, Sholl opened a new place every year for 7 years. Year by year, as he prospered, he would open new cafeterias and sell the others to employees, increasing both the prestige of his name and the good will that he was determined to build. His watchword always was give, and he never operated on any other principle.

During World War II he was operating many cafeterias, and, he says, "the money came in so fast, I really became very rich, from a material standpoint, before I realized it." He slowly began the process of selling the various cafeterias to his employees. In the two he still owns, business is excellent. Today he says:

"One thing businessmen must remember is that God gives us our reward. We may fight against giving—to the poor and to

others. But if we are smart, we must realize that we work only through people. The strength we obtain through our faith helps us better to work with people, in every way. It is the sugar of life, the oil that greases the machinery; it takes out the groans and the conflicts and smooths the way for us to do our jobs better, and render our greatest service."

### Near-Miracle in Laos

EXTENSION OF REMARKS

### HON. WALTER H. JUDD

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 3, 1959

Mr. JUDD. Mr. Speaker, during the past few months the newspapers and congressional hearings have resounded with charges of mismanagement and bungling in our mutual security program in Laos. The impression has been left that the program is a costly failure. Nothing could be further from the truth. As I stated during debate on the mutual security program a year ago and as Assistant Secretary of State Robertson testified eloquently before the Foreign Affairs Committee in its recent hearings on the program, we have succeeded in what we set out to do: we have preserved the independence and freedom of this little country dangerously threatened by Communist forces and infiltration along its 600-mile border with Communist China and Communist Vietnam.

The fact is that American diplomats and American aid personnel have successfully fought one of the most difficult and bitter battles in the cold war against almost impossible odds and, so far, have won.

It is important that Members of the Congress should understand and appreciate the achievement which these hardworking people, living and working under the most primitive conditions have made. The actual situation in Laos is described by Mr. Ernest K. Lindley, of Newsweek, in the following article:

NEAR-MIRACLE IN LAOS (By Ernest K. Lindley)

VIENTIANE.—A near-miracle has occurred in landlocked Laos, most remote, most primitive, least organized of the free nations which sprang from French Indochina. It is not entirely a miracle because it is due to the intelligence and courage of Laotian leaders who understand communism and are resolved to preserve the independence of their country. The American Government has given effective help. As a result the situation in Laos is utterly different from that depicted in recent congressional rehashings of the past.

To appreciate the near miracle it must be remembered that Laos has a very long border with Communist North Vietnam and China. It's two northern provinces were controlled by Laotian Communist troops when the Indochina war ended in 1954. Two Communists were admitted to the cabinet in 1957. Only a year ago, the Communists and their allies scored an ominous political victory, winning a majority of the additional seats in the enlarged national assembly. Meanwhile, corruption had made Laos a highly publicized example of badly administered American aid.

Last summer the near miracle began to develop. Most of the older anti-Communist leaders put aside their feuds and united in a new party: Rally of the Laotian People. Concurrently, progressive younger Laotians who had never held elective office, although most of them had served in appointive posts, organized the Committee for Defense of National Interests, dedicated to clean government as well as to saving Laos from communism. A new cabinet was formed, including four of these young men and excluding the Reds.

#### REPULSE

Last October the new Government removed the chief source of graft by abolishing import licenses and develuating the currency. It firmly withstood a phrenetic Communist counteroffensive—demands for reactivation of the International Control Commission (including a Communist member) which had left Laos in July, supported by a strong propaganda campaign from North Vietnam and raids across the border by Vietninh troops. In January, it obtained a 1-year grant of special powers from the National Assembly and added three Army officers to the cabinet.

Four months ago this new regime launched a campaign designed to destroy communism at the rice roots. One arm of the campaign is village improvement—most of the 2 million Laotians live in some 10,000 villages. The government is giving the villages cement and roofing materials, and they are building schools. The village campaign includes public health and local roads. The other arm of the campaign is the strengthening of the administrative pyramid, extending downward to the villages.

#### ADVANCE

Traditionally, each village elects its own headman and the headmen of each group of 6 to 10 villages elect their district leader. Now these lower officials must be approved by the national government. The Communists and their dupes are being eliminated. The prestige of reliable lower officials is being built up by giving them officials huts and staff assistance. In this, the Laotian Army, trained, at our expense, has an active role. Six picked Army men are assigned as staff to each district leader. Meanwhile, graduates of the U.S. training programs in agriculture, public health, etc., are beginning to move into the field.

Thus while backward-looking Congressmen rake over the past, Laos has moved ahead. I talked with Premier Phoui Sananikone and with such younger officials as Inpeng Suryadhay, Secretary of State for Education, and Lt. Col. Oudone Sananikone, Secretary of State for Social Affairs and Public Health. They seem to me to be both capable and socially enlightened. The changed situation in Laos justifies two conclusions: (1) Despite past waste and corruption, American aid has been a success; and (2) not to give this new regime our unstinting support would be blind folly.

Fair Trade: For Whom?

EXTENSION OF REMARKS

#### HON. JOHN D. DINGELL

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 3, 1959

Mr. DINGELL. Mr. Speaker, pursuant to permission granted, I am inserting into the Appendix of the Concressional Record an article appearing in Business Week on May 23, 1959, en-

editorial properly characterizes fair trade as being clearly against the public interest.

However, the editors make the mistake of assuming there is not much danger that the bill will become law. Quite to the contrary, unless the consumers and intelligent businessman of this country act with more vigor than they have in the past, they may very well find themselves shackled to a national fairtrade system. The editorial, which conforms with unanimous expression of editorial opinion in the country, is in opposition to the fair trade bill, H.R. 1253.

FAIR TRADE: FOR WHOM?

By a 20 to 9 vote, the House Commerce Committee has approved Representative OREN HARRIS' bill to legalize retail price fixing on a national basis.

By the simple expedient of issuing notices, a manufacturer or distributor of a brandnamed product could require retailers, regardless of State laws, to sell the product at a specified price. Individual contracts with retailers aren't necessary. What's more, this latest version of the so-called fair trade laws would be far simpler to enforce than its predecessors. In fact, since the bill takes the form of an amendment to the Federal Trade Commission Act, the FTC is afraid it could be required to assist manufacturers and dealers in prosecuting violators, even though the FTC is dead set against the bill.

The bill is an obvious weapon to plug the loopholes of the McGuire Act, which permits States to use fair trade laws. But last year many manufacturers dropped factory-fixed prices when the State laws proved unenforcible. The Harris bill would

solve that sticky problem.

Such a bill, backed by a powerful lobby of small retailers, has no place in the kind of economy we enjoy today. Perhaps in the depressed 1930's a case could have been made for fixing minimum prices on national brands. But there are already too many built-in ratchets in our economy that keep pushing prices upward-farm supports, protective tariffs, commodity subsidies, loan guarantees, wage escalators. The Harris bill would be another. It is an anachronism which, in the long run, would not help the manufacturer, the dealer, the national economy-or the consumer.

Fortunately, there is not much danger of the bill becoming law. But the philosophy behind it—which, in effect, legalizes price fixing-is dangerous. It is symptomatic of the kind of thinking that has given protection to too many special groups.

Liberals' Glow Gets Dim-Eisenhower Becomes Stronger President With Inflation Fight

> EXTENSION OF REMARKS OF

HON. LEO E. ALLEN

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES Wednesday, June 3, 1959

Mr. ALLEN. Mr. Speaker, under leave to extend my remarks, I wish to include the following editorial, entitled "Eisenhower Becomes Stronger President With Inflation Fight," from the

titled "Fair Trade: For Whom?" The Rockford (III.) Register-Republic of in the teeth of increasing deficits. It is true June 1, 1959:

LIBERALS' GLOW GETS DIM-EISENHOWER BE-COMES STRONGER PRESIDENT WITH INFLA-TION FIGHT

(By Raymond Moley)

The President's perceptible rise in popularity is due to a number of circumstances, past and present. So far as the immediate situation is concerned, the reasons are obvious. The big Democratic majority is caught in the net of past pledges and future ambitions. Liberal Democrats elected in the sweep of 1958 won votes by irresponsible promises. With little regard for what actually might be done, they offered panaceas for every ill. Fiscal realities were ignored. If they thought about it all, they assumed deficits to be inevitable and unimportant. With nothing very clearly in mind, they recklessly talked about better ways of keeping the peace of the world, and violently attacked the President and Secretary Dulles.

The fact that so many are greenhorns and of little stature makes things worse for their party and their experienced leaders. Speaker RAYBURN once said that he would much rather have a small than a large majority to manage in the house.

Many in the majority have real problems about the next election. In most cases they were elected in marginal districts, and at home there is a strong conservative and Republican opposition whetting the ax for 1960.

On the Senate side there are at least four presidential candidates—Kennedy, Johnson, Humphrey, and Symington. Except son, Humphrey, and Symington. Except for Johnson, none of these would be contenders if there were really notable and commanding figures in the party. The Democratic Party is rich in quantity but poor in quality.

Against this inchoate opposition the President's situation and qualifications stand out with great clarity. He doesn't have to worry about his own future. Moreover, in an appeal to the public he has a vast advantage. He is a single figure, understandable, able to speak for his party with authority. He has a national audience at all times. International affairs, which are so critical, permit him to have the headlines. The opposition is many things with many tongues. Hence the public is confused about what the alternative might be.

Most important, the President has seized an issue that everybody can understandinflation. And the people of the country are worried. Specific pockets of inflation show that there is beginning an ominous "flight from the dollar"—land booms, reckless stock market activities by unsophisticated investors, city workers buying land in the nearby countryside, purchases on credit, and a shift in preferences in life-insurance buying.

At long last, the President is fairly from the sort of advisers who have infuriated conservatives and regular Republicans. Nothing so impaired the President in the past as those who professed to help him. He is more sure of himself now. He has graduated from his novitiate in politics. Now the real character of the man is emerging from the fog of assistants and advisers.

And that real character is in the pattern of a sincere, liberty-loving American who has a feeling for the principles that American have lived by. He shuns the piling up of bureaucracy because he has been able to see its workings at home and abroad. He realizes that concentrated power in Washington is a dangerous thing. He even feels that the excessive growth of the President's power is not in the American tradition.

He is close to the fiscal management of the Government and realizes how difficult it is becoming for the Treasury to borrow money

that he has been an expensive President, but he has come to see the limits of spending. And after years of attempting to appease labor-union leaders and ultraliberals, he realizes that he can never win them to his party. At the moment he is angry over the nagging of the opposition, and that is not hurting his popularity with people who want, enjoy, and expect a show of fire in their

A few strong vetoes will help mightily to cement his advantage, and from all indica-tions these will be coming before long.

#### The Soviet Cosmic Rocket

EXTENSION OF REMARKS OF

### HON. LEONARD G. WOLF

OF IOWA

IN THE HOUSE OF REPRESENTATIVES Wednesday, June 3, 1959

Mr. WOLF. Mr. Speaker, by now those who believe the Soviet lunik or mechta was a hoax have had their say. The officials who are equally convinced it performed approximately as advertised have also been heard. There have been opportunities before the House Committee on Science and Astronautics for rebuttal and counterrebuttal. Short of a full disclosure by the Soviet Union, little more is likely to be gained by pursuing the subject.

The committee, of which I am a member, will write its report in due course. Personally I suspect that the editors of True magazine which carried Lloyd Mallan's articles wish they had done more independent checking of the material before printing it for national circula-

tion.

Having heard a parade of witnesses, some with access to all the facts available and equipped with the scientific training to evaluate these facts, the conclusion is almost inescapable, as these witnesses have testified, that a Soviet rocket was launched, that it went to the vicinity of the moon, and that the only reasonable interpretation is that it is now in orbit around the sun.

The hearings have been instructive in a broader sense. They have brought forth many illustrations of the problems of scientific fact gathering, interpretation, and evaluation. They have also thrown some light on the general scope of Soviet scientific endeavors and capabilities. They illustrate a need for continued committee study of Soviet scientific programs, whose size and impetus give pause to our own policymakers. The hearings show the importance of the work this committee is conducting in study of our own science education and manpower needs, dissemination of technical information, research and development programs, use of computers, and a number of other matters.

Perhaps it is time that we turn from worrying over past Soviet accomplishments to steel ourselves for the surprises which lie ahead, and that we make sure our own house is in order to meet the challenges which will confront us.

John R. Giese, Noted Bridgebuilder

EXTENSION OF REMARKS OF

### HON. WALTER M. MUMMA

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES Wednesday, June 3, 1959

Mr. MUMMA. Mr. Speaker, a prominent engineering firm in my district that is well known for its bridge building activities throughout a large part of the United States, the nationally known firm of Modjeski & Masters, of Harrisburg, Pa., has just lost one of its partners who passed away suddenly on

I feel that many Members of Congress would be interested to know of the passing of John R. Giese, who, as they say, was one of the noted bridgebuilders in our country. Some of you may have known him from his boyhood days where he grew up in Louisville, Ky.

Right now his firm has been chosen as the engineers for the Roosevelt Island Bridge and are proceeding with

plans for construction.

Also, many Members of Congress from the Mississippi and Ohio River areas might remember him as being a member of the firm that designed most of the bridges from Huey Long and Greater New Orleans Bridges, and on up the river.

To his widow, to his family, and to Modjeski & Masters, my heartfelt sympathy in this, their hour of bereavement.

Mr. Speaker, I would like to include herewith an article from the Patriot for June 1, 1959, telling about his activities and his death:

JOHN GIESE, 52, DIES, NOTED BRIDGEBUILDER

John R. Giese, 52, partner in the Harrisburg firm of Modjeski & Masters and nationally known bridgebuilder, died unexpectedly Sunday afternoon in his home at 232 Willow Avenue, Camp Hill.

Death was attributed to a heart ailment. A native of St. Louis, Mo., he attended schools there and was graduated from Harvard University with a bachelor of arts degree in engineering sciences. He was assoclated with Modieski & Masters since 1928

and became a full partner in 1947.

Among the many bridges whose construction he directed were the Louisville Municipal Bridge; Tennessee River and Cumberland River bridges near Paducah; Huey P. Long Bridge over the Mississippi River near Orleans; the suspension bridge the Mississippi at Davenport, Iowa; International Bridge over the St. Clair River between Port Huron, Mich., and Sarnia, Ont.; M. Harvey Taylor Bridge here and the South Bridge now under construction; Walt Whitman Bridge over the Delaware River, Philadelphia; Greater New Orleans bridge over the Mississippi at New Orleans; Memphis Highway bridge; Cairo-Illinois Central railroad bridge; South Capitol Street before over the Anacostia River, Washington, D.C.; and the Penrose Avenue bridge over the Schuylkill River, Philadelphia.

Mr. Giese was a member of the American Society of Civil Engineers; Pennsylvania Society of Professional Engineers, and the National Society of Professional Engineers.

He was a member and trustee of Camp Hill Presbyterian Church.

He is survived by his wife, Mrs. Edith H.

Giese; his son, John D. Giese, attending Harvard University; his daughter, Miss Edith C. Giese, at home, and his mother, Mrs. Estelle B. Giese, Louisville, Ky,

Funeral arrangements have not yet been completed.

### Michigan Week in Review: State Loyalty and Prosperity Dominant

EXTENSION OF REMARKS OF

### HON. LOUIS C. RABAUT

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES Wednesday, June 3, 1959

Mr. RABAUT. Mr. Speaker, from May 17 to May 23, we Michiganders celebrated Michigan Week. It was a whopping success. The surge of State loyalty was tremendous. Partisan prejudices fell by the wayside. All her citizens rallied 'round Michigan's flag. This response was inspiring indeed. It ran the length and breadth of the State. Its fervor showed that State loyalty comes before politics. Its zeal put State interests ahead of private interests.

Under permission to extend my remarks in the Appendix of the RECORD, I place an editorial which appeared in the Detroit Times under date of May 28, 1959. The article follows:

#### PRIDE IN MICHIGAN

As reports come in on the just completed Michigan Week, there is apparent a gratify ing and enthusiastic response to it. Don Weeks, director of the Michigan Department of Economic Development, in Lansing, has talked with six regional Michigan chairmen, and expresses it in this way:

'Instead of sighing with relief that their job is over, local groups are already thinking

in terms of next year's plans."

Hillsdale reports the biggest celebration the town ever had; Genesee County reports 3,587 students competed in a Michigan Week essay contest; businessmen in Howell became schoolteachers to establish direct contact with youth; in Kent County the ministers exchanged pulpits; Marquette reports the biggest civic meeting ever under one roof; 25 outstate daily newspapers instituted a round robin exchange of articles about their communities, which ran for 25 days.

It was in accord with one principle; a better understanding of Michigan throughout the State, with the pride and unity bound to result.

That leads to a normal, reasonable progression of thought. If understanding can bring State pride and unity for one week it can accomplish even more in 52 weeks. Understanding is not limited by a calendar.

We neither wish nor hope for a útopia in which Republicans and Democrats think alike. We expect no epidemic in which management showers its workers with benefits, and finds them magnanimously declined by labor. No business will urge its customers to take big orders to competitors.

But it is possible to place State loyalty and the State prospertly first—to exercise partisan politics, economic bargaining, business competition within the limits of the common good throughout the State.

It is not only possible, but wise. Michigan prosperity is a big canoe in which everybody is riding. No one benefits by tipping it over.

### Oregon's Brighter Outlook

EXTENSION OF REMARKS

### HON. CHARLES O. PORTER

OF OREGON

IN THE HOUSE OF REPRESENTATIVES Thursday, May 28, 1959

Mr. PORTER. Mr. Speaker, in May the economy of my State took a significant step forward. Six cities moved out of the surplus labor category according to Federal Government standards. Those cities were Albany, Coos Bay, Eugene, and Roseburg in my district, and Pendleton and Portland in other congressional districts.

This is encouraging. It comes during the centennial year of Oregon. It means the number of unemployed is decreasing. Not rapidly, admittedly. But this does mean that the grim outlook of 1957 and 1958 has changed considerably. I wish this were true in all parts of our Nation today.

In my State there are economic indicators which confirm the Department of Labor's action. For example, Doug-las-fir and pine prices in the Roseburg. Oreg., area were at \$58.60 a thousand late in May. The appraised price was almost \$17 less, at \$41.90.

This is the highest bid in many years, I am told.

Under leave to extend my remarks, I include articles which in more detail describe the climb in Oregon economy. This climb will continue if it is given nourishment-nourishment of the kind contained in the housing bill which will soon be discussed in conference. It is also contained in legislation which would put a halt to boxcar pirating which the Senate will soon consider and which Chairman Harris tells me will soon come before the Interstate and Foreign Commerce Committee.

[From the Portland, Oreg., Journal, May 25, 19591

#### OUR BRIGHTER JOB OUTLOOK

The person who is still out of a job is not cheered very much by the news that more of his fellow citizens are working. And in the Portland area, some 14,500 persons who are actually seeking jobs haven't found them, according to the Portland office of the State employment service.

But this cannot disguise the fact that the total job picture is enough brighter that we can no longer be considered a recession area.

The proof is that we are enjoying a new classification from Washington, D.C. have moved out of the substantial labor surplus category, a place we had won when unemployment rose in January 1958, to 10.54 percent of the total labor force, with 33.800 persons out of work. Unemployment now is down to 4.5 percent of the total work force. What is even more encouraging is that this change in classification is based not on just the situation of the moment but on the prospect that employment will grow in the months ahead. This in turn is related not to a single development but to a great variety of industrial and commercial activities.

One must assume that the centennial itself will produce added employment, not merely at the exposition itself, but from added services required to accommodate the influx of visitors to our State. The experience of other expositions of this nature is that they produce economic stimuli of a

lasting nature.

Job improvement is not limited to Portland. Albany, Coos Bay, Eugene, Pendleton, and Roseburg likewise have been lifted out of the labor surplus category. This obviously means that the lumber business, the bulwark of our economy, is better. There is no reason to believe this improvement is of a temporary nature.

Last year some Oregon citizens thought it was wrong to call public attention to our State's economic distress. The Journal, and some others, thought it was right to do so and to call for steps to remedy the situation. Now it is right to call attention to our improved status but to do it soberly, with the knowledge that we will have some distress among us and that we cannot be satisfied until all those who want jobs can find them.

[From the Portland, Oreg., Journal, May. 23, 1959]

PORTLAND'S LABOR SURPLUS VANISHES-1,000 JOBS REPORTED AS UNFILLED

(By Stan Weber)

Portland Friday was moved out of the substantial labor surplus classification by the Federal Government as a result of a significant improvement in the city's employment picture.

Clark M. Woodcock, manager of the Portland office of the Oregon Employment Service, announced the new classification after word was flashed to him from Washing-

ton, D.C,

It means Portland is changed to class C (areas with 3 to 5.9 percent of the labor force unemployed) from class D (6 to 8.9 percent unemployed).

Portland had been in the class D category since January 1958, when unemployment rose to 10.5 percent of the total labor force with 33,800 persons out of work.

As of Friday, Ray Anderson, statistical manager of the Portland office, estimates the list of unemployed has been pared to roughly 14,500. That would be 4.5 percent of the total work force.

The last official estimate was on May 1 and showed 15,600 (4.8 percent) out of work. As of April 15 there were 17,300 unemployed in the metropolitan area, representing 5.3 percent of the labor force of 325,700.

Portland will lose one advantage as a result of its improved employment picture. By moving into class C, it no longer will enjoy certain priorities on Government procurement contracts it received while in class D.

Woodcock had no official figures on how much extra business the priorities had brought to Portland while in class D but he said he heard an estimate that it was about \$3 million or \$4 million.

Woodcock said other Oregon towns moved out of the surplus labor category today by the Federal Government are Albany, Coos Bay, Eugene, Pendleton, and Roseburg.

"The significance of all this is that things are getting better for our area economically," said Woodcock. It also means that his staff and the Federal Government agree that the situation is likely to stay favorable in this area for a substantial time.

Anderson said the improvement in employment had been gradual ever since joblessness was at its worst early in 1958.

One of the brightest spots in the current picture, according to Harlen Klausen, assistant manager, was the fact that Thursday there were 1,000 unfilled job openings listed in the Portland office.

"That's about the biggest total we've had in several years," said Woodcock.

The list of job openings included not only many skilled positions such as engineers and

accountants but, significantly, there were jobs available for some unskilled workers.

Woodcock said the improved economic picture here is "broad based," covering virtually all segments of the economy.

[From the Oregon Journal, May 23, 1959] PRICE NEAR 1955 RECORD—BOHEMIA BID HIGH ON UMPQUA TIMBER

ROSEBURG, May 22.—Bohemia Lumber Co., of Culp Creek, paid a price for Douglas-fir and pine Thursday that approached the highest bid made in the bumper sale year of 1955 for U.S. Forest Service timber.

The company bought a tract of 4,600,000 board feet of Umpqua timber 32 miles southeast of Cottage Grove and paid \$58.60 a thousand for the 4,300,000 feet of fir and pine in the tract. It was appraised at \$41.90. The highest price paid in 1955 was \$60.25.

The 300,000 feet of western hemlock and other species sold at the appraised price of \$12.20.

Total sale price was \$255,640. It was appraised at \$183,830.

Patriotic Brotherhood of America, With Headquarters at Kingston, Pa., Sponsors Movement To Make America Flag Conscious

EXTENSION OF REMARKS

### HON. DANIEL J. FLOOD

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 3, 1959

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Wilkes-Barre Times Leader of Thursday, May 28, 1959:

BROTHERHOOD SPONSORS MOVEMENT

The Patriotic Brotherhood of Americans with headquarters at Kingston, a nonsectarian, nonprofit organization, incorporated here in 1942, is sponsoring a new movement to make the community and the country American flag conscious. The thought occurs that Greater Wilkes-Barre has a splendid opportunity to cooperate in this laudable project the coming weekend when Memorial Day will be observed, as well as on Flag Day in June and Independence Day in July

The brotherhood is dedicated to God and country. A statement of its principles emphasize that "we believe that our loyalty to the United States of America, its Constitution, its flag and institutions, should be second only to our loyalty to God."

Its chief aim is to cement together all American citizens, native or foreign born regardless of religious belief or race, for the purpose of building a stronger and more solid United States of America.

With this lofty purpose, it is easy to understand the organization's anxiety stemming from the indifference of large segments of the population on matters of patriotism. One of the problems of immediate concern is the failure of so large a percentage of the populace to display the colors on set days, as well as on special occasions.

In wartime, the public generally responds, but in peace there have been holidays when only 5 percent of the people displayed the flag from their homes.

One of the handicaps, the brotherhood has discovered in its campaign, is the lack of literature concerning the flag. Several organizations have issued pamphlets, but for

the most part they are incomplete or too expensive for general distribution by an organization with limited financing.

Apprised of the efforts of the brotherhood,

Apprised of the efforts of the brotherhood, President Eisenhower not only expressed his appreciation, but disclosed that the Department of Defense has prepared a revision of a Marine Corps edition, to be made available to the public. With billions going to foreign lands from the U.S. Treasury, it would seem that a few cents might be invested to acquaint the individual American with flag etiquette and to promote patriotism.

This year, there is added incentive in the recurring international crises and in the designing of the new flag, first to include Alaska and later Hawaii. This should lend impetus to the efforts of the brotherhood and the Government itself to stimulate public interest in the undertaking.

Poison in Your Water-No. 97

EXTENSION OF REMARKS

OF DIMOTEL

### HON. JOHN D. DINGELL

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 3, 1959

Mr. DINGELL. Mr. Speaker, pursuant to permission granted I am inserting into the Appendix of the Congressional Record an article appearing in the Corpus Christi (Tex.) Caller of May 17, 1958, entitled "Water by South Beach Swim Area Is Polluted":

WATER BY SOUTH BEACH SWIM AREA IS POLLUTED

(By Jim Wood)

Water adjoining the South Beach swimming area in Corpus Christi Bay is contaminated. The water dumps from a storm sewer that lets into the bay.

A wooden lid which the city built last year to cover the sewer is rotted. Scum-covered water surrounds it. A chunk of wood is used to keep the lid on the sewer cover. And although bay water washing in on the beach is only ankle deep, water fronting the storm sewer box is several feet deep.

The area is just north of the Glasscock fill. Immediately south of the fill area is another contaminated water area. This one is in Cole Park near Booty and Ocean Drive. Earlier this week it was reported to be contaminated.

The water dumping into the swimming area is street surface drainage. All tests by the City-County Health Unit in recent months have indicated the water contains enough bacterial count to be considered polluted.

The area is slightly back from the actual bay and is generally not used for swimming. However, since it is right on the beach it is easily accessible, especially for children.

Dr. W. R. Metzger, public health officer, said yesterday health unit sanitarians are checking possible sources which might be contaminating the water in Cole Park.

Earlier this week he said a food-processing plant on South Staples was believed responsible. Now he fears there may be some accidental or illegal discharge of sewage into the storm sewer lines, he said.

Dye is being put into drains in the area in question and outlets checked in an effort to track down the source.

He said the potential dangers of the pollution continuing and building up are greater than actual dangers at the moment.

### The Polish Legion of American Veterans, U.S.A.

EXTENSION OF REMARKS OF

### HON, EDWARD J. DERWINSKI

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES Wednesday, June 3, 1959

Mr. DERWINSKI. Mr. Speaker, the Polish Legion of American Veterans, U.S.A., an organization composed of veterans of Polish extraction who have served in the world wars and the Korean conflict, met in their 14th national convention at Hartford, Conn., August 29, 30, 31, and September 1, 1958. During the course of this convention, they adopted numerous resolutions, many of which are today still exceedingly pertinent.

In view of the nationwide scope of membership of the Polish Legion of American Veterans, I hereby list pertinent points of the resolution passed at

their national convention:

1. We pledge our loyalty to the Government of the United States of America and declare our devotion and dedication to the principles that the United States is dedicated to liberty, equality, and equal justice for all.

2. We commend President Eisenhower on his action in sending American military forces to Jordan, Lebanon, and other places in the Middle East to preserve peace; we urge our President to withdraw these forces only on condition that the U.S.S.R. withdraw its troops from the satellite countries of Eastern

3. We wholeheartedly approve the admission of Alaska to statehood and urge speedy admission of Hawaii as our 50th State

4. Recognizing that many veterans of both world wars and especially the Korean war suffered serious economic dislocations with resulting hardships, we urge that wherever possible employers should hire veterans in preference to nonveterans and that appropriate provisions accomplishing this purpose be included in all union contracts; that special care be given to veterans over the age of 45 in job placements.

5. We urge that May 1 of each year be proclaimed Loyalty Day by the President of the United States and the Governors of the United States, and that all P.L.A.V. posts enthusiastically observe Loyalty Day.

6. We urge that the death gratuity presently awarded to veterans of World War I and the World War II by the Federal Government be extended to veterans of the Korean war.

7. We urge the Postmaster General of the United States to prepare and order issued a suitable postage stamp commemorating the 350th anniversary of the landing of the Polish settlers in Jamestown, Va., in 1608.

8. We commend the Government of the

United States for following the policy of nonrecognition of Communist China and the erection of trade barriers which was first promulgated by President Truman, and we urge that we follow the policy of a veto vote on any action to admit Communist China to the United Nations.

9. We realize because of military service many veterans have suffered severe economic hardships which they have not yet been able to correct, which hardship serves as a legitimate basis for demanding adjusted compensation in the form of a so-called bonus. Nevertheless, we feel that this is a most inappropriate time to demand payment of the bonus because of the present state of the American Federal budget and demands for increased spending for foreign aid, establishment of a large military organization. and other fiscal matters. Instead, we urge that the PLAV devote itself to the continuance and expansion of those veterans' benefits which are presently available. We must defend the veteran from being deprived of his legitimate rights against the onslaught of those groups in our society who fail to recognize the legitimate and proper station of veterans.

10. We extend our sympathy and con-dolence to the Gold Star Mothers of our Nation and to all persons who suffered loss of their loved ones in defense of our country, and we want to assure them by this resolution that all members of the PLAV and their auxiliaries are devoted to the ideas and principles for which they paid the supreme sacrifice.

11. We urge the Congress of the United States to grant a national charter to the Polish Legion of American Veterans and to several other veteran organizations which have members throughout the United States.

12. We urge the United States of America and the entire world to be ever vigilant and on guard against Russian treachery and their dealings with the U.S.S.R. We cite as a typical example the wanton murder of many thousands of officers of the Polish Army and Polish civil servants at Katyn Forest by Russia in the early days of World War II. To rectify this human atrocity we urge the speedy enactment of anti-Genocide Convention by the United Nations with the United States leading for its enactment.

13. In these times of international crisis with new aggression developing in various parts in the world suddenly and without prior notice the United States of America must take the lead to defend the peace. We must have the best fighting men equipped with the best weapons and to this end we urge continued research with greater appropriation by Congress, therefore, in order that we lead in the field of new weapons such as guided missiles, nuclear weapons, atomic powered ships, planes as well as submarines, and so forth. In this field we direct special commendation for Admiral Rickover, the father of the atomic submarine, the son of Polish immigrant parents.

Resolutions Committee: Benjamin C. Stanczyk, chairman, Michigan; Benjamin J. Ko-pacz, Connecticut; Walter Weglarz, New Jersey; Thaddeus Buczko, Massachusetts; Frank Todro, Illinois; A. T. Purta, Ohio; and Bronislaus Tencz, New York.

Poison in Your Water-No. 98

EXTENSION OF REMARKS OF

### HON. JOHN D. DINGELL

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 3, 1959

Mr. DINGELL. Mr. Speaker, pursuant to permission granted I am inserting into the Appendix of the Congres-SIONAL RECORD, an article appearing in the Richmond (Va.) Times-Dispatch of May 22, 1958, entitled "Water Board Warns City On Pollution":

WATER BOARD WARNS CITY ON POLLUTION

The State Water Control Board told the city of Richmond yesterday to come up with specific plans by September 1 to stop polluting the James River with untreated sewage from the temporary jail at Deepwater Terminal.

Earlier, the city told the board that no treatment facilities had been proposed at the terminal because "it has not been determined that the facility (the temporary jail) will remain at its present location for any protracted period."

The board told Gate City and Webber City to send representatives to the next meeting and show cause why a special order should not be issued against them to cease pollution. Honaker was told also to appear and discuss its plans.

The Charlottesville Woolen Mills and Say-

ers Sand Co, of Marion were told to get started on definite plans for waste treatment. And the Albemarle County School Board was told to begin plans for treatment facilities at Scottsville High School.

Representatives of Smithfield and Arlington County will appear at the board's meeting today to discuss pollution problems.

### Resolution of Indonesian Parliament on Geneva Conference

EXTENSION OF REMARKS

### HON. WALTER H. JUDD

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 3, 1959

Mr. JUDD. Mr. Speaker, under leave to extend my remarks in the RECORD. I include the following resolution adopted on May 20, 1959, by the Parliament of Indonesia. It is a sincere appeal from one of the new and uncommitted nations of Asia for a determined effort by all of the foreign ministers at Geneva to find a peaceful way to settle international differences and safeguard mankind and the world. The resolution is an expression of the deep concern of people everywhere that peace may be achieved by honest negotiations and the burden of fear and anxiety be lifted from men's hearts and homes. The resolution fol-

INDONESIAN PARLIAMENTARY RESOLUTION OF MAY 20, 1959, ON FOREIGN MINISTERS' CON-FERENCE, GENEVA

Considering:

1. That the continued existence of a cold war between the Western bloc and the Eastern bloc is a danger to world peace.

2. That the nations which suffered the Second World War are not yet completely recovered.

3. That, as a direct result of the failure to reach agreement between the Western bloc and the Eastern bloc in settling the various world problems troubling these two blocs, there has been no lessening of the possibility of world war three.

4. That the result of this failure is felt by nations throughout the world which are concentrating their strength for develop-ment in order to raise their standard of

5. That the outbreak of war with modern weapons would result in the destruction of all mankind.

Remembering:

- 1. The fact that the foreign policy of the Republic of Indonesia is free and active and continuously attempts to establish world
- 2. The resolutions of the Afro-Asian Conference in Bandung-similar to the above, for example, those in the Bandung declaration.

3. The principles included in the Charter of the United Nations.

Resolves to: In the name of humanity:

1. Take full notice of the existence of the Foreign Ministers' Conference in Geneva currently in session.

2. Call upon the representatives of the nations participating in the Geneva Conference, both those who represent the Eastern bloc as well as those who represent the Western bloc, to devote their full energy to the ending of the cold war and to the reaching of an agreement which can safeguard mankind and the world-

3. Call upon the parliaments of all the nations of the world affiliated with the Inter Parliamentary Union to support the result of the present Geneva Conferences.

We Need a U.S. Crime Census-A Proposal by Former President Herbert Hoover

> EXTENSION OF REMARKS OF

### HON. WILLIAM C. CRAMER

OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 27, 1959

Mr. CRAMER. Mr. Speaker, the following article is one that deserves the consideration of every Member of Congress in that it points up a very grave shortcoming of our present law enforcement system on the Federal level, and that is that there is not available through any agency or department a correlation of all criminal activities of any given individual or group which could be made available to either Federal or local law-enforcement officials.

There are better than some 50 lawenforcement agencies within the Federal Government. Each operates to some extent as a separate unit and without the advantage of having all their efforts correlated and all of the information acquired separately to be made available to each jointly. This is a serious shortcoming that the former President has pointed out and one that I think Congress must seriously consider.

It is axiomatic to say that the Bill of Rights guarantees to all Americans the right to be secure in their persons, and, as the former President said:

Our people must be able to walk the streets free from holdups, muggers, murderers, hoodlums, and teen-age gangs.

Congress has the responsibility to do everything in its power to bring this about.

I have introduced a series of bills which I think to some extent will have the effect of helping stamp out crime. Serious consideration must be given to this additional problem as pointed out by former President Hoover, as well.

The article follows:

FORMER PRESIDENT HOOVER SAYS "WE NEED A U.S. CRIME CENSUS"

(By Hon. Herbert Hoover)

The Bill of Rights guarantees to all Americans the right "to be secure in their persons."

Surely that must include the right of our people to walk the streets free from holdups,

muggers, murderers, hoodlums and teenage gangs. Our people also should have protection from racketeers, blackmailers, extortionists, kidnapers, forgers, embezzlers, bank robbers, and auto thieves. Our children need protection from rapists.

But in actual fact, how secure are we? What do we know about the crimes being committed in our country? What happens to these criminals? And, what can we do

In this article I propose to state the statistics on crime such as I have been able to secure, and to point out the deficiencies in facts which our country needs. I shall also propose a new kind of national crime census which will give us these facts and thus help us mount an effective all-out attack on the problem.

#### WHAT WE KNOW ABOUT CRIME

Every report of the FBI lists the horribleincrease of crime. J. Edgar Hoover has been a magnificent voice crying in this wilderness of multiplying criminals. And there is a host of crime commissions in our cities daily proclaiming the failure to protect our people. But the forward march of crime goes on and on.

The FBI by herculean effort secures reports from local authorities as to the number of known major crimes. These major crimes are: murder, manslaughter, rape, robbery, aggravated assault, larceny, automobile thefts, and burglary. The reports they rethefts, and burglary. ceive cover possibly 85 percent of the population. They do a good job.

These reports show that major known crimes have grown from 1,685,000 in 1946 to approximately 2,800,000 in 1957, or 3 times as fast as the increase in population. The minor offenses generally follow the trends of the major offenses

Other FBI reports indicate increases in the number of major offenses in the single year of 1958 alone all the way from 2 per-cent to 14 percent. Rape offenses alone had increased 10 percent.

The most heartbreaking increase in crime is among the teenagers under 18 years. During 1957 there were 740,000 of these youngsters arrested. Since 1952 the population group under 18 years of age has increased 22 percent while arrests of persons under 18 years have increased 55 percent.

In the face of the FBI's staggering lists of 2,800,000 known major crimes in 1957, it is interesting to note that the Bureau of Prisons reports that there were on January 1, 1958 only 195,414 persons in Federal and State prisons, and only 80,408 were received from the courts the previous year. These exclude county and city jails whose inhabitants are mostly pending cases and minor offenses.

The Bureau of Prisons also reports that in the previous year 43,357 prisoners were paroled and 12,096 were returned to prison for crimes committed when on parole or other reasons.

WHAT WE DO NOT KNOW ABOUT CRIME

There remains a vast area of things about crime which we don't know.

What we do not know is what happens after those crimes are committed. In other words, how efficient are our procedures and methods of justice in stemming this rising flood of crime? That is the major question in determining any plans for better portection for our people.

Our information on this question is abso-

lutely inadequate.

The only data which the FBI is able to secure on this phase of the problem comes from reports sent to them. And, these reports constitute but a "sample" which covers only about 25 percent of the total population.

The figures in the box below for the total known offenses in the eight categories are from the FBI and cover, as said above,

approximately 85 percent of our population. However, the figures for the number found guilty are mine. These are based on the FBI "sample." I have applied that sample to the total population. I repeat, the estimates are mine, but the reader can discount them by a large percent and still find them startling and depressing. If so small of total offenders is found percentage guilty the reader may well wonder as to our processes of government in protecting

#### WE NEED THE WHOLE TRUTH

Before we can do anything constructive about this terrifying problem we need to know its dimensions. In every war it is necessary to know your enemy and nowhere is that more important than in our war against crime.

As to this situation, I venture to make a suggestion. It is not a proposal to reform criminals. It is a proposal to publicly illuminate some of the spots where our governmental machinery fails to provide our constitutional rights of protection.

This requires a determination of many more facts which we do not have from any public or private agency. My proposal is that the Census Bureau be instructed by Congress to conduct a special and separate census by canvassing the police and the prison records.

The U.S. Bureau of the Census is skillful, accurate, well-equipped and long ex-perienced for large undertakings of this kind.

Every 10 years the Census Bureau lists every person in the United States, not only making a count (now 170 million of them) but also collecting a number of items about each of them. It also collects special data as to our industries and agricultural and educational systems which require information from immense numbers of people.

When it collects such massive information it punches holes in a card. Each hole indicates an item collected. Then when they pass these cards through batteries of machines, the total can be obtained on any item wanted.

Such a census should include the following: the name of each person who has been arrested for a crime during the past 2 years. (These names should be held confidential so as not to reflect on reformed persons); a record of the nature of the crime; the date of the crime; the date of arrest; the amount of ball set; how many jumped bail; how many committed crime when out on bail; whether tried or not; the date of the trial; whether convicted or not; the date of the sentence, the sentence imposed.

If fine or imprisonment, the amount of me fine or the term of imprisonment; whether an appeal was made to a higher court; whether the higher courts confirmed the sentence or modified it; the date when the fine was paid, or the criminal finally sent to prison; the months served in prison, whether paroled, and whether any crime was committed during parole, whether the criminal was pardoned, and how many months of the term were served.

Facts should also be recorded on probation and suspended sentences. The information collected should also show whether more than one crime was committed by the same individual.

Holes can then be punched in a card for each of these items or other items as our national crime prevention agencies might

The job is not so great as one might think since this would not be a personal canvass, but a search of public records.

Today the FBI figures on known crimes are our only important insight into comparative crime between cities and States.

ONE-HUNDRED-PERCENT COVERAGE

In my proposed census, these FBI figures could be used, so far as they go, to enable the census to cover 100 percent of the population, and in this way eliminate any duplication of work. It would simplify the task and give the FBI a useful index number for its future annual estimates.

Also to further simplify it, persons fined less than \$50 or sentenced to less than 60 days in jail, could be omitted. And, to make it better still, we should have a separate card

for youthful delinquents.

As important as the number of known crimes is, the purpose of this census is far

deeper than this.

The machines would tell us how many of the known offenses resulted in arrests, how long it took from the discovery of the crime until a perpetrator was tried, how long it took from conviction to prison, and how long was the average length of time in prison for each category of crime. From such data we could judge whether the courts were being lax or effective.

The census could show as far as possible what races the offenders come from It might stir the leaders of the various racial groups to action and we might be surprised as to where the great fault lies. It would show the weakness or strength of the present parole systems. It might show the failure of the courts to give adequate confinement in cells so that people could no longer trespass on our constitutional rights.

The teenage cards should show what are the family situation of our teenagers who are arrested. The cards should show how many have lost one or both parents, how many of them have divorced parents, how many of them have had religious training in our schools, how many of them have had religious training even in reformatories, in fact, how many of them have ever tasted religious training at all.

WHAT WE WOULD LEARN

The first thing we would learn is: What is the matter with our governmental machinery for the protection of our fundamental constitutional rights?

A report of the type I suggest would help every local, State, and Federal agency concerned with the prevention of crime to do

a better job.

And such a census would take a load of blame from our generally courageous and efficient police forces and would help relieve

their too-frequent frustration.

The story from this census might bring realization to the American people that freedom in the United States is in more jeopardy from crime than from all the Communist conspiracies. It might show that our freedom and safety are overwhelmed by these eight categories of thugs. It might show whether we have elevated crime into a pastime with occasional free board and lodging. It might show that we have to duty to get tough.

Remember that the enemies of our civilization numbered over 2,800,000 in 1957

On every side our freedoms are being eaten away by criminals. We have reached a time when decent Americans have an imperative duty to mobilize all our resources of knowledge and power to check the inner blight of crime.

CRIME VERSUS PUNISHMENT: A SHOCKING CONTRAST

(Note.—The figures below as to the known offenses are from the FBI. The figures of those found guilty are my own application of the FBI sample of 25 percent to the whole population.—H.H.)

Murder and nonnegligent manslaughter: There were 6,920 known offenses. Only 48 persons were executed. (No records can be found on how many were serving life sentences.) Manslaughter by negligence: There were 5,740 offenses known. About 1,400 defendants were found guilty, or 24 percent.

Rape: Of the 21,080 offenses known, there were about 7,900 persons found gullty, or approximately 37 percent.

Robbery: Of the 61,410 offenses known,

Robbery: Of the 61,410 offenses known, there were about 16,000 found guilty, or 26 percent.

Aggravated assault: There were 100,110 offenses known, and of these 27,000 were found guilty, which is 27 percent.

Larceny: There were 1,721,170 offenses known to the FBI. Only about 171,000 of these offenders were found guilty. This is approximately 10 percent of the total.

Automobile thefts: There were 289,950 offenses known with about 41,000 of the offenders found guilty, or 14 percent.

Burglary: There were 590,020 offenses known and 72,000 offenders found guilty, or 12 percent.

Remarks by the Honorable Edwin B. Dooley, Memorial Day Services, Larchmont, N.Y.

EXTENSION OF REMARKS

#### HON. EDWIN B. DOOLEY

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 3, 1959

Mr. DOOLEY. Mr. Speaker, Memorial Day is a period of tremendous spiritual significance to millions of Americans, particularly the bereaved families of war dead, and the friends and neighbors of those who have made the supreme sacrifice in behalf of our country.

In my hometown of Mamaroneck and its villages of Mamaroneck and Larchmont, fitting tribute is reverently paid annually to the deceased members of the Armed Forces.

On last Memorial Day, I was one of those chosen to pay homage to the departed men and women of the Armed Forces who once lived in these communities

My remarks follow:

On this day which is commemorated across our country, we pause to pay reverent tribute to those who gave the full measure of their devotion to this great land, and we pause also to reflect on the course which our country has taken since these men and women whom we honor, made the supreme sacrifice.

It has been said, and said sagely, that the pragmatic axioms of the past are not a reliable index to guide future actions. Never was a fact so evident as that is today.

Without in any sense diminishing the stature of the Father of our Country, whose memory is enshrined in every good citizens' heart, it must be said nevertheless that the admonition he gave us against foreign alliances was made at a time, before days were telescoped into hours—before space was annihilated by supersonic speeds, and before nations were so interdependent on one another.

The course of our country, its material wealth, its idealistic concepts, and its immutable ties to the free way of life, delineate in bold lines its historic destiny. By all the tenets given us by God, through our Judeo-Christian heritage, and by all manmade patterns of life, as evidenced by our common and statutory law, we are irrevocably committed to accept the Biblical phrase, "I am my brother's keeper."

Therein lies all the Justification needed for our global generosity—for our constant effort to feed the world's hungry; to give inspiration and moral and physical aid to the distressed multitudes of the Asia-African block who are rising in belated revolt against the unmoral imprisonment and abuse they have endured through the centuries. If we believe in freedom as we proclaim so steadfastly, then we believe that the people of Nyasaland, of Ghana, and of other areas of the world have the same God-given right to preserve their destiny, unhampered by the imperialistic whims of other nations and other men.

We believe that Vietnam has a right to repel the invasions of the Communists, that each nation and each people in fact has an innate right, a tacit right, if you will, to

fashion its own destiny.

But today with the world teetering recklessly on the brink of self-annihilation, with mankind's ingenuity focused on the problem of how to devise the most destructive instrument of mass slaughter attainable, it is necessary, yes, even urgent, that we reexamine our attitude toward our allies and our attitudes toward ourselves, with the aim of trying to rescue reason from chaos, and of preserving what we can of our way of life and the preclous heritage which was handed down to us from our forebears.

First, I think that in appraising our position we must express thanks to our Almighty Father for the infinite variety of blessings he has showered upon this land and on our

generation.

He gave our forefathers a source of natural wealth virtually unprecedented in human history. Sturdy and courageous people that they were, they could not have survived had it not been for the boundless forests, the rivers teeming with fish, the rich soil, and the proper climate.

Europe and other lands from which our ancestors came had long since exhausted their resources. And from the bounty inherent in the new land our forebears built the great cities, the industries, the educational institutions, the norms, and the culture which are ours today.

Now we face the supreme test of whether those things which are ours can be preserved for ourselves and our children's children.

When we reflect on the fact that a fleet of enemy submarines halted momentarily off our coast has the power to virtually obliterate all of us, and our culture, we realize that we have reached a critical stage from the standpoint of our chronological history—a turning point in our destiny.

We have reached a time when more than ever before we must be willing to make sacrifices for our country that Americans were never called upon to make before. I am not referring to the imminence of sudden extinction which the present strategy of warfare makes possible, but rather to the need for sacrifice of material things in order that our Government can have the resources to carry on.

The burden of our defense program is oppressive, but so long as the Communists continue to threaten, so long as Khrushchev makes a mockery of international diplomacy, and a toy of protocol, we must of necessity keep our sinews of preparedness sturdy and resilient. All of this costs money and our taxes are our chief source of revenue. We must be willing to pay our fair share, if we are to survive.

We must too sacrifice certain illusions, the illusion for example that we can stand alone in this tumultuous and somewhat fearsome world.

We must of necessity forge stronger the links which bind us to friendly peoples of distant lands, not out of humanitarian impulses alone but out of enlightened selfishness so that we may weather any storm that may eventually buffet us.

We must sacrifice funds if need be for the development of our young people's minds—and for the just remuneration of those who teach them—in order that they will be fittingly equipped to meet the problems which they will be called upon to face. Fluency in language, adaptability to science, flexibility of mind and loyalty to country are the virtues our young people must acquire if they are to adjust to the swiftly changing patterns of the world.

As one prominent aspirant for high office put it, "He who sells freedom cheaply is a deceiver, or is himself deceived. He who sells it cheap or offers it as the byproduct of this or that economic system is a knave or a fool. For freedom necessitates infinitely more care and devotion than any other political system. It puts consent and personal initiative in a place of command and-obedience. It supplants the harsh and oppressive disciplines of dictatorial tyrannies with individual devotion and personal initiative."

All of these qualities are compatible with adherence to our principles, and to the heritage which the honored dead handed down to us.

Ours is a great land, but we must respect other men and women who love their native lands; ours is a great and opulent country, but if we are to enhance it, we must be willing to do our fair share in its behalf.

One thing is certain, in this confusing world, we have much to be grateful for, and we must never lose heart. Ours is a land rich in blessings, ours a tradition bright as a star. All of us must ever be grateful, for out of gratitude flows patriotism and loyalty undying.

# Williams Winning Long Fight Against Huge Farm Handouts

EXTENSION OF REMARKS

# HON. LEO E. ALLEN

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 3, 1959

Mr. ALLEN. Mr. Speaker, under leave to extend my remarks, I wish to include the following editorial, entitled "WIL-LIAMS Winning Long Fight Against Huge Farm Handouts," from the Rockford (Ill.) Register-Republic of June 1, 1959:

WILLIAMS WINNING LONG FIGHT AGAINST HUGE FARM HANDOUTS

(By Holmes Alexander)

Washington.—My candidate for Senator of the year begins to take the oblong, upright shape of John Williams, Republican, of Delaware, who at last seems to have muzzled the tax-eating ox called the incorporated farmer.

WILLIAMS has tentatively put a \$35,000 limit on what any producer can receive from

the Government in crop support.

With Williams, this has been a long fight. It began, he tells me, in 1950, when, as a first-term Senator, he noticed that the fabulous King Ranch, owner of the racehorse Swaps, was taking charity in the form of drought relief from the Federal Treasury.

Stories of this sort make flash headlines, but they do not bring about instant reform. The latter, as Williams learned, takes years and years of grinding away at the whetstone of hard, unforgiving, irrefutable fact. A farmer, whether he is corporate or individual, is a constituent of two Senators and at least one Congressman,

Every constituent has a right to make his case known, and usually the wealthy constituent has Senators and Representatives who are inclined to believe him to be right. Williams had to overcome both the inertia and the self-interest of statesmen from the agricultural South and West. Significantly, when the Williams measure passed the Senate on May 22 as an amendment to the Wheat Act, there were 21 absentees, 1 more than the 20 Senators, all Democrats, who voted against the \$35,000 limitation. But Williams got the support of every Republican who stayed on hand for the winning rollcall of 57 affirmative votes.

On Senator Williams' desk while he led the debate was a document which he did not use because, he says, "When you're winning, don't rub it in." But the weapon which he didn't hurl was a 1935 report of cotton payments under Secretary of Agriculture Henry Wallace. The report revealed that a wholly owned British firm in Scott, Miss., the Delta & Pine Land Co., had received from the U.S. Government \$114,840 in 1933, \$102,408 in 1934, and \$101,039 in 1935. The point is that this same company is still at the trough. In the past 10 years it has received \$9 million from the United States of America in support of crops, mainly cotton and rice.

Thus from the very inception of our present farm policy, down to the present year, the bureacuracy of socialized agriculture has been such a runaway monster that it has taxed the poor to enrich the wealthy, and in this instance, the alien wealthy.

Not only that, but the monster is robbing the U.S. Treasury with both fists. WILLIAMS showed the Senate that in 1957, 10 farming firms received over \$500,000 under the soil bank for crops they refrained from growing on part of their lands, and about \$3,500,000 for surplus crops which they did grow on other parts.

In nominating Williams for Senator-ofthe-year at the two-thirds point of the congressional session, there is some rick incurred. Who knows, but a mightler man with a more justly celebrated deed will arise? But who could it be?

Kennedy? His big effort was the 90 to 1 labor reform bill, coupled with the promise of further labor-management relations legislation before the session ends. It now appears (certainly from my own mail) that Kennedy failed to catch the public fancy with his labor measures.

JOHNSON? His January brilliance does not carry the same luster in June, although he's far from finished. The familiar Democratic prophets of gloom-and-doom, HUMPHREY and DOUGLAS? No. The Eisenhower prosperity has singed their high-flying wings. PROXMIRE? He was going to unhorse Majority Leader JOHNSON and restore the reign of King Caucus—remember? FULBRIGHT? KUCHEL? DIRKSEN? CLARK? What has happened to the brave beginners?

When the honor candidates are reviewed, it is hard to see how any has a better chance of solid achievement, for the public good, than Williams. He won a big victory on the Senate floor and, during the same week, the House passed an appropriations rider which limited crop subsidy receipts to \$50,-000. This is a higher figure, and looser law-making (a farmer might be able to get two or more \$50,000 handouts under the House provision) than the Williams measure. But the Senator himself feels that his principle has been established in both Chambers of Congress and that limitation of some substantial sort is now inevitable.

"This is America," WILLIAMS says, "and there is a right to accumulate whatever you are able. I am not against bigness in business, as such. But I am against big businesses being subsidized out of the Federal Treasury."

What gives added size to the Williams achievement is that this success clears the way for more of the same kind. He is now working on loophole-stopping in the soil bank, in certain features of income taxation, in boondoggling reclamation projects, and a few others. If there's a better Senator in the 86th Congress, it would be hard to name him at this point.

# A Letter From Tom Montgomery

EXTENSION OF REMARKS

# HON. LEONARD G. WOLF

OF IOWA

IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 3, 1959

Mr. WOLF. Mr. Speaker, under leave to extend my remarks, I wish to insert into the body of the RECORD a letter by Thomas Montgomery, which appeared in the Clinton Herald on May 28. Tom Montgomery is a young man who is going to be a great man. He is aware of the fact that charges of creeping socialism and slogans like "balance the budget" are nothing more than the cries of people who are forgetting the heritage that made this country great. The great men of this country are not the McKinleys. Coolidges, and Hardings. The great men of this country are the Lincolns, the Roosevelts, the LaFollettes, and the Norris'. They are the men who have made the United States a land where men may breathe free air and think and act

We are too quick to forget our true heritage and take up the cudgel for the private corporate and military interests. We are too quick to forget about better schools for the illusory phrase "balance the budget." We are too quick to forget the farmer in favor of inadequate and fallacious economic theories of the vested interests. We are too quick to forget about the economic and social inequality which Negro people of this country suffer. We are too quick to forget the meaning of the individual in a free society in favor of the illusory phrase, "national security."

But I do not think we can forget for long when men like Tom Montgomery prod our consciences, remind us of our historic heritage, and demand that we deal with the real problems which confront our society today.

TELLS WHAT WOULD HAPPEN IF CREEPING SOCIALISM IS HALTED

DEAR EDITOR: Seldom am I ever moved to write a letter in reference to our editorials, nor do I particularly care for many of the opinions, both pro and con, of those who do write. However your article of May 25, and many of the prior ones, have focused my admiration on such a proponent of rugged American individuality, and I am forced to pour forth my wholehearted support.

I agree that now is the time to sit up and take notice of this creeping socialism and put a stop to it.

Let us start at the root of this socialistic growth and kill it in the budding stage:

Schools: After all what are they except an instrument for educating those children of the rabble from below the tracks at the great expense of the enlightened upper class?

Government: Let us get Government out of its roles as promoter and manager and back to the practice of laissefaire, even though this theory is as obsolete as Malthusianism.

The farm program: Let us stop those outrageous subsidies to the farmer and return him to his impoverished condition of the late twenties and thirties.

Postal service: Let us make the farmers and newspapers pay their own way in the sending and receiving of the mail and stop this expensive service of free rural delivery and reduced rates for the distribution of newspapers and magazines.

Labor relations: It is certainly time to return to that philosophy of master-servant bond relationship and give back into the hands of those great American titans of industry, such as the notorious Fricks, James J. Hills, Andrew Carnegies, Jay Goulds, the decisions as to what should constitute a living wage. We must ignore the propaganda or our Dickens as to the conditions this fosters, for had God not intended the laborer to live by the sweat of his brow he would not have been born into such a miserable world.

Foreign policy: The time is indeed here when we must discard this mythical Judeo-Christian teaching of brotherly love our churches have so laboriously taught us and ignore the pitying wants of our foreign brothers in the interests of a balanced budget. Let us take our ball and bat and go home from these countries who refuse to play the game according to our rules and insist on throwing rocks at our Vice President.

Taxation: I believe that it is time to rise up against this burden of outrageous taxation and put a stop to the income tax that raises such havoc with our destitute upper income brackets and revert to the more comprehensive, if regressive, sales tax and damn the man who must feed the mouths of seven on an income of \$3,500 a year.

Crime prevention: Last but not least, let us also throw off our reactionary ideal, so enumerated in article I section 8 of our State constitution and in amendment IV of our Federal Constitution, and so stubbornly guarded by Governor Loveless, of the sacrecy of our person. In the interest of better law enforcement and for the benefit of our local businesses we must put this personal security at the discretion of our businessmen, however doubtful their judgment may be.

Yes, Mr. Editor, it is time to stagnate the democratic principles set down by our fore-fathers and reverse the wheels of dynamic Government. In this way only can the basic rights of mankind, as set forth by John Locke, be reached. We must crawl back into the shell of 19th century individuality that brought forth the cries of such demagogs as William Jennings Bryan, Eugene V. Debs, James B. Weaver, Theodore Roosevelt, Robert M. LaFollette, George W. Norris, and culminated in that hideous theory of Franklin D. Roosevelt: Freedom from want.

Thus can we save from posterity the enormous burden of an unbalanced budget and throw off the crown of world leadership that the free countries of the world in their desperation did place upon our brow. A burden too heavy? In contrast we shall leave the relatively simple problems of outmoded Government, poverty, communism, nationalism, and those social problems which fostered the bloody Haymarket, Homestead, and Pullman affairs.

Then we can face our Maker free from the conscientious stigma of social justice and stained only by our selfish concern for economic progress.

THOMAS MONTGOMERY.

#### Fallout and Home Defense

EXTENSION OF REMARKS

#### HON. CHARLES O. PORTER

OF OREGON

IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 3, 1959

Mr. PORTER. Mr. Speaker, Ralph Lapp is correct when he says that the general prevailing impression is that civil defense is hopeless. He is right that no one in Washington expects any massive infusion of funds to support a national civil defense program on the scale of multibillion dollar appropriations.

His conclusion follows that the problem of civil defense transforms to home defense, and the citizen must look to his own security.

If my colleagues and other readers of the Appendix are interested in survival in time of fallout or suspected fallout, I recommend they take a few moments to read the following article entitled "Fallout and Home Defense," by Dr. Ralph E. Lapp. It appeared in the Bulletin of Atomic Scientists for May 1959 and is included under a previous unanimous consent:

#### FALLOUT AND HOME DEFENSE (By Ralph E. Lapp)

Soviet successes in the nuclear weapons and missiles field together with an unremitting arms race call for a new look at the problem of home defense. This is all the more necessary because of a general prevailing impression that civil defense is hopeless.

There is no use in avoiding this blunt statement of the issue at this stage of world affairs. Moreover, the rapid succession of mounting hazards—the megaton, fallout, and ballistic missiles—forms a terrible triad. Civil defense planners have never been able to keep step with the tempo of arms development and very often they were hamstrung in their efforts to obtain the necessary planning information from the Defense Department and the Atomic Energy Commission.

Excellent studies of the civil defense problem were made available in 1958, notably the testimony of Dr. Ellis A. Johnson, Director of the Operations Research Office, Johns Hopkins University, and the RAND Report the gist of which was presented by Dr. Herman Kahn in the January Bulletin. These analyses deserve careful consideration because they point out the profound interrelation of population survival and sound defense policy; furthermore they maintain that an effective civil defense is possible.

The triple impact of megatons, fallout, and missiles convinces most Americans that their lot will be a hopeless one should the United States be subjected to a nuclear attack. The ORO and RAND assertions to the contrary have not as yet made an appreciable dent in the public attitude, certainly not in congressional attitudes. The reshuffle of the Federal Civil Defense Administration into the new Office of Civil Defense Mobolization has made little apparent change in the administration's handling of the civil defense issue. Civil defense is still in the research and development and planning stage. And it is now almost 14 years since Hiroshima.

Footnotes at end of speech.

No one in Washington expects that OCDM will be energized with a massive infusion of funds to support a national civil defense program on the scale of multibillion dollar appropriations. The Congress continues to be highly skeptical of any increases in civil defense appropriations, and the White House has given no indications of asking for a budget sufficient to finance a national shelter program.

I feel that under these conditions, the problem of civil defense transforms to home defense, and the citizen must look to his own security. This would seem to be in line with the views of Civil Defense Administrator Governor Leo Hoegh, who answered in reply to a question about shelter construction: "Of course, we have not advocated a Federal construction program. We advocate this, the self-help program. That's nothing new. For instance, back in the Indian age our forebears, when they built their homes, also provided a fortress. In 1958 the American people in their own home should provide themselves protection from radioactive fallout. We give the guidance and the direction."

Our forebears were confronted with the challenge of the bow and arrow and the tomahawk. Today we face the swifter-thansound ICBM, the incomprehensible megaton, and the unsensed threat of radioactive fallout. This disparity is so immense that the average person is overwhelmed; he looks to his Government for guidance, and he is advised to do it himself.

#### MISSILE WARHEADS

Mr. Khrushchev has implied that the Soviets have a compact nuclear warhead with a 5-megaton explosive equivalent. It is assumed that this nuclear explosive is compact enough to fit into an ICBM nose cone and that it is about 1.5 tons in weight. This constitutes a very considerable accomplishment in weapon development. Little is known about the actual weight of the Soviet bomb package, but analysis of the October 1958 tests shows that the Soviets released about 20 megatons (strontium equivalent) of fission energy to the stratosphere. would seem prudent to assume that the Soviets have developed a 5-megaton ICBM warhead. The radiochemical data available to the author suggest that compactness in this missile warhead has been achieved at some expense in terms of nuclear material. The burning of cheap Ums involves a weight disadvantage in missiles but is useful in highyield air-dropped bombs such as the 20-megaton weapons carried by the U.S. strategic bomber, the B-52.

Continued nuclear testing should result in an early doubling of megatonnage in missile warheads and with increased development of rocket fuels, warheads of 20 megatons must be anticipated. By the same token, bomber weapons may be doubled and tripled in power, i.e., 40 and 60 megatons. It is understood that the Strategic Air Command is thinking in such terms for B-52 and B-58 carried bembs.

With the development of mega-thrust propulsion plants and possibly with the perfection of nuclear-powered ramjets the transportation of 100 megaton bombs appears feasible, although this is farther in the future. The military worth of such high-yield weapons is arguable, depending upon what purposes are involved in the military applications. If the weapons are meant for blast applications for the reduction of strategic targets of "hardened" construction, then blast pressures of the order of 100 pounds per square inch are required. A 1-megaton warhead such as might be developed for a Polaris missile would produce 100 pounds per

square inch at five-eighths of a mile: a 5-megaton warhead (present Soviet ICBM capability) would extend this blast to 1 mile; a 20-megaton SAC bomb would reach to 1.7 miles, and a super 100-megaton bomb would range out to 3 miles.

Given a missile accuracy such that 50 percent of the warheads land within a circle of 5 to 10 mile radius, it is obvious that huge numbers of Polaris-type missiles would be required to knock out a hardened missile site and very considerable numbers of 5-megaton missiles would also be required. On the other hand, 20-megaton bombs launched from short range by B-52's or B-58's with greater accuracy could be very effective; this is a prime reason why the U.S. Air Force believes that bombers will still be in business

5 to 10 years from now. Judging from U.S. bomber capabilities, our strategic retaliation against Soviet attack would involve a 1-day level of attack in excess of 10,000 megatons. Actual on-target deliveries might reduce this considerably depending on the alert status of SAC bases and the nature of Soviet defenses. It is not clear why such a high level of attack is contemplated on a second-blow basis since in making the first-strike Soviet military installations would presumably have fulfilled their prime role. Adm. Arleigh A. Burke, Chief of Naval Operations, has questioned the strategic mission of the Air Force in a recent speech in which he stated: "\* \* We recognize that in general nuclear war missile forces can no longer attempt to destroy their enemy's counterpart without destroying the corporate body of the enemy state itself, provided all these forces are stationed within the heart of the homeland." This raises the fundamental issue of the wisdom of locating prime strategic bases within continental United States. The level of enemy attack upon the United States will depend upon the number and nature of U.S. strategic bases; thus our military leaders may be making profoundly wrong decisions in locating hardened missile sites within the U.S. borders. Each hardened site may cause the enemy to allocate immense megatonnage to its destruction but the fallout from these bombs will inevitably spill out over the U.S. population and food areas.

The foregoing suggests that "the megaton assumptions" for the USA meaning the commitment of bombs to U.S. targets may vary within wide limits and may actually be determined by our own decisions. The present 30-odd strategic bases within continental USA are nonhardened or "soft" and it appears that Russia could be forced to commit a minimum of 1,000 megaton to these targets. Additional targets would double or triple this megatonnage during the time span of the next 3 years. It is within the framework of this assumption that the author proposes to view the civil defense problem. Obviously, the feasibility of civil defense depends very critically upon the megaton assumptions because a decade from now 3,000 megatons may be a small fraction of the Soviet strategic capability.

#### FALLOUT AND SURVIVAL

The current status of our civil defense offers little hope that the primary effects of thermonuclear weapons can be minimized to any significant degree. The protective construction necessary to reduce the sledge-hammer effect of the megaton-blast on cities involves a degree of metropolitan surgery which is deemed unattainable now. When there was time our cities were not made less vulnerable by dispersion, and now that there is little time the metropolitan areas cannot be hardened like a missile site.

However, the random sprawl of our cities coupled with the inherent inaccuracy of ballistic missiles makes it probable that very large chunks of our metropolitan areas will remain outside the zones of heavy blast damage. Population-wise, the situation is even more favorable since Ground Zero is equally probable for downtown and the suburbs.

As I see the problem for the average American, he can't do very much about combating the primary effects of megation weapons; only the rara avis will go to the trouble and expense of building a blast shelter. However, the big problem once the impact of the blast-heat ceases to be felt upon the stricken community is protection against radioactive fallout. This problem centers upon the family home, and it is for this reason that the term "home defense" applies.

Vast areas remote from the actual bomb bursts will be subjected to lethal radioactive fallout; in some cases where there are multiple bursts and strong winds the lethal distance may extend to 500 miles from Ground Zero. Areas downwind of prime strategic targets will fall in this category. Thus the true lethal potential of a nuclear attack derives from the fallout hazard. Primary lethality of megaton weapons centers upon an area 20 to 40 times smaller than that subject to lethal fallout.

I believe that the average American's understanding of radioactive fallout is pitifully inadequate. Judging from contacts with thousands of people during the past 5 years, I arrive at the conclusion that there is a deep-rooted feeling that there is no way to escape death from fallout. It is for this reason that I reexamined the fallout radiation hazard.

The fallout field which has been assumed seems realistic, i.e., 2 kilotons of fission debris per square mile corresponding to an actual rate of 4,000 roentgens/hour 1 hour after the tomb burst. The first day radiation exposure depends very critically upon the time of fallout. It may require only 1 hour for complete fallout close to the target or as much as 18 hours farther downwind.6 Reliable data on megaton-class fallout are fragmentary, but Dr. Paul C. Tompkins, Scientific Director of the U.S. Naval Radiological Defense Laboratory, testified before the Holifield civil defense subcommittee that "the major residual radiation threat does not occur within range of physical damage." It was stated that peak radioactivity never occurs at the crater but about 50 to 75 miles downwind.

The first day fallout is illustrated by the following schedule of roentgen doses:

#### TABLE I

	Gamma dose (roentgen)	
Time interval: (roen	tgen)	
1 to 2 hours	2,500	
2 to 3 hours		
3 to 4 hours	800	
4 to 5 hours	550	
5 to 10 hours	1,500	
10 to 24 hours	1,550	

Each hour that the fallout is delayed reduces the first-day integrated dose by hundreds and thousands of roentgens. If we assume an effective time of fallout as 3 hours, the first-day exposure to a person standing in the open is about 4,000 roentgens. Some analysts believe that a nuclear attack upon the United States would produce areas in the Northeast where the 2-day radiation dose would exceed 10,000 roentgens. It is estimated that the variable fallout patterns would overlap to blanket many States in a coat of radioactive contamination.

Subsequent in-the-open radiation exposures are listed in another table.

#### RADIATION PROTECTION

The fundamental rule for survival in time of fallout or suspected fallout is below-ground shelter. This evasion action must take priority over all other activities during

the first few days following the outbreak of nuclear war.

Since it is doubtful if many Americans will possess prebuilt radiation shelters, the do-it-yourself approach must be followed. The hours of grace before lethal faflout may reach the earth allow time for last-minute improvisation of radiation shelters. The ordinary basement provides a 10- to 20-fold reduction in the radiation dose. Further reduction can be attained by lying prone in one corner of the basement but for many regions it will be necessary to provide additional below-ground shelter. This can be provided by use of the foxhole principle" or by shielding with some dense material. A tunnel dug in the cellar wall would provide excellent protection. Stacking up bags of coal, sand, or containers of water in a corner of the basement would also reduce the radiation dose.

A committee of the National Academy of Sciences is pondering the problem of setting up a schedule of "allowable" radiation doses for a nuclear catastrophe but the final report is not expected for several months. Presumably, 25 roentgens might be stipulated for the first day and 100 roentgens for the first week. The shelter protection factor required to keep the dose below 25 roentgens the first day would range from 100 to 500 for most areas. It is seen that this protection factor drops rapidly during the first week permitting the holed-up survivors to emerge from cramped quarters after 2 or 3 days and enjoy more freedom of movement in the basement.

During the third day the external radiation would drop to 10 roentgen-hours and limited excursions within buildings would be possible for adults. At the end of 1 week the outdoor radiation level would drop to 4 roentgen-hours in open fields (it might build up to higher values in built-up areas where the fallout debris naturally concentrates), and limited above-surface excursions could be made.

#### DECONTAMINATION

Natural decontamination of building materials may occur as a result of weathering processes. Because the Nevada Proving Grounds showed that a 2-inch rainfall following fallout reduced the indoors radiation dose to one-tenth-one-twentieth the dose measured in an adjoining field. The radiation level just above the floor was one-tenth that at a height of 7 feet inside the house.

F. P. Cowan 12 has investigated the buildup of fallout on construction materials and he has found that smooth-surfaced materials such as aluminum accumulate the least fallout and yield most quickly to decontamination, whereas asphalt and asbestos shingles hold the fallout more tenaciously.

After 1 week a properly indoctrinated householder might attempt to reduce the contamination on the roof. A 20-fold reduction of the roof contamination (as compared with open field levels) seems feasible. Since the roof contamination contributes as much radiation dose to the basement as the skyshine of radiation from adjoining land <sup>13</sup> an overall 10-fold dose reduction for basement dwellers is possible.

Decontamination of ground areas and pavements will involve an organized effort and substantial equipment. The U.S. Navy has had practical experience in radiological decontamination as a result of the Bikini bomb tests in 1946. Data <sup>14</sup> from the U.S. Naval Radiological Defense Laboratory show that fire-hosing of asphalt surfaces contaminated with dry fallout can reduce the level of radioactivity 30-fold.

In the absence of extensive decontamination it would appear wise to live very cautiously during the 1-week to 1-month period after attack. The second week dose of about 500 roentgens should be kept be-

low 20 roentgens and preferably below 10 roentgens. The same rule applies to the third week. The 140-roentgen dose which would be accumulated by full above-ground exposure during the fourth week can be cut to 7 roentgens by an overall reduction factor of 20; this still requires basement living unless decontamination has been effective.

#### BEYOND 1 MONTH

Once the challenge of the first month of post-attack living has been met, the radiation hazards in the following months can be put into manageable proportions by cautious living. At about this time the outdoor levels will be about 10 roentgen-day—still too high for long-term above-ground movement. However, local decontamination and restricted movement plus indoor living as much as possible should make it possible to keep the radiation dose below 10 roentgens for the second month. Thereafter the radiation exposures call for caution but the problem is clearly no longer an acute one.

After 4 months the maximum 24-hour dose for a man in the open would be about 1 roentgen although it might be 10 times less in a decontaminated area. At the end of 1 year an untouched area should exhibit about 0.1 roentgen-day and the total dose in the second year after attack would be about 20 roentgens so that return to ordinary life so far as the external hazard is concerned would be indicated. For people who had accumulated 100 roentgens in the first year an additional 5 roentgens in the second year (allowing for shielding) would not constitute undue risk. Since the impact of the attack might replace our industrial economy with a colonial type of existence millions of people would have to till the soil; this would involve greater exposure but it would not be prohibitive.

These conclusions apply to the radiation field specified by a fallout of 2 kilotons of fission products per square mile. It would seem that this kind of a fallout field is a reasonable projection through the early 1960's. Beyond that time it is probable that more intense fields must be considered, doubling and tripling the radiation doses specified in this article.

The assumed radiation field would be accompanied by a fallout of 200 curies of strontium 90 per square mile if there is no fractionation which depletes the local fallout in Sroo. This heavy fallout raises the question as to the human use of foods grown on such contaminated land. Besides Sreo, one has to consider the shorter lived fission products and induced activities which might pose a hazard as food contaminants. If the nuclear attack took place during the growing season much of the crop would have to be sacrificed. Thereafter, many areas would be denied to dairy farming for a decade and the survivors would be forced to derive their calcium from other sources (currently the average American takes 80 percent of his calcium from dairy products). Thus, in projecting to the emergency conditions in the postattack years the present Sroo levels must be adjusted to apply. There are many un-knowns involved in estimating the ultimate biological damage from crops grown on land, contaminated to a level of several hundred curies of Srie per square mile, but the gradual buildup of Sroo in human bone would present an acute health problem. Unless heroic measures were adopted to inhibit the intake of Srao the body burden of this radiopotson would exceed the threshold for lethality.

The strontium 90 levels which might be anticipated for 100-megaton bombardment of hardened missile sites, such as are planned for 10 areas in our Western States, would approach the kilocurie/square mile value and such land would be denied to agriculture for more than just a decade. One wonders whether this point has been considered in the siting of these military installations.

As a weapon of ultimate venegance, the threat of soil contamination is a victous one. However, it is also a rather subtle hazard requiring a degree of imagination for its full appreciation. In this sense the strontium 90 hazard resembles the genetic hazard. On the other hand, a country such as the Soviet Union would be vulnerable to deprivation of future crops since it has small food reserves. Conceivably, the threat of crop contamina-tion might act as a deterrent to the Soviets. The concept of a Carthage on a continental scale is new to war and is a direct offshoot of the megaton-class weapon.18

In summary, the biological consequences of local fallout present an immense challenge to civilization. Over the short term the external radiation threat appears to be of manageable proportions providing people understand the nature of the hazard. The internal hazard does not appear to be of the same degree of lethality as that formed by the external radiation. Orop contamination poses a serious long-term problem and it is not clear whether a post attack economy could support the kind of agriculture which could minimize the uptake of strontium 90 from the food supply.

25 This point was emphasized in "Strontium Limits in War and Peace," published in the Bulletin, 12 (November 1956), 287, in which it was stated; "The best hope for peace, it would appear, may be common understanding of the state of the st derstanding of the nuclear consequences of recourse to superbombs. If this be true, then man's foreknowledge of the effects of nuclear weapons may serve as the ultimate deterrence to war."

This discussion has not embraced the short-term toxic effect of the retention in the body of gross fission products.

Poison in Your Water-No. 96

EXTENSION OF REMARKS

# HON. JOHN D. DINGELL

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES Wednesday, June 3, 1959

Mr. DINGELL. Mr. Speaker, pursuant to permission granted, I am inserting into the Appendix of the Congressional RECORD an article appearing in the Dallas (Tex.) Times Herald of August 3. 1958, entitled "Thirty Stricken Here-Unfit Water Cited":

THIRTY STRICKEN HERE-UNFIT WATER CITED (By Judy Bonner)

At least 30 persons in the West Dallas area have become violently ill recently after drinking apparently contaminated water sold in barrels and tanks from private trucks, the Times Herald learned Saturday.

The illness, which resembles dysentery, includes severe stomach cramps, vomiting and diarrhea. In some cases, all the members of one family have been stricken. Many of the victims have been treated at Parkland Memorial Hospital.

Two private dealers who have been peddling the water in West Dallas were apprehended Saturday and ordered to appear Mon-day before Dr. J. W. Bass, city health officer. Dr. Bass said the dealers admitted selling

the water but told him it was not being sold for drinking purposes. It is city water, he said, but apparently becomes contaminated during handling and storing in the barrels and tanks.

#### TO LABEL TRUCKS

"We will instruct the dealers to clearly mark their trucks and the barrels that the water cannot be drunk," the health officer said.

He added that no legal action can be taken against the dealers unless persons who bought the water testify that it was sold to them as drinking water.

"At any rate," Dr. Bass said, "we will put a lot more health inspectors in the area to make certain the water is sold only for non-drinking purposes."

Many homes in the West Dallas area do not have city water supplies—a main target of the Times Herald and other organiza-tions interested in bringing reforms to that

#### BAD SITUATION

"It's a bad situation, we realize that," Dr. Bass said. "The city is getting water supplies out there as fast as possible."

Some West Dalias families get their water from shallow private wells. In at least one instance this has resulted in cases of typhoid

Two families that have purchased the apparently contaminated water told the Times Herald Saturday they were not informed it was not drinkable, or that it should be sterilized before drinking.

"The trucks come around every day or so selling the water for 50 cents a barrel," one woman said. "Nobody told us it wasn't fit to drink. We thought it tasted like it had moss in it or something. My husband and I and all our children got sick the next day after drinking it."

Dr. Bass said dealers must have licenses before they are permitted to sell drinking water. Licenses are not required to sell nondrinking water.

He said city water should be rechlorinated if it is sold from barrels or tanks.

The city health department laboratories now are testing the water to see what con-tamination it has. Dr. Bass did not say when the tests will be complete. Uncommon Man

EXTENSION OF REMARKS

# HON. W. J. BRYAN DORN

OF SOUTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 3, 1959

Mr. DORN of South Carolina. Mr. Speaker, it was my honor and privilege this morning to attend the graduation exercises of the FBI National Academy. Law enforcement officers from all over America were awarded their diplomas during this program. We are proud of these men at the local and State level who receive this excellent training and who will work and cooperate with our great Federal Bureau of Investigation in its crusade against crime and communism.

The program was an excellent one featuring Assistant Director Quinn Tamm, Deputy Attorney General Lawrence E. Walsh, Director J. Edgar Hoover, and excellent addresses by Daniel S. C. Liu, president of the graduating class with the Honolulu Police Department, Hon. Preston J. Moore, national commander of the American Legion, and His Eminence Richard Cardinal Cushing.

Mr. Speaker, I was particularly proud to see on the platform our own Hon. STYLES BRIDGES, the Honorable JOHN W. McCormack, our beloved majority leader of the House, and the Honorable JOHN J. ROONEY who have always been strong supporters of the FBI and its principles and ideals. Dr. Edward L. R. Elson of the National Presbyterian Church pronounced the invocation and the benediction. Appropriate music was furnished by the U.S. Marine Band. Mr. Speaker, I commend to the entire Congress and American citizens everywhere the outstanding, challenging timely and superb address of His Eminence Richard Cardinal Cushing, Archbishop of Boston:

THE NEED FOR UNCOMMON MEN

(Address by Richard Cardinal Cushing, Archbishop of Boston, at graduation exercises of the FBI National Academy, Washington, D.C., June 3, 1959)

A few years ago a capable but somewhat bewildered public servant published his campaign speeches and other addresses under the title "The Century of the Common Man." He meant by the title that we are now living in a century in which the average citizen, the ordinary person, has entered into the full enjoyment of his rights and dignity not by privilege of birth, class or talent, but simply as a man, a creature composed of body and soul and made in the image and likeness of God. His further meaning, at least by implication, was that the coming of this happy day had been and would be further hastened by the ultraliberal principles and progressive programs set forth in his speeches and his book.

Both contentions were naive and misleading. It is absurd to describe as the "century of the common man" a period of history which finds the average citizen of countries in almost two-thirds of the inhabited globe living under communism and its despotle restraints once considered the wretched lot of slaves, and which finds the ordinary person not merely despolled of his privileges as a common man, but forbidden to proclaim

himself, publicly at least, as the child, the image or even the creature of God. To style such a period of history the century of the common man was indeed confusing rhetoric; not less so was the suggestion that the way out of the 20th century plight of the common man lies in the empty pretensions of those who shared the political views of the author of "The Century of the Common Man."

And yet, you and I, and Americans generally, should face the disturbing fact that we are living in the century of the common man in an unfortunate, embarrassing sense not intended by the title of the book in question. Ours sometimes seems to be the century of the common man in a pathetic and perilous sense, a sense pathetic for mankind, perilous for America, partly because of our apathy and indifference to those twins of inequity-communism and crime; partly because of a prevailing standardization which tends to level all values, accomplishments and interests in our civilization; partly because of an emphasis on least common denominators of belief and of worth which tends to discount those differences which impel to greater virtue and more lofty vision; partly because of some of the less attractive byproducts of our honest democratic effort to lift the level of the inferior and the underprivileged, sometimes with the unnecessary but frequent reduction of the superior to a common general average, ours has become the century of the common man in a sense which no one who loves faith or freedom would possibly wish.

It is good when common men are given every means and opportunity to rise to greater heights of excellence and achievement. But it is not good when the common becomes the norm of excellence and accomplishment, when the man of uncommon ability is resented and the person of uncommon performance is perpetually cut down to size. It is best for our traditions of faith and our institutions of freedom when citizens are inspired to seek uncommon heroism and uncommon stature, to avoid the merely common and to aspire after that which is more noble, more truly humane, and more nearly divine.

A century of literally common men would be a disaster for civilization; our need, our urgent, compelling need at the moment is for uncommon men, men of uncommon devotion to the highest and best, the uncommon spiritual ideals and civic objectives.

When did Americans have it for their ambition to be common men? Which of the Hebrew prophets held out to their hearers the dull dream of becoming a common people among the nations of the earth? What Christian, mindful of the heroism of his Christ, the magnificence of his saints, the hopes of his martyrs, would settle for the mediocre dignity of a merely common man? Everything authentic and of value in our tradition, religious and political, spiritual and democratic, impels us to covet the tribute "he nothing common did or mean"; everything truly human in us prompts even least gifted of us to seek to excel-to attain to uncommon excellence, however common the means at hand to accomplish our noblest aspirations.

We Americans would find depressing the prospect of a century of common men. However poor, however handicapped, however limited in nature or grace we may sometimes be, our ideal has always been, must always be, to achieve uncommon excellence and to lift to uncommon well-being those less fortunate than we. The common must always leave us unsatisfied, particularly in what pertains to the service and perfection of the human person; the need is for uncommon men, not common men, and our every emphasis in religion, civil life, and education must be on how to meet that need.

Our need for uncommon men-men of uncommon vision, uncommon integrity, uncommon loyalty-arises from circumstances within the national community and without Within the national community, crime and communism are on the march and it is time for uncommon men to do something about them. The trend toward standardization in education and socialism in economic and social theory has been accompanied by a leveling away from uncommon initiative, uncommon zeal and uncommon pride in the job uncommonly well done. This has not been good for civilization; it has not been good for democracy, especially when it has all but turned mediocrity, apathy and common standards of performance into the norms of worth. It will call for uncommon courage, extraordinary boldness on the part of the generation coming up to dispel the civic indifference and moral neutralism which are comfortable enough for the common, but which prevent the uncommon greatness that America needs so badly-and expects of each of us.

But our need for uncommon men is dictated even more definitley and imperatively by circumstances outside the national community, though with dangerous influences reaching deep into the national life. The dangers which threaten faith and freedom. as Americans cherish these blessings, are by no means ordinary; our perils are uncommonly powerful and uncommonly great.
They require much more than ordinary alertness to recognize them, much more than common courage to face them and to vanquish them. World communism even more than communism in America is no common nuisance, no ordinary menace. It is uncommon in the magnitude of its evil; it demands uncommon men, not men of common intelligence and loyalty, men of heroic stature and resolution to penetrate and overcome its

The Communist Party in the United States is so small in its present numbers that it seems hardly visible to the naked eye. But only a fool supposed that it is merely a commonplace menace to our security. It is the greatest threat to our survival as a nation of free men. Fortunately for America and the world, the Federal Bureau of Investigation functions on the realistic premise that the danger of Communist intrigue is greater than ever, precisely because of the uncommon dedication, cunning and capacity for damage of the hardcore Communists who remain at work in America-and fortunately the FBI is prepared to offer uncommon qualities of the intellectual, moral, personal and organized kind needed to give America no ordinary, but uncommon protection against those who would destroy her.

Such uncommon devotion, in men of uncommon loyalty and discipline, is in the tradition of the FBI since the days of its reorganization in 1924. This Federal Bureau has met with uncommon diligence and uncommon might of the underworld on the front of crime within our borders; it has met with uncommon, resolute daring the extraordinary resources and ruthlessness of communism during the evil days before, during and since World War II. It has been frankly selective, unashamedly discriminating and exclusive in its selection and training of candidates for its service. It has been impatient with common motivation or common moral character in its personnel, because of an intense awareness that none but the best are adequate to defend faith and freedom against the worst, that none but the uncommonly strong can be trusted against the uncommonly brutal. The FBI represents America's uncommon response to the need for uncommon men to meet the uncommon menace of communism and crime to the national security.

The Bureau has achieved its uncommon prestige because of the uncommon character

to run it.

of the disciplined, dedicated, devoted Director who has just completed 35 years of uncommon service to a nation he dearly loves and the gratitude of which he so greatly deserves. Mr. J. Edgar Hoover was no common man of common promise when, at the age of 29, he took charge of the Federal Bureau of Investigation under President Calvin Coolidge. With uncommon speed and efficiency, he cleaned out the incompetent, the men of common capacity and character—and staffed this supremely important branch of government service with men who stood out as uncommon in that "good moral character" which he made the esesential qualification for his department. His career of uncom-mon trust under five Presidents of both parties is no common achievement, and his contribution to the good order of his country and its secure stability has been made with uncommon dignity and uncommon devotion to duty. He has given living proof that a Government agency can be run with uncommon probity and results, despite the smears of a few very common people—if an uncom-mon man of his caliber is given the chance

You, the latest graduates of the FBI National Academy, to whom I am privileged to speak under these solemn circumstances today, have the high vocation-the uncommon calling-of perpetuating the uncommon standards of resolute righteousness which have become the proud tradition of the FBI. As students of this academy, you have gained added knowledge of the crimes and criminals of our Nation, costing us more than \$20 billion a year and constantly increasing at the appalling rate of about 8 percent annually. You have been trained to crack the stone walls that have protected organized gangsters and created an underworld of evil that seems at times to be more powerful than the Government itself. Fortified with a knowledge and training similar to that given the agents of the FBI, you are now equipped to train others, as well as to cope with the subtle methods and modern techniques of professional lawbreakers. While congratulating you on the successful completion of your courses at the national academy, I salute you as law enforcing officers of uncommon promise, uncommon importance to the American people.

Let others be content with common love for America, ordinary interest in its well-being, mediocre pride in its institutions, commonplace contributions to its goodness and its greatness. But you are not members of the age of the common man; you are the guardians, uncommon in your courage and competence of all that our heroes; refusing to be common men, made possible—all that our sons and younger brothers need to make them not common men, but men in your pattern of uncommon manliness, patriotism, and integrity. May God, with uncommon grace and favor, bless you one and all and be with you amid all the dangers of your uncommon vocation.

The Last Veteran and Tobacco

EXTENSION OF REMARKS

HON. JOHN L. McMILLAN

OF SOUTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 3, 1959

Mr. McMILLAN. Mr. Speaker, under leave to extend my remarks, I include an article from the Charlotte Observer, Charlotte, N.C., April 28, 1959, concern-

ing the last of that heroic group who wore the blue or the gray, who still likes his tobacco:

LAST OF THE VETERANS: HE LIKES TOBACCO MILD, MUSIC LOUD

HOUSTON, TEX.—Walter Williams, the last of nearly four million men who fought in the Civil War, likes his chewing tobacco mild and his hillbilly music loud.

Williams, 116, frequently turns down food but frets if his tobacco isn't handy and the flavor just right. He also wants his coffee on schedule, at 5 a.m.

The frail, blind, bedridden Confederate veteran is recovering nicely from a flareup of an old aliment.

The flareup came only 2 weeks after he learned that the March 16 death of John Salling, 112, at Kingsport, Tenn., had made him the last living link with the Civil War.

A daughter, Mrs. Willie Mae Bowles, turned down the radio that was blaring western music.

"Are you asleep?" she shouted.

Without opening his eyes, Williams shook his head.

"Scratch my head," he said. The daughter scratched the back of the head and smoothed down the white hair.

"Give me a chew of tobacco and stir up the music," he said.

- Mrs. Bowles turned up the volume of the radio, full force. The small radio is on top of the big pillow, attached to the head of the hospital type bed so it will not tumble down on the former Confederate forage master.

Williams dozed off again.

"The medicine he has to take every time that old ailment acts up makes him drowsy all the time," Mrs. Bowles said. "He sleeps most of the time anyway, but he's not quite as alert when he has to take the medicine."

The old soldier normally requires no medication, although he is checked each week by a doctor and receives vitamin shots every Tuesday and Friday.

#### Anniversary of the Death of Khristo Botev

EXTENSION OF REMARKS

#### HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 3, 1959

Mr. MULTER. Mr. Speaker, there have been many great leaders who fought and gave their lives for the cause of freedom and liberty, and who are not as well known to the people of the free world as they should be. Many leaders who have left their memorable legacy in their homelands and among their own

ples.

Among such gifted, resourceful, daring, and liberty-loving men Khristo Botev of Bulgaria ranks high.

people are hardly known to other peo-

As a matter of fact this doughty defender of oppressed Bulgarians and defiant challenger of the Ottoman regime in the Balkans was one of the truly great champions of freedom in 19th century Bulgarian history. As a writer as well as a fighter, in his youth he became a leader of the Bulgarian people in their fight for freedom. Though he lost his life in his youth in the bloody massacres

perpetrated by the Turks in 1876, 83 years ago, today all Bulgarians of whatever persuasion pay homage to his memory.

I am glad to join Americans of Bulgarian descent in paying my respects to the memory of this great fighter for freedom, the immortal Khristo Botev of Bulgaria.

#### The Eban Chapter

EXTENSION OF REMARKS

# HON. SEYMOUR HALPERN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 3, 1959

Mr. HALPERN. Mr. Speaker, a little more than a week ago, Ambassador Abba Eban left the United States on the start of his return journey to Israel. After outstanding service at the United Nations, he was appointed Ambassador to the United States 8½ years ago. His deep intelligence and integrity, his poise and tact gave dignity and forcefulness to his representation of this new born democracy in the Middel East.

He returns to Israel to continue his impressivel ife of public service. He is to become the president of the Weizmann Institute of Science and will run for Parliament.

Many fine tributes have been paid to this outstanding diplomat, teacher, and statesman. In the May 15 issue of Near East Report, published here in Washington twice monthly and edited by two foremost authorities in the field, I. L. Kenen and Allen Lesser, there appeared an excellent commendatory article on Ambassador Eban entitled "The Eban Chapter."

The article sets forth sweep of his life, his philosophy, and his faith. I thought that it was so outstanding that it should be brought to the attention of all Members of Congress.

The article follows:

THE EBAN CHAPTER .

Twelve years ago this month, a 32-yearold English Zionist who had been a Cambridge don and a major in the British Army in Egypt and Palestine came to Lake Success to join the Jewish Agency delegation. Shy and aloof, he buried himself in the preparation of the case for Jewish statehood.

A few months later he was in Palestine and then Geneva as liaison between the Jewish Agency and UNSCOP, the special committee which later was to recommend partition. Memorandums and pamphlets poured from his speeding pen. He traveled with the U.N. delegates, met their questions, and won their confidence and understanding.

In early 1948, the unborn state of Israel was struggling to come to life. As the mandatory regime retired from Palestine leaving the country in disorder, Arab irregulars moved in. The Jewish Agency pleaded for Security Council intervention to implement the U.N. partition resolution. The Eban briefs massed evidence of Arab aggression and British nonfeasance. Unable to meet the crisis, the U.N. Security Council abdi-

cated, prepared to abandon the partition plan, and to retreat into the shelter of a temporary trusteeship. And now the Eban oratory suddenly burst upon the U.N. scene. He had written a devastating critique of the trusteeship proposal. For the first time he presented his tract in person.

U.N. diplomats, attachés, reporters were awed and overwhelmed by this unprecedented address, at once symmetrical in grace

and withering in polemic.

A surprised Jewish Agency press officer wrily recalled that he had refused to schedule Eban on radio because he cannot speak.

An annoyed U.N. correspondent, searching through the glittering cascade of Eban's rounded phrases for the lead of his story, fretted: "He makes three words do the work of one."

"You mean 1,000," his neighbor amended. That was 11 years ago. Three days after Israel was proclaimed, Eban took his place in the U.N. Security Council as Israel's official representative, to accuse Arabs of aggression. One year later—10 years ago this week—he wrote around the clock and delivered a monumental address calling for Israel's admission to the U.N. Eight and a half years ago, he assumed an additional responsibility. He came to Washington to serve as Israel's Ambassador as well as its U.N. delegate. Now, at the end of a dozen years, Eban is going back to Israel, his multipurpose mission completed,

#### HIS FAREWELL TOUR

Within recent weeks he has spoken many times in major cities, bidding farewell to tens of thousands of Americans who came to honor him not only as his people's advocate but as a statesman who has had an impact on the development of a rational policy for the free world in the turbulent Near Fast.

He has lifted the United States-Israel dialog from the narrow ruts of day-to-day protocol. The restoration of Israel in 1948 was not a casual incident. It was an epochal response by the international community to a moral imperative. Strategic considerations and power politics had little to do with it. Indeed, some have said that in the powerdriven and power-paralyzed world of 1959. the decision might have gone differently. He has worked to maintain United States-Israel relations within the realm of high moral purpose: two peoples, one small and one so large; two lands, one so tiny and the other so vast; and yet both nations of pioneers, both "imperishably dedicated to democracy as the highest expression of human personality."

He exalts Israel's mission, and he appeals to reason to deepen dedication. Those who have labored to aid Israel as she struggles to resettle immigrants and to restore her arid and eroded soils are exhilarated and stimulated to higher levels of endeavor. By his unique ability to bring emotion and rationality into harmonious balance, Eban bestows dignity and majesty on their joint undertaking.

He is a master of language. He has English, French, Hebrew, Persian, Arabic, and he now betters his Spanish by studying a translation of his U.N. speeches. His sparse leasure notes testify to a retentive memory; his manuscripts reveal the compulsions of a perfectionist; he is always challenged to edit himself in the search for words that are at once more gracious and precise. Ideas, faithfully arrayed and forcefully expressed, can have an irresistible impact on They can demolish hostility, surmount obstacles, reverse retreat into advance, as Eban's speeches have shown. He has gentle wit, acrid sarcasm. He has, to quote the Washington Post, "mobilized the English language and sent it into battle in defense of Israel."

#### DEST TO THE U.N.

Many times in these 12 years, Israel's friends in the United States have been dis-

appointed and disturbed by the failure to attain an Arab-Israel peace. They find it hard to understand why the U.N. and the free world appear unable to end the conflict. The international community has seemed to condone Arab aggression against Israel by falling to enforce the U.N. Charter, which requires all U.N. members to keep the peace. And sometimes, it has seemed to Israel's supporters, there has been a double moral standard both at the U.N. and in Washington, which coddles Arab aggression against Israel and censures Israel's reply.

Ambassador Eban's farewell addresses have done much to sweep away these doubts. He recalls the adoption of the U.N. partition resolution, the U.N. truce and armistice, Israel's admission to the U.N., the U.N. decision condemning Egypt's blockade of the Suez Canal in 1951, the U.N. arrangement in 1957 to bring serenity to Israel's frontiers and to free Israel's shipping through Aqaba. If the U.N. has, at times, seemed to "alienate itself from its responsibilities for Israel's security and freedom," Ambassador Eban is deeply convinced that Israel "has gained far more from the U.N. than it has lost in moments disappointment and frustration."

#### UNITED STATES-ISRAEL RELATIONS

He has done much to revolutionize American thinking on United States-Israel relations. Conflict always captures headlines; agreements are buried on inside pages. Many people have come to believe that sharp differences between America and Israel are inevitable. Arab propagandists would create a conflict between the United States and Israel. And Israel's friends, troubled by the continuing Arab war against Israel, often tend to interpret deviation in opinion as convulsive conflict.

#### PAST CONFLICTS

There have been differences between the United States and Israel. Students of the period will recall four major crises. One was in 1947 before Israel was established, when State Department experts at the U.N. prematurely retreated from the partition resolution; there was the pressure on Israel in 1949 to make concessions to the Arabs which the Israelis regarded as fatal to their secur-There was the crisis in the winter of 1955-56, when Israel was alarmed over the Soviet arms shipments to Egypt and was unable to get the arms she needed. There was the Sinal conflict of 1957, when the Arabs demanded sanctions against Israel unless she withdrew unconditionally from Sinal.

But these peaks of controversy are leveled in the perspective of Eban's dispassionate review. He places emphasis not on conflict but on agreement. He hails America as Israel's "oldest, most constant and authentic friend." He recalls that America supported the partition plan in 1947; that the United States was the first to recognize Israel in 1948 in her hour "of solitude and peril"; that she urged others to do the same; that the United States championed Israel's admission into the U.N. in 1949; that the United States joined with the United Kingdom and France in the tripartite declaration in 1950, promising to resist any effort to change the U.N. armistice frontiers by forcible means; that the United States began a massive program of economic aid to Israel in 1951, which has continued undiminished until the present moment; that the United States supported Israel in 1951 in condemning the Egyptian blockade of the Suez Canal; that the United States was the first to proclaim and practice the freedom of the seas on the Straits of Tiran and the Gulf of Aqaba.

He enlarges on the effect of this last decision, which was originally projected in the Dulles memorandum of February 11, 1957. Freedom of navigation in Aqaba enabled Israel to establish new links of trade and cooperation with Africa and Asia. For now Israel has become in fact, no longer in

theory, a pilot plant for democracy in Asia and Africa. New nations send their emissaries to Israel to examine "the mystical union between economic dynamism and polical freedom, under circumstances similar to their own and achieved without the abundance of the United States."

For if Israel, merely by the power of her example, can guide these nations "to resist the allurements of tyranny," she will have performed a mission in the service to freedom and she may be entered high on the balance sheet of the assets of the free world.

The Israel Ambassador is appreciative of the fact that the Western World is now alert to Israel's security needs. The arms embargoes are ended. He welcomes the American doctrine that the territorial integrity and political independence of the States of the Near East is a vital interest of the United States. He remembers that in 1957 the United States resisted those who were demanding territorial concessions at Israel's expense. He concedes that Jerusalem and Washington do not always see alike." But he pays tribute to the unprecedented harmony which exists in the relations of the two Governments and is carried "on deep tides of public sentiment in both countries."

Ambassador Eban sees no prospect of peace "arising from sudden diplomatic initiative or debate." He spurns the suggestion that peace can be secured if Israel is forced to contract and the Arabs are enabled to expand. History has not dealt unkindly with the Arabs, he points out. Four decades ago, no Arabs lived in freedom. Now they have 11 Arab States, in an expanse of 4 million square miles and with a population of 50 million, with great rivers of water and oil. In contrast, Israel has 8,000 square miles and 2 million people. If the Arabs feel they have been ill-treated, Ambassador Eban is ready to exchange places.

Nevertheless, Ambassador Eban is an optimist. He is convinced an Arab-Israel peace must come. There was a time when Israel's friendships were concentrated in Europe. But now "it is respectable to recognize Israel." Some 70 nations have done so. Today the Arabs are "isolated in nonrecognition." Israel's last victory showed that "he who tries to push Israel into the seas ends up in the sands." And Ambassador Eban believes that if serenity can be preserved and there is a long period of tranquility, "thoughtful Arab minds will awaken to the fact of Israel's permanence and will abandon their unjust and useless hostility." For there is no outstanding issue which cannot be resolved.

Ambassador Eban returns to Israel to become the President of the Weizmann Institute of Science. He will run for Parliament, as a member of the Mapai Party, and if that party continues to lead the coalition, it is logical to expect that he will be concerned with Israel's foreign policy. In that role, he would remain faithful to his conviction that a strong United States-Israel friendship is important to both democracies and to the cause of freedom everywhere.

America Is Dividing up the Goose That Has Kept Us Supplied With Golden Eggs

EXTENSION OF REMARKS

#### HON, ROBERT W. HEMPHILL

OF SOUTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 3, 1959

Mr. HEMPHILL. Mr. Speaker, under leave to extend my remarks in the Rec-

ORD, I include the following editorial from the Lancaster News, Lancaster, S.C., of May 28, 1959:

[From the Lancaster News of May 28, 1959] OFF THE RECORD

When it comes to looking after our best interests, the United States is the most fouled-up Nation in the world. When we were selfish economic royalists, we built up a prosperous, competitive economy that was the admiration and envy of every nation. We inherited world leadership because we knew how to make, sell, and deliver. Twice we threw this tremendous energy into world conflict and twice we turned the tide in favor of right and justice.

Now we are embarrassed because we have so much in comparison with the hundreds of millions of backward peoples who have so little. Because our conscience is hurting us, we want to share our prosperity with everybody on our side of the democracy-vs.-Com-

munist line.

Let's take a simple illustration of the very real danger in our current world attitude. At a recent meeting of big department store buyers two men's suits were displayed. One was the top product of a big name Amerlcan manufacturer. The other, selling for one-third the price, was a Japanese copy. These expert buyers were invited to say which was which and none could tell the difference.

No one got excited. Imported Jap-manufactured men's suits are just a drop in the bucket. Two years ago Jap cotton textiles were just a drop in the bucket. But the existence in a slow market of even a small quantity of half-price offerings was enough to wreck prices and push-low-profit mills into bankruptcy.

Let's say these were old, out-moded mills like the Victoria in Rock Hill. They couldn't compete. When someone came along with a cheaper product they had to fold. all right. We understand this in the United States. If you can't make it cheaper or

better you're out of business.

But we play this game according to set rules. The Government controls the price of raw materials, sets minimum wages and regulates competition. And unions come along with industry-wide standards no employer can ignore. These are the ground rules and they still leave room for some flexibility.

The South steals industries from the North by offering better production per manhour. The North goes into more highly skilled manufacture of new products. Detroit attracts semiskilled agricultural workers to its assembly lines with higher wages. Farmers turn to machines to replace their labor. John L. Lewis and his miners price coal too high and natural gas suppliers take over. Steel workers achieve the highest wages in any industry and pre-stressed concrete, laminated wood and substitute products begin to replace steel.

This is the pattern of a stable economy. We heal our sores, patch up our broken bones and go on to maintain a high standard of living. But we are embarrassed because our system works so well. No other nation has been able to achieve our prosperity so we decide to change the rules.

Our first move was to supply all our lends with American dollars. We called friends with American dollars. We called this foreign aid and the net result was twice-spent dollars, once for nothing and once for real, but worth only half as much as the taxpayers put up. Now we call it inflation and wonder why a dollar outside the United States will buy a dollar's worth of gold when a dollar in this country is only worth 50 cents in silver.

Our diminishing gold reserves show clearly that there is danger in this. But this danger is mild compared with the determination of the do-gooders of the U.S. State and Commerce Departments to share our prosperity still further by opening every domestic market in foreign competition.

Even the Japs are astounded. The Japanese embassy in Washington, mindful of the spontaneous boycott 2 years ago of that nation's cotton textiles, has cautioned the manufacturers of men's clothing in Japan to use restraint in rushing their products to America.

Thus, we have it. The Japs urging restraint in frank recognition of the limited capacity of U.S. markets to absorb lowwage imports while Washington fiddles with one-world theories of equal opportunity for

Neither Karl Marx nor his sidekick, Engels, would have dared predict that a triumphant America could have become so bemused with socialistic ideals that her own best interests would be forgotten. Yet, that is what has happened. America is denying a system that has made it great.

If, at this late date, Congress cannot understand that the American standard of living is high, protected wages versus the products of cheap labor, then there is no hope for our continued prosperity. We are dividing up the goose that has kept us supplied with golden eggs.

#### Discrimination in Housing Projects

EXTENSION OF REMARKS OF

# HON. HUGH J. ADDONIZIO

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES Wednesday, June 3, 1959

Mr. ADDONIZIO. Mr. Speaker, the New Jersey Committee Against Discrimination in Housing has sent the following letter to the Federal Housing Commissioner with respect to discrimination in housing projects in violation of the New Jersey law against discrimination.

We in New Jersey are proud of our fine record in advancing the cause of equal rights for all citizens. We are deeply concerned about this flagrant disregard of our laws and sentiments, and I join with the committee in urging the Commissioner to act promptly to protect the rights of our New Jersey citizens.

The letter reads as follows:

NEW JERSEY COMMITTEE AGAINST DISCRIMINATION IN HOUSING, Newark, N.J., June 2, 1959.

Mr. JULIAN H. ZIMMERMAN,

Commissioner, Federal Housing Administration, Washington, D.C.

DEAR MR. ZIMMERMAN: The New Jersey Committee Against Discrimination in Housing, a committee of 42 organizations representing a large segment of the population in New Jersey, has been much concerned over the challenge to our New Jersey public policy with respect to discrimination in housing on the part of William J. Levitt and several other builders who have deliberately flaunted our law against discrimination and particularly the 1957 amendment which states, there shall be no discrimination in publicly assisted housing accommodation, any part of which is financed by a loan guaranteed by an agency of the Federal Government.

Their challenge to the law has not only been in practice, but they have sought through litigation, to prevent the New Jersey Division Against Discrimination from holding hearings with respect to complaints that they are discriminating in the sale of housing in violation of our law. This challenge has proceeded through our courts and shortly an opinion of the appellate division of our superior court will be rendered. We are looking forward to an opinion of the courts which will deny the claim of these

builders that the law against discrimination does not apply to them.

In anticipation of that ruling, we urge that you and members of your administration develop plans with respect to commitments for guarantees of mortgages in the case of building projects and operative builders against which there may be a ruling upholding the applicability of our law.

We are certain that the Federal Government, through your agency, will not assist any persons in a process in which they have evidenced in public statements or otherwise their intention to discriminate, in violation of the New Jersey law against discrimination. Our purpose in this letter is to request that you develop those procedures so that they may go into effect if and as soon as the Appellate Division rules that the challenged law against discrimination constitutional and applicable to operative builders such as Levitt and Sons and others.

We are taking the liberty of writing to you on this matter in the hope that TOU will undertake to fulfill what we consider to be a commitment from your predecessor,

Mr. Mason.

We have a sense of urgency because of the fact that much time has elapsed since the original complaints have been made and the present. Speedy administration will be of great value in seeing to it that the rights of our citizens in New Jersey are protected.

We are forwarding a copy of this letter to the Attorney General and members of the

New Jersey delegation in Congress.

Sincerely yours, Dr. IRVINE L. H. KERRISON, Chairman.

#### Capital Punishment

EXTENSION OF REMARKS OF

#### HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES Monday, June 1, 1959

Mr. MULTER. Mr. Speaker, on January 7, 1959, I introduced my bill, H.R. 870 which if enacted would abolish the death penalty under all laws of the United States except the Uniform Code of Military Justice and would authorize the imposition of life imprisonment in lieu thereof.

In this connection, I commend to the attention of our colleagues the following statement of the New York Board of Rabbis as it appeared on their agenda for State legislation, 1959.

#### CAPITAL PUNISHMENT

"Vengeance is mine sayeth the Lord," and therefore it is not within the power of fall-ible man to pass judgment of life and death on his brother. Experience has shown in some of our sister States, in the United Kingdom and the State of Israel that the index of capital crime has not risen by reason of the discontinuance of the death penalty. We therefore urge a moratorium of 5 years on the imposition of the death penalty in the State of New York and that during this period the matter be subjected to earnest and careful study. We further urge that monies be appropriated to heighten the work of the State's rehabilitation agencies toward the reformation of those who have been found guilty of violating the penal statutes.

# Free Market Only Answer to U.S. Farm Surpluses

EXTENSION OF REMARKS

# HON. R. WALTER RIEHLMAN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES .

Wednesday, June 3, 1959

Mr. RIEHLMAN. Mr. Speaker, it is becoming more evident each day that we just can't solve the economic ills of agriculture by legislation. We have tried since 1929 to provide a farm program which would give the farmer parity of income with the remainder of society. We have used schemes of all kinds—including planned scarcity, price supports at high levels, compensatory payments, disposal programs, and a myriad of other proposals. They just haven't worked out. The farmer is relatively no better off today than he was in 1929 and he is probably worse off because his very freedom has been taken from him.

Secretary Benson has made great efforts to stabilize the farmers' income and yet at the same time restore his basic freedom to sow and reap. In 6 years, the Secretary has tried to reverse the effect of 30 years of tinkering with our economic system. He has made some progress, but it has been slow. It has been slow because our agricultural planners are willing to control out of existence in order to give the farmer a high price for his product. This is fallacious, because the high price the farmer receives for his product means nothing if he doesn't have volume.

Inevitably we will get back to the free market concept where the free seller and free buyer will be the only factors in determining commodity prices and production levels. Then, and only then, will the farmer's problems be solved. An exceedingly pointed editorial on this subject appeared in the Chicago Daily News recently, and I should like to include it at this point:

EVERYTHING ELSE A FAILURE—FREE MARKET ONLY ANSWER TO U.S. FARM SURPLUSES

Remember 'way back when your Congressman would send you a free assortment of garden seeds for the asking? 'We can't recall what cynical defense was made for this handout. Doubtless it was to encourage healthful exercise. What it really was, in the simple ways of those days, was an inexpensive bid—at public expense—for your vote.

This infant aid to agriculture makes a fine illustration of the growth of a Government program. We have progressed through farm boards, the "ever-normal granary," and Agricultural Adjustment Act to a price-support program under which the Government now holds \$8 billion worth of surplus commodities

Agitation is again underway for the next step. That is the proposal to pay farmers directly, out of the Treasury, the difference between the prices they receive on a free market and the "fair" price established by Congress, The best description of this plan so far has come from Charles B. Shuman, president of the American Farm Bureau Federation. He calls it the prelude to a licensed peasantry on American farms.

Mr. Shuman's organization speaks with a powerful voice, but there is no assurance that individual farmers will reject the chance to have a federally guaranteed income.

The rebellious Stanley Yankus drew plenty of criticism for his refusal to collect a bonus for falling to grow wheat. A group of Wisconsin farmers announced their intention to retire on the payments for placing their acres in the soil bank.

Doubtless it is the recognition that all the control and price-support schemes have been costly failures that now sparks the search for a new formula. Politically, it would have the merit of ladling out the money for the years necessary to demonstrate its futility.

The income-payment scheme also has the backing of some groups which see in it the possibility of lower market prices, with their food bills indirectly subsidized by the payments to farmers. This seeming advantage would be far outweighed by the taxes required to support the plan.

Actually, any plan for artificially increasing farm incomes must be tied to production, unless we want to elevate farmers to the status of an idle aristocracy. But any payments tied to production will automatically increase output, and with it the total of the subsidy.

Experience has shown that Congress can neither order nor bribe agriculture to become prosperous for all who would like to engage in it. If some sense is ever to come out of the situation, it must start toward the only plan that has ever worked—a free market.

# The Spirit Lives On

EXTENSION OF REMARKS

### HON. STEVEN B. DEROUNIAN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 3, 1959

Mr. DEROUNIAN. Mr. Speaker, I should like to include in the Appendix to the RECORD an excellent article, by David Lawrence, on one of the great Secretaries of State in our history, the Hon. John Foster Dulles:

THE SPIRIT LIVES ON (By David Lawrence)

The accolades have been bestowed and the eulogies have been spoken. The tasks performed by the departed have been delegated to an able successor. What concerns us now is whether the eminent statesman who has been lost to the free world has left an enduring legacy.

The fame of John Foster Dulles spread to the four corners of the earth because he was an indomitable fighter for a great cause. He was brave in life and braver still as, with a full awareness of his fate, he approached the brink of death.

It is our duty now to examine carefully the legacy of moral principle which he bequeathed to us. For he strove indefatigably to spare the peoples of the world another big war. He was maligned as inflexible because he would not compromise with evil. He was denounced as too rigid because he refused to bow to the deceptive wiles of an unscrupulous adversary. But he invariably tried every resource of argument and every formula of honorable ad-

justment in order to achieve acceptance of a simple truth—that peoples must be free to work out their own destiny and that military force must be renounced as the sole means of settling international disnutes.

Mr. Dulles believed in personal diplomacy. He tried with all the earnestness and sincerity of spoken words to overcome face to face the handicaps of long-range communication—the cumbersome language of instruction to faraway Ambassadors.

In an age of air travel, the American Secretary felt it would take relatively little of his time to maintain personal contact with high officials of other governments, and he didn't worry about the critics who said he was away from Washington too much. On accepting the post, Mr. Dulles explained to President Eisenhower why he believed in frequent missions overseas. He urged that he not be required to administer the details of his large department. As it turns out, a competent staff—from which the new Secretary of State was chosen—is still functioning today as it has in the past during the absences of Mr. Dulles.

But it is no criticism of the viewpoint which Mr. Dulles held to say that the multiple problems that he handled would appear to be too much for any one man. It would have been better if there could have been established, inside the Department of State, a council of five outstanding men to function without administrative duties but concerned primarily with the broad principles of foreign policy. Such a plan was outlined on this page on Nov. 14, 1952. The problem deserves anew the careful attention of the Congress and the administration.

The world is fortunate that Mr. Dulles was able to carry the load so well. He could do so only because he derived added vigor from his unswerving confidence in the rightness of the principles he espoused. God gives inspired men extra strength to fight the battles of mankind.

The essence of the Dulles philosophy in foreign policy was that morality must triumph over unmorality, that a surrender to expediency can only lead to eventual disaster. He was ever mindful of how the paths of appeasement let to two World Wars. He saw no merit in cringing before the enemy or in taking any steps that could be construed as weak or irresolute. He believed that, to avoid war, it is necessary to risk war. On this he never deviated, though the cynics ridiculed his willingness to take risks as mere "brinkmanship."

Nor did Mr. Dulles ever 'allow material considerations to sway him. His hardest decision undoubtedly was his recommendation that the United States publicly disapprove of the British-French policy in the attempted seizure of Suez by force in 1956. For this, he has never been forgiven in certain quarters in London and Paris where resentments still rankle. But the courageous application of a principle against friend and foe alike is a mark of true morality itself.

To withhold diplomatic recognition, moreover, from the regime in Peking required a heroic determination and an unflinching devotion to principle. Too many people have been ready to forgive Red China's aggression and accept criminal rulers into respectable society, endowing them with a prestige they do not deserve.

Are we who remain behind willing and ready to carry the banner that John Foster Dulles held aloft and, irrespective of political party, put moral values above the passion for material gain and ephemeral comforts that so often present such alluring alternatives in dealing with world affairs? Or are we to forsake ideals because that is seemingly the easier way?

The spirit of America has always been consecrated, on the battlefield and elsewhere.

to the attainment of unselfish ends-that liberty and freedom might be enshrined throughout the world. This was the spirit that Mr. Dulles breathed throughout his whole career. This is the spirit which will live on because it was and is the spirit that from the birth of the Republic has guided the American people in war and in peace.

# Who Will Be the Next President of the United States?

EXTENSION OF REMARKS.

# HON. WILLIAM C. CRAMER

OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES Wednesday, May 27, 1959

Mr. CRAMER. Mr. Speaker, I take great pleasure in calling to the attention of my colleagues in the House a very fine editorial from the Jackson, (Miss.) State Times which discusses the question "Who Will Be the Next President of the United States?"

I think this is a particularly enlightening editorial, and will be to many Members of the House. It contains jus-tifiable accolades for Vice President Nixon who, in my opinion, has been one of the most effective and one of the greatest Vice Presidents in the history of the country. Eight very sound arguments in favor of the Vice President's nomination and election to the Presidency are propounded in the editorial and they certainly deserve, as is suggested by the editorial, the serious consideration and deliberation on the part of the people of this country:

WHO WILL BE THE NEXT PRESIDENT OF THE UNITED STATES?

(By Oliver Emmerich)

As the political situation stands today it appears that Vice President Nixon will be the next President of the United States.

Now hold your fire. This is neither a recommendation of the Republicans nor a de-

nunciation of the Democrats.

This editor was one of the Mississippi delegates who walked out of the National Democratic Convention in Philadelphia in 1948. He has been a delegate or alternate delegate to five or six different Democratic conventions from this State.

Our reasons for making the statement regarding Nixon are here presented. They are controversial and our readers can decide for themselves whether or not they hold up by

the side of logic and fact.

In politics no one knows what will happen tomorrow. We can only judge tomorrow's events in the light of today's circumstances.

First, Vice President Nixon has the Republican organization almost solidly behind him. It is obvious that the Republicans are striving to present a solid front. There is a movement in Republican circles to discourage opposition so that solidarity may be a factor in the Republican campaign.

Second, Vice President Nixon is the first man in U.S. history who has been particularly trained for the post of the presidency. President Eisenhower has consistently worked with his Vice President as though he wanted to be certain that in case of death a qualified man would succeed him. Thus for 7 years Nixon has been engaged in a training program for the presidency.

Third, the Democrats have many leaders who covet the Presidency. These leaders dif-fer in political philosophies. Different seg-ments of the party hold that their respective leaders are the strongest politically. One segment insists that Mr. Stevenson will again be the nominee. Others respectively espouse the cause of Hubert Humphrey, Lyndon JOHNSON, JOHN KENNEDY, and STUART SYM-The field is also open for dark-INGTON. horse candidates.

The Democrats lack solidarity. The indications point to growing division because of the varied degrees of liberalism within

the party.

Fourth, the Democrats have shown by recent reactions to circumstances that they are sorely in need of political issues. was revealed in the Democrats reaction to the threat of recession. Democratic leaders advocated large spending programs. It was revealed again in their reaction to the problem of unemployment. Time seems to have solved both of these emergencies without the need of added billions in Government spending. The effort to find a political issue has also been revealed in the Demorcatic Party's aggressive fidelity to the civil-rights program and in Democratic Chairman Paul Butler's insult to the people of the South.

Fifth, the Republicans have a platform. They are not frustrated by a lack of issues. They have capitalized upon the need of considering fiscal problems. The President has advocated balancing the budget. They have given at least lip service to the lessening of deflicit financing, curtailment of Federal spending. They have evinced less hostility to private business.

Important today in the minds of many people are the fiscal facts of national life and the Republicans have established their

platform in this field of thinking.

Sixth, the people of the United States have indicated that they find some satisfaction in maintaining Democratic leadership in Congress and Republican leadership in the White House. It is a means of slowing down progress, yet many Americans feel that it is an added means of checks and balances.

Seventh, political fortunes are often made by circumstances. The people of the United States have indicated that there are three things they want-peace, prosperity, and progress.

Today the country has peace, enjoys prosperity and has made progress.

How much of this is the result of Congress and how much is the result of White House leadership is a debatable question. But in the presidential election these three political elements of the moment will be accepted as achievements of the White House and hence will be used effectively by the Republicans in their campaign.

Eighth, earlier in his political life Nixon was regarded as an opportunist. It is generally agreed that he has applied himself during the past 7 years and has grown in

Recently in Washington he was the banquet speaker of the American Society of Newspaper Editors. His part on the program was to answer questions fired at him from an audience of more than 500 editors. He acquitted himself well, suggesting to the editors that he possessed an understanding of the acute problems confronting America.

Who will be the next president of the United States?

Obviously no one knows. However, these eight reasons suggesting that it might be Nixon, are offered to our readers for their deliberation.

In 6 months the political picture could be changed completely. But this is as it impresses us today.

# Address by Hon. Alf M. Landon

EXTENSION OF REMARKS

#### HON. WILLIAM H. AVERY

OF KANSAS

IN THE HOUSE OF REPRESENTATIVES Wednesday, June 3, 1959

Mr. AVERY. Mr. Speaker, the following is an address given by the Honorable Alf M. Landon at the Rotary Club, Manhattan, Kans., May 28, 1959, in which he sets forth his comments on the Vice President's address before the Academy of Political Science. Mr. Landon discusses a very important topic in the field of international relations. It is one which should command the attention of each Member of Congress. The speech fol-

COMMENTS ON THE VICE PRESIDENT OF THE U.S. ACADEMY OF POLITICAL SCIENCE AD-

#### (By Hon. Alf M. Landon)

I speak today in the role I enjoy-that of objective discussion. Already the lines are forming in both parties behind the candidates for the presidential nomination in 1960. The bandwagons are being rolled out and painted and greased. The doing some preliminary tooting. The bands are

Senator John F. Kennedy evidently has deliberately timed his campaign unusually early to get out in front of the field. He probably will enter presidential primaries in more States than any other candidate. But it is interesting to note that Thomas E. Dewey carried more presidential primaries in 1940 than any other candidate-and yet was denied the nomination by the Republican Na-

tional Convention.

Senator Kennedy is the pacesetter and that strategy is forcing the other Democrat possibilities to start pushing their campaigns ahead of the normal time-except for Gov. Adlai Stevenson. Like an old pro in a 4mile race, he is letting the field set the early pace-saving his wind for the home stretch.

There is one fixed immutable law in politics. That is, the party in power is judged by the voters by whether times are good or

In the Republican Party the two obvious candidates, Vice President RICHARD C. NIXON and Gov. Nelson D. Rockefeller, of New York State, are following more customary strategy of not risking getting out too far in front at this stage of the preconvention campaign. But it is not too early for all of us to pay attention to the national candidates' positions on vital problems involving the life and death of our great and wonderful Republic.

The first of these is the next President's conception of our U.S. foreign policies. You and I are going to have the opportunities, come 1960, to have our say about what our country's foreign policies should be, and now is the time for discussion.

Come what may, there is no disagreement among Americans on standing pat on Berlin. Apparently the best that will come out of the Geneva Conference is more talking. And that was to be expected. As long as talks continue between Imperialist Soviet and the free countries there is hope of avoiding open war on a worldwide scale. History is full of agreements and treaties that were made and broken and made again. There was a time when England was called perfidious Albion.

Vice President Nixon has made what can be the most important fundamental and farreaching proposal involving a reversal in our

international policy.

On April 13, in New York City, Mr. Nixon said for himself and the administration, "the time has now come to take the initiative in the direction of establishment of the rule of law in the world to replace the rule of force" through the International Court of Justice at The Hague operating in the framework of the United Nations. That Court consists of judges representing the following 15 countries: Egypt, China, Australia, Greece, and Poland whose terms expire in 1967; France, Mexico, El Salvador, United Kingdom, and Argentina whose terms expire in 1964; Uruguay, United States, Norway, Pakistan, and U.S.S.R. whose terms expire in 1961.

Because of the attention centered on the Conference of Foreign Ministers attempting to lay the foundations for a peaceful settlement of the crucial Berlin situation, the Vice President's proposal has not attracted the attention it deserves. Any statement on public affairs by Mr. Nixon, the leading candidate for the Republican presidential nomination cannot be disregarded as just another speech. That is even more significant when he was presenting the administration's position on which the President's recommendations to the Congress would be forthcoming.

The question of whether greater resort to a World Court at this time is sound and desirable is a major one. It is somewhat of a nonpartisan one because Senator Hubert Humphrey has authored a resolution before the U.S. Senate to repeal what is commonly called the Connally amendment, by the former U.S. Senator-from Texas, that in effect reserves to the U.S. Government the right to determine what cases it will submit to what is generally called the World Court.

Mr. Nixon uses the words "modifying this reservation" in describing the forthcoming

Mr. Nixon uses the words "modifying this reservation" in describing the forthcoming changes in the national administration's policy with reference to the United States greater utilization of the International Court of Justice. But he does not say clearly and definitely what he means by "modify." In fact, what does he mean when he says:

"As the President indicated in his state of the Union message, it is time for the United States to reexamine its own position with regard to the Court. Clearly all disputes regarding domestic matters must remain permanently within the jurisdiction of our own courts. Only matters which are essentially international in character should be referred to the International Court. But the United States reserved the right to determine unilaterally whether the subject matter of a particular dispute is within the domestic jurisdiction of the United States and is therefore excluded from the jurisdiction of the Court. As a result of this position on our part, other nations have adopted similar reservations. This is one of the major reasons for the lack of judicial business before the Court.

"To remedy this situation the administration will shortly submit to the Congress recommendations for modifying this reservation. It is our hope that by our taking the initiative in this way, other countries may be persuaded to accept and agree to a wider jurisdiction of the International Court."

The first question that occurs to me is whether Mr. Nixon was loyally speaking only for the administration on the policy of modifying our world court position—or for himself as well. When he says, "Clearly all disputes regarding domestic matters must remain permanently within the jurisdiction of our courts"—the question arises who is going to determine what are or are not domestic matters.

Mr. Nixon is being widely quoted as favoring himself modifying the so-called Connally amendment that reserves to the U.S. Government the right to determine what are domestic matters—not subject to the jurisdiction of what is commonly called the world court.

Whether the Vice President—or the administration—is serious about changing the Senate resolution—known as the Connally amendment—to the U.S. ratification of the statute of the International Court of Justice—Mr. Nixon's address is being taken seriously by many.

There is quite a campaign on to get the Connally reservation repealed and thereby expecting to activate the world court that has been almost a nonentity. Quoting Mr. Nixon: "In its 12-year history an average of only two cases a year have come before the tribunal."

Our President has been talking in generalities about the world court. In his state of the Union message last January he said studies were going on about ways to utilize the Court.

Yet in a most justiciable case—President Nasser's —of Egypt—seizure and nationalization of the Suez Canal—our State Department made no attempt to get that case referred to the world court. And neither did the other countries involved.

Apparently our Allies are not interested at all in using the world court on policy issues of this nature.

France flatly stated that its hot potato— Algeria—is strictly a domestic matter and therefore outside the jurisdiction of the United Nations and world court.

When the United States attempted to cite the Soviet before the world court for shooting down an American military plane—thereby murdering its personnel—the Soviet declined to let the case go to the world court on the ground that it was within their domestic jurisdiction.

Therefore, it must be admitted that the Court of International Justice is at the present time practically a mere symbol of what it should be.

That does not mean that we should not be greatly interested in developing a world court in fact—instead of being content with a paper one—with a glittering facade—and empty interior.

Vice President Nixon used the word "reexamine" as well as "modifying" in describing his position and that of the administration future world court policy. I am all for that reexamine. But it should include our whole field of international relations.

There are highly important questions of international policy that must be pressed if the world court is to have a chance to function as it should.

Does the administration in its attempt to increase the greatly desirable independent adjudication of international agreements and disputes intend to propose to widen the jurisdiction of that court by including Red China? That would mean a reversal of our policy refusing to recognize the Government of that country and opposing its admission to the United Nations.

It is obvious that establishing a rule of law, equity, and justice in the world will require the inclusion of 600 million peoplethat is expected to exceed 1 billion by 1980—the first election for babies born this year. To leave out a country of that size would be as if the jurisdiction of the Supreme Court of Kansas covered all the State except Wyandotte County.

A Court of International Justice has got to be just what the title says it is. Where you have a rule of law and order you have got to include all peoples—any single segment of mankind—which Red China is.

There is the question of what would the Court of International Law and Justice do with Premier Khrushchev or Premier Chou En-lai when they fiatly repudiate their agreements or run around in a circle of conflicting

statements. The contradictions in the Communist tyrants' statements are amazing and baffling.

Let me offer as the last witness on that point the great and most powerful noncommitted, leader in the world—Prime Minister Nehru, of India. Quoting from the Prime Minister's address to the Parliament of India a few weeks ago on Red China's doubletalk:

"When Premier Chou En-lai came here 2 or 3 years ago, he was good enough to discuss Tibet with me at considerable length. He told me that while Tibet had long been a part of the Chinese state, they did not consider Tibet as a province of China. Therefore, they consider Tibet an autonomous region which would enjoy autonomy. He told me further that It was absurd for anyone to imagine that China was going to force communism on Tibet.

"All I can say is that I have been greatly distressed at the tone of the comments and charges made against India. \* \* \* They have used the language of the cold war, regardless of truth and propriety. This is peculiarly distressing in a great nation with thousands of years of culture behind it, noted for its restrained and polite behavior. The charges made against India are so fantastic that I find it difficult to deal with them."

Countless people through the ages have dreamed of a world living under a rule of law, equity, and justice in international affairs. I think the free world has the degree of maturity that would enable it to comply with an independent court's decisions; but in view of their record, the Communist countries would not, unless it suited their avowed purpose of world conquest.

At the present their definite policy is to attempt to make their own law of force and the threat of force stick in every area and every part of the world, without the slightest base of public approval.

Until there is a basic change of that policy, I do not believe the free world can look for too much from an expanded jurisdiction of the World Court, either geographically or by removing statutory limitations.

Until the Sino-Soviet autocratic governments recognize the advantage to them of peaceful coexistence, it's too much like a game of one-o-cat with no umpires. Because the World Court cannot be an umpire in reality, unless there is some power to enforce its decisions. However, we must show the Sino-Soviet tyrants that we can survive and thrive in spite of them and beat them at every game they play.

While we are at this reexamine business, let our great and wonderful Republic go all the way in reviewing its foreign policy.

I believe it is to America's interest—and that of the free world—for the U.S. Government to vigorously support Spain's admission to the North Atlantic Treaty Organization.

That great nation is strategically located, with a strong and virile people, whose experience with communism was so tragic that Spanish people are definitely opposed to its bitter fruit.

As for Generalissimo Franco being a dictator suppressing democratic processes, one factor for sure exists—that is, both the Government and the Spanish people, from experience, from tradition, and from religion, are strongly opposed to communism.

That is our self-proclaimed enemy. Why concern our international policies with either the political, social, economic, or religious philosophy of any people who are as much involved—as we are—in the Communist threat to colonize them and bury them. We cannot afford the risk of being too choosey in picking friends and allies.

We should by all means reexamine our Middle Eastern policy with the Arab peoples. To them President Nasser is as much the father of his country-as Washington is to Americans

The President of the United Arah Republic has shown that he will not be pushed around by imperial Soviet-any more than he will be by any of the western democracies. In fact, President Nasser's policies are the most effective check to the Soviet attempt to reestablish colonial rule in the Middle East, Therefore, it is good sense for the United States to meet him half-way in working for the peaceful stabilization of the Middle East.

I believe these three policies-China, Spain, and Middle East-are more vital than our

world court policy.

The first step to strengthen the world court and broaden its jurisdiction by wiping out any and all unilateral reservations by all countries on what are or are not domestic matters. That first step must be taken in the broader field of international relations in order to make the Court successful as an independent adjudicating tribunal in international affairs.

The argument most used against a world court that could actually and in fact apply a rule of law is—that it whittles down our

national sovereignty.
Of course, it would. But that has been the trend since World War II-and it is going

to continue.

In 15 years we have gone a long way in participating in international organizations and subordinating our national sovereignty to collective security.

A sound, strong, and indisputable Court of International Justice of worldwide jurisdiction is greatly to be desired in the whole wide field of intertwined political and economic life.

There is considerable agitation for increase of investment in foreign countries by private

capital.

There have been suggestions of Government insurance to protect American com-panies from losses on their foreign investments through acts of foreign governments. That would mean another huge government bureau and all kinds of actuarial difficulties in arriving at fair settlements.

That would certainly precipitate settle-ments of insurance covering those losses

into the dusty political arena.

Every settlement-fair or foul-would be the target of congressional investigating committees—and an issue in every campaign.
There are two other ways that the much

to be desired investments by risk capital in the development of other countries can be encouraged.

One is to protect those investments by force. But that is neither wise nor feasible in the world of now. The old days of what was known as dollar diplomacy are gone forever.

The remaining way and the best way of protecting risk capital from unreasonable acts by government is the use—by all nations-of a workable world court-and compliance with its devisions.

There is a long, rocky, hilly road to travel before the objective can be obtained of a world court rendering decisions on the basis of reason-equity and justice-that would be complied with-by all parties concerned.

That cannot and should not be attempted overnight-as the Senate resolution offered by U.S. Senator HUBERT HUMPHREY to repeal the Connelly reservation would do. If adopted by the Senate it would most decidedly and abruptly affect our inter-national relations with the rest of the world.

I believe our adoption of wider jurisdiction by a world court must be a slow and evolutionary process-because the most important aspect of such moves is the support behind them—and the court itself. It can-not be done by printing a document, Prof. Arthur M. Schlesinger, Sr.-writing of the formative and constructive impact of the United States on the world-said:

"Viewed as a whole-the contribution of America will be seen for the most part in the nature of methods and processes.

Professor Schlesinger's article listed great ideals in government and human relations combined with American realism that made them workable.

A world court—that would justify that title by its jurisdiction-its prestige-and its authority-is truly a great and exciting adventure

The causes of the cold war are so deep seated that I believe we must feel our way seeking areas in which our great republic could safely take some chances in trying to orient the world to the idea that it had better get used to abiding by accepted lawsor else there won't be any world left.

# Controlling Farm Prices Leads to Controlling Farmers

EXTENSION OF REMARKS OF

## HON. JOHN J. RHODES -

IN THE HOUSE OF REPRESENTATIVES Thursday, May 7, 1959

Mr. RHODES of Arizona. Mr. Speaker, under leave to extend my remarks, I wish to call the attention of the House to an editorial written in the Saturday Evening Post of May 30, 1959. The editorial entitled "Controlling Farm Prices Leads to Controlling Farmers"

CONTROLLING FARM PRICES LEADS TO CONTROL-LING FARMERS

Stanley Yankus, a poultry farmer at Dowagiac, Mich., who fed his chickens with wheat grown on his own farm, has decided to emigrate to Australia, where he hopes to find farming less complicated. Over here he was fined more than \$4,000, for theoreti-cally having increased the national wheat surplus.

Despite the furor aroused by the virtual confiscation of Yankus' property for this alleged crime, the Government continues to alleged crime, the Government continues to bring these suits. One concerns Evetts Haley, Jr., who lives in Texas and ralses wheat in Oklahoma. He is a cattleman and got into trouble with the bureaucrats by raising feed for his cattle. He lost his case, although a Texas Federal district judge ruled in his favor on the ground that the law was unconstitutional. The Supreme Court reversed the decision, and Haley has to pay. Secretary of Agriculture Benson, violat-

ing the pattern of bureaucracy, wrote to Yankus, congratulating him upon his courage, explaining that he had no way of making exceptions in the law that is administered by his own Department.

More recently Mr. Benson told a gathering at the annual Farm and Home Week, Cornell University, that he, as Secertary, is required to administer "the most costly, irrational, hodgepodge program ever patched together." He cited the results of a recent poll by a natioanl farm magazine which "showed 8 out of 10 of the farmers want greater freedom and less government in farming."

Since the price support-virtual subsidyis the pivotal question, being the pretext for imposing fines for alleged overproduction. Mr. Benson quoted a breakdown of the ballot which showed that 55 percent voted for "no supports, no controls, no floors, free

market prices, get the Government clear out. \* \* \* Another 15 percent favored emer-gency supports only. \* \* \* Another 8 pergency supports only. • • Another 8 per-cent wanted adjustment supports such as recommended by the administration. • • • Only 22 percent wanted more Government price help."

His final conclusion was, "If this is what farmers want, what are we waiting for? What is Congress waiting for? We've made our recommendations, why don't they act?"

We have to face this question fairly: Does a sane agricultural policy require such unfair, unpopular and generally cockeyed

#### I Am Brooklyn

EXTENSION OF REMARKS

# HON, ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES Wednesday, June 3, 1959 -

Mr. MULTER. Mr. Speaker. I am pleased to commend to the attention of our colleagues the following poem "I Am Brooklyn," written by the principal of Public School 212 in Brooklyn, Mr. Samuel G. Gilburt. The poem was written to commemorate Better Brooklyn Month, March 20, 1959:

I AM BROOKLYN

My myriad miles of homes, brownstone, frame and stucco, house my 21/2 million people.

Tree-lined avenues, serrated with many lawns, spattered with privet hedges, cover my expansive acres.

In spring I am sun-splashed with forsythia, azalea, and rhododendron.

My broad ribbon arteries, Kings Highway. Ocean Parkway, Linden Boulevard, with clusters of light bulbs like giant marigolds, banish the dark at night. I am Brooklyn.

A slice of America am L for I reflect the raw. healthy, polyglot strength and culture of America.

Americans all-my Irish live in Red Hook, my Finns in Sunset Park, Italians in Bath Beach, Germans in Ridgewood, Jews in Brownsville, Negroes in Stuyvesant, Syrians in Bensonhurst,

In my shipyards, lumberyards, warehouses distilleries, sugar, oil refineries, and factories work my citizens,

From Bushwick, Gravesend, Fort Greene, New Utrecht, Boro Park, Greenpoint, Crown Heights, and Flatlands.

Foreign commerce streams through my 33 miles of developed waterfront. steamship freight lines, 14 trunklines of weaving rails, through renowned Erie Basin and Bush Terminal. I am Brooklyn.

My skyscraper, "1 Hanson Place," lifts a jagged stone needle to the clouds, with a four-faced clock for an eye,

The bell of my Dutch Reformed Church built in 1796 has tolled the funeral of every American President.

My Brooklyn Museum has a permanent collection of the arts and crafts and primitive culture of Malaysian, Egyptian, Japanese, North African, and American Indian.

My Grand Army Plaza Library is a diadem among libraries, with hundreds of branches, circulating 7 million books, to more than 600,000 eager borrowers.

I am Brooklyn.

I am a wonderful place in which to live, to rear children. Neon-lighted Flatbush Avenue and Fulton Street have glittering stores, topped by A. & S., my mighty mart.

My fabled and spacious Botanical Gardens is a garden of gardens, tranquil, exotic, luxuriant, herb-garnished, and cherry-tree scented;

With its unique Garden of Fragrance for the Blind, aromatic with sweetbrush and spicebush, sage and chive, textured with furry catnip, and threadlike plumes of golden fleece, coarse-spired

cacti and prickly ivy.

My Aquarium abounds in fin-twinkling. darting, speckled, shiny, tawny fish of

all kinds and shapes.

Coney Island is the "world's largest play-ground"—kaleidoscope of freak shows, skee-ball stands, waxworks, penny arcades, sizzling red-hots, and

Carousels, cotton-candy, crisp crabs, corn-on-the-cob, chile-con-carne, and

cacophony.

Go thru the red rolling barrel of fun to
Steeplechase Park, the Mecca of millions; ride the whip, the cyclone, the chaser, and the thunderbolt.

I am Brooklyn.

Romp in my wooded Prospect Park with its rolling, verdant meadows, picnic grounds, tennis courts, baseball diamonds, lagoons, zoo, parade grounds, bridle paths, and gravel walks.

Stroll thru my quite residential streets-Evergreen, Dorchester, Esplanade, Emerald, Exter, and Celestial Court,

Or would you prefer Lamont, Lancaster, Laurel, Lee, Lefferts, Lyme, Louisa, or Lincoln Road?

My esteemed and eminent citizens include Tom Paine, the good gray poet, Walt Whitman, the flery Henry Ward Belden, the distinguished John G. Whittier, and comic Danny Kaye. I am Brooklyn.

Giant sea swans-the Queen Mary, the Mauretania, the Ile de France-with hoarse notes, slide down the gray-green carpet of my shimmering narrows to the wide Atlantic.

Flung gossamer webs of steel, air, and wire are my wondrous bridges-the Manhattan, Brooklyn, and Williamsburg.

Though the Dutchmen built my first houses on Wallabout Bay in 1637, I still grow, blossom, and flourish day by day in every way.

I am a Borough, bigger than most cities, a name known everywhere, a uniqueflavor, a tradition of respectable family life, of friendly church and synagogue.

I am always planning, building, wrecking, rebuilding—newer, bigger, better. I stand tiptoe eagerly facing the atomic future.

I am Brooklyn.

# Statement in Support of a Register of Trained Manpower

EXTENSION OF REMARKS OF

# HON. LEONARD G. WOLF

OF IOWA

IN THE HOUSE OF REPRESENTATIVES Wednesday, June 3, 1959

Mr. WOLF. Mr. Speaker, under leave to extend my remarks, I wish to insert in the RECORD a part of the recent testimony of Mr. William A. Douglass before the Committee on Science and Astronautics.

Mr. Douglass is president of a private corporation which uses the National Science Foundation register of scientists and engineers to provide an employment placement service. His testimony illustrates the usefulness to the American economy of a register of trained manpower. It also points out certain shortcomings of the National Science Foundation register for mobilization purposes. Mr. Douglass stated that the value of the register could be greatly enhanced by broadening its scope, by making registration as nearly universal as possible, and by adopting uniform and simpler classifications and terminology. I believe his remarks will be of general interest for the light they shed on the problems of mobilizing scientific and professional manpower:

REMARKS BY MR. DOUGLASS

My name is William A. Douglass. I am associated with Careers Inc., a vocational publishing firm with headquarters in New York City. We publish and distribute two books, one titled "Career: For the College Man," and the other titled "Career: For the Experienced Engineer and Scientist."

Ten years ago my college classmates and I needed employment ourselves. Korean war shortages brought every day a host of com-panies to our campus. The very multiplicity of ob opportunities was confusing. company had its own glamorous pitch. We

didn't know who to believe.

Our answer to this situation was to collect and publish page-long comparative profiles of every company coming to campus before it came there. In this way we hoped to eliminate some needless blind alleys for ourselves and for the companies, who after all had only a limited time to spend on campus.

The idea was evidently a good one. It was the beginning of Careers, Inc., of which I am now the president. More than I million copies of our annually revised publication "Career: For the College Man," have now been distributed to successive waves of college seniors. I should point out that these books do not cost anything. The employers pick up the tab. Unfortunately, in the fields of science and engineering, the colleges cannot keep up with the demand. Last year, therefore, we began distributing a new publication "Career: For the Experienced Engineer and Scientist." More than 80 leading employers, including facilities of the armed services and the Federal Government, now support this project on annual contracts. One hundred and fifty thousand copies of this new publication have already been distributed

Now in the experienced field men and jobs cannot be merged simply by a publication. You have a man in Brownsville, Tex., who is wanted, we will say, by research labs in such distant points as Silver Spring, Md., and China Lake, Calif. First of all labs must find this man with his particular specialties, and furthermore, know of his willingness to move. Keep a central file, you say? Surely, but in what form? Any national file involves thousands of people. To be useful it must be completely crossreferenced, constantly updated, and in such a form that anyone—not just specialists can use it.

I have here such a file system. anywhere in the world can look at the research expert from Brownsville and be in contact with him in less than 24 hours. This folder encompasses the backgrounds of 400 men. Their qualifications were posted as of April 15. Their availability is updated every 90 days. In that 90-day period, if their qualifications look good, they may hear from as many as 20 or 30 of our co-

operating employers. Here is a shorthand system of communication which works like lightning. The adaptation of data processing to the matching of key men with needful employers has been an unqualified and exciting success. I feel it is still in the model T stage when compared to its potential for development.

Now, gentlemen, this fabulous system is not our baby. It is the work of the National Science Foundation right here in Washington. To be sure, we have had to make adaptations, but I want to impress you with the fact that we are proving day to day, again and again, and in a free market, just how practical this register is in solution to heretofore insurmountable problems of communication in the Nation's vast lob market.

Obviously, the Foundation cannot use its information to run a placement business, but think of the potential uses for this register if its mechanism is applied not just to the limited number of men interested in changing jobs, but to our Nation's entire scientific and engineering population. Such a register might list 1 million men. What a gold mine it would be for you gentlemen in this present inquiry. Instead of opinions and selected samples you would have the complete picture. How many physicists speak Russian? And of those, how many have doctorial proficiency in nucleonics? And of those, how many are located within 100 miles of Washington? Not only for defense but for constant study of utilization, education, motivation, etc.—such a register could be the conclusive source.

Now, you say, "Mr. Douglass, such a register was established by law in 1950. You know this because your company is using it. It is the very same one you have mentioned over at the National Science Foundation," and I must answer "Yes, it is the same register as established by law in 1950 but that same Congress which established it has never given it enough money to develop even We know. a pittance worth of its potential." We use it. The codes are hopelessly out of date with reference to modern technology. The sciences are heavily overbalanced to the detriment of engineering. The whole system is heavily weighted to the language of the academic world, which confuses men now accustomed to the everchanging terms developed at their work.

Some organizations have already developed what they feel to be more practical classsification systems of their own. We have sought to prove the NSF register—the only one established by law-even with its imperfections, in the hope that our success with it will help its betterment and the development of a single language for manpower classification in this country. Every anyone sets up his own register and his own code systems, the more chaos of understanding and the more imperfect the data which will result. If a national crisis developed today, our efforts to mobilize critical scientific and engineering manpower would be hamstrung by the crazy quilt methods of classification now in use.

Leonard Carmichael, now head of the Smithsonian Institution, had a staff of around 300 during World War II when he pioneered development of the National Roster of Scientific and Specialized Personnel. The present register, at a time when science is the recognized forefront of the cold war, has a staff of three professionals and two secretaries plus help from 20 or 30 people in professional societies. The societies, by the way, function as collectors of registrants through their membership. The trouble with this is that cooperation is voluntary; many men do not belong to societies; many societies particularly in engineering are not covered. Though NSF has succeeded in getting perhaps two-thirds of the scientists into the register, much of the information is several years out of date and in this era that is the equivalent of decades.

I would like to see one register only. I would like to see it completely updated annually. If that's too big a job for the Foundation, then perhaps it could be done by one of the other agencies involved in manpower data collections. I would like to make registration compulsory for every engineer and scientist in industry, education, self-employment, Government, and the armed services. Our experience indicates that cooperation of all will be easily obtained if (1) the identity of individual registrants is coded—absolutely confidential except in times of war—and (2) if reports result which will tell the individual registrant important things about himself and the field in which he works. In fact, such a register would further recognize the professional status of our engineers and scientists and will provide public recognition of their import to us.

What will all this cost? I have one suggestion that it could be done for around \$3 million a year. The gain? I think my previous statements make the many facets of our national gain clear. The tendency in the past has been to see such a register only for its original mobilization purposes. It assumes real weight, however, when one sees it as the only conclusive answer to the vital questions you men are asking in these hearings. I do not see how this Nation can hope to properly assess perhaps its most key manpower resource if it is to rely on the scanty information presently available to it.

scanty information presently available to it.

Incidentally, if the register is made an absolute reflection of the modern scientist and engineer, the mobilization purpose will be served, practiced, ever improved without cost to the Government. If the register is the best system and not, as at present, just another system, Federal agencies, the armed services, even employers will turn to it and use it for their own internal classifications. My small company already has brought the potential of the NSF system home to 80 employers, many of whom match our codes internally so they can look for a man in their own company before seeking him outside.

It will be no surprise to you to know that Russia has a register, and from all reports a very good one, used right down the line through their various ministries. Comparisons may be odious but I think any fact of life is worth bringing in if it will help bring home (1) our dangerously laggard position, and, (2) the commonsense, and the necessity, of our fully utilizing our register resource. It alone can tell us where we need to concentrate our utilization forces.

Mr. Wolf. What percentage of all of the scientists and technicians, and so forth, are registered somewhere in this country, and what percent would you say are still floating for which you have no figures?

Mr. Douglas. Well, the National Science Foundation tells me they have about two-thirds of the scientists in this country in their registry. They have a very small percentage of the engineers in this category, because the emphasis has been on science registrations.

I gather from the nature of the National Science Foundation it has been closer to the academic and government world than it has to the industrial world.

Of course I would like to see its purview expanded to include engineering talent also. This is a register for research purposes.

#### Monsignor McNulty

EXTENSION OF REMARKS

# HON. CORNELIUS E. GALLAGHER

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 3, 1959

Mr. GALLAGHER. Mr. Speaker, I wish to join in the many tributes which have appeared in the press of New Jersey in expressing a deep loss over the death of the Right Reverend Monsignor John L. McNulty, president of Seton Hall University. The passing of Monsignor McNulty a great humanitarian has saddened all those who had the privilege of knowing his friendship.

Monsignor McNulty was one of the truly outstanding churchmen and educators of our times.

Under leave to extend my remarks, I include herein the editorial tribute which appeared in the Jersey Journal of May 28, 1959:

MONSIGNOR MCNULTY

If the capacity to adapt to vastly different persons and situations is one of the truly great gifts, then Monsignor McNulty was one of the most blessed men we ever had met. For he was many things to many people—all of them good.

He was, first of all, a priest—but evaluating that facet of him is beyond the scope of a secular newspaper.

He was an educator, one of the best in a State which has many good ones. If some of the groundwork for raising Seton Hall from the status of college to university was done by his predecessors, it must be admitted that he brought it through to completion handsomely.

The development of the College of Medicine and Dentistry was, however, strictly his own. Upon breaking this barrier in New Jersey education he staked his reputation as an organizer and administrator—and he won. The Medical-Dental College in the Jersey City Medical Center will be his monument in education. He never seemed to think of it as a monument yet he put his soul and heart into its development; perhaps more heart than he could afford.

He was a friend of the drunks and the bums and there is no telling how many or who among the respectable, comfortable, completely controlled men and women today owe it to him. As with the organization through which he worked diligently, helping alcoholics was an anonymous job.

He was one of the most entertaining and elevating speakers we ever heard. No matter how often he started a speech with his joke about standing in a hole (he was quite short) it always got a laugh—and always was the first step along a way paved with worthwhile thoughts beautifully expressed.

The last time we saw him was a few months ago; he had asked us to sit down in a small group and play around with some thoughts on a public relations program. It went on for a couple of hours. It seemed to bring out some worthwhile ideas. He was thankful as he hurried off for the next stop in his busy schedule.

We hope our suggestions helped. It would be a good feeling to have added a little extra touch to the monument of one of the most interesting personalities we have ever met in a business that finds most people wonderfully interesting.

Honorary Degree for Mrs. Roger L. Putnam, founder of Catholic Scholarships for Negroes

EXTENSION OF REMARKS

# HON. EDWARD P. BOLAND

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 3, 1959

Mr. BOLAND. Mr. Speaker, on Monday of this week Manhattanville College of the Sacred Heart at Purchase, N.Y., conferred an honorary degree of doctor of humane letters on Mrs. Roger L. Putnam, of Springfield, Mass., who founded Catholic scholarships for Negroes.

Mrs. Putnam is the very charming and gracious wife of Roger L. Putnam, former mayor of Springfield and, as many of my colleagues remember who worked closely with him, former Price Stabilization Administrator during the Korean war serving under President Truman.

Under leave to extend my remarks, I ask that the news story from the Springfield Union of June 2 concerning the honorary degree and the citation to Mrs. Caroline Jenkins Putnam, be printed in the Appendix.

Mrs. Putnam Gets Honorary Degree at Manhattanville

Mrs. Roger L. Putnam, founder of Catholic scholarships for Negroes, was awarded the honorary degree of doctor of humane letters at the 118th commencement of Manhattanville College of the Sacred Heart, Purchase, N.Y., Monday. It was her fifth honorary degree. Following is the citation which was read before the conferring of the degree:

"Caroline Jenkins Putnam grew up in Charles County, Md., where atmosphere and social traditions were more southern than in the far reaches of the Deep South. Her holy and happy life of homemaking brought her into the heart of New England where she ably seconded her distinguished husband in the service of worthwhile civic causes. As her sons and daughters grew up, she found ways of translating her love of God into action outside her home, and doing the truth in charity took many forms; cofounder of the Holy Child Guild, founder of the first Catholic bookshop in Springfield, director and advisor in state-wide commissions. All this readied her for the apostolic venture which began on the memorable day in 1946 when, with her husband, she founded a perpetual scholarship for a Negro student at Regis College.

"Almost before she knew it, she was engaged on a national and international education venture. The Catholic Scholarships for Negroes was founded. With the charm

of a Southern belle, the bargaining power of a Yankee merchant, and the irresistible persuasiveness of a convinced Christian, Caroline Putnam set about opening doors and minds and hearts. Since 1946, 61 Catholic Colleges have given scholarships to 347 Negro boys and girls. These students have sticceeded academically and apostolically. Today the first holders of scholarships are making their mark as teachers, doctors, workers, engineers. They have - caught her enthusiasm and have founded an alumni association with the avowed intent of opening to other candidates the opportunities which were theirs. The sheer statistics are impressive. But much more meaningful is the moral and spiritual impact of these graduates who play their important part in the life of America and of the church. This is the glory, the so happy outcome of this work. And the end is not This work, founded on the love of Christ, carried forward with invincible hope and modest capital, gathers momentum with each passing year. The best is yet to

"So Manhattanville, which already claims Caroline Putnam as the mother of one of its dear alumnae, is proud and happy today to make her a fellow alumna of that nundaughter, as it confers upon her the degree of doctor of humane letters."

#### Farm Program Economies

EXTENSION OF REMARKS OF

# HON. THOMAS B. CURTIS

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES Wednesday, June 3, 1959

Mr. CURTIS of Missouri. Mr. Speaker, I wish to take this opportunity to call to the attention of my colleagues an editorial from the New York Times of May 22, 1959, entitled "Farm Program Economies":

#### FARM PROGRAM ECONOMIES

Besides being extravagant and a failure, the farm program is also confusing. Thus two events connected with House approval of the regular agriculture appropriations bill have served to divert attention from the basic flaw of the program while creating the impression that something useful was being accomplished.

The first was a cut of \$100 million in the appropriation for the Commodity Credit Corporation, which carries out the price-support program on the ground that the CCC's expenditures were needlessly high. The argument of the Appropriations Committee was that Secretary of Agriculture Benson was not aggressive enough in selling surplus cropschiefly cotton—to foreign nations for dollars.

This was not really a cut at all. It will not affect price-support outlays now or in the future. To the extent it was aimed at forcing Mr. Benson to increase export subsidies on cotton, it will add to our problems with other cotton-exporting nations and in-crease the net cost of the price-support pro-

The other was the vote of the whole House to limit individual price-support loans to \$50,000. There is dispute over whether the amendment will have any real effect as it is now worded; but assuming it does, the farm bloc for once was right. The amendment will not cut Government outlays or farm surpluses. Its most likely effect would be merely to force more sales to the market by large farmers and more sales to the Government by smaller ones. The farm problem

would be as bad as ever.

When and if Congress is willing to reduce artificially high price supports for the handful of major problem crops, there will be some hope in sight for a solution to the farm problem and its enormous costs. Meaningless jiggering with appropriations will accomplish nothing.

### White House Conference on Children and Youth

EXTENSION OF REMARKS OF

# HON. WILLIAM S. BROOMFIELD

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES Thursday, May 28, 1959

Mr. BROOMFIELD, Mr. Speaker: The problems of our younger generation are only partially understood and are largely ignored. In helping solve these problems, the White House Conference on Children and Youth which convenes next year will be a great aid.

Following are the last of a series of articles which appeared in the Detroit Free Press on the coming conference and the need for adequate study of our children and our neighbors' children:

[From the Detroit Free Press, Apr. 22, 1959] (By Warren H, Stromberg)

When a baby becomes aware that he is here and something is there identity starts.

W. Mason Mathews, authority on behavior of young children for the Merrill Palmer School, sees identity as both physical and psychological.

'Anyone who doesn't have a good opinion of himself is not well adjusted," he main-

Somewhere between infancy and the point where one becomes well satisfied with himself or herself-psychoanalysts call it egois the proving ground.

"Shortly after babies find they can manage their fingers they begin to try to manage their elders," Dr. Mathews asserts.

He contends children well adjusted from the beginning can face up to monumental strain. As they mature they build a reserve of strength against emotional invasion.

In early childhood the first behavior patterns begin to form.

"All human beings seek the positive," Dr. Mathews insists, "If they can't get that they turn to the negative. Sometimes, they just

Thus if Dr. Mathews' premises are correct and this point of view is widely accepted -the early years of a child's development set the course for the future.

Some substantiation could come from the fact that nursery schools are booming. seem to be a necessity in every community. cooperative movement is far the most popular because, under this arrangement, parents learn along with their children.

Can identity growth and positiveness succeed in a practical situation?

There are 69 member schools in the Greater Detroit Cooperative Nursery Council, serving approximately 2,400 children-400 more than a year ago-according to Mrs. Norman Cummings, Jr., council president.

Let's take a look at one of them.

The Lake Shore Cooperative, in a church annex at 22707 Harmon, St. Clair Shores, has two morning classes a week for 3-year-olds and a similar program for 4-year-olds.

There are 20 children in each. Class sessions last 2 hours.

June 3

"When I first came into the group I didn't think it would involve so much from me,' the mother of a 4-year-old said.

She and two other mothers were helping the teacher, Mrs. Robert Hanson. The three mothers assist at three class sessions in a row, then another team begins. On Thursdays, all pitch in to clear the room.

Then there are periodic conferences at Wayne State University and local monthly instructional meetings.

"A working mother can't do it," one said. "It means real progress when you have the time and the energy. My child's play habits at home are greatly improved."

Fathers also get involved in building and repairing equipment. They also provide the \$5 registration fee and the \$7 monthly dues.

To an observer the first hour of class is most intriguing. There seems to be complete freedom.

Some of the tots paint. Some mold figures, with clay or bread dough. Some pound nails into a fibrous board.

There is more to it behind the scenes. The mothers have their hands full mixing paint and supplying materials.

The children are getting their first course in citizenship-learning how to get along with each other.

"We had one little boy who insisted on hurling blocks at everyone." Mrs. Hanson said. "I took him to a sturdy table where there were piles of clay. He pounded clay against the table. But this didn't interfere with anyone else."

The second hour started with Mrs, Hanson reading the story about "Tweety," a bird. With considerable reluctance 19 little bodies gradually became still, eyes fastened on the illustrations in the book held aloft by Mrs.

The 20th couldn't seem to come to a halt. Mrs. Hanson asked him if he'd like to go to the other part of the partitioned room and help the mothers pour fruit juice.
Later, Mrs. Hanson explained: "Many are

freeting authority outside of their own homes for the first time. We attempt to redirect their activities rather than censor

"I try to make my approach kind, thoughtful, cooperative and helpful—not dictatorial."

Mrs. Hanson added, "We know children grow at different age levels. And some get buoyed up when the group is large but seem to get along well in small group ac-tivities."

In 3 years, Mrs. Hanson, a university graduate with special training in this field, has never asked a mother to take her child home.

There have been times, however, when she asked certain mothers to attend beyond their assigned dates to help with the special problems of their own children.

Yardsticks of a good nursery program, according to Dr. Mathews, are a pleasant climate, sound structure and freedom.

He also feels there's another kind of structure that's hidden: "It's when the teacher never seems to demand but the kids sense the need to live up to whatever the house rules may be.

"Children will frequently try out at home things they have learned in the nursery and vice versa. Gradually there is acceptance of the proper order of things at each place."
In later stages of childhood and in the

teens identity continues to be a primary factor in growth. These areas also will be studied as Michigan gets ready for the 1960 White House Conference on Children and Youth.

For example: Does identification change with respect to school and the home? At a Scout meeting? Do identities sometimes become confused in new situations?

Do the changing times create an additional pressure that interferes with such development?

[From Detroit Free Press, Apr. 23, 1959] (By Warren H. Stromberg)

Eight-year-old Leroy seems to know more about what's going on in his second-grade class than the teacher. But his school accomplishments are only average.

Whenever money is missing, the others in the class point to Leroy—blond, thin and hungry-looking. Leroy immediately says that one of his older sisters or his parents gave him the money.

Weekends, the three children scour the neighborhood for empty pop and beer bottles. At a neighborhood store the bottles bring cash. The father takes the money.

Henry, 15, dropped out of school desipte State law that says all children must attend school until they are 16.

Henry was offered a job setting pins in a bowling alley. He worked 5 months under a work permit. Then someone complained. An inspector ruled Henry couldn't work there until he was 16.

The oldest brother, Tom, is 20. He found that some of the other boys in the neighborhood who were married weren't being

called into the Army. Tom got married.

Tom and his wife are expecting a baby in June.

"That should be the clincher to keep me out," Tom said.

How do the values of right and wrong as held by members of this family affect community? Do laws provide an answer?

Are the Leroys, Henrys, and Toms so different from the others in the neighborhood?

These are questions that confront those studying children and youth in Michigan preparing for the 1960 White House Conference.

More important are the questions of how the times affect these standards. And, of course, what can be done?

Tom can't get a good job as long as he might be drafted. There are others in the same fix.

Tom isn't alone in avoiding military training. And what of the married men with children being called in some places?

Some city youths call those who go in "suckers." Yet, some who have served gain status in their group.
Should something be done to make the

draft universal?

There is some evidence so-called "middle class delinquency" is increasing. Some say this stems from the emotional instability of our times.

Those who criticize youth today must remember that now youth is brought closer to adult attitudes while adults cling to a separate set of standards.

Ernest L. Bridge, attorney and register of the Wayne County juvenile court, says:

"Youth obeys or disobeys the law to the extent of the climate in which it is reared. Nearly always youth reacts almost exactly to the type of sociological, emotional, and cultural climate that parents, teachers, and

leaders in general create around them.
"Remember that if this climate is not a good one, youth can do very little about it. Adults can change the climate in which they live. Youth cannot.

"They are forced to grow up in whatever environment we adults create for them. many children are problems to you and the community, they are probably the victims of circumstances much more than they are culprits."

Bridge feels that trouble stems from adults

having little and big laws.

"Adults are inclined to cheat and lie about their little laws," he says. "Stealing towels from hotels, false charges on expense accounts, illegal income tax deductions, de-

stroying property while on a convention in another city.

"These are bad enough, but worse when the adults brag about them in front of their families!

Bridge wonders how a teenager is supposed to react when he hears his father brag about fixing a ticket or how he told off that dumb

'We glorify crime, sex, and violence in our alleged children's programs on radio and television," he asserts, "and then scream because adventuresome youth try out the things these media teach them.

"A bill is now pending to prohibit the sale of chemicals that go into rockets. We preach the space age and then by law deny youth the right to experiment."

Grant Bogue, senior staff assistant for the Detroit Commission on Children and Youth, feels strongly about the big gap between youth and adulthood. He calls it "gaps in the rites de passage."

"All societies have ceremonies to portray the passage from one role to another," he points out.

"But for us there is an empty span between the 18-year-old and the 21-year-old.

"The graduation speaker gives them a big sendoff and they're out of school. Then what happens? Too young for an apprenticeship. Can't get a good job because they're draft balt.

"They can't buy a car although they've breathed cars all their lives and, here, we're in the motor capital of the world. A minor can't buy a house unless he has finished the military.

"What kind of a half world is this with the present and the immediate future at

Some say the tendency is toward an ab-sence of values rather than a change in values

Bridfe, Bogue, and others worry that the tendency is to offset this lack of recognition in a sort of negative conformity that often shows itself in odd dress and behavior and other times lies dangerously beneath the surface.

A 21-year-old American student on a scholarship in Holland found questions concerning the values in this country most difficult to answer. He wrote back that he found questions concerning the status of young adults even more perplexing.

# Resolution by Long Island Federation of Women's Clubs, Inc.

EXTENSION OF REMARKS

# HON. FRANCIS E. DORN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES Thursday, May 28, 1959

Mr. DORN of New York. Mr. Speaker, under the leave to extend my remarks in the RECORD, I include the following resolution adopted by the Long Island Federation of Women's Clubs, Inc. in their 108th convention assembled, held May 15, 1959 at Rockville Centre, N.Y. This federation is made up of 104 clubs in all four counties and consists of 60,000 mem-

The resolution follows:

Whereas a rising tax rate adds to the cost of Government, of consumer goods, and of services, and

Whereas such increases contribute to inflation: Therefore, be it

Resolved, That the Long Island Federation of Women's Clubs, Inc., in convention as-sembled this 15th day of May 1959, urges our elected representatives to resist the trend toward mounting governmental expenditures. and to work toward the restoration of a sound fiscal policy; and be it further

Resolved, That copies of this resolution be sent to the following: Dwight D. Eisen-hower, President of the United States; Richard M. Nixon, Vice President of the United States; majority and minority leaders of the U.S. Senate and House of Representatives; Members of the Senate and House elected from Long Island; Nelson A. Rockefeller, Governor of New York; majority and minority leaders of the New York State Senate and Assembly; members of the New York State Senate and Assembly elected from Long Island.

# Marshall College Deserves To Be Marshall University

EXTENSION OF REMARKS OF

# HON. KEN HECHLER

OF WEST VIRGINIA

IN THE HOUSE OF REPRESENTATIVES Wednesday, June 3, 1959

Mr. HECHLER. Mr. Speaker, on May 30 the annual dinner of the Marshall College Alumni Association attracted many old grads to Huntington, W. Va. Climaxing the evening, Dr. Franklin L. Burdette, renowned political scientist, author, administrator, and educator, delivered an outstanding address which deserves wide attention.

Dr. Burdette is currently director of the bureau of government research of the University of Maryland. He was formerly Chief of the Information Center Service of the U.S. Information Agency, with which he is still serving as a consultant. He had a straight-A average as an undergraduate at Marshall College, and he is one of the few summa cum laude graduates of Marshall.

This year was the 25th reunion of Dr. Burdette's Marshall class of 1934. On May 31, at its commencement, Dr. Burdette was awarded an honorary degree of doctor of laws.

In his penetrating remarks, Mr. Speaker, Dr. Burdette stated:

Marshall College as we see it today is in fact a university. It should be so in name.

I would like to state that I not only concur heartily with these comments, but I will work along with others to speed the day when we can proudly call our institution Marshall University.

Mr. Speaker, I spent some of the happiest days of my life as an associate professor of political science at Marshall College. It was for all too short a time, but I developed a deep affection for this great institution; and I will do everything within my power to protect and further the interests of Marshall College and her alumni. On the desk as you enter my congressional office, Mr. Speaker, I proudly display my greatest treasure—a loving cup presented to me by the students of Marshall College in 1957, which is inscribed "Professor of the

I trust that the day is not too far distant when Dr. Burdette's wishes come true and we can call this great seat of learning by the term she deserves, "Marshall University."

Under unanimous consent, I include Dr. Burdette's address at this point in

the RECORD.

In these weeks American college alumni meet with mixed emotions and mixed motives for informal ritual on campuses all the country. We are touched with over the country. We are touched with nostalgia, of course, and with a high rev-erence for many of the things patiently done for us by our professors in the con-cluding years of our formal education. We hold great respect for some of the judgments of our teachers, and undoubtedly we now hold many of their rulings about us in far higher esteem than on the original occasion of vigorous imposition. Reflection and experience have given us a deeper affection for the wisdom of the past. We have found, too, that some of the problems which we could so easily have solved in our days of apprenticeship, had we been allowed carte blanche to deal with them, are far from simple and remain unsolved by the responsible leaders of our own mature generation.

We American college alumni, proud and grateful in the recollection of educational opportunities given to us, have an energizing sense of aspiration and drive not only to preserve the best of the past but also to push forward to new goals of opportunity and achievement. If we are burdened, we seek strength and inventiveness to carry new burdens. If we have met discouragement, we look for ways to turn obstacles into the steppingstones to success. Where there is a world of trouble we look with faith, if not always with confidence, for peace through preparation, cooperation, and

action.

Many of us were children of the depression, and all of us have felt its marks for good and ill upon our country and our way of living. Whatever the time of our origin, we are often and vividly conscious that the days in which we are living now are different from our collegiate days. America has become more populous, more urbanized, more mechanized, and more responsible in a world of political, economic, and social upheaval.

As we West Virginians take stock of our situation we may rightly look with amazement at our progress in the face of obstacles. As alumni of Marshall College, in particular, we have a right to look with pride at the growth in size, stature, and service of our college. As an alumnus and the son of an alumnus, I am deeply conscious of the change and, from generation to generation, of the continuous improvement of our State and of Marshall College. The rich economic resources of West Virginia, challenging both in their importance and in their frequent inaccessibility, have been developed by men of purpose and dedication. No less remarkable has been the insight and perseverance of men and women who have devoted their lives to the intellectual, spiritual, and cultural development of the people of West Virginia. Marshall College today is the product of that kind of dedication. We as alumni are the beneficiaries of a spirit in our State which has always recognized that education, including higher education, is a priceless opportunity and a community obligation without which we as sons and daughters of West Virginia cannot achieve the full promise of our heritage. Our way of life today is the result of our past educational opportunity no less than of our economic enterprise. It is a part of our strength as a people that we recognize the profound importance of education, that we are willing to make sacrifices

mined to plan and build for its greater impact and effectiveness in the future.

Marshall College as we see it today is in fact a university. It should be so in name. Its services to this State, to this metropolitan area, and to a great industrial region in three States not only justify but require that status. While I speak as an individual alumnus, and without consultation on this point with the college or State administrations, I am confident both of the wisdom and of the ultimate inevitability of university rank for Marshall. Many details of organization and of proper relationships with sister institutions require study, but the needs of the day demand both early study and action. Experiences elsewhere have shown that university status, with proper coordination within a logical system of higher education, can bring to State colleges which already perform in fact university roles notable advances in legislative appropriations, alumni and other financial support, faculty status, academic standing and achievement, pro-fessional recognition, and morale.

The educational function of a university has various aspects. I think of them as instruction, research, and service. Marshall has made significant contributions in all three and must be equipped for an even larger role in the future.

We are in a metropolitan area of great industrial expansion, and it is in such an area that many of the most stimulating changes of the century will take place. With great growth and with rapid scientific and industrial development we shall have new, one might easily say staggering, problems of transportation, housing, health, and public security. Adjustments in governmental functions and structure will test the ingenuity of us all to meet the needs for efficient service while we preserve at the same time real democratic processes and local civic responsibility. The preservation of business opportunity, small as well as large, will be one of our major and most challenging objectives. We shall need trained leadership in politics, business, labor, and the professions, and the place of Marshall in educating all who would thus serve the public interest will be a primary one. We shall see a great demand and recognition for men and women who can use facts and logic while serving their fellow men as they want to be served.

Because education does not end with the classroom, Marshall will be called on more and more to provide through its academic skill and integrity, basic research by which important public and private action can be guided. This research will take place in the natural sciences, of course, but if our social engineering is wisely planned, research will be no less important and enriching in the humanities and the social sciences. The academic leadership of Marshall will be called upon, implicitly if not expressly, to provide training, research, interpretation, and practical public services in the board fields of business and of public administration. Government as well as business is in need of vastly broadened facilities and re-sources for planning and creative action. Both will welcome and support the impartial services of Marshall today and tomorrow.

The future will require that Marshall be a living and working part, as it is now, of the community which it serves. We alumni have a great role and a singular obligation in the continuing growth and increasing service of Marshall. That role is partly financial but it is also broadly civic. We may provide not only an important part of the resources and support for Marshall but, in addition, the climate of enthusiastic cooperation which lifts the vision and the aspiration, as if by inspired contagion, of men who value knowledge for the sake of opportunity and service.

#### for its continuance, and that we are deter- LAWS RELATIVE TO THE PRINTING OF DOCUMENTS

Either House may order the printing of a document not already provided for by law, but only when the same shall be accompanied by an estimate from the Public Printer as to the probable cost thereof. Any executive department, bureau, board, or independent office of the Government submitting reports or documents in response to inquiries from Congress shall submit therewith an estimate of the probable cost of printing the usual number. Nothing in this section reusual number. Nothing in this section re-lating to estimates shall apply to reports or documents not exceeding 50 pages (U. S. Code, title 44, sec. 140, p. 1938). Resolutions for printing extra copies, when

presented to either House, shall be referred immediately to the Committee on House Administration of the House of Representatives or the Committee on Rules and Administration of the Senate, who, in making their report, shall give the probable cost of the proposed printing upon the estimate of the Public Printer, and no extra copies shall be printed before such committee has reported (U. S. Code, title 44, sec. 133, p. 1937).

#### GOVERNMENT PUBLICATIONS FOR SALE

Additional copies of Government publications are offered for sale to the public by the Superintendent of Documents, Government Printing Office, Washington 25, D. C., at cost thereof as determined by the Public Printer, plus 50 percent: Provided, That a discount of not to exceed 25 percent may be allowed to authorized bookdealers and quantity purchasers, but such printing shall not interfere with the prompt execution of work for the Government. The Superintendent of Documents shall prescribe the terms and conditions under which he may authorize the resale of Government publications by bookdealers, and he may designate any Gov-ernment officer his agent for the sale of Government publications under such regulations as shall be agreed upon by the Superintendent of Documents and the head of the respective department or establishment of the Government (U. S. Code, title 44, sec. 72a, Supp. 2).

### RECORD OFFICE AT THE CAPITOL

An office for the Congressional Record is located in Statuary Hall, House wing, where Mr. Raymond F. Noyes is in attendance during the sessions of Congress to receive orders for subscriptions to the Record at \$1.50 month, and where single copies may also be purchased. Orders are also accepted for the printing of speeches in pamphlet form.

#### CONGRESSIONAL DIRECTORY

The Public Printer, under the direction of the Joint Committee on Printing, may print for sale, at a price sufficient to reimburse the expenses of such printing, the current Congressional Directory. No sale shall be made on credit (U. S. Code, title 44, sec. 150, p.

#### PRINTING OF CONGRESSIONAL RECORD EXTRACTS

It shall be lawful for the Public Printer to print and deliver upon the order of any Senator, Representative, or Delegate, extracts from the Congressional Record, the person ordering the same paying the cost thereof (U. S. Code, title 44, sec. 185, p. 1942).

#### CHANGE OF RESIDENCE

Senators, Representatives, and Delegates who have changed their residences will please give information thereof to the Government Printing Office, that their addresses may be correctly given in the RECORD.

# Appendix

# The International College of Surgeons and the Health of Our People

EXTENSION OF REMARKS

#### HON. LISTER HILL

OF ALABAMA

IN THE SENATE OF THE UNITED STATES Thursday, June 4, 1959

Mr. HILL, I ask unanimous consent to have printed in the Appendix of the RECORD an address which I delivered to the Alabama section of the International College of Surgeons at its annual banquet at Huntsville, Ala., on May 21,

There being no objection, the address was ordered to be printed in the RECORD, as follows:

THE INTERNATIONAL COLLEGE OF SURGEONS AND THE HEALTH OF OUR PEOPLE

(Address by Senator LISTER HILL to Alabama section, International College of Surgeons, Huntsville, Ala., May 21, 1959)

At the entrance to the International Surgeons' Hall of Fame in Chicago there is a symbolic statue called Hope and Help. This staue depicts a suffering patient whose eyes look upward into the comforting face of the

From time immemorial, my friends, you doctors have played the key role in the alleviation of human suffering. Yours has been the truly international art, for as the great Louis Pasteur wrote, "Science does not belong to any country, because knowledge is a patrimony of humanity."

The history of surgery is shining evidence of the truth of Pasteur's dictum. Medical historians date the first document on surgery, known as the Edwin Smith papyrus, to I Em-Hotep, the earliest recorded physician of ancient Egypt. The germination of surgery then followed a cosmopolitan trail through Hippocrates, Galenus, and Ambroise Pare to Andreas Vesalius, the father of the study of anatomy who from the gallows took corpses of executed criminals that he might study

Early surgery was decidedly on the rough side. In fact, in ancient and medieval times most of the cutting was done by barbers. butchers, dentists, stonecutters and herniot-Through most of the history of mankind, the surgeon has had to work under almost unbearable handicaps; he had to perform without an effective anesthetic, and with no knowledge of asepsis and antisepsis. Preoperative and postoperative care were virtually unknown.

The modern age of surgery really began with the work of William Harvey, an English-man, who in 1628 published his findings that the heart pumped the blood continually in the body. Harvey was one of the great re-search scientists of all times—his animal studies over a 20-year period laid the groundwork for modern physiology. A generation later, the Italian Morgagni made many great contributions to the nature of disease, in-cluding the discovery that tuberculosis is a contagious disease.

The 19th century laid the precise ground-work for the miracles of 20th century surg-

It was in the 19th century that the Hungarian Semmelweis pioneered in the use of antiseptic methods in childbirth. Frenchman, Louis Pasteur, after proving that germs cause disease, developed a process to kill them. Joseph Lister, whose honored name I am privileged to bear, one of the greatest surgeons in medical history, applied the basic ideas of Pasteur to surgery. His use of antiseptics in surgery revolutionized operating procedures. My father studied under Joseph Lister in England and much of what he learned from him prepared him for that eventful night-more than 50 years ago-when on a kitchen table in a Negro shack right here in Alabama, by the flickering light of two kerosene lamps, he performed the first successful suture of the human heart in America.

It is but fair to state that the 20th century has witnessed a golden age of surgery. In 1903 a Dutchman, Willem Einthoven, with his newly developed electrocardiograph first recorded the electrical impulses in the heart. The years since have brought nothing short of miraculous techniques in surgery. 1939 Dr. Robert E. Gross repaired the first congenital heart defect to yield to surgery. In 1945 Drs. Alfred Blalock and Helen B. Taussig developed their famous blue baby operation to correct a combination of congenital heart defects which robbed the blood of oxygen and the tissues of nourishment. This blue baby operation has been demonstrated in all parts of the world, it has saved the lives of thousands of children.

It is impossible to summarize in a few moments the staggering advances of the past decade. In 1949, for the first time in the history of mankind, a surgeon, Dr. Charles Balley, performed an operation inside the heart. Today open-heart surgery is almost a commonplace, and surgeons now remove the aorta, the main artery leading out of the heart, and replace it with a plastic substi-

The International College of Surgeons, founded in Geneva a quarter of a century ago, has played a major role in many of the exciting surgical and medical developments of recent years. Your guiding principle, "Science has no fatherland," is exemplified in the fact that your 13,000 members represent 64 countries. Your general surgical congresses bring together outstanding medical minds and knowledge from all parts of the world. Your international postgraduate surgical clinics, which are held in a score of countries each year, bring the latest surgical techniques to your medical brethren around the globe.

In a truly international spirit of dedica-tion, you have shipped supplies, instruments, sutures, material, gloves and drugs to im-poverished countries whose surgical centers are most desperately in need of this vital equipment. You sponsor research grants to deserving scientists, and you give fellowships to surgeons desirous of improving their art

through postgraduate study.

As you establish new chapters of the college in various parts of the world, you lift the standards of surgical practice, you bring the gift of extended life to many areas of the world where the Biblical three score and 10 years of life is still an unattainable goal. What this means, for example, to the struggling surgeons of Asia, far removed from large medical centers and struggling with staggering problems of infectious diseases which have been wiped out in the West, is told most movingly in the words of Dr. Mu-hammad S. Quereshi at the organization meeting of the Pakistan Chapter of the International College of Surgeons in 1952:

"The establishment of this chapter will enable us to render twofold service to our country: it will place Pakistan at once on the international map of surgery, and will greatly help in the improvement of our surgical standards which means better service to Pakistan nationals. \* \* The college brings about wide, frequent and intimate contacts with the leading exponents of our art. Such contacts with men who have devoted their lives to the solution of surgical problems and have made lasting contribu-tions to our profession are undoubtedly a source of great inspiration and will stimulate us to emulate them."

The late Dr. Elmer Henderson, that gifted and distinguished son of Kentucky who held the presidency of both the American Medical Association and the World Medical Association, probably best summed up your impact when in 1951 in his farewell address as president of the American Medical Association he said:

"The work of the World Medical Associa-tion and of the World Health Organization and that of other groups, such as the International College of Surgeons, has assumed importance far beyond the field of medicine. By serving as forums for the exchange of ideas between men and women of vastly different backgrounds and environments, they initiate a realization of brotherhood that metate a realization of brotherhood that seems beyond the best efforts of diplomacy. Medicine's high role in world affairs is firmly rooted in the very nature of its own work."

In this second half of the 20th century, America holds an increasingly solid posi-tion as the medical fountainhead of the world. Reversing the trend of the 18th and 19th centuries, the trek is now westward across the Atlantic to the United States to keep abreast of the latest developments in the art and science of medicine and surgery.

In a world which modern communication and transportation make smaller each day. we become increasingly aware of the plight of our fellow men in many parts of the world. At the turn of the century the great physician Sir William Osler wrote, "Humanity has but three great enemics: fever, famine, and war; of these by far the greatest, by far the most terrible, is fever." His words still ring true. We are aware of the fact that an underprivileged two-thirds of the human race is constantly afflicted by the ravages of disease. Millions of these people suffer the age-old scourges of malaria, tuberculosis, and the various intestinal infections. many countries of the world a third of the babies die during the first year of life, and life expectancy falls 30 and 40 years short of the Biblical three score and ten.

At present we are engaged in an effort to stop the spread of Communist imperialism, which is competing with us for the uncom-mitted peoples of the world. Communism finds a ready breeding place in the ill health and poverty of the submerged peoples of the world. Communist forces of militant medi-cine are on the march. We have reports that Russia is sending about 2,000 doctors a year to do medical missionary work in these underdeveloped areas.

Yet we who once fired the shot "heard round the world," and gave a new dimension to personal liberty in the founding of a Republic which guaranteed life, liberty, and the pursuit of happiness to all of its citizens, have been slow to meet this challenge.

In the closing days of the 85th Congress, I introduced a bill which would provide the mechanism through which this country would join with all the countries of the world in a united medical research offensive against the major killers and cripplers of mankind. The bill would create, as part of the National Institutes of Health, a National Institute of International Health and Medical Research. This institute would be charged with the support of worthy medical research projects submitted by competent investigators from any part of the world. It would support the training of specialized research personnel here and abroad, it would encourage and support the rapid international exchange of research knowledge conderning disease and disability.

In introducing this bill on the Senate floor, I pointed out that the unfinished tasks facing medical research are truly staggering. For example, cancer, that most ancient enemy of man, is rising in its incidence in 33 countries of the world. What more priceless bounty could be given to the suffering peoples of the world than a cure for this

universal and dread disease?
In the current session of the Congress, 63 Senators joined me in sponsoring this legislation. I am happy to say that on yesterday the Senate passed the bill by a vote of 63 to 17. During the last week in February of this year, hearings were held on this International Medical Research Act, and I think I may state that it received unprecedented and overwhelming support from doctors, scientists, voluntary health organizations, and civic leaders.

Testifying on behalf of the American Medical Association, its president, Dr. Gunnar Gundersen, told our Senate committee of a growing recognition that medicine with its resources and influence fully mobilized can perhaps do more for world peace than the billions of dollars being poured into armaments. Mr. John T. Connor, the president of one of the largest pharmaceutical companies in America, told the committee that "the International Medical Research Act strs the imagination with its opportunities for a new breakthrough in international relations as well as in medical research."

Dr. I. S. Ravdin, the distinguished surgeon who is currently serving as vice president for medical development of the University of Pennsylvania, told us that "we who have gained so much from the research of our own scientists and those from other countries, where good research has been done and is being done, must realize that the more quickly we can assist those less fortunate to begin to achieve what we have so fortunately achieved, the more quickly universal understanding will be won in our troubled world."

Your own Dr. Ross T. McIntire, who serves you so capably as executive director of the International College of Surgeons, strongly endorsed the bill in a very fine presentation before our committee. Following his testimony, Dr. McIntire wrote me that "the International College of Surgeons is so organized that the program that you are proposing in the International Medical Research Act would be a natural, in that we have outstanding men in foreign lands who are in teaching institutions and who are presently engaged in forms of research."

In Chicago you have built the International Surgeons' Hall of Fame which does honor to those great men of all faiths and of all nations who have made immortal contributions to the art and science of surgery. On the day that the hall of fame was dedi-

cated, Dr. Max Thorek, the father of the International College of Surgeons, pronounced these words, which truly epitomize the universality of all surgery:

"We shall honor these men, but not so much as they will honor us. As Agesilaus truly remarked, 'It is not the places that grace men, but men the places.' We are but paying another installment of our age-long debt to those who cleared the way for us, a debt to which we can never write 'paid in full.'"

Let me say that the International Medical Research Act is not only a payment on our debt to the physicians and surgeons of all nations but an affirmation of the ideals which motivate the International College of Surgeons. It states our belief that disease is a universal threat to the family of man, and that we must unite our medical research efforts to wipe out this threat. It accepts the fact that no nation has a monopoly on medical research, and that our own self-interest dictates a maximum effort toward the rapid pooling of the fruits of such research. It accepts the fact that we must raise a common banner under which the doctors and scientists of all lands can march to the goal of better health for all mankind.

Inspired by your devotion to the health of our people, by your courage, your faith, and your generous works for humanity, and moved by the high ideals and purposes of your International College of Surgeons, we shall press forward into the ever-widening horizons of medical discovery and medical knowledge. In the confidence of knowledge, in the strength of integrity, in the tenderness of sympathy, in the fellowship of humility, and in the love of God we shall continue to wage together the never-ending battle for the health of our people, for the health of all peoples, and for peace on this earth.

Value of Education to Women's Significant Role in Our American Life

EXTENSION OF REMARKS

# HON. ALEXANDER WILEY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES
Thursday, June 4, 1959

Mr. WILEY. Mr. President, today, I rise to pay tribute to the very significant way in which American women serve as the focal point of home life, and also contribute in almost limitless ways to our economic, sociological and cultural progress.

In a nation founded on family life, the majority of women, of course, continue to be primarily interested in the home. However, statistics show that today the average woman also seeks employment elsewhere at some time during her lifetime.

Very often, this occurs either immediately after completion of schooling, or later in life, when family responsibilities decrease.

Currently, more than 22.5 million women are employed in the United States. Overall, they are making constructive contributions in a wide variety of fields, including home economics, nursing, biology, chemistry, teaching, secretarial, social work, and a number of other important posts in our economy.

During the current graduating season, from the Nation's high schools, colleges and universities, hundreds of thousands of additional graduates will be seeking employment.

Unquestionably, the formal training received in our Nation's educational institutions has enabled these graduates to perform, not only more efficiently and effectively in their respective fields, but also to receive better pay for their work.

While a college degree is by no means an absolute requisite to a successful homemaking, or other type of career, the consensus of individuals interviewed indicated that their educational experience was extremely beneficial, vocationally, as well as in many other aspects of life. For example, more than ninetenths of the married graduates offering an opinion thought their college experiences helpful in their role as housewife, and an even larger proportion, in their role as mother.

Recently, the Department of Labor issued a report on the current role which women graduates of 1957 are playing in our Nation's social and economic structure. The survey illustrated that 76 percent were working full time; 3 percent were seeking work; 9 percent were still attending school full time; 5 percent were working and/or attending school part time; and 7 percent were not seeking work.

As always, the mother and homemaker, who continues to be the nucleus of America's family, the foundation of our society, deserves our high tribute. In addition, those women who find it possible to assume the responsibility of a successful home life, as well as to make a significant contribution, through their jobs, to our economic and social progress, are to be warmly commended.

The Department of Labor has just published a booklet entitled "First Jobs of College Women." Included in this fine report is a survey among women graduates of ways in which college work might have been more valuable. In view of the fact that the Senate will, before long, likely be considering legislation in the field of education, I ask unanimous consent to have a number of these observations, excerpted from the booklet printed in the Appendix of the Record.

There being no objection, the excerpts were ordered to be printed in the RECORD, as follows:

"My college work might have been more valuable had there been better counseling with attention to my total situation, rather than the counselor just trying to schedule courses I had already chosen."

"I wish that I had had some good advice about what different majors covered. I changed my major three times for lack of knowing what different majors consisted of and what I really wanted."

"Vocational guidance should begin much earlier than the senior year; if not in the freshman year, certainly by the time a student must choose her major department. This vocational guidance should be conducted in an organized and continuous manner by the chairman of the major department in cooperation with the vocational bureau."

"Students should be given more detailed and individual guidance aid. At our school it was optional but I think it should have been required in order to determine our exact needs in our individual fields."

"Guldance toward a vocation, but by my by professors or counselors, but by my "Guldance toward a vocation was not given mother, who is a personnel director. her direction, my schooling has prepared me to work in several different fields.

"My college work was tremendously rewarding and valuable in my own personal life—culturally, intellectually, and socially. I do feel, however, that it was rather unrealistic as far as the business world is concerned."

"The college I attended greatly lacks a progressive, realistic approach in helping students plan for future careers. Many of the courses I took were of little or no help in preparing for the future."

If I had had some counseling in how to use my major in a vocation, it would have

been very helpful."

"From my own experience, colleges are very good in placing men but very seldom do they have good positions for women."
"Representatives from various employ-

ment fields should be brought on campus, not only for interviewing purposes, but for educational and informative sessions or lectures too."

Among the many other comments offered the recent graduates were some which showed concern about the quality of their college education, as revealed in some of the following miscellaneous remarks:

"I feel that not enough was demanded of me in my college education."

"I feel that the college curriculum should provide more opportunity for individual expression and formulation of ideas. much of the college material is hand fed by the professors and not enough is left to the responsibility of the students."

"A lack in my education was the stress on facts and not on ideas."

"I think that my courses that were most valuable were the ones that required outside project work to be done by the student \* made learning a very personal matter which inspired real interest instead of simply a rote memory of facts."

"Research facilities should be made available for all those wishing to do original work in any field. I feel that this experience is the single most valuable one a college can

"While many of the so-called required courses may be valuable for students entering college at 18 or 19, I found them of minimum interest and use to a woman over 30."

Although these comments do not necessarily represent the viewpoints of all the women graduates surveyed, they contain many helpful insights into some of the current problems and thinking of college women Among the large proportion who went to work immediately after graduation, there were some who thought that the difficulties encountered in the transition from college to workplace could and should be decreased. By and large, however, the recent women graduates viewed their college education favorably as they reflected upon it 6 months after graduation.

## Berlin, City of Crisis, Where Free Germans Must Trade With Communists

EXTENSION OF REMARKS OF

# HON. HARRISON A. WILLIAMS, JR.

OF NEW JERSEY

IN THE SENATE OF THE UNITED STATES Thursday, June 4, 1959

Mr. WILLIAMS of New Jersey. Mr. President, in connection with the on-thespot study of the Berlin situation which Representatives Cornelius E. Gallagher made recently, I ask unanimous consent to have printed in the Appendix of the RECORD, an article he wrote on his return to this country.

In his article, Congressman Gallagher depicts the close commercial relationship which exists between East and West Germany. This working relationship between East and West Germany must perforce continue if West Berlin is to survive. As Congressman Gallagher states-

This can be if the United States and her allies remain firm and make a determined stand in Berlin.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

BERLIN, CITY OF CRISIS, WHERE FREE GERMANS MUST TRADE WITH COMMUNISTS

(By Congressman Cornelius E. Gallagher, member, Foreign Affairs Committee, House of Representatives)

Berlin is a city of crisis. The current maneuvers by the Soviet Union to change the status of the divided city is nothing more than refinement of Russia's crude and cruel attempts to starve out the city in 1948.

The only normal thing about Berlin is the calmness of its 2.2 million citizens as they live their lives surrounded by Communist forces which threaten their freedom. West Berlin is an island of freedom in a Red sea.

The great fear of the West Berliner is not the possibility of war, or an attack which could not be repelled by the meager, but efficient military garrisons of the Allied Powers, The great fear is that the Communists may succeed where they failed in 1948 and starve out the city.

You understand this concern when you learn of the degree to which the survival of West Berlin depends on the commercial transport that is controlled and passes through Communist-controlled East

The raw materials and fuel which feed the great industrial plants of West Berlin are brought into the city by rail, truck and canal routes running through East Germany. The manufactured product which is exported moves over these same routes.

Even a curtailment of this transport would seriously disrupt the life of the city. While the military garrison may be supported by supplies moving over certain access corridors, mainly three air routes, one rail route and the Autobahn running from Helmstedt to West Berlin, commerce and industry requires almost the whole net of transportation linking the city with West Germany.

It has been conceded, of course, that West Berlin with its greatly increased population could not possibly be sustained, even to the point of meeting its minimum basic needs, by airlift as it was in 1948.

There exist close commercial relationships between the East and West German business communities and there is a free flow between East and West Germans across the border that divides the two sectors of the city.

The very procedures to which the United States and other occupying powers refuse to submit, such as inspection of motor vehicles, stamping of visas, inspection of cargo, etc., by the East German police, are agreed to by West German business firms and civilians.

All of the coal for heating and industrial use in West Berlin is mined in East Germany. An interesting example of complexities existing in the fields of commerce and economics between the free West Berliners and the Communists of East Germany can be found in the operation of Greater Berlin's important underground and elevated railroads. The underground railroad, the Ubahn, is

owned and operated by West Berlin interests, but the powerplant for its operation is located in East Berlin. The elevated railroad, the Sbahn, is owned and operated by East Berlin. It originates its run in East Berlin, crosses into West Berlin, where it has station stops, and then continues into East Germany beyond the city line. The power for the Sbahn is furnished by plants in West Berlin where its maintenance shops also are located.

The West German Government underwrites the delivery of materials manufactured in West Berlin, which must be moved through East Germany, up to \$125 million. This is a government guarantee of loss in any business venture in West Berlin.

Despite the expanding industry. largest of industrial cities on the continent could not survive without the economic aid

of West Germany.

This working relationship between East and West Germany must continue if West Berlin is to remain a healthy economic community.

The Germans say this can be if the United States and her allies remain firm and make a determined stand in Berlin.

#### Labor-Management Reform Legislation

EXTENSION OF REMARKS OF

# HON. JOHN F. KENNEDY

OF MASSACHUSETTS

IN THE SENATE OF THE UNITED STATES Thursday, June 4, 1959

Mr. KENNEDY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD, an editorial from the Yuma Daily Sun, of Yuma, Ariz.; an editorial from the New York Times of May 22, 1959; and various other editorials, all relating to my labormanagement reform bill.

There being no objection, the editorials were ordered to be printed in the

RECORD, as follows:

[From the Yuma (Ariz.) Sun, May 8, 1959] KENNEDY LABOR BILL IS BIG STEP IN THE RIGHT DIRECTION

The pressure now put upon the U.S. House to pass labor reform legislation along the lines of the Senate-approved Kennedy bill is very substantial.

The Senate's 90 to 1 vote, coming on top of last year's 88 to 1 tally on a similar, though milder, measure, is firm notice that the upper Chamber considers labor reform both a compelling and a nonpartisan issue.

Last year the House chose to scuttle the Kennedy-Ives bill. With the need for reform so thoroughly demonstrated. House Members will find it extremely difficult to explain to the country any further major delay.

The bill, as endorsed overwhelmingly in the Senate, was a victory of Senator John F. Kennedy, of Massachusetts, its author and chief pilot.

To be sure, the measure was stiffened on the Senate floor with certain restrictive features not contained in the original bill as it emerged from committee. KENNEDY felt these features should have been dealt with later in other proposed labor legislation, that their presence in the basic reform bill would hurt its prospects of final enactment.

For a time that fear seemed justified. A storm was stirred when, by a 47-46 yote, a so-called union worker's bill of rights was put into the bill with the aim of assuring individual rights against the union leadership.

KENNEDY and others charged that, as framed, these changes would open the way

to unreasonable and unfair harassment of union organizations, with resultant damage to their effectiveness. Even the bill of rights sponsor, Senator John McClellan, of Arkansas, was persuaded they might go too far. He accepted a toned-down substitute.

Alerted by this test, KENNEDY and his forces blocked all later efforts to introduce strongly restrictive elements into the bill, even while accepting certain limits on picketing, the secondary boycott, and other union pressure devices.

The goal was to achieve a broad measure of union reform without hampering unions'

accepted functions.

Basically, the bill is designed to assure full disclosure of union financial affairs and to promote the operation of democratic procedures in the choosing of union leadership. It is in these areas that the worst evidences of corruption and malpractice have been turned up.

The Kennedy bill is a major stride toward reform. The Nation now looks to the House

to take a step just as big.

[From the New York Times, May 22, 1959] LABOR BILL TO THE HOUSE

All the maneuverings and pressures that played upon the Senate in connection with labor union reform—of which the Kennedy bill was the result—are now being directed to the House and, for the time being to its Committee on Education and Labor, where the bill now lies. It can only be hoped that the forces set in motion by the bill—working for greater strength or weakness—will not result in no union regulation measure at all, as occurred in the last session of Congress. That would fly in the face of one of the clearest public mandates for action ever given to Congress.

The statement on the Kennedy bill by the AFL-CIO Executive Council raises a question of strategy which bears directly on whether action will be possible. The federation has been, and still is, in favor of Federal curbs to parallel its own efforts to clean house and to cover unions outside its own ranks—witness its support, though qualified, of the original Kennedy bill. But the federation is strongly opposed to many of the changes since made in it because they would hamper legitimate and democratic union operations.

The executive council is wise to seek the bill's amendment on the basis of a careful analysis of the specific provisions it objects to—as its statement implies—rather than to oppose it now as a whole. Only extreme provocation could justify the federation in fighting a measure to curb corruption and dictatorship in labor unions.

#### [From the Janesville (Wis.) Gazette, Apr. 25, 1959]

UNITED STATES NEEDS, UNION CURBS

Labor union leaders will how loudly at the so-called bill of rights amendment tacked onto the Kennedy measure by the Senate this week, but such curbs were needed and overdue. By failing in certain quarters to clean house, the leaders themselves brought on the restrictions. There are a multitude of laws under which industry must operate—including those which insure fair treatment of stockholders—so it is difficult to see what is unreasonable about giving union rank and file the same kind of protection.

The amendment calls for identical voting rights and equal protection of union rules, freedom of speech and assembly, freedom from arbitrary dues increases, protection of the right to sue, safeguards against improper disciplinary action, and inspection of mem-

bership rolls.

Legislation to cut the power of union leaders is the result of a long investigation by Congress. The results of these hearings have been making page 1 news for months, and

they showed an ugly picture of embezzlement, intimidation, coercion, misuse of funds, and use of the fifth amendment. Beck is out of unionism and facing prison, but Hoffa is still riding high and if the only way to cut him down is through legislation, then the laws must be passed. The wonderment during these months has

The wonderment during these months has been the apathy of the rank and file. When interviewed and offered anonymity in giving replies, truckdrivers in Hoffa's union thought as a rule that he was "OK," or that he was a good guy or that "they (the Senators) were just trying to get him."

Many persons sympathetic to unionism felt unions should be allowed to clean up their own mess, but the trouble obviously is of public concern and thus becomes a re-

sponsibility of government.

Under protection offered in the bill of rights, union members who want to speak out would have the chance without fear of reprisals. The ultimate responsibility of electing clean leaders rests with them. If they don't act wisely, further restrictions will become a certainty.

Congress should approve the Kennedy bill with its amendments and the President should sign it. This much is owed to the

American people.

[From the Washington (D.C.) Post and Times Herald, Apr. 28, 1959]

WELL DONE, SENATE

The most pointed commentary on the much amended Kennedy-Ervin labor reform bill is the 90-to-1 vote by which it passed the Senate. Even Senator Goldwater, who cast the lone negative vote, admitted that the bill has been immeasurably improved. Many other Senators have reservations about some parts of the bill, but the passage of a broad-gaged measure on so controversial a subject with general approval on both sides of the alse is a very striking performance.

Virtually unanimous action was possible because the Senate avoided extremes. The one decision which seemed to cut loose from well-digested reform, the adoption of Senator McClellan's so-called bill of rights, was wisely modified despite the heated row this effort provoked. The Senate clung to the substance of the bill of rights while discarding some of its sweeping language that might have given unions difficult administrative problems.

The Senate was similarly restrained in handling various other difficult problems. It did not deal comprehensively with secondary boycotts, but it voted to prohibit common interstate carriers from signing labor contracts that would prevent them from handling "hot cargo" from strikebound or nonunion plants. At least this strikes at one conspicuous facet of the secondary boycott problem. Similarly the Senate extended Senator Kennedy's very limited curb on picketing to some additional situations in which picketing is indefensible, without venturing into the most controversial sphere and the danger of thwarting legitimate aims.

Certainly the Senate has not spoken the last word on these highly complex aspects of the labor-management problem. But it has gone as far as it thought prudent in this urgent reform bill. If the House acts with comparable judgment, a constructive labor bill will soon be on its way to the White House. It is scarcely conceivable that the President would veto such a measure.

For the outcome in the Senate much credit is due to Senator Kennedy even though the Senate found it advisable to stiffen his original bill in many particulars. Special credit is also due to Senator Ervin, the cosponsor, Senator McClellan, and the group of liberal Republican and Democratic Senators who worked out the bill of rights compromise. With continued good management, this bill may well stand out as one of the chief landmarks of the present session.

[From the Raleigh (N.C.) News and Observer, Apr. 28, 1959]

HOUSE MUST ACT ON LABOR BILL

For the second time within 2 years the U.S. Senate has passed a labor reform bill with virtual unanimity. The vote last year was 88-to-0 and this time it was 90-to-1.

The bill now goes to the House where it deserves a better fate than was accorded it last year, when it met with hostile receptions by both the Labor and Rules Committees.

No one can deny that reforms to cope with abuses in labor unions are needed and no one has attempted to do so. On the other hand, no one has claimed that the Kennedy-Ervin bill, with or without the amendments attached in the Senate is perfect. Obviously, it is not.

Whatever the bill is not, however, it very definitely is a great improvement over existing law. Both last year and this year the Senate recognized this indubitable fact by voting for the bill overwhelmingly, after differences as to various sections had been threshed out.

Last year nearly all Republicans and some southern Democrats in the House took the postion that they would prefer no bill at all unless it was one that suited them exactly. Some Republicans even said openly that they preferred no legislation in order to preserve the disclosures of labor abuses revealed by the McClellan committee as a campaign issue for the 1958 congressional elections.

The elections have come and gone, with scant comfort to the Republicans and the House must act and act promptly if it is to retain its position as a responsible legislative body.

The House Labor Committee, headed by Representative Barden, is acting faster than it did last year, and is already conducting hearings on a companion House bill. Those hearings should be completed expeditiously and the bill should be carried to the floor in time for final action by the end of the present session.

Some Members of Congress feel the bill goes too far in punishing labor, others feel that it does not go far enough. The bill however, does provide a definite advance over existing law and that advance should be made.

[From the Minneapolis (Minn.) Morning Tribune, Apr. 28, 1959]

THE SENATE'S LABOR BILL

The labor reform bill approved by the Senate Saturday represents a triumph of compromise over stubbornly held opinions.

The wonder is that any bill at all was passed, considering the fact that several presidential hopefuls were involved in the preliminary tug of war. It is not easy to whittle out a labor law when so many of the whittlers are casting anxious glances toward the White House. In this case the anxious glancers included Senators Kennedy, Johnson, Humphreey, and Symington, not to mention Vice President Nixon.

Only one vote was cast against the Kennedy-Ervin bill, that of Senator Barry Goldwater, Republican of Arizona. Yet even Goldwater, the Senate's most implacable advocate of severe controls over labor, admitted that the bill was much stronger than it was when it came from committee.

It is quite true, as GOLDWATER suggests, that this measure is not a full solution to the problem attacked. Yet if it is a good partial solution, as it appears to be, surely it deserves to survive.

Perhaps the most impressive testimonial for the bill lies in the 90 votes cast for it. These included the vote of Senator Kennedy, who felt that it had not been crippled by amendments, and of Senator McClellan, who praised it as "a good strong bill that can

go a long way toward cleaning up internal problems within many unions.

The spectacle of KENNEDY and McCLELLAN closing ranks after they had disagreed vigorously on amendments was an unexpected one. In a way it symbolized the Senat's desire to conciliate, rather than to emphasize, many conflicting points of view.

The 90-to-1 Senate vote by no means assures final passage of the bill. Last year the Senate approved the Kennedy-Ives labor bill 88 to 1 only to see the lower House defeat This year another House fight may develop between those who want stiffer labor controls and those who do not. But stronger support for the Senate-passed measure is claimed.

Perhaps the House is ready to acknowledge that a bill which seeks to guarantee democratic union practices and honest union procedures is better than no bill at all even if it does not go as far in the regulation of labor as some Taft-Hartley revisionists would like.

Last year a bitter House fight resulted in no bill at all. Surely the Nation has a right to expect something better than that in 1959. It will not easily forgive another failure to make at least a beginning toward effective controls over abuses which the McClellan committee has so shockingly revealed.

[From the Chicago (III.) Wall Street Journal, Apr. 28, 1959] THE SENATE LABOR BILL

The labor bill the Senate has sent to the House is neither the Kennedy bill, not the administration bill, nor is it a McClellan bill. It is a product of many minds, hammered out on the anvil of compromise, and its value may be gaged by the view many Senators hold of it: It will wholly please neither labor nor management.

Management will not care very much for the union sweeteners retained from the Kennedy version in the present measure. For example, organizational and recognition picketing is to be permitted even where the employees of the place under siege have shown little or no interest at all in joining a union; in the building trades, the requirement of new employees to join the union when employed in a union shop has been reduced from 30 to 7 days. And the Senate gives strikers who have been replaced by nonunion workers the right to vote in union recognition elections within certain time limits. Nor, to be truthful, do these grants to union leaders appear to serve the public interest.

Balancing them, though, are some of the restrictions on and responsibilities now required of unions. The measure does demand fiscal responsibility by unions, and it grants, through the courts, the right of union members to union information, to hold secret ballots to remove union officials deemed guilty of misconduct, and to require local union elections every three years.

Nor are these all; the bill prohibits hot cargo clauses in transportation-which gave union-organized truckers the right to refuse to handle freight carried by a trucker the Teamsters disapprove of. This curb on union power is in the public interest, but it is not only the Teamsters who wielded that power. The House, in fairness, ought to extend the ban on hot cargo clauses to other industries, among them the building and garment trades, and not limit the curb only to transport.

To be sure, Mr. Hoffa did more to assure passage of this labor legislation than any so-called enemy of labor; the rights granted union members to call their leaders to an accounting, like the hot cargo clause ban, are one direct result of the McClellan committee revelations of the manner in which Mr. Hoffa rules the Teamsters' empire.

And that is, after all, the way labor laws actually come to pass. This particular measure, if it passes the House and becomes law, will not by any means cure all the ills of labor-management conflicts. It dos not, for example, come even close to doing anything shout the chief root of union power, which is union exemption from the antimonopoly laws that all others must observe.

But on balance, the public interest is better served by this measure than if there were no new labor laws at all. And the public interest is, after all, the interest the Congress should hold paramount to all other Interests.

Soviet Russia's 7-Year Plan

EXTENSION OF REMARKS

### HON. PAUL H. DOUGLAS

OF ILLINOIS

IN THE SENATE OF THE UNITED STATES Thursday, June 4, 1959

Mr. DOUGLAS. Mr. President, the 7-year economic plan launched by the Soviet Union this year is a subject of widespread interest and discussion in this country. Some observers regard it as a very serious and menacing threat to the security interests of our Nation. Others view it seriously but tend to minimize its alleged threat. The proper estimate depends, of course, on the framework of reference used by the analyst, and in connection with the totalitarian nature of the empire known as the Soviet Union prime political motivations cannot be excluded from any reasonable assessment of its economic plans.

An interesting and instructive discussion of this current plan recently took place over the Georgetown University Forum. This award-winning forum, conducted under the able directorship of Rev. Francis J. Heyden, S.J., and Rev. Daniel E. Power, S.J., is well known to many Members of Congress. The Georgetown University Forum continues its public service by having offered this particular program in which a panel of close economic analysts of the Soviet Union participated. The panelists were Mr. Leon M. Herman, specialist in Soviet economy, the Library of Congress; Mr. Hans Heymann, Jr., economics research staff member, the Rand Corp., and Dr. Lev E. Dobriansky, professor of economics, Georgetown University.

This discussion furnishes an analysis of the essential parts of Moscow's 7-year plan. It reveal its points of strength as well as weakness. Because of its contribution to our thinking about the significance of this plan, I request that the transcript of this discussion be printed in the Appendix to the RECORD.

There being no objection, the transcript was ordered to be printed in the RECORD, as follows:

U.S.S.R.'s 7-YEAR PLAN

MODERATOR. "U.S.S.R.'s 7-Year Plan," topic for the 636th consecutive broadcast of the Georgetown University Radio Forum, another in a series of educational and informative programs from Washington. The Georgetown Forum was founded in 1946.

This is Matthew Warren on the campus of Georgetown University, historic Jesuit seat of learning in the Nation's Capital.

Over 6 months ago, the Kremlin embarked on the formulation of a 7-year economic plan for the Soviet Union. Recently, there has been much discussion about the goals of the plan. Moscow's propaganda machine emphasizes that the fulfillment of the plan would greatly close the economic gap tween the Soviet Union and the United

Would you further set the scene for this 7-year plan for us, Dr. Dobriansky?

Tuesday, Dr. Dobriansky, Gladly, On January 27, this month, the Communist Party of the Soviet Union will hold its 21st congress. As many of you know, the pre-ceding congress was held in February 1956. Now most Americans will certainly be bombarded by a good deal of propaganda ema-nating from Moscow about what I consider to be the grandiose features of this particular 7-year plan. I am reminded of the fact that at the last congress there was a great deal of propaganda with regard to the sixth 5-year plan. And if one goes all the way back to 1928, at the initiation of the first 5-year plan, one will find Stalin uttering pretty much the same words that I suspect Mr. Khrushchev will be uttering on Tuesday, January 27, namely, that the Soviet Union will close the economic gap with the American economy. In other words, this is the economic expression of a general political race that has already found its expression in the solar orbit, with the lunik and the sputnik, and also in the military area with the rockets and missiles, and now in the economic.

I think before going into the question as to the nature of an economic plan, one should bear constantly in mind that it would be an obstructionist error to look upon the economy of the Soviet Union as an isolated phenomenon, actually, that economy, unlike ours, is heavily motivated politically. Politically objectives are constantly set forth and ultimately determine to the largest extent the directions of economic flow and invest-

So, with this in mind, Leon, could you tell us about the nature of the economic plans.

Mr. HERMAN. Yes; I think it is a good way to begin by drawing a distinction at once between a long-term plan in the economic system used in the U.S.S.R. and the annual plan. The Soviet economic system must be governed by a plan, as we all know, because the Soviet leadership refuses to accept the market as a mechanism for balancing supply and demand. Not because they find the market inefficient, but rather because they find that it serves the wrong master, namely, the consumer

Now to make sure that the resources are used precisely as the political leaders want them used, the economy is governed not by a system of contract between individual producers and consumers but rather by a set of directives to all enterprises, issued from a single command center. This set of directives, taken together, is called the plan, and it is operative really only in its annual form. It's the annual plan which really holds the economy together, holds it in balance, and achieves the kind of results that are being watched by the leadership.

Now the long-term plan, as distinct from the so-called bread-and-butter, year-to-year plan, is an animal of a slightly different color. It represents the elements of the planning mechanism prepared for purposes of public consumption and for a general guidance in the future. The people who prepare the 5-year plan or the 7-year plan are not responsible for sighting every single indicator. They select the ones that look best, and to that extend it has to be regarded not so much as a precision document but rather as a

collection of desiderata.

The one in general, the one we're speaking about today, of course, is called a 7-year plan. It covers the period of 1959 through 1965. Why are we dealing with a 7-year plan? This has a little interesting history of its own. In February 1956, as just indicated, there was prepared and launched a plan called a sixth 5-year plan, but apparently something went wrong in the calculation and the plan fell And it's this 7-year plan that is introduced to pick up some of the wreckage of the previous plan and to take them up to this next target year of 1965.

Now we are studying, discussing this plan today largely not because we think this will tell us precisely where the Soviet economy will stand, but rather that its ingredients will tell us what the general direction of economic development will be in the U.S.S.R. think the first element to discuss, from the point of view of the general direction, would

be the investment pattern.
Mr. Hans Heymann, Jr. Leon, since you pointed out quite correctly that this plan should not be viewed as an exact blueprint, I'd just like to add one word to this: That we should not perhaps take this plan too literally, but we should take it seriously, because even though past plans often fell short of their goals, they did achieve a substantial rate of growth in the economy, and the features that characterized this or caused this rate of growth are again present in this new 7-year plan. The central feature is the investment plan, meaning the amount of the Nation's resources that the Soviet leaders are planning to plow back into the economy.

Mr. HERMAN. This is the amount that would be withheld from consumption.

Mr. HEYMANN. Exactly. It is placed into the further growth of industrial capacity. Now when you look at this total volume of investment that is planned for the next 7 years, you find that it is substantially larger than was in fact invested over the last years-in fact 88 percent larger. But when you look at the way these additional resources are being distributed among the different sectors of the economy, you find that the result of this distribution is precisely the same percentage allocation of resources as was achieved during the last 7 years. In other words, all of the sectors of the economy-industry, agriculture, housing, transportation-are to share equally in the additional resources.

Mr. Herman. Share equally? There might be a misunderstanding there, Hans. It almost seems as if everybody gets the same share.

Mr. HEYMANN. No. Share equally in the marginally added resources that are to be invested in the economy.

Mr. HERMAN. They get the same share of the total melon, so to speak.

Mr. HEYMANN. Exactly. So that when you look at the percentage distribution of Investment by sector, it is identical in 1959 through 1965 to what it was doing 1952 to 1958.

Now this doesn't mean that there was an equality of these shares. On the contrary, the thing that strikes you about this new plan is that the emphasis is placed on heavy industry, and industry generally, as against the other more consumer-oriented sectors of the economy. The share of industry is to continue to be the overwhelmingly largest share, accounting for almost half of total investment.

Dr. Dobriansky. Hans, there are certain points which you have made here that require further elaboration. When this plan was first announced, a great deal of the propaganda emphasized the great strides that are to be made in the increase in the standard of living of the people in the Soviet Union. Now this has always been, going back for that matter to the first 5year plan, starting in 1928. I just wonder,

whether there is no substantial difference. percentagewise, with regard to the flow of investments in this plan as against previous plans: whether this substantial stride in standard of living could be achieved in Khrushchev's time, or even beyond.

Mr. HEYMANN. This plan seems to differ in this respect from previous Stalinist plans. Under Stalin there was a clear-cut emphasis on one priority: heavy industry. All other objectives were permitted to be sacrificed in order to achieve this one. It seems to be that during the last few years, and again under this new plan, there are indications that Khrushchev approaches this somewhat differently. He does not allocate more resources for the benefit of the consumer, but he seems to be more reluctant to sacrifice the resources going to the consumer in order to achieve the heavy industry plan.

The unfavorable aspect is that again under this plan the overwhelming emphasis is on heavy industry. About 46 percent of total investments are to go to industry; all but 3 percent of this, of the total, is to go to heavy industry. Light industry will share in this investment plan only to the extent of 3 percent of all investments in the So-

viet economy.

Dr. Dobriansky. To put it another way, this can be said to mean that in the Soviet economy the prime product is more capacity to produce more capacity.

Mr. HEYMANN. Exactly.

Mr. Dobriansky. Yes, but is this difference substantial enough to justify these really politically motivated expressions, namely that by 1970 all the Socialist countries would produce about one-half of the total world output; secondly, that there would be such marked increases in the standard of living that the Soviet economy will be very close to the economy of the United States? let me just cite one thing. In the 7-year plan they claim that they will realize about a 70-percent increase in total agricultural output by 1965. For them to do that, and that is a basic source for the increase of about 40 percent in average real income, they would have to increase their agricultural production in foodstuffs and feeds to roughly about 50 to 66 percent.

Now, could they possibly do that? When we stop to consider that in the past 4 years Mr. Khrushchev went all-out in this whole virgin land development, he brought in many marginal lands. Yes, he reaped some success. He had 2 years of favorable weather. Now having done all that, it's very significant to me that in the plan there is no mention of a similar virgin land campaign. Where are they going to find the resources in that area to bring about that agricultural increase and, as a consequence, bring about an increase in real income of about 40 percent? Looking at these things, I am very skeptical. In fact, I think the contradiction to the fulfillment of many of these targets and the increase in standard of living rests in this one vital sector.

Mr. HEYMANN. Lev, you have put your finger on the weakest spot in the Soviet economy, and I quite share your pessimism on the ability of the Soviet economy to achieve the goals in agriculture. I see no prospect of the Soviet Union continuing to be so lucky with the weather as they have been during 2 of the last 3 years. I see no source of added virgin lands that can be brought into play on a large scale. The increases in agricultural output will have to come from greater efficiency, greater productivity in agriculture, and this is a costly operation. On the other hand, I would not share your skepticism on industrial consumers' goods, in other words, manufactured consumers' goods. Even though only 3 percent of investment is to go into the production of televisions, washing machines, and the like, this 3 percent is the same slice of a

much larger ple in the next 7 years, and therefore can be expected to yield substantial increases in some of these commodities. I think by 1965 washing machines, vacuum cleaners, and the like will cease to be the rare commodities they are today. Not so for automobiles: the Soviet economy will not be an automotive economy such as ours, and there will be tremendous segments of the consumer phase which will be totally neglected by 1965, and I would argue also by 1970.

So in this respect, I quite agree with you on consumer goods. I do not see where the Soviet economy can hope to come anywhere close to our present record, to say nothing of what we may be able to accomplish by

that time.

Mr. HERMAN. Yes. This brings us to a dilemma which now faces the planners. The formula, apparently, as they have been working it so far, is a going formula. The amount they will hold annually from consumption and plow back in terms of new plants and new machinery is giving them new growth. But they have now reached a stage in which they are asking themselves whether they will ever have enough manpower to spare to devote to the production of consumer goods. And I think it might be useful to cite a few figures to illustrate this dilemma. They look at the U.S. economy, as we all know, as the laboratory, the model which they wish to emulate.

They look at it today, say, in 1959-59 with say 1957 data as the background, and what do they see? They see they have already reached the U.S. level, and overreached it in terms of the labor force they use in industry. Citing Soviet figures here, we see that in the number of workers in industry in 1957 the Russians had 12 percent more than the United States, Moreover, in the number of engineers employed in industry the Russians had 204 percent of the U.S. level. But with this input in manpower they received a product which is less than 50 percent of ours-to be exact, 43 percent.

This raises the question to them in this form. Growth is there, it continues from year to year, but somehow they must learn this lesson of growth better than they have in the past from the United States in particular; find out how is it that the United States has a labor force in industry slightly smaller and yet produces a different productmix, and has more for the consumer.

And I think this is where Khrushchevism differs from Stalinism, I would say, in the disposition of economic resources. Which brings us to the point of what is being done in the 7-year plan to close the qualitative

gap between the two economies.

Dr. Dobriansky. Well, before you get into that, if I may bring out this point, Leon, on the matter of the labor supply. Roughly, the Soviet Union has an increase of about 1.5 percent per annum in population, and I think they are beginning to feel the pinches of a relatively inadequate labor supply. This has partly necessitated the general change or alteration in their educational plans in order to get more of the young ones in the age limits of 15 to 18 years for fulltime or parttime employment. Also, it's interesting in the plan that you have an inducement set up for women to continue to be employed, in the sense that Mr. Khrushchev is attempting to rectify somewhat the low income brackets. Now, when we take all that into consideration. I'm just wondering whether they will really be able to achieve any marked increase in labor productivity, or will it necessitate, instead of depending upon increased labor supply going into the factories and into the fields, a strain on already strained investible resources, in further mechanization, better techniques, and, if you will, in automation and in the development of synthetics and numerous other things that are incorporated in this plan.

Mr. HEYMANN, I can paint this picture even blacker for you if you want, Lev. Not only is the problem serious in labor supply; it's also serious in capital inputs. That is, if you think of economic growth being the result of two factors of production, and capital, you find a diminishing supply of labor that can be used over the next 7 years, because of the deficit in births during the war that are now entering the labor force, and you also find diminishing returns in capital investment. That is, you have to go further afield, you have to dig deeper to obtain the same increase in output that you had during the past.
Mr. HERMAN. You have to go farther geo-

graphically.

Mr. HEYMANN. Farther The problem then is with declining productivity of the two principal factors of produc-What do you do with this problem? And we are right back to the question that Leon posed: what about the qualitative possibilities for improving efficiency, internal efficiency in this system. And here we have a fairly questionable situation, because you run head on into conflict between the ideology and the long-range conception of a centrally organized, authoritarian-directed economy which wants to control everything from the center and, on the other hand, the for internal, local, decision-making, flexible, efficient organization within the plant and in the fields, and there is a con-

Mr. HERMAN. Excuse me, Hans, where do they look to in the search for better economic organization, better methods of economic calculation? Do they again look to the West? Would it be fair to say that so long as capitalism exists and progresses, socialism will continue to grow?

Mr. HEYMANN. Well, it certainly would be fair to say that they look to the West. They look to the West not only in technology, in the field of trying to obtain from us, for

the sake of copying-

Mr. HERMAN. This is standard practice.

Mr. HEYMANN, This is standard practice. I think they also look to the West now for guidance on organizational ideas. seems to be a lot of interest in the Soviet Union, for example, for getting delegations from the United States who know something about managerial organization.

Dr. Dobriansky. Well, gentlemen. suggests another important point. I just wonder whether this whole Mikoyan campaign and the campaign that's to succeed it is not in part pointed at actual, concrete American and other Western assistance in helping them buy up goods to overcome some of these problems in their chemical industries and numerous other industries; in effect, have the West assist Moscow to fulfill some of the targets in this 7-year plan.

Mr. HEYMANN. Yes, I think that's right, Lev. In this sense, Khrushchev's contribution to Soviet economic growth is evident. Khrushchev differs from Stalin in the sense that he accepts that capitalism, somehow, the doctrine notwithstanding, continues to grow, be healthy, and display tremendous capacity for progress, and he wants to learn it. At the same time, I think Khrushchev also accepts that the Soviet experiment in new forms of living is becoming more and more irrelevant to European, reality. And for that reason he seems to have, at least if not in doctrine in practice, given up trying to convert the West to communism. Instead, he is using the experience of the West to strengthen the Soviet economy and make it a model for the underdeveloped nations, where, you must remember, the face of the Soviet economy makes a quite different impression. There, there is such tremendous hunger for growth of any kind and so little concern with the niceties of democratic institutions that the Soviet economy can be looked at from the point of view of the

underdeveloped countries as an economy that has something to contribute. So I agree with you that we will probably be playing the role in the nearest future of helping the Soviet economy willy-nilly to make a better showing but to use that showing not so much vis-a-vis the West but toward the underdeveloped countries for the purpose of gaining influence, gaining converts, and perhaps expand communism in that direction.

Dr. Dobriansky. But, Hans, also for the intensification of their own growth and for their military buildup; after all, in the What cold war Moscow is still our enemy. you were saying here is that we might be put in the position-as a result of the gullibilities of certain American businessmen, and even some of our politicians-of strengthening our own enemy toward our own destruction.

Mr. WARREN. We have about a minute and a half. This question to each of you gentle-men: Is the Soviet Russian 7-year plan a challenge to the United States?

Dr. Dorriansky. I would say that it's a bogus challenge. More power will be added, to be sure. But when one looks at the American economy in all its aspects, diversified aspects, different goods, the high quality of our goods. I don't think that we have anything to fear. The 7-year plan, again, is an economic expression of typical Russian totalitarian bluster, bluff, and, of course, determination.

Mr. HERMAN. The 7-year plan will, beyond any doubt make the Soviet economy stronger and therefore enable the rulers of that system to use economic expansion as one of the avenues by which they intend to press their offensive against the free world.

Mr. HEYMANN. I consider it a challenge not so much in the sense of growth of production, but in the sense of an increased ability to utilize Soviet resources to promote and advance Soviet military objectives all over the world.

Mr. Warren, Thank you, gentlemen, for your participation in the discussion, "The U.S.S.R.'s 7-year plan."

#### The Trust That Is Left to Us

EXTENSION OF REMARKS

# HON. HARRISON A. WILLIAMS, JR.

OF NEW JERSEY

IN THE SENATE OF THE UNITED STATES Thursday, June 4, 1959

Mr. WILLIAMS of New Jersey. Mr. President, Americans have dedicated one day a year for special remembrance of those who have died in defense of this Nation. Memorial Day, in this time of cold war, has a particular significance. As we remember conflict of the past, we work every day to prevent conflict in the future.

The distinguished Senator from West Virginia [Mr. RANDOLPH] expressed the American determination to preserve freedom and justice when he gave an address at Memorial Day services May 31 before the Veterans of Foreign Wars of Pendleton County at Franklin, W. Va. Senator RANDOLPH'S summary of questions about our defense policies, and his declaration that we should build a true memorial in the future, are, I believe, meaningful to all freemen. I, therefore, ask unanimous consent to have printed in the Appendix of the RECORD, the address by the Senator from West Virginia.

There being no objection the address was ordered to be printed in the RECORD, as follows:

THE TRUST THAT IS LEFT TO US

(Address by Senator Jennings Randolph, Democrat, of West Virginia, at Memorial Day services, Veterans of Foreign Wars of Pendleton County, Franklin, W. Va., May 31, 1959)

Commander George Sponaugle, members of the Veterans of Foreign Wars, and guests, we are gathered today to pay tribute to the lives of our departed comrades who have passed to that bourne from which no traveler returns, where faith assures us that they have entered into a more significant phase of the divine order of the universe.

Though we cannot hope to read in this life the cipher of the universe, nor of one man's place in this order, we hold to the faith that earthly existence is not all that is meant for man. And we can say with Ralph Waldo Emerson, that though "Our faith comes in moments \* \* \* there is a depth in those moments which constrains us to ascribe more reality to them than to all other experiences."

Today offers us such an occasion when we pause to pay tribute to those who made the supreme sacrifice, for "to live in hearts we

leave behind is not to die."

At such a time as this, when we join in memoriam to the gallant dead, we well look to their lives for guidance in our own conduct and as testimony of the values which life offers to those who share with their fellows its joys and sorrows.

Our words can but revive the memories of our departed loved ones; but it is our actions and our lives which will continue to keep alive the meaning of their sacrifice. The courageous young men to whom we pay tribute today gave their blood and their lives in the cause of humanity, in the right of the individual to achieve for himself a life of freedom and dignity. This basic and primal idea has been the chief source of direction in our national history. More than any other idea, it gives meaning and vitality to present American life, and it has been the ultimate goal toward which man's constant progress through the centuries has been directed. Yet the struggle has not ended.

It has been a dispiriting and tragic disillusionment for Americans, and for citizens of other free nations as well, to see in the years since the end of World War II, the ex-tinguishment of the ideals of freedom and individual dignity among the millions of people under the domination of the Soviet Union and Communist China. In the face of such terrifying repression and assaults upon the integrity of man, we might, in moments of weakness, wonder if it has been worth the cost in blood and treasure.

For those who gave their lives in the cause of human freedom, we might find assurance in the words of the Gospel (John iv: 14) that "Whosoever drinketh of the water that I shall give him, shall never thirst; but the water that I shall give him, shall be in him a well of water springing up into everlasting While this offers consolation to those of us who have lost friends and members of our families, it does not relieve us of the responsibility of carrying on their struggle and thus, in some measure, giving meaning to their sacrifice. Only in this way can we truly memorialize those who gave the full measure of devotion to their country.

When the great American poet, Walt Whitman, was confronted by the tragic death of President Lincoln he sought in some manner-as did the people of the Nation as a whole-to find a meaning in such an irrational and devastating event. For Whitman the problem is solved in the beautiful and moving poem, "When Lilacs Last in the Dooryard Bloomed." Here he indicates that since Lincoln gave his life for the Union, the only meaningful manner in which one could acknowledge his death was to contribute to the growth of the Union and the ideals for which he had worked and died. These the poet symbolized in the sprig of green lilacs which he brought to the deceased President as a token of his commitment to the future and to the promise of growth and creativity that the future holds.

that the future holds.

Thus, we too can best memorialize those we love, not by haunting regrets for a past that can be no more, but by building a true memorial in the future—a memorial made of our dedication to the ideals and values

they served.

This we can best do by maintaining a strong and vital America for the preservation and extension of the ideals of human freedom and the dignity of men. And since the malevolent forces that oppose us respect only power—and the show of power—America must maintain her power, economically as well as militarily. This means also that we can no longer afford the luxury of giving only part-time attention to full-time problems, for the problem of combatting Soviet imperialism is indeed a full-time assignment which deserves the full application of all our resources.

Within the present century we have been involved in two major wars and one localized but extremely costly conflict. In each instance our military policy was one of punishing an aggressor nation which had disturbed the peace. And in each instance we acted as though all we needed do was punish the aggressor and peace would be restored, leaving us free to follow our own carefree pursuits. But we have learned through harsh and bitter experience that the uneasy condition of peace is not so easily restored.

It would seem, therefore, that we must reexamine the military policies that have guided our conduct in the wars of this century. We must recognize that the United States has interests that endure beyond the mere punishment of the aggressor nations, interests that involve the basic values and assumptions of Western civilization itself. And these interests, these values, can be maintained only so long as the United States is capable, in alliance with the other free nations of the world, of bringing a countervailing power to bear on the Soviet Union and Communist China, whenever and wherever their imperialistic designs lead them to encroach upon free nations. Such power cannot be provided by an unwise and unrealistic attitude toward our national budget.

We devoutly pray that the present foreign ministers conference—and the possible summit meeting to follow—will lead eventually to a world in which all men may live in honor and in peace with one another.

But until that day arrives the United States must maintain sufficient strength—now and in the foreseeable future—to deter the hunger for conquest among the Soviet and Chinese leaders. This cannot be done if we are to be preoccupied solely with a balanced budget. For, as I have said elsewhere, a balanced budget in financial terms may well bring about a deficit budget in larger and more human terms.

For example, early last March, in a memorandum setting forth their views on the budget, the chiefs of each of the armed services expressed doubt about its adequacy. Typical of their comments was the statement of Gen. Maxwell D. Taylor of the Army when he reported, "The reservations which I had in mind pertain specifically to four major Army programs. These are: (1) Army modernization; (2) the antimissile missile program; (3) the personnel strength of the active Army and Reserve forces; and (4) the Army surface-to-air missile program." The chiefs of each of the other services expressed similar concern about the adequacy of the allotment for his own branch.

Yet, in the face of growing criticism from experts in the field of science, from our military authorities, from economists and business executives, and from leaders in Congress, the President has apparently decided that we cannot afford to provide for what the experts consider to be a minimum defense level. While it is true, as the President avers, that the present deterrence of mutual terror prevails, what of 3 or 4 years from today? There are those who maintain that Russia, at the present rate of development, will have a 3-to-1 superiority over us in intercontinental ballistic missiles. By thus deliberately conceding a missile superiority to the Kremlin, we are gambling with the future and gravely limiting the range of our present diplomacy.

In addition, almost a year and a half ago

In addition, almost a year and a half ago the Preparedness Subcommittee of the Senate Committee on Armed Services issued its report after taking 7,000 pages of testimony. In this report the subcommittee made 17 specific recommendations covering the entire range of our defense system. These recommendations were unanimously approved not only by the subcommittee, but by every member of the committee itself and endorsed on the basis of testimony from the leading

experts throughout the country.

Yet, not enough has been done, ladies and gentlemen, to implement these recommendations. The excuse has been that we cannot afford them. I say, the leaders of Congress say, and, I believe, the American people will say that we cannot afford not to have them. If we cannot afford them under our present system of priorities, then we had better reappraise our standards of priority.

As the richest Nation in the world we can afford and must provide the defense necessary for the preservation of those values which alone make our material wealth meaningful. To do less is to lose faith with and to violate the trust of those who gave their lives for human dignity and individual free-

dom.

#### The Intellectual Frontier

EXTENSION OF REMARKS

# HON. LISTER HILL

OF ALABAMA

IN THE SENATE OF THE UNITED STATES

Thursday, June 4, 1959

Mr. HILL. Mr. President, the Birmingham Post-Herald of May 26, 1959, carried a most timely and thought-provoking editorial captioned, "The Intellectual Frontier." The editorial deals ably with the question of education and the problems and dangers that confront our country today. I ask unanimous consent that the editorial may be printed in the Appendix of the Record.

There being no objection, the editorial was ordered was ordered to be printed in the RECORD, as follows:

#### THE INTELLECTUAL FRONTIER

The ability of the United States to survive in an increasingly complex, competitive, and dangerous world depends on the quality of education made available for young people—and for adults.

Few would deny grave shortcomings in our present educational system. And in the long run of history they may be a greater threat to the United States than the missile gap.

"The race which does not value trained intelligence is doomed"—so wrote the great philosopher-mathematician Alfred North Whitehead back in 1916. The President's special panel on scientific and engineering

education as the basic thesis of a report on education which warns: "Today the frontier is intellectual; the

"Today the frontier is intellectual; the scholar, the research worker, the scientist, the engineer, the teacher are the pioneers \* \* \* our intellectual resources will be adequate to meet our needs only if all the brainpower of our population is fully developed and utilized."

The distinguished scientists and educators who wrote the report leave no doubt that in their opinion American brainpower is not being either fully developed or utilized, and that much of the fault lies in an educational system which is inadequate both in scope and quality.

The report is a mine of ideas for men and women interested in bringing about the revolution needed in American education—changes in curriculums, attitudes toward teachers and the intellectual, a whole new approach to science and technology, and the need for educating adults long out of school to an understanding of the modern world.

Not the least of the problems in meeting the challenge of modern times in education, according to the President's special panel, is financial—more particularly the need to make the American people generally aware that they must spend a lot more money on education if they want the quality necessary for survival.

"Doubling our current annual investment in education (now about \$15 billion a year) is probably a minimal rather than an extravagant goal," the panel concluded.

The ability of this country to double its expenditures for education is not in doubt. To double the quality of our education is more difficult—although the goals outlined in this report are in the right direction if the so-called educationists can be kept at bay.

# Foreign Aid

EXTENSION OF REMARKS

#### HON. JOHN F. KENNEDY

OF MASSACHUSETTS

IN THE SENATE OF THE UNITED STATES

Thursday, June 4, 1959

Mr. KENNEDY. Mr. President, I ask unanimous consent to have printed in the Appendix of the Record a recent broadcast commentary on foreign aid given by Eric Sevareid. Mr. Sevareid is leaving his CBS post in Washington at the end of this month. Later this year he will assume a new position for CBS in Europe. There being no objection, the broadcast was ordered to be printed in the RECORD,

CBS RADIO NEWS ANALYSIS, MAY 13, 1959 (By Eric Sevareid)

Good evening, the annual foreign aid debate in Congress is now going on, in full course; the latest chapter of the remarkable modern story of one nation attempting to help a large number of other sovereignties throughout the world; for a mixture of motives—partly humanitarian, partly political because of the struggle with communism, partly economic because of our necessity to preserve and expand both foreign markets and foreign sources of raw materials.

Each year, our domestic moods and movements affect these programs. For some time we sent about as much military as economic aid to the underdeveloped countries. Congress was easier to sell on weapons aid because of the deep seated communism scare and the first thought of many newly independent regimes was the usual concern for their own physical safety. The mood here in more recent months has been to see this world struggle in political and economic terms; to see it as a long, slow process; and there has been much more awareness that paper alliances backed by intermittent parcels of arms are not necessarily bulwarks against communism.

The present case of Ethlopia is an example. The official proposal is to send that semiprimitive African country 12 Sabre jet fighter planes; that would amount to \$12 million in military aid; the program for welfare measures in that country amounts only to some \$300,000. So the questions are asked: What purpose will those modern planes serve in Ethlopia; whom will they be used against? With what results? How much more money will that poverty stricken nation have to spend for pilot training, upkeep, airfield facilities and so on? What happens when these planes are worn out? What could be done to improve the lot of that country if these millions were spent there on education, technical training, resources surveys, and so on?

The whole business of military aid to Latin America is severely questioned. What stability has it achieved, where? Has it helped or hurt the dictators? What was the sense of sending it to Batista in Cuba, for example, who, even with these modern arms, could not stop a small band of dedicated youngsters with nothing but small drms in their hands?

But the issue is more complicated than the simple contrasting of economic to military aid. By itself, economic aid in the form of simple money grants or loans can also do harm rather than good. Sometimes it simply makes it easier for incompetent regimes to postpone the real effort to deal with their country's fundamental problems.

More American lawmakers now see more clearly that all these programs—military, financial, health measures, technical assistance—must march together in each given country. In some places public health measures simply make things worse because, without partner programs of industrialization or land management of education, they only speed up the population increase. Many countries have never even had thorough surveys made of their own natural resources under the ground. That must be one first step; another must be the training for technical skills of the people involved.

The matter gets even more complicated than that. Nearly always there is the local political problem; the regimes involved must be persuaded to take this long, hard road to improvement. We have not had much success in that respect with Brazil, for one example, nor with Spain, for another. Financial loans and grants and readjustments in prices and markets for her coffee have never been anything but stopgap measures for Brazil, and she now faces financial chaos. We have put hundreds of millions into Spain in various forms, yet, by many reports, Spain is now on the verge of economic collapse and possibly political upheaval.

But there is no escaping the iron neces-

But there is no escaping the Iron necessity of trying to bring backward nations into 20th-century life. The gap between the haves and the have-nots is growing wider, and in this era of psychological revolution, with mass awareness and demands, this can only lead to more and more revolution, wars, misery, and communism. Pretty clearly, the great effort should be coordinated in detailed and specific plans; should be joined much more by the prosperous nations of Europe; and should be internationally run,

no longer subject to the moods and whims and domestic politics of this one National Capital,

Statement by Senator Byrd of West Virginia on Legislation To Expand Distribution of Food to the Needy

EXTENSION OF REMARKS

## HON. ROBERT C. BYRD

OF WEST VIRGINIA

IN THE HOUSE OF REPRESENTATIVES
Thursday, June 4, 1959

Mr. BYRD of West Virginia. Mr. President, I ask unanimous consent to have printed in the Appendix of the Record a statement which I submitted this morning to Subcommittee No. 3 of the Committee on Agriculture and Forestry, during the course of its hearings on certain measures to expand the distribution of our food to the needy.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

STATEMENT BY SENATOR BYRD, OF WEST VIRGINIA, BEFORE SUBCOMMITTEE NO. 3, OF THE COMMITTEE ON AGRICULTURE AND FORESTRY, ON JUNE 4, 1959

Mr. Chairman, in your consideration of proposed measures to expand the distribution of Government food to the needy, it might be natural for you to think that perhaps the need for such legislation is becoming less urgent today. You might reason that, in view of the increasing number of indications that the economy of America is improving, there would be less necessity to broaden our national program to provide foods to welfare families.

But the plain truth is that, despite many indications of a general economic upturn, the need for an emergency foods program continues to be as great as ever. In fact, the number of Americans dependent upon Government food has just passed the highest peak in 17 years.

Figures from the Commodity Distribution Division of the Department of Agriculture show that, during the month of March, there were 6,552,592 Americans eligible for surplus commodities, and 5,741,298 actually receiving them (figures include Puerto Rico and Territories). These numbers represented an increase of more than half a million recipients in, roughly, 2 months. The Department of Agriculture states that March was the highest month in this regard since 1942.

The situation in my own State of West Virginia also was at its worst in March, when 332,085 West Virginians were eligible for foods, and 301,264 were receiving them. (The figure for March recipients includes 85,504 public assistance persons, and 215,760 non-public-assistance persons \* \* the unemployed, low-income families, etc.) The number of recipients represented 15.3 percent

of the State's population.

However, West Virginia's condition was no worse than that of several other States. Mississippi led the Nation with 18.5 percent of its population receiving surplus foods, and Arkansas was second with 16.9 percent.

West Virginia was third.

In the past week, new figures for the month of April show a slight decline in the need for surplus foods—to 6.2 million eligibles and 5.3 million recipients nationally, and to 331,641 eligibles and 299,037 recipients

in West Virginia. But this still represents a staggering number of Americans, despite the slight decline.

I cite these statistics, Mr. Chairman, in an effort to show that America's needy family problem has not just magically disappeared at an upward wave of the economic wand. Much of our Nation may be enjoying a return of prosperity, but more than 6 million of our people have been certified eligible for surplus foods, and more than 5 million of them actually are receiving the foods.

The diets of those families dependent upon Government foods are appalling to normal, well-fed Americans. Let me give you an example: At the beginning of this year, in my State of West Virginia, the average needy family of four—father, mother, and two children—was receiving the following monthly quantities of surplus foods: 10 pounds of cornmeal, 9 pounds of dried skim milk, 20 pounds of flour, 2 pounds of rice, and 4 pounds of butter. Can you imagine a family of four trying to survive for a month on such rations? Our West Virginia department of health stated publicly that such quantities of food could not, by themselves, constitute an adequate diet, as they provide only 26 percent of the needed calories, 35 percent of the required protein, and 46 percent of the necessary calcium.

Since that time, the Department of Agri-

Since that time, the Department of Agriculture has announced that butter is to be dropped from the distribution list on June 30, the end of this month. This makes matters even more disheartening.

The families dependent upon Government food face a cheerless, half-starvation existence, unless they somehow manage to obtain additional foods. Children cannot be expected to grow healthily; fathers lack nourishment and energy to face the struggle of seeking work; mothers go hungry in order that their youngsters may have larger portions of food; sickness strikes easily; and general health conditions deteriorate.

Mr. Chairman, it was with these grim facts in mind, I am sure, that each of the special food bills which you now have under consideration was drawn up. Each of the measures, I believe, recognizes the need to do something more for the 6 million Americans in need of Government foods.

For my part today, however, I shall speak only of S. 663, the so-called emergency foods bill cosponsored by Senator RANDOLPH and myself and 24 other Senators.

I sincerely believe that S. 663 would provide an effective, workable approach to the problem. The bill is based on the assumption that the best method of improving the diets of families dependent upon Government food rations is to direct the Secretary of Agriculture to purchase from the open market quantities of supplemental foods to be added to the farm surplus commodities now being distributed. The bill also is designed to be only a temporary measure, in the hope that the economic conditions which have forced these families to rely upon Government foods may be greatly improved by the end of the period which the bill would cover.

The proposed legislation would authorize and direct the Secretary of Agriculture, during fiscal year 1960, to use \$160 million of that money now available to him under section 32 of the act of August 24, 1935, to buy additional foods to augment those now distributed.

It is hoped that the Secretary would concentrate upon the purchase of basic, moderately priced, good protein items which might be effectively and efficiently transported, stored, and distributed. I am thinking of canned meats, dried beans, powdered eggs, shortening, and other such foods. These basic foods, while not elegant fare, would add tremendously to the bleak diet of flour, meal, rice, dried skim milk, and butter now available—and remember that butter is soon

to be dropped from the list.

The bill is not a mandate to the Secretary of Agriculture to expend the full amounts of money authorized. It is expected that he would adjust this supplemental purchase program so that it will augment the varieties of foods available under the regular surplus donation program. Therefore, the need for expenditure for additional foods would be lesser or greater, depending upon the amount and variety of surplus foods available.

While the Secretary should take care to plan for orderly purchases to avoid market disruption, it is not believed that the levels of expenditure set forth in S. 663, if the purchases are carefully and wisely made, can significantly disrupt a food market that retails about \$50 billion worth of food a year. In fact, I believe that such purchases would have a definite beneficial effect to the foods market, which I shall explain in just a moment.

Furthermore, it is the intent of this bill that these supplemental food items shall be made available to the States under the same terms and conditions now in effect governing the distribution of surplus commodities to needy families, these having been shipped in carload lots to points designated by the States.

One of the attractive features of this bill is the fact that no special appropriation would need to be made to put it into operation. More than enough money already is available through the provision of section 32 of the act of August 24, 1935. This act, I believe, provides a permanent appropria-tion to the Department of Agriculture of 30 percent of the receipts of all U.S. custom duties. The section specifies that the money is to be spent on programs to encourage the export and domestic consumption of American farm products. Programs now being carried out are surplus removal, export, diversion of food products to nonfood uses, and other such undertakings. These section 32 funds normally amount to more than \$200 million each year, but for the past several years the entire amount has not been used by the Agriculture Department. Although the Department is allowed a yearly carryover of \$300 million of these funds, it still has had even greater excesses for the past 2 years, and the extra money has reverted to the U.S. Treasury. In 1958, a total of \$83,585,000 was turned back, and this year it is estimated that \$43,657,000 will be turned back. Therefore, ample funds are available for the new bill.

Now at first glance, it might appear that our new bill would cause a departure from the traditional interpretation of section 32—that interpretation being that the funds provided by the section should be used only to improve market conditions for foods which are in surplus supply. It might be argued that our bill, which calls for purchases designed primarily to improve the diets of undernourished families instead of designed to uphold crop prices, would constitute a departure from the primary purpose of section 32.

But this first-glance opinion would be incorrect. Upon closer study, it can be seen that this bill not only complies perfectly with the purposes of section 32, but that it actually would make a significant contribution toward improving market conditions for foods in surplus supply. In the first place, the language of section 32 specifies only that the money provided by the section be used to encourage the export and domestic consumption of American agricultural commodities. There can be no question that providing more food for half-starving American families would constitute an increase in domestic consumption. In

the second place—and this is the important point—the proposed program would help ' in the effort to solve the dilemma of American farmers whose products are not bringing worthwhile prices.

At present, as you know, the Department of Agriculture conducts two major programs to uphold farm prices—the price support program for basic, nonperishable foods, and the surplus removal program for perishable foods and other commodities not covered by the price support program. These two programs, in order to protect farmers' incomes when surpluses begin to flood the markets, carry out nationwide purchases of the excess products.

But, the condition of America's farm products market is rarely clear-cut, with a neat dividing line between products which are in surplus supply and products which are not. There always are a number of border-line food items which present a problem. They are in excessive supply to a degree that their prices are somewhat depressed, but not to a degree that they are deemed eligible for assistance under the surplus programs. Therefore, they continue to remain in a slightly sluggish condition on the market.

Now, it is in the matter of these borderline products that I feel that S. 663 would prove to be valuable. In putting the bill into effect, the Secretary of Agriculture would be expected to make judicious, economical purchases, with his decisions as to what type of foods to buy based largely on the prevailing market conditions. Therefore, it follows that the Secretary probably would choose to purchase mainly borderline commodities, as their depressed prices would make them good bargains. And the purchases would, in turn, help improve the status of these slightly surplus items. Thus, the overrall objective of stabilizing and improving the Nation's farm prices would be well served.

Of course, gentlemen, this price-support aspect of the bill would be only a side benefit of the measure. Its basic objective still must be a humanitarian one. It is a crucially needed emergency step to alleviate the suffering and hunger of millions of American men, women and children. If we can continue to provide billions of dollars for hungry persons in foreign countries, it is unconscionable that we could refuse to give a small fraction of that amount for our own flesh and blood.

Lord Asquith once said: "The test of every civilization must be the point to which the lowest and most unfortunate are allowed to fall."

America is being put to that test today. I fervently hope that we shall not fail it.

Memorial Day Address Delivered by Representative George M. Rhodes

EXTENSION OF REMARKS

# HON. HUBERT H. HUMPHREY

OF MINNESOTA

IN THE SENATE OF THE UNITED STATES

Thursday, June 4, 1959

Mr. HUMPHREY. Mr. President, on Memorial Day, Representative George M. Rhodes, of Pennsylvania, delivered a very fine address at Womelsdorf, Pa. The address cites many of the challenges before our Nation during this very perilous and difficult period. I commend it to the reading of my colleagues, and I therefore ask unanimous consent that it

may be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the Record, as follows:

MEMORIAL DAY ADDRESS BY CONGRESSMAN GEORGE M. RHODES, WOMELSDORF, PA., MAY 30, 1959

In common with our fellow Americans in 10,000 communities, we are assembled here today to honor the memory of those who gave their lives that this Nation might live and all of our loved ones who have passed on—and to pay homage to the countless dead who served our country on many far-flung battlefields throughout the world.

It is fitting and proper that we should, at such regular intervals, gather reverently, to remind ourselves of the service to their country and the sacrifices made by those who died for us. Such ceremonies are a solemn obligation—a pledge of remembrance, both to the dead and to their loved ones who survive.

Memorial Day always recalls Lincoln's words, delivered not a hundred miles away, at the battlefield of Gettysburg. Lincoln, of course, was brooding over the long struggle that still lay ahead before the Union and the cause of freedom could be secure. But even so, I think his words were directed not to any one party, not to any one State, not even to any one generation, but to all Americans who honor the memory of their fallen soldiers.

"It is rather for us," Lincoln said, "to be

"It is rather for us," Lincoln said, "to be here dedicated to the great task remaining before us—that from these honored dead we take increased devotion to that cause for which they gave the last full measure of devotion—that we here highly resolve, that these dead shall not have died in vain—that this Nation, under God, shall have a new birth of freedom—and that government of the people, by the people, and for the people, shall not perish from the earth."

The meaning of Lincoln's words rings just as true today as it did almost 100 years ago.

It is our duty, on this and every Memorial Day, to give thought to the ideals for which they gave their lives. We must take this opportunity to rededicate ourselves to the never-ending services of citizenship that are necessary to the success of any democracy.

Our forefathers said that eternal vigilance is the price of human freedom. That is more than ever true today as we face the threat of Communist tyranny and totalitarianism; and as we face an equally dangerous threat of nuclear and biological warfare which could destroy our entire civilization. Overnight, two great opposing nations, using the latest weapons of destruction, could destroy the major population centers, each killing more than a hundred million people in one blow. The aftermath could be even more deadly from radioactive fallout contaminating our food supplies and affecting the normal growth and reproduction of future generations of our people.

Never before have we as Americans faced such a challenge to our security and our survival and to our good sense and intelligence. The problem is not only to prevent nuclear warfare but it is equally important that we strengthen our Nation morally—spiritually and economically, as well as militarily, and show the world that democracy is superior to dictatorship as a way of life. We must prove to the other nations of

We must prove to the other nations of the world, that we can find a way to translate the great abundance with which our great Nation is blessed into a force for the common good and for the public welfare. We must have the vision and the determination to end the waste of unemployment when there is so much work that needs to be done. We must not permit want and poverty at a time when we worry about what to do with what we have so much of in surpluses of food and other essentials of life.

Poverty is an ally of communism. We have the means to wipe out poverty in our own country, and by example and cooperation we can aid other free people in this fight against poverty and communism.

To win this fight we must end the waste of human and natural resources. The real wealth of our Nation is these human and natural resources, our know-how, our productive power, and the intelligence and health of our people.

We must end the waste of lost productivity, for heavy unemployment is contrary to the best interest of our country, as is the waste of the potential of our children because of limited educational opportunities.

Our future strength, as never before, depends upon developing the best talents in our young people. Yet there are many thousands of boys and girls who will graduate from our high schools during the next few weeks, who want to go to college, who have the capacity to learn, but who will be denied the opportunity because there are not sufficient facilities in classrooms and teachers, or because of family difficulties and distress, much of which is the result of unwise and unjust fiscal and economic policies of our Federal Government.

This is more than a denial of opportunity to our children. It is a tragic loss to the Nation at a time when Communist Russia is moving ahead rapidly in this field where our Nation's future strength and leadership is being challenged.

This is a challenge to the best that is in us. The failure to provide adequate medical care and rehabilitation programs for the disabled is also wasteful and deprives these individuals and the Nation of productivity and the right of our aged and handicapped to lead more useful lives.

Our strength as a nation ultimately rests with our people—industrious, healthy, well-informed, creative Americans who fully understand the needs and objectives of our free society as a powerful force for good at home and throughout the world.

As we commemorate this Memorial Day, let us seek the vision and the courage to raise our moral, spiritual and intellectual standards which are as important as our military and economic strength in making our Nation strong and progressive and a powerful force for world peace and freedom.

The destructive powers of atomic energy are beyond human imagination. But as a force for good, it is even more fantastic in what if offers in creating abundance and a high level of living in the atomic age. It can be the servant of man as well as the destrover.

The war against communism and other totalitarian evils requires a strong and united America.

People need to have the faith, ideals and principles of their forefathers. We need to raise moral, ethical, and spiritual standards in the home, in the community, in government and in our every day life. We must make decisions in the light of reason and understanding of the facts and basic issues. We must look through the fog of confusion, and the clash of narrow, selfish interests to advance the common interest we all share in good government and in a strong and progressive Nation.

A strong America requires full educational opportunities for our youth, decent homes for all our people, job opportunities for all who are willing and able to work, and adequate pensions for the aged and disabled. We must provide the best possible hospital and medical care for our war veterance.

We need to practice economy in government, but must guard against false economy which would undermine health and educational standards, destroy essential programs such as flood control and soil conservation, and which would permit great waste of human and natural resources.

We do rightly when we honor those who gave their all for their country. We can take just pride in the many beautiful monuments which serve to remind us of their sacrifices.

We can, however, best honor the memory of our beloved dead by striving faithfully to carry forward those ideals which motivated them—by remaining true to our faith—boldly proclaiming to a troubled, uneasy world that we are still a Nation united, that we will oppose Communist tyranny and totalitarianism everywhere and unite with the democratic nations in building for a free and peaceful world.

Let us, as Lincoln said, dedicate ourselves to those unfinished tasks remaining before us. The best memorial to our honored dead will be a vigorous, healthy, sound and strong America, abounding with hope and opportunity, insolubly linked with the like-minded peoples of the earth, for mutual well-being and for mutual defense against tyranny and aggression.

As we honor our soldier dead and all of our heroic war veterans, let us dedicate ourselves to the task of making our great Nation an even greater force in world leadership through understanding, unity and prosperity at home, free from internal, sectional, religious, or racial strife, setting the example for all mankind and all nations for a better tomorrow.

#### Tribute to Robert Murphy, Deputy Secretary of State

EXTENSION OF REMARKS

# HON. ALEXANDER WILEY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Thursday, June 4, 1959

Mr. WILEY. Mr. President, in special ceremonies recently, the University of Notre Dame conferred the Laetare Medal upon Mr. Robert Murphy, Deputy Under Secretary of State.

The university confers the medal once each year upon an outstanding American Roman Catholic layman.

Over the years, Bob Murphy has made an outstanding record in the United States service, with a credit to himself and to his country, particularly as a troubleshooter to a number of areas around the world.

We, in Wisconsin, are particularly proud of Bob, our native son, and of his fine record.

I wish to join with his many friends in congratulating him upon this wellmerited recognition.

Now, I ask unanimous consent to have excerpts from the fine commendation by Rev. Theodore M. Hesburgh, president of Notre Dame, reviewing some of Bob Murphy's work and achievements upon presentation of the medal, as reported in the New York Times of June 2, printed in the Appendix of the Recorn.

There being no objection, the excerpts were ordered to be printed in the RECORD, as follows:

#### TRIBUTE TO ROBERT MURPHY

For more than two-score years of ardent dedication to your country's service, in a

century rife with turmoil, war and abiding menace, you have shown a noble record of selfless endeavor, of devotion to principle, of prudence and of wisdom. You have been in a diplomatic sense the world's physician; diagnosing with masterful skill its manifold ills; sitting patiently at dozens of national bedsides while political leaders tossed in a fever of fear, suspicion or ill will; and by applying a therapy of charity, patience, understanding and good will you have usually brought the patients back to normal health and peace.

## Research Into Cancer and Other Diseases

EXTENSION OF REMARKS

# HON. LISTER HILL

OF ALABAMA

IN THE SENATE OF THE UNITED STATES
Thursday, June 4, 1959

Mr. HILL. Mr. President, Tris Coffin is a member of the Washington radiopress corps and author of a daily news broadcast originating in this city and reaching out to sponsor stations in several States.

On June 3 of this year Mr. Coffin devoted most of his news program to recent Senate committee hearings concerning the need for increased Federal funds to help researchers hurry the day when man will conquer the ancient scourge of cancer.

The hearings were before the Health, Education, and Welfare Appropriations Subcommittee of which I am chairman. A number of this Nation's most outstanding doctors and scientists testified at these hearings to urge increased funds for medical research into cancer and other major killers of mankind.

After reading the testimony of various witnesses before the HEW Subcommittee, Mr. Coffin was so impressed that he decided to devote a series of broadcasts to the hearings.

I ask unanimous consent that excerpts from the transcript of the first of these broadcasts be printed in the Appendix of the RECORD.

There being no objection, the excerpts were ordered to be printed in the Record, as follows:

BROADCAST ON COMMITTEE HEARINGS

A few days ago, a woman and two men listened to news that makes the heart sing with pride and joy. In a large, glistening Senate hearing room, they were told how to save the lives of 34 million Americans.

There were no banner headlines over this glad news, no happy voices crying it into the air. Sournalism seems to have a far greater fascination in death and ruin than in the quiet work of healing.

Senator Lister Hill, one of the truly great patrons of medicine, was holding a hearing on funds for cancer research. The administration had asked for a cautious \$71 million. Senator Hill wished to increase this to \$109 million. By comparison, the military budget is a thundering \$40 billion.

By Senator Hill's side were the gracious and thoughtful Senator Margaret Chase Smith of Maine, and Senator Mike Monsoney of Oklahoma, whose clear mind has won him respect and honor.

The first witness was another Senator, himself a victim of cancer last year. RICHARD NEUBERGER'S SOft voice talked of the

\$109 million, and he said, "This is about the sum needed to fire a few missiles off the launching pads of Cape Canaveral. If there was a foreign enemy that would strike down 50 million Americans, and about 34 million would die from this attack, every single resource of our Nation would be thrown into the fray. Our Treasury would be emptied, every young man and woman mobilized. Yet is a fee of this magnitude, and we spend less conquering it than on chewing gum, permanent waves, or greeting cards.

The other Senators were so still he might

have whispered and told his tale.

The next witness was Dr. Isador S. Ravdin, whose leadership is an inspiration to all those fighting cancer in the laboratories and hospitals. He was short, somewhat stout, and seemed a little weary. Yet most of all, he had the stamp of the humanitarian. This is not a mark or a medal a man wears on his chest. It is, instead, a look in the eyes, a feeling in the voice.

Dr. Ravdin told a story. In the early 920's, a distinguished pathologist came to the William Pepper laboratories and had lunch with the late Dr. Alfred Stengel.

Dr. Stengel asked him gently, "Tom, how

is young Tom?"

The other replied in a voice of the greatest sorrow and bitterness, "I wish young Tom was dead. He has diabetes. He is 13, and isn't any bigger than a boy of 6. He can't possibly live and grow up."

Dr. Stengel looked at him and said, "Tom, you ought not talk this way. The next month, the next year, or the year after, someone will come forth with a solution for diabetes."

The very next day, the discovery of insulin was announced. This boy, young Tom, was the second patient treated in this country. He began to grow rapidly. Today, he is married, has five children, and is himself a distinguished pathologist.

Finishing the story, Dr. Ravdin said, "I cannot, Senator, accurately predict the future for cancer treatment. I might be so bold, however, to assert that I believe we shall see a vast reduction in the mortality from cancer in the lifetime of the oldest of us here. I can tell you, as chairman of the clinical panel, that real progress is being made. Plans should be laid for a continued and steady increase in funds for research."

Dr. Ravdin, sitting earnest and full of his subject, went on, "While surgery and X-ray are valuable in treatment, they are not good enough to still the search for further better methods. New agents to fight cancer are being made available at an amazing rate. I, myself, have seen certain of these agents cause the rapid disappearance of malignant tumors. The tragedy is that after a period of time, these malignant lesions again make their appearance. We shall have to find agents which destroy every cancer cell in the body. Such agents, I believe and hope (he said) will be found."

Senator Hill asked in his easy Alabama drawl, "How much of this can be attributed

to research, Doctor?"

Dr. Ravdin replied, "About 9944 percent. The progress is heart warming. A few years ago, an infant with lukemia never lived out the first year. Children are now living several years. It is with a real sense of humility and gratitude that I tell you research is overcoming ignorance." He paused and went on, "Great truths in medical knowledge are usually the results of research by many workers, each of whom adds to the sum total of final accomplishment."

The talk turned to use of radioactive isotopes in cancer therapy, and Senator Mon-BONEY leaned forward and said, "I just hope there will be funds and personnel in the nuclear field turned over to medicine, instead of the constant statements from the military of the catastrophic creation of hydrogen bombs. We should let the world

know of our interest in saving life instead of destroying it."

Dr. Raydin told of the goals of cancer research-finding a vaccine useful against all forms of cancer, a simple diagnostic test, and developing agents to halt cancer. He showed slides of mice treated with agents discovered in the laboratories. In one, the cancer was completely destroyed after 11 days

Next on the stand was a great, tall man, Dr. Sidney Farber of the Harvard Medical School, whose treatment of cancer in children has saved so much suffering in the

Dr. Farber described some of the progress breaking through in the worldwide research, and said, "If we had anything like this in 1935, the program and budget we are talking about today would have been in effect in 1936."

Then, the room was darkened and pictures were flashed on a screen. Dr. Farber's voice, that of a man in a great hurry, explained the slides of shrunken cancer tumors in animals and humans. He said: "We cannot stand still because the leads are too important. We must proceed as rapidly as the doctors and the scientists know how.'

The Senators nodded their heads in silent agreement.

This is Tris Coffin. I'll be back with an interview with the happiest man in Congress after this important message.

#### Labor Reform Legislation

EXTENSION OF REMARKS

#### HON. JOHN F. KENNEDY

OF MASSACHUSETTS

IN THE SENATE OF THE UNITED STATES Thursday, June 4, 1959

Mr. KENNEDY. Mr. President, I ask unanimous consent to have printed in the Appendix of the Record the leading editorial in the current issue of Life magazine. This editorial states the compelling need for action this year on labor reform legislation.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

#### IS CONGRESS BOSS, OR HOFFA?

The showdown is at hand. The issue is very simple. Is Jimmy Hoffa, whose union includes arsonists, extortionists, and associates of murderers, stronger than the Congress of the United States in all its might and majesty?

Hoffa, as Life's readers are by now very well aware, makes no bones of his de-termination to control everything that moves, and, if need be, stop everything that moves in a general strike to enforce his will on the whole Nation. He specifically threatened one if Congress is stupid enough to pass a bill banning secondary boycotts. In short, Hoffa regards himself as more powerful than Congress.

He may be right. There are already signs that some Congressmen, who have been subjected to intense Teamsters lobbying at dally breakfasts and briefings, are running away from a labor bill with the kind of teeth needed to bring Jimmy Hoffa and his gangster crew down to size. The Kennedy-Ervin bill, which would go a long way to do this, passed the Senate with only one dis- IN THE SENATE OF THE UNITED STATES senting vote. But there is doubt that the

House will have the guts to make it law.

What are they afraid of? The big city
Congressmen fear the political power of or-

ganized labor, even though numerous elections have demonstrated that union bosses can't control the votes of their members. Now that the AFL-CIO executive council, which supported labor reform, has chickened out on the bill as finally drawn, the line of political cowards is growing longer by

We've got some news for the chicken Congressmen. The ordinary people of this country—including the rank-and-file members of unions-are fed to the teeth with the arrogance, the violence, lawlessness, bribery, and stealing of corrupt union bosses. They believe in unions. They are aware of the great contribution union power has made to our high-wage, mass-consumption economy. But they are likewise angry at the misuse of unions by malefactors of great power who today stand in the role once played by malefactors of great wealth. Union members themselves, in a recent poll, voted 62 percent in favor of curbing the power of unions.

In spite of the sickening revelations by the McClellan committee, Investigator Bos Ken-NEDY reports that there is appalling public apathy and that Congressmen get virtually no mail on the Hoffa mess. We believe there is widespread latent indignation, and that what may seem to be apathy is nothing more than disgust that, after 21/2 years of those revelations, a do-nothing Congress still has not enacted the vital reforms these abuses cry

The people are certainly entitled to be They are entitled to be angry that any Congressman should be willing even to be seen with Hoffa's lobbyists, much less listen to them.

The American people want this mess cleaned up—and pronto. The very minimum they demand—and which the Kennedy-Ervin bill does provide-is a labor law that will bar criminals from union office, guarantee free elections and free speech for union members. protect union funds from misuse, and open union books to regular public inspection. They want such a law this year, now.

The AFL-CIO executive council earlier had supported basic reforms but now objects to other, last-minute provisions added by the Senate. Perhaps these should be modified in the interests of getting, at once, the most important reforms. Quibbling over others must not be allowed, as it was last year, to kill the whole measure. Yet the do-nothing Congressmen think you, the public, have lost interest in this matter. Does your Congressman think that? It is your job as a constituent not to let him. Write him how you feel. By so doing you may help Congress find the spunk to look Jimmy Hoffa in the eye and to stare him down.

For the showdown is simply a question of who's going to be boss-Jimmy Hoffa or the sovereign people of the United States of America. Hoffa's gang is not afraid to use guns, arson, terror, brass knuckles, and baseball bats to beat down the freedoms of Americans. Time was when our forebears who earned these freedoms we inherited would have taken up their muskets to end a threat as grave as this. The least you can do is pick up a pencil and a postcard.

#### Balancing the Moral Budget

EXTENSION OF REMARKS

# HON. PAUL H. DOUGLAS

OF ILLINOIS

Thursday, June 4, 1959

Mr. DOUGLAS. Mr. President, at the -18th annual Century Club dinner of the

Harlem YMCA, on last Monday evening, the Senator from Minnesota [Mr. Hum-PHREY! once again gave voice to the hopes and determination of the great majority of the American people that basic human rights shall be denied to none by reason of race, color, religion or national origin.

In his speech entitled "Balancing the Moral Budget." Senator HUMPHREY eloquently reminded his listeners of the deficits in our democracy's human budget. He also renewed his appeals for action by this Congress to back up the desegregation decisions of the Supreme Court, to assist the States and localities in compliance, and to give the Attorney General authority to seek court orders enjoining violations of individuals' rights under the 14th amendment.

This speech is a timely reminder of the importance of these national goals, a realistic appraisal of the inadequacy of certain other programs, a frank facing of the legislative obstacles still to be overcome, and a clear summary of our most effective legislative proposals in this field. For these reasons I ask unanimous consent that Senator Hum-PHREY's speech be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

BALANCING THE MORAL BUDGET

(Remarks of Senator HUBERT H. HUMPHREY at the 18th annual Century Club dinner of Harlem YMCA, New York City, May 25, 1959)

I am glad to be here at this 18th annual Century Club dinner on the occasion of your awards for achievement in sports and in the theater

I remember the old song, "Reach down, reach down your head, O Lord, and help this child along.

This is what the Harlem branch of the YMCA has been doing all these years.

This is what Jackie Robinson is doingas a civic leader here in New York, as a member of the parole board in his adopted State of Connecticut, and as a newspaper columnist and TV personality.

I am proud to share your platform tonight with Jackle Robinson-very proud. For Jackie Robinson is a concerned person. Nothing human is alien to his interest. I know this because I have read his column and I have heard his broadcast. And I have talked with him.

He is soft-hearted but tough-minded. From his own personal experience and observation in breaking the color barrier into the big leagues, he learned the economics of integration the hard way.

He knows that it is our job-his, yours, and mine—to see that every American has the opportunity to develop into a useful

and happy citizen.

As I read and listen to Jackie Robinson, I know he is pro-Negro but above all he is pro-American. In a recent column he defined his position clearly and in a way that, it seems to me, is a valid challenge to any person in, or candidate for, public I want to quote from his May 8 column in the New York Post:

"I certainly don't want to give the impression that during the elections Negro voters will be considering only what's best for Negroes alone. As Americans, we have as much stake in this country as anyone We, too are concerned about foreign policy, farm policy, national defense, a balanced budget, and all the rest.

"Still, to effectively participate in a democracy, you must first enjoy the basic freedoms that democracy guarantees to everyone else. And since Negroes, North and South, have so long been deprived of many of the rights that everyone else takes for granted, it's only natural that we are especially interested in catching up on basic freedoms before we work up much excitement about protective tariffs or forest preserves or the like.

"Then, too, Negroes aren't seeking anything which is not good for the Nation as well as ourselves. In order for America to be 100 percent strong—economically, defensively and morally-we cannot afford the waste of having second- and third-class

citizens.

"Negro citizens this year and next will be using their individual, unpledged votes as never before. No one party or candidate can lay safe prior claim to the so-called 'Negro vote.' It is for the parties and the candidates to demonstrate themselves that they are actually helping to make de-mocracy work-not just for white people, nor just for colored people, but for each one of us separately and for all of us collectively.

"Certainly this is no more than any voter has a right to expect, and a duty to demand." I propose to try to reply to that challenge

tonight.

We have had much talk in recent months about a balanced budget—more talk about a balanced budget, in fact, than about the needs of our country and its citizens.

If we are to survive as a free people, we need to-we must-balance our human

budget.

Only as we balance our human budget can we hope to balance our money budget over the long hard pull of the next 20 or 30 years or however long it may take to establish a genuine and lasting peace among freemen.

We must wipe out unemployment by balancing our production and consumption

budget.

We must wipe out our slums by balancing our housing budget. We must wipe out our appalling losses in preventable diseases and sickness by balancing our health budget, so that every person can have the care and skill now available to those who can pay big bills.

We must wipe out the terrific losses in family development by balancing our income budget through a fair minimum wage law applicable to all workers, adequate unemployment compensation, and a greater share of our economic abundance for older citi-

We must wipe out the shocking education deficit that was exposed to the world a year and a half ago when the first sputnik was

put into orbit.

We must balance our education budget by seeing to it that every child-rich or poor, white, black, red, or yellow-in this Nation has full and equal access to education up to the limit of his potential in terms of ability and will. If we miss one Einstein, one Lise Meisner, one Nils Bohr, one George Washington Carver, we may miss the margin between survival and disappearance of freedom or civilization itself.

We must wipe out the manmade deficits in opportunities which now frustrate, blunt, or drive millions of our youth and our adult citizens to desperation and reckless dissipation of great ability.

FBI Director Hoover has recently reported that (1) crime is up, (2) crime by youth

is up. Why?

Of course the causes are many. But high on the list is the frustration, the indignities suffered by millions of our children, our teenagers and our adults because of discrim-

ination and bigotry.

To balance the picture, let it be said that there has been progress, great progress, in the field of equal opportunity in education and employment. Great progress has been made in the past 10 years here in New York, in my home State of Minnesota, in New Jersey, in Connecticut, in Massachusetts, more recently in Michigan, in Ohio, and only a few weeks ago and at long last, a State antidiscrimination bill was made law in California. But even in these States, the job is far from complete.

More tragic, more dangerous to the strength, the security and the survival of our country is the brutal fact that we have made the least progress where the need is greatest, most urgent, most difficult to achieve. must wipe out the shocking human deficit represented by these denials of full civil rights to all Americans whatever their race. color, religion, national origin, or ancestry.

We must balance the moral budget and do

it before it is too late.

It is at peril to our surivval that we shirk the balancing of our moral budget. It is folly to try to evade it by substituting for responsible legal action presidential counsels of patience and education or even legislative gestures limited to conciliation or to other forms of exhortation not backed by the equal protection of the law guaranteed by the Constitution of the United States.

We must dare to hope that by 1963, the 100th anniversary of the Emancipation Proclamation, all Negroes, all Americans of whatever color, race, religion or national origin shall be truly free, in the sense that in their daily lives they shall have equal oppor-

tunity, security, and dignity.
In 1947, President Truman's Civil Rights Committee said the time for action is now. It is 12 years later and, except for the Civil Rights Act of 1957, pared down under threat of Senate filibuster, the Congress has done nothing to balance the moral budget.

Instead, it has been the courts, usually considered the combined rudder and sea anchor of our Ship of State, which have provided the most substantial progress toward wiping out our national deficit in the field of civil rights.

It is now more than 5 years since the Supreme Court, by unanimous opinion, held that separate but equal schools are unequal by the very fact of their segregation and ordered that they be integrated with all deliberate speed.

Compliance is general in the North; progress has been made in the border States; token integration is underway in the upper South; the back of massive resistance has been broken in Virginia, the intellectual and spiritual leader of the Old South. But the high schools in Little Rock are still closed.

In the simplest terms, using men as symbols of positions they represent, the issue was well stated by Senator Paul Douglas during the Senate debate on the anti-Supreme Court bills last August, when he said: The issue is Warren or Faubus."

Of course, it is more than that, as he added instantly. But it expresses the essential truth.

The Supreme Court needs help. It is entitled to help. It should have had it long before now.

Congress should act now, in this session. We cannot again go home having done nothing. We cannot ignore the continued meaning of Little Rock, the example of unrebuked, unchecked defiance of the Constitution and the courts.

We must not ignore the deeper meaning and challenge of the lynching at Poplarville, the rape at Tallahassee and all the hundreds of unknown, unpublicized daily acts of discrimination in atmospheres of violence, threats, and chronic terror.

We made a serious mistake, I think, last January, when instead of changing the Senate rules so as to permit the breaking of a filibuster by a majority of all the Members

of the Senate, the Senate voted to continue

the power of the filibuster.

Now we must again legislate the hard way—subject to a double veto threat, the veto power of a filibustering minority of one-third-plus-one in the Senate and the veto power of the President, if supported by a minority of one-third-plus-one.

We cannot permit the threat of filibuster or Presidential veto to set the standards for civil rights legislation—or any other legisla-

tion.

No matter how rough the road to civil rights legislation, we must persevere and we must win. This is one fight the American

people cannot afford to lose.

Recognizing the unlikelihood of getting the Douglas-Humphrey-Javits civil rights bill out of the clutches of Senator EASTLAND'S Senate Judiciary Committee, we must all help Chairman CELLER of the House Judiciary Committee get his bill, identical with ours, out on the House floor soon. If the House passes this bill and gets it over to the Senate in time for action before adjournment we will not tolerate having this bill tied up in Senate committee. Let the record be clearwe got a civil rights bill to the floor of the Senate in 1957 and we can do it again.

The Douglas-Humphrey-Javits bill is better than the 1957 bill in at least two vital

respects:

1. It provides an understanding step-bystep support and implementation of the Supreme Court's 1957 school desegregation decisions:

2. It provides the Attorney General with authority to act when an individual cannot enforce his own constitutional right to equal protection of the laws. Titles V and VI of this bill are an improved version of the part III that was stricken from the 1957 bill at the insistence of the anticivil rights forces.

Although our bill is designed primarily to carry out the Supreme Court's school desegregation decisions, it is not limited to that purpose. Titles V and VI provide Federal assistance to any individual unable to obtain his constitutional rights by authorizing the Attorney General to file injunction proceedings, enforceable by contempt actions, more effective than the limited usefulness of criminal action.

The very least we must have in the way of a 1959 civil rights bill is the brain, heart and soul of the Douglas-Humphrey-Javits bill:

1. A declaration of support for the Supreme Court in its integration decisions;

The step-by-step help to States and local authorities in complying with all deliberate speed;

 The authority for the Attorney General to seek court orders enjoining against violation of an individual's civil rights.

This is minimum justice in the field of

civil rights in this year of 1959.

I suggest that all true friends of civil rights concentrate on promoting House and Senate action on such a bill well before adjournment.

I agree with the statement of Roy Wilkins and the Leadership Conference on Civil Rights that this is the No. 1 civil rights bill. But I go further. I say that this is not just a civil rights bill; it is something far bigger. The enactment of this bill now is an urgently needed demonstration of our democratic faith.

For the watching two-thirds of the world's peoples who are colored, for the watching one-third of the world's peoples who are today uncommitted in the contest between communism and democracy, the single act of adopting and carrying out this bill will revalidate our credentials as practitioners at home of the rights of the individual human being that we preach abroad.

I believe that the best politics, the best diplomacy, the most expedient course in the

long run, is to do the right thing in the short run and to do it because it is the right thing.

If we may talk in the vocabulary of the moment, let us say that this bill, when made law, will have a blessed fallout that will be borne around the world on the winds of thought and human emotion.

As our example and our fresh proof of our belief in the rights of man takes hold, democracy will be better strengthened, better defended, and more secure here and everywhere in the world. It will penetrate where no weapon or missile can go—into the minds and hearts of the very people who today are uncommitted and who will either believe democracy's promise of both bread and freedom or accept communism's promise of bread now and a caricature of freedom later.

But, basically, I hope that Congress will act now in this session of Congress because it is the right thing to do. I hope that we will have the fortitude to surmount the difficulty of strong differences within the Congress. I hope we will lay this bill upon the President's desk before we go home to face and report to the American people upon our stewardship and our performance upon our promises to them.

In civil rights, as in defense and economic strength, we must not fall the Nation or the free world. We must be strong in all things now, or we shall be secure in none.

# Dedication of Albert Einstein Medical Center, Philadelphia

EXTENSION OF REMARKS

#### HON. JOSEPH S. CLARK

OF PENNSYLVANIA

IN THE SENATE OF THE UNITED STATES
Thursday, June 4, 1959

Mr. CLARK. Mr. President, on behalf of the junior Senator from Pennsylvania [Mr. Scott] and myself, I ask unanimous consent to have printed in the Appendix of the Record a statement outlining the celebration to take place on the 11th of this month at the Albert Einstein Medical Center, Philadelphia. This center is one of America's great institutions for research.

I direct attention to the importance of this occasion. The city council of Philadelphia has adopted appropriate resolutions, and the mayor of Philadelphia is proclaiming Sunday, June 14, as Einstein Medical Center Day.

On behalf of my colleague and myself I congratulate the members of the board and of the staff for the great work they are doing in medical research.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

On the 11th of this month (June 1959) the Albert Einstein Medical Center, one of America's great institutions for research, medical education and the care of the sick and injured, will begin a 5-day program of ceremonies and scientific meetings to dedicate, at its northern division, its fine new hospital facilities in the Greater Philadelphia area.

In recognition of the importance of this approaching occasion, the City Council of Philadelphia has adopted appropriate resolutions and the mayor of Philadelphia is proclaiming Sunday, June 14, as Einstein Medical Center Day.

On that day a message of congratulation from the President of the United States will be read at the formal dedication and the Governor of the Commonwealth of Pennsylvania will express our great State's special appreciation of an \$3,500,000 expansion the medical center has completed.

This much-needed expansion includes the splendid new Paley Clinic Building, where remarkable progress in dental work for handicapped children is already being made and the ultramodern medical surgical building, offering the Philadelphia area efficient new facilities for patient care. The entire area below the main floor level of the two adjoining buildings is integrated with a new accident ward to provide a vast X-ray and operating room complex that could handle almost any community disaster. Altogether, the new facilities add more than 2,500,000 cubic feet of space to the medical center's northern division and bring its bed capacity up to 660. When its southern division is added, the Einstein Medical Center will become a 1,000-bed institution.

In this day and age it is of special interest to realize that the northern division of the Einstein Medical Center is an outgrowth of Philadelphia's old Jewish Hospital, and that the old Jewish Hospital was founded nearly 100 years ago for the relief of the sick and wounded without regard to creed, color, or nationality.

Mr. President, that pledge was engraved in the hospital's corporate papers several years before the 15th amendment to the Constitution was proposed and ratified. It was possibly the earliest formal expression of a pledge that is part of the American credo today.

In passing it should be mentioned that 2 days of scientific meetings in connection with the dedication will be featured by recollections on the part of a surgeon of old Jewish Hospital who began his career more than a half-century ago; by a venture into the future of surgery on the part of one of America's best-known experts in that field, Dr. Isidore Ravdin, and by an exploration into space medicine on the part of an Air Force medical officer.

The medical center's new buildings are designed to operate as a functional whole. Together they will house clinics that range alphabetically from allergy to vascular, a succession of laboratories far more extensive and well-equipped than has been possible in the past, a separate pediatric floor that features indoor and outdoor play areas, a central pharmacy geared to fill more than 340,000 prescriptions a year, a series of 14 operating rooms, one of which is fitted for color television transmission over a closed circuit, and finally floor after floor of efficient patient rooms, each with piped-in oxygen and individual temperature control.

The medical center embraces the old Jewish Hospital and the former Mt. Sinai Hospital, which now is its southern division. The center has been in the forefront of the fight against cancer, and it shares in several Federal research projects.

During all 5 days of the dedication celebration, which will be brought to a close with the medical center's annual dinner meeting, the public will be welcomed to the new facilities and escorted through them by specially trained guides. The public will see a clinic building that already is in full operation. The medical-surgical building will be integrated with the hospital routine in carefully planned stages.

Before the end of this year the medical center expects to complete and start using a great new research building that will still further augment its facilities. That new building will enable the medical center to expand its research activities by approximately 70 percent.

At present the medical center is pursuing more than 70 research projects at a cost of approximately \$300,000 a year, financed in large measure by grants. In addition, its School of Nursing draws students from as far as Egypt and Lithuania, while its medical education program embraces postgraduate training for practicing physicians and dentists as well as on-the-job training for resi-dents, interns and technicians.

Einstein Medical Center is one of the few teaching hospitals that have filled and continue to fill their annual intern quota. That alone, in the field of medicine, is a solid

claim to fame.

#### Foreign Loan Assistance

EXTENSION OF REMARKS

# HON. JOHN F. KENNEDY

OF MASSACHUSETTS

IN THE SENATE OF THE UNITED STATES Thursday, June 4, 1959

Mr. KENNEDY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a column and article recently published in the Christian Science Monitor on the need for an enlarged and more durable program of foreign loan assistance. I believe that both indicate the strong desirability of enacting the proposals which Senator FULBRIGHT has introduced as amendments to the Mutual Security Act.

There being no objection, the column and article were ordered to be printed

in the RECORD, as follows:

[From the Christian Science Monitor, May 4, 1959]

#### FULDRIGHT'S 5-YEAR PLAN

From his opposition seat Senator Ful-BRIGHT has offered to rescue the President's extremely useful foreign Development Loan Fund from the yearly ravages of last-minute budget slashing. The President has responded with guarded approval.

We hope the administration will do more than this-despite the "made by Democrats" label on the Fullbright foreign aid bill amendments.

What Senator Fulbright urges is to put the Loan—yes, loan—Fund on a long-term basis. He proposes that up to \$7.5 billion be made available for development loans during the coming 5-year period.

He further proposes to permit the administration a much wider latitude to play the world situation as it comes by permitting the President to transfer as much as 30 percent of military assistance funds to economic aid where circumstances warrant.

The key point to these Fulbright amendments is that they are permissive rather than demanding. They would strengthen the administration's hand in foreign policy by permitting it to make long-range plans; permitting it to use up to \$1.5 billion a year in loans; permitting it to control the balance between military and economic support in accordance with the needs of the day.

The Development Loan Fund is more than a corporate Good Samaritan. It is a natural development of the fact that the United States is now the world's leading creditor Nation, and that at least a portion of that credit capital is put to its most productive use as an adjunct to peaceful diplomacy.

If the fund is to be treated as the poor brother to every pork-barrel program in Congress, America's, sometimes hesitant friends overseas will be left no alternative but to turn to the Hammer and Sickle Finance Company with its easy credit termsand who knows how long to pay?

[From the Christian Science Monitor, May 5, 19591

#### IS INDIA WORTH SPECIAL AID? (By William H. Stringer)

Is India worth a special foreign aid operation—as, for instance, Western Europe once was rescued by the Marshall plan?

Right now the spotlight is being focused on India by official Washington and by unofficial policy-pondering groups around the Nation. India, whose population equals that of Africa and Latin America combined, is in trouble. Perhaps India, trying to modernize by democratic methods-while Red China next door is using the police-state methods of communism-deserves a very special helping hand.

The time is fast approaching when Congress, and the American people, will need to decide whether the United States should take the leadership in a multigovernment underwriting of India's third 5-year plan to the tune of \$1 billion or \$1.5 billion a year.

Senator John Kennedy, Democrat, of Massachusetts, has proposed that a congressional contingent should tour Asia-similar to the congressional group which a representative by the name of Christian A. Herter once led to Europe in the pre-Marshal plan days, laying the basis for that aid program which so revitalized U.S. European allies.

Simultaneously Senator J. W. Fulbright, Democrat, of Arkansas, chairman of the Sen-ate Foreign Relations Committee, has pro-posed that Washington's new Development Loan Fund be augmented so that it can loan (not give away) up to \$1.5 billion a year, in-

stead of \$700 million as now.

Similarly moving toward realistic appraisal and action is the convening in Washington this week of a 2-day conference on "India and the United States." This is arranged by the Committee for International Economic Growth, an organization embracing the National Planning Association, the MIT Center for International Studies and other groups, a committee originally sponsored by people like Dr. Milton Eisenhower, Gen. Lucius Clay, Mrs. Franklin D. Roosevelt, Gen. Alfred Gruenther, and George Meany.

Why should the United States give special attention to India? What is our stake here?

So far, India has had modest success in its efforts to achieve that breakthrough into better living standards which the industrial revolution brought to pass in Europe. Its first 5-year plan, aiming at agriculture, irrigation, and power generation, was a success. Its second 5-year plan, begun in 1956 and emphasizing industry, will miss full completion by 20 percent, due to the heavy import requirements which have drained off India's foreign exchange. To finish it at all, India will in the end have been assisted by foreign loans and credits totaling \$3 billion.

But now comes the third plan. Experts suggest it will require this annual guarantee of perhaps \$1 billion to \$1.5 billion a year from the West. Otherwise the plan cannot be adequate, India will be gripped by frustration and political instability, and the other underdeveloped lands—watching the rival experiments of India and Red China—will conclude that communism offers the only swift and sure route to rapid economic

As of now, Communist China is forging ahead of India in economic development. has nearly doubled food production, while India's has risen only 50 percent. China's rate of economic growth is faster. On the other hand, many of India's villagers are gaining in hope, in Initiative, and in their status as free men-an advance which China's communes never will bring about.

Let us pose the issue on its broadest terms. We are challenged in Asia-Africa and specifically in India, as Barbara Ward said brilliantly in addressing this Washington conference, with the question whether Western ideals, institutions, and Christian humanity can be applied on a worldwide front. We

may not realize it, but it was certainly the application of these ideals, in the West, which curbed the excesses of the industrial revolution and finally proved Karl Marx totally wrong in his forecasts that capitalism would simply make the rich richer and the poor poorer.

But while this has produced the more abundant life for that 16 percent of hu-manity living mainly around the North Atlantic, who enjoy 70 percent of the world's income, it has yet to be applied to the vast underdeveloped areas of earth. Can Western ideals and institutions be applied world-wide? Or must the West get richer while Asia-Africa gets steadily poorer, and finally falls into the Communist camp?

This is worth pondering. It may give us the answer on special aid to India.

Texas' 36th Division Staged World's Greatest Jailbreak in Italy During World War II

EXTENSION OF REMARKS

# HON. RALPH W. YARBOROUGH

OF TEXAS

IN THE SENATE OF THE UNITED STATES Thursday, June 4, 1959

Mr. YARBOROUGH. Mr. President. although other world events crowded the breaking of the Nazi Alban Hills defenses out of World War II headlines, this feat by Texas' 36th Division-the famed "T-Patchers"—remains one of the dramatic stories of the time.

What makes it more remarkable is the speed, and particularly the silence, with which it was carried off. This began the Wehrmacht retreat that led to the liberation of Rome and the smashing of the Nazi defenses: it has been called the world's greatest jailbreak.

The men of the 36th went through where three American and a British unit had been unable to penetrate before. And their move enabled the Allies to break out of the Anzio Beachhead.

Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article by Kenneth L. Dixon which was published in the Houston (Tex.) Post for Sunday, May 31, 1959, under the heading: "Italy Break-through—36th Staged World's 'Greatest Jailbreak."

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Houston Post, May 31, 1959] ITALY BREAKTHROUGH-36TH STAGED WORLD'S GREATEST JAILBREAK

(Kenneth L. Dixon was with .Texas' 36th Division in World War II when it broke out of the Anzio beachhead. He is a former As-sociated Press staff writer and now is managing editor of the Lake Charles (La.) American Press. The following anniversary story of the breakout was written bit by bit in a Galveston hospital where Dixon is recuperating from an operation.)

(By Kenneth L. Dixon)

Fifteen years ago Saturday night a com-parative handful of Texans—native and adopted—spearheaded what came to be known as "history's greatest jailbreak."

They broke the Allied troops out of Anzio beachhead after 4 months' imprisonment there, and they opened the road to Rome.

And they did it without firing a single shot—without a single cartridge in a single rife barrel, for the work that night was done in silence, with knives, bayonets, homemade garrots, and a hand grenade only as a last resort.

Those men of the 36th (Texas) Infantry Division infiltrated the German Alban Hills defense lines, worked their way up and around the key town of Velletri and started a Wehrmacht retreat that became a rout long before it reached the Tiber.

It was a classic infiltration because of its silence, its success and its almost total lack of casualties. Yet it was doomed to obscurity for three reasons.

First, Fifth Army Commander Mark Wayne Clark did not believe in identifying individual units under his command. Second, Rome fell right on the heels of the operation. And third, the Normandy invasion came shortly after the fall of Rome—and the world forgot Italy.

But even had we known, none of that would have mattered to those of us dug in on top of the Alban Hills 15 years ago Saturday morning. We knew that had we dared to climb the trees we could have seen Rome—the first Axis capital doomed to fall. But mainly, we were still alive, and word over the walkie-talkie was that the weird, impossible maneuver was succeeding.

We had walked, climbed, skulked, crawled, and fought our way some 8 circuitous miles to gain the ridge, some 3 miles behind the German lines. And behind us, platoon by platoon and company by company, the entire 2d Battalion of the 142d Regiment had come, slowly spreading out after it crossed the combat line.

By dawn the entire regiment was in position—or near it—atop the ridge, and the next regiment was flanking its way up on our right. Before it was done, almost the full effective combat strength of the division had moved through a widening hole where, short hours earlier, a single rifleman could not have walked in safety.

walked in safety.

Up there, at long last, we were looking down the Germans' throats, and they didn't know it yet. We turned and started down—and what fighting there was to be done was done.

For me it all started 24 hours earlier in the little stone cowbarn that served as division command post. Three American divisions and one British outfit had bloodied their noses against the Alban line and the word had gone out that the 36th had drawn the short straw for the next try.

Nobody gave the Texans much more of a chance than their luckless predecessors, but the 36th was almost like home to me by then—and besides, I heard that "Gen. Fred"

had a plan. So I joined them.

Sure enough, Maj. Gen. Fred Walker—as fine a division commander as ever came up through the ranks from buck private—had a plan. It was the infiltration plan. Unfortunately (from the division's point of view) Lieutenant General Clark, the Army commander, also had a plan. It consisted of piling riflemen on metal sleds that looked like hog troughs on runners and hauling them behind tanks right up to the line.

I didn't like it. Besides the last time Generals Clark and Walker had disagreed on plans had been at the Rapido River. They had used Clark's with disastrous results.

Anyhow, I told General Walker if they used his plan I wanted to go along, but if they used General Clark's, I did not care for a sleigh ride in May. He just grinned a weary grin and said he was waiting for word from the corps commander, Maj. Gen. Lucian B. Truscott, who was trying to talk Clark into letting him use his plan.

Just then a jeep raced up to the cowbarn and Truscott jumped out, grinning from ear to ear, and ran over. "It's all yours, Fred," he said. "It's all ours."

Within 30 minutes, word spread throughout the division that we were using "General Fred's plan" and you could feel the tension ease.

But nerves had tightened again an hour before dusk when we started a feint in a swing back away from the lines. The Germans could see every move from the hills.

They grew tighter as we swung back toward the combat line at dark. A sniper killed a lieutenant 5 yards in front of me. They caught the sniper, a man in civilian clothes. Two men took him back into the woods. There was a shot. They came out. The line moved on in silence.

At the checkpoint before crossing the combat line, the regimental commander—a raw-boned bemoustached West Pointer—gave the orders tersely. Not a shot was to be fired. To make certain, all rifle barrels were to be cleared. Clips and magazines could be full, but not a cartridge in a rifle chamber.

"Get this clear," the colonel said, "one shot can ruin the whole operation. This is a night for knife work—knives, bayonets, bare hands, strangling any way you can. As a last resort, you can use a hand grenade; they may mistake it for an oncoming mortar. But they know the sound of our small arms. So clear those rifle barrels and keep 'em clear."

Faces fell as the order was passed along, but Lt. Col. Sam Graham, a former West Texas school teacher who had been acting commander of the outfit in more battles than most men had commanded it, got some laughs by saying the general had promised him they wouldn't run into more than one or two Germans at a time. "So who needs guns?" he cracked.

Graham's own Second Battalion—"the Mountaineers" of Mount Lungo and Todundo infiltration experience—were tabbed to lead the operation. The regimental intelligence and reconnaissance platoon was put at point—although I am sure there will be arguments about who was at point as long as two Velletri veterans survive. I stayed right behind the walkie-talkie man who followed the I and R. Scouts. I figured that radio pack would stop a lot of bullets.

We moved out across the combat line. Although it was an impossible night to forget, it is a difficult night to remember in any intelligent sequence. It deteriorates into fragments and flashbacks.

We crawled and climbed almost as much as we walked. There was no smoking and no talking. Once after a brief halt, the man in front signaled to me and pointed. Over against a tree sat a German soldier, wearing two grins in the moonlight—a white one where his teeth were bared, and a red one 3 inches below \* \* \*

A planned fire fight broke out along the line to our left to distract German attention. It worked, but men got hit, and cries of "medic, medic," floated over to us. I heard a commotion and turned. Two men were struggling with an aid man who was trying to go. Finally he subsided and crawled along behind me but I heard him sobbing for what seemed a long time \*

Flares pinned us down in a vineyard. A dog held up the whole straggling line until one of the scouts silenced him. An I and R scout, sheathing his knife, said, "It must be safe here if you guys from regiment are along."

We passed one or two exhaustion cases, men who were gasping uncontrollably. Weariness became a nightmare. So did nervous strain. One man went berserk and had to be gagged until he calmed.

Just before dawn came a new crisis. To reach our assigned post we had to cross a clearing perhaps an eighth of a mile wide, and there was no time to crawl. We double

timed it across, single file, feeling naked in the predawn light, but there were no shots, So went the Velletri infiltration. When

So went the Velletri infiltration. When the Germans awoke to the fact that a full regiment was above and behind them, they panicked and headed out of Velletri and up the road to Rome. Those who didn't were captured or killed.

The rush to Rome was on. Except for delaying tactics, roadblocks, snipers and occasional resistance pockets, the back of the last German defense before Rome was broken.

And although I put the name of every Texan's hometown I could put into the story to give the folks back home a hint, fate was to prevent the 36th Division from ever getting full credit for history's greatest jailbreak—the Anzio beachhead breakout.

Fate treated them even worse at the moment. They got marched right on through the eternal city with order to catch up with the Germans.

Me? I got a confession to make. I stayed a while in Rome.

#### The Passing of the "Voice of Firestone"

EXTENSION OF REMARKS

# HON. RICHARD L. NEUBERGER

OF OREGON

IN THE SENATE OF THE UNITED STATES

Thursday, June 4, 1959

Mr. NEUBERGER. Mr. President, good music is one of the sublime creations of the human race. For many years the "Voice of Firestone" has presented outstanding musical talent and musical numbers over the air waves—first on radio, later on television.

Now, after more than three decades on the air, the "Voice of Firestone" has been forced to relinquish its television time because it could not compete successfully—in the opinion of network business managers—with synthetic cowboy thrillers and comedy shows.

This is certainly a tragedy for television and a blow to people who are dedicated to good music. I join in mourning the passing of the "Voice of Firestone." I salute the Firestone Tire & Rubber Co. for supporting and sustaining this excellent program for so long. May it soon return to our television screens and radio sets.

Mr. President, I ask unanimous consent to have printed in the Appendix of the Record an article mourning the passing of the "Voice of Firestone," written by John P. Shanley, and published in the New York Times of June 3, 1959.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the New York Times, June 3, 1959] Television: Death at 31—"Voice of Firestone," a Viotim of Rating, Presents Final Show on Channel 7

#### (By John P. Shanley)

After 31 years on the air, the "Voice of Firestone" presented Monday night what may have been its final program,

The fate of the musical series was mentioned during a brief statement on the channel 7 telecast. Raymond C. Firestone, president of the Firestone Tire and Rubber Co., reported unemotionally what had already been published: the sponsor, willing to continue but unable to find a suitable

period for next season from any of the net-

works, was being forced to go off the air.

Mr. Firestone did not say, as he might have, that the show was victim of television's inflexible dedication to ratings. The night's program of fine music by outstanding artists such as Rise Stevens, Heidi Krall, Richard Tucker, and Robert Merrill, undoubtedly brought pleasure to many listeners.

But probably the American Broadcasting Company telecast did not have so large an audience as the concurrent attractions on the two other television networks.

While Miss Krall was singing the tender Un bel di, from Puccini's Madam Butterfly, more earthy entertainment was being offered by the National Broadcasting Co. and the Columbia Broadcasting System.

On NBC, Peter Gunn was engaaged in a pistol duel with a hoodlum who had shot Gunn's girl friend. On CBS, at the same time, Danny Thomas and Desi Arnaz were simulating concern over their wives' shopping sprees.

Soon afterward the "Voice of Firestone" faded out gently with the singing of Auld Perhaps something can be done Lang Syne. before next fall to obtain a new lease for the program. If not, Monday night should be remembered as a time when commercial television crassly shrugged off not only quality but also tradition.

#### Seeing for One's Self About Politics

EXTENSION OF REMARKS

# HON. HARRISON A. WILLIAMS, JR.

OF NEW JERSEY

IN THE SENATE OF THE UNITED STATES Thursday, June 4, 1959

Mr. WILLIAMS of New Jersey. Mr. President, an article from the Bergen Evening Record of May 26 concerns itself with the appearance of three young leaders in the Republican and Democratic Parties before the senior class of Hackensack High School in New Jersey. I think this is of significant interest.

It is noteworthy to notice the change that has come about in the last few years in relation to participation in politics. It was not so long ago that we found the businessman, the banker, the housewife evincing very little interest in the political field. But a revolution in thinking on this score has occurred. Today we see a recognition and acceptance of the fact that politics does indeed touch each one of us in our daily lives and in a very personal way. I champion this kind of thinking. Surely, we in this enlightened age have a real need to study and to practice politics. For politics means the conduct of government and obviously this is the concern of every one. So it is particularly heartwarming to me to see the interest exhibited by our young leaders in the political field and by our high school boys and girls.

I ask unanimous consent to have this editorial printed in the Appendix of the

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

SFEING FOR ONESELF ABOUT POLITICS

What those three people said at Hackensack High School the other day about politics may not be so important as the people Sweeping Reform Won by Ribicoff-Hartthemselves.

The subject under discussion: "Is Politics A Dirty Word?" The audience was the senior class. The speakers were Joanne Eddy, Mary Alice Moss, and William De Lorenzo, Jr. Had they been, let's say, State Senator Walter H. Jones, Democratic State Committeeman Herman P. J. Hoffmann, and Freeholder Director E. Merrill Seaberg they might have expounded more profoundly, but they might not have been so convincing. Jones, Mr. Hoffmann, and Mr. Seaberg, estimable gentlemen all, are nevertheless officeholders, and may be presumed to have a vested interest in politics and its reputation. Furthermore, they are no longer boys.

Miss Eddy, Mrs. Moss, and Mr. De Lorenzo hold no paid political jobs. They are in politics, so to speak, for the kicks. In addition, they are not so long out of school themselves that they cannot remember when they presumed all politicians were villains. Miss Eddy is an industrious, effective toiler for many good causes, among them the Republican Party. Mrs. Moss is a young woman with a great deal of intelligence and spunk, and is one of the Democratic Party's best advertisements. Mrs. De Lorenzo is one of our more alert and intelligent young Republicans. They are the sort of people one likes to see in politics. To an audience of high school seniors they must have been thoroughly believeable.

This message about the validity of politics as a personal concern is a lot more important than it sometimes gets credit for being. Lately a good many people have been delivering it. Businessmen are telling organizations of other businessmen that they have to get into politics. Professional men, housewives, craftsmen all are being told they cannot just stand around and criticize. But the best place to preach the sermon is to the people who will be called to do the job in the years ahead. If the community's young people get the idea that politics is smelly, dingy, unwholesome, then the smelly and unwholesome people are going to take charge. The best convincer is to see fine, young people taking part in politics and Government and enjoying it. A great deal depends on who preaches the sermon.

# Legislative Record of Gov. Abraham A. Ribicoff, of Connecticut

EXTENSION OF REMARKS OF

#### HON. JOHN F. KENNEDY

OF MASSACHUSETTS

IN THE SENATE OF THE UNITED STATES Thursday, June 4, 1959

Mr. KENNEDY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article which appeared in the New York Times of today regarding the splendid legislative record of Gov. Abraham A. Ribicoff in the session of the Connecticut General Assembly which has just ended. The legislative program recommended by Governor Ribicoff this year is an outstanding example of practical reform and good government. I know of few legislative sessions in any State which in any year have achieved such a record of accomplishment.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

FORD LEGISLATORS PASS VIRTUALLY ALL MEASURES REQUESTED IN INAUGURAL

(By Richard H. Parke)

HARTFORD, June 3 .- The Connecticut General Assembly worked tonight to dispose of nearly 200 bills before the adjournment deadline, set by law at midnight.

The last-minute legislation was largely routine. The biennial assembly, under Democratic control for the first time since 1876. already had approved sweeping statewide reforms in its 5-month session.

It gave Gov. Abraham A. Ribicoff, Democrat, virtually all the major governmental reorganization measures he requested in his inaugural message last January.

These included:

Abolition of the State's system of town and city courts, dating to 1639, and its replacement by a State circuit court system, effective January 1, 1961.

Abolition of county government, dating to 1666, and the assumption of its powers by the State, effective October 1, 1960.

Authorization for a \$346 million bond issue to finance a 4-year State highway construction program. The bill includes provision for State acquisition of five Hartford area bridges, two of which would be made toll

Approval of a \$57 million bond issue for capital improvements and payment of State building grants to towns.

Approval of the diversion of about \$21 million a year from the State highway fund to the general fund. Governor Ribicoff had warned that the diversion was required to avoid tax increases.

Approval of a \$536 million appropriations bill that included a \$457 million general fund budget for the 1959-61 biennium.

#### OTHER MAJOR LEGISLATION

Other major legislation to win passage included a reorganization of the State health department. The assembly also voted to continue the State education grants to the towns of \$21 a pupil.

However, the Ribicoff administration suffered a few setbacks. One, ironically, was in the field of highway safety with which the Governor has long been identified. Democratic-sponsored bills that would have established a uniform traffic ticket, maximum speed limits and standardized accident report forms were defeated.

The Governor also was unsuccessful in obtaining approval for an expanded unemployment compensation bill. The bill, a key administration measure, finally was passed but suffered crippling amendments. About all it provides for is a \$5 increase in the present \$40 weekly benefit pay.

The session was marked by many close otes. The Democrats control the senate by votes. 29 to 7, but have only a 140 to 138 margin in the House. The highway bond issue bill passed by only one vote and the appropriations measure by only two.

Political observers gave much of the credit for the Democratic victories to John M. Balley, the State leader, who worked closely with legislative leaders throughout the ses-

Poison in Your Water-No. 99

EXTENSION OF REMARKS OF

# HON. JOHN D. DINGELL

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES Thursday, June 4, 1959

Mr. DINGELL. Mr. Speaker, pursuant to permission granted, I am inserting into the Appendix of the Congressional RECORD an article appearing in the Seattle (Wash.) Times of November 18, 1957, entitled "Two Parks Posted as 'Unsafe'":

Two PARKS POSTED AS "UNSAFE"

Ravenna Playfield will be unusable for at least a year because of the north trunk sewer break, Paul V. Brown, park superintendent, said today.

The field, Brown said, is in danger of pollution from raw sewage flowing down the creek bed in Cowen and Ravenna Parks. The playfield is at the southeast corner of Ravenna Park.

The playfield also is being used as a staging area for heavy construction equipment working on a bypass sewer line around the cave-in in Ravenna Boulevard near 16th Avenue NE.

#### BYPASS INVOLVED

Engineers plan to build a temporary bypass line, which will cross the playground's ball field on the surface. A permanent bypass, to be built later, will go under the playfield.

"I think we had better face up to the fact that the playfield will be put out of commission by this work for at least a year," Brown said

Cowen and Ravenna Parks were being posted today as unsafe by the Seattle-King County health department.

Sewage which ordinarily would go into the broken north trunk sewer was being diverted into the open creek bed in the parks,

STREAM 3 FEET WIDE

At some places in the parks, the stream was 3 feet wide.

Brown said the use of both parks will be restricted, both by the polluted stream and by construction of the bypass line.

#### World Peace Through Law

EXTENSION OF REMARKS

# HON. HARRIS B. McDOWELL, JR.

OF DELAWARE

IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 3, 1959

Mr. McDOWELL. Mr. Speaker, recently I introduced a measure, House Resolution 267, expressing the sense of the House of Representatives with respect to determinations of whether certain disputes involving the United States are subject to the compulsory jurisdiction of the International Court of Justice

My resolution to strengthen the International Court of Justice will remove one of the major roadblocks which keeps it from being really effective. This Court is, indeed, the weakest link in the chain that is the United Nations.

Under an amendment sponsored by Senator Connally some years ago, the United States maintains the right to decide whether or not a question shall go before the Court. But this cuts two ways, and less than half of the 81 nations which are members of the United Nations accept the Court's jurisdiction. The Soviet Union and the nations dominated by it are prominent among those nations which do not accept the Court's jurisdiction. I do not think our national interest is served by standing with the Soviet Union in this matter. By staying out of the Court we

strengthen the will of the Soviet Union to stay out, and issues in which we are vitally interested and would like to have the Court deal with cannot come before it in the present situation.

Of course, I realize that this is a matter which ultimately must be decided by the Senate of the United States, but it will certainly be of assistance to the Senate to have the House of Representatives to express its view.

This whole matter is of great interest to the Department of State and it is significant that President Eisenhower told the Congress this year, in his state of the Union message, that—

All peoples are sorely tired of the fear, destruction and the waste of war. \* \* It is my purpose to intensify efforts during the coming 2 years in seeking ways to supplement the procedures of the United Nations and other bodies with similar objectives, to the end that the rule of law may replace the rule of force in the affairs of nations. Measures toward this end will be proposed later, including a reexamination of our own relation to the International Court of Justice.

One of the country's leading proponents of a change in our present relationship with the International Court of Justice is Charles S. Rhyne, chairman, Committee on World Peace Through Law of the American Bar Association, and a past president of the ABA. I am delighted to have a letter from Mr. Rhyne in which he says—

The American Bar Association in 1947 adopted a resolution favoring the idea you are now sponsoring. Our Committee on World Peace Through Law will certainly bring your resolution to the attention of others who are working on the subject.

We do hope you will push your resolution with vigor as it is a most essential thing that the self-determination clause be eliminated from our acceptance of the computsory jurisdiction of the International Court of Justice in order that we can provide leadership towards world peace through law.

I am including the text of my resolution, the text of Mr. Rhyne's letter, and the text of the concluding statement by Mr. Rhyne at the regional conference in Dallas, Tex., April 29, 1959, of the Committee on World Peace Through Law of the American Bar Association:

#### HOUSE RESOLUTION 267

Resolved, That it is the sense of the House of Representatives that the determination of whether an international dispute to which the United States is a party involves matters which are essentially within the domesite jurisdiction of the United States, and is therefore not within the compulsory jurisdiction of the International Court of Justice, should be made by the Court itself rather than by the United States; and that any provision of law or resolution to the contrary should be repealed or otherwise nullified.

RHYNE, MULLIN, CONNOR & RHYNE, Washington, D.C., May 27, 1959. Mr. Harris B. McDowell, Jr., House Office Building,

Washington, D.C.

DEAR MR. McDowell: I am very pleased to receive your letter of May 25 and the copy of House Resolution 267. The American Bar Association in 1947 adopted a resolution favoring the idea you are now sponsoring. Our committee on world peace through law will certainly bring your resolution to the attention of others who are working on the subject.

We do hope you will push your resolution with vigor as it is a most essential thing that the self-determination clause be eliminated from our acceptance of the compulsory jurisdiction of the International Court of Justice in order that we can provide leadership toward world peace through law.

I enclose a paper summarizing the findings of five national regional conferences of lawyers in this field.

Sincerely,

CHARLES S. RHYNE.

CONCLUDING STATEMENT BY CHARLES S. RHYNE, CHAIRMAN OF COMMITTEE ON WORLD PEACE THEOUGH LAW OF AMERICAN BAR ASSOCIA-TION AT REGIONAL CONFERENCE, DALLAS, TEX., APRIL 29, 1959

This historic inquiry is the first time a nationwide representative group of lawyers has ever come to grips with the problem of creating legal machinery and procedures for nations to use in deciding international disputes by law instead of by violence.

This is the final meeting of the five regional meetings called by the American Bar Association for the purpose of obtaining the views of the leading lawyers of America on how the rule of violence, terror, and fear can be replaced by the rule of law in the control of the fate of the world. Many of you lawyers, and other lawyers at these conferences, have come hundreds of miles at your personal expense to make your contribution toward a solution of mankind's No. 1 problem—how to achieve and maintain world peace.

As was stated in San Francisco, to have hired this group of lawyers to study this problem and travel to five cities to give their opinions upon its solution would have cost more than \$1 million if paid for at usual rates. But all of you have for your compensation the satisfaction of serving mankind in seeking the answer to the problem of peace—an answer so difficult that it has eluded man since the dawn of civilization. The attendance and the helpful contributions made at these meetings prove again the great dedication of our profession to public service in America. Certain it is that no other group or profession exceeds ours in that service. My pride in you and for you knows no bounds.

We have started from the premise that the rule of law has achieved order and stability within nations and could do the same between nations if but given a chance. We began our inquiry with background working papers prepared by international law experts recording past experience. We then stretched our minds to encompass the new horizons of the new world that science and technology have created in this ever advancing and changing 20th century. We have envisioned the ways and means whereby the great new miracles of our day can be harnessed through legal procedures and institutions for man's benefit rather than his death.

With full realization that the unprecedented dangers of today create overwhelming public support for any idea which will prevent war, we have sought to develop plans and programs whereby the rule of law can bring about the same order, stability and peace internationally which it has already created nationally.

We have at these five regional conferences, after most careful consideration, decided that the rule of law can justifiably be raised as a new standard of decency in international relations. We have further decided to back this standard to the hilt as a means whereby world peace can be achieved and maintained. We have done this knowing full well that years and decades of hard labor are ahead of us before this goal can be realized. The absence of law in the world community is indeed the greatest gap in the growing structure of civilization. To fill that gap, or vac-

uum, is no easy task. The path to success is strewn with many pitfalls and immense difficulties. We face up to the job that must be done knowing that no other group or profession has, or will, or in fact should assume, a responsibility equal to ours in translating the idea of world rule of law into reality. Lawyers in centuries of effort have created the legal rules and institutions and procedures which exist now; lawyers of this and other nations are the logical group to do this new work of creating a "lawful" world.

People everywhere are hoping and searching and praying for some way to avoid the holocaust of missile-atomic war. They know that history teaches that every arms race since the world began has exploded into war by design or accident. They watch the current ever-accelerating arms buildup and fear that war is as certain as tomorrow's sunrise unless a great leap forward is made on peace machinery. World peace through law offers the greatest potential of any idea yet advanced to avoid self-destruction by mankind. The law's proven capacity in achieving and maintaining order and stability within nations augurs well for its success if used between nations.

Lawyers at these regional meetings have signified their willingness to lead the way in a great crusade to inform and unite the people of the world in support of this great idea. I sincerely believe that once the people realize what a world controlled by the rule of law means, nothing will stop the forward movement of this idea from general concept to reality. An idea can be more powerful than an atom and nothing can deny an idea whose time has come. The time of this idea is on its way. What we have done here should hasten the arrival of that great day. We have stepped across the frontiers in law to keep pace with the changed needs of our era.

While our goal may to some seem overambitious, let us remind them that it is not beyond the capacity of those to whom our plea for action is addressed—the people of

the world.

When law replaces weapons in the control of the fate of humanity our lawyers' mission will have been completed. In a world ruled by law man can walk in freedom, in

dignity and in peace.

It was President Ross L. Malone's idea that we call in the leading lawyers of the USA, as we have done in these five meetings. His idea has proved sound and has worked out in a most inspiring way. Lawyers who have come in a little doubtful have gone out as evangelists for the cause of world peace through law.

Aside from current United States of America meetings, lawyers in over 70 nations have been contacted and nearly all have offered their enthusiastic support, and it is most interesting to note that they have often reported that they are organizing to stir the grassroots in their nations as we are here.

I would summarize the opinions expressed by the more than 250 lawyers at our five

regional conferences as follows:

1. A world conference of lawyers should be held. To make it a true world conference, Iron Curtain lawyers should be invited. Lawyers from behind the Iron Curtain cannot hurt us by advancing their ideas, and we might make a dent on their thinking.

2. International regional conferences in Latin-America, Asia, Africa and Europe should be held to lay the groundwork for

the world conference.

3. The world conference should concentrate chiefly upon how to get more international disputes into court—the existing International Court of Justice and new circuit or regional courts. Consideration should be given to urging the world court to sit at the seat of the United Nations in New York and also all over the world.

4. The world conference should consider how to expand and improve procedures for settlement of disputes in the business field by extending world court jurisdiction to individuals and by encouraging the use of more legal rules in commercial arbitrations.

The world conference should lay down and express adherence to legal procedures, institutions and principles, but not attempt to write detailed legal rules on any subject. It should concentrate upon increased use of courts and arbitration bodies, with application of existing law, rather than try to draft new treaties which might bog delegates down in detail and differences. All lawyers should be able to agree now upon the general concept of applying law in judicial tribunals and ways and means of encouraging its increased use in international At future world conferences, through working committees between conferences, spadework on treaties to build new legal rules in many fields could be carried out on an extensive scale.
6. The mere fact of holding the first

6. The mere fact of holding the first world conference of lawyers in all history would be a tremendous event of world-wide impact. Lawyers have never worked together in this way on this subject before and all seem stirred at the prospects of

worthwhile accomplishments.

7. Attendance should be limited to practicing lawyers and teachers of law so as to eliminate Government officials who might be rejuctant to criticize or change the status

8. A world law day and a world law year should be considered to coordinate and further lawyer effort on this program. A clearinghouse of ideas, programs, and experience on an international scale should be created

9. If Russian lawyers will not cooperate this should not be allowed to veto this effort toward a lawful world. The effort will be a great success without Russian participation. If all nations other than the Red bloc use law in courts to decide international disputes, Russia's propaganda claim of being a civilized nation will be defeated in the area of world public opinion—an area she so assiduously seeks to influence by her extensive propaganda.

10. The U.S. Senate's Connally reservation which presently limits the usefulness of the International Court of Justice must be repealed before we can go much further with any program for world peace through law. Under the Connally reservation the United States sits as a judge of the world court's jurisdiction in each case filed against the United States and decides whether the case involves an international or domestic issue even though the United Nations Charter prohibits the Court from exercising jurisdiction over domestic issues. This Senate distrust has been a major factor in reducing the Court's prestige and usefulness to the point that it has had only 11 cases to decide in 13 years.

Lawyers from other nations say our talk of a world ruled by law is hollow when we ourselves do not accept that thesis. As the greatest users of the rule of law nationally, the U.S. Senate must by this repeal action prove that we trust the rule of law internationally. Such leadership on our part is essential and here only the U.S. Senate can act to encourage, or block through inaction, progress toward the rule of law in the world.

11. A tremendous grassroots educational proagram is essential. Most lawyers believe that there is yet no real comprehension in the public's mind of what this program is all about. All State and local bar associations, law schools, civic and other organizations, including the Junior Bar Conference and the American Law Student Association, should be requested to help in this educational program.

12. The grassroots information program should spotlight that it is essential to ex-

ercise our national sovereignty for survival to offset the claim that we are giving up sovereignty. This emphasis upon use of sovereignty to build a lawful world into the vacuum which now exists internationally is all important to a correct understanding of the program for world peace through law.

13. World government is impossible in today's world, but this program of application of the rule of law in courts, and building new law in the world community is a practical and attainable forward step toward a peaceful world.

14. This lawyers' crusade to create a lawful world should be financed by private not government money. It should be a lawyer-to-lawyer-to-people program in the hope that the people will persuave governments to adopt it.

15. We should do all we can to strengthen the United Nations by urging increased application of, and adherence to, the rule of law in the deliberations and actions of all of its bodies and agencies.

#### Foreign Aid

EXTENSION OF REMARKS

## HON. JOHN F. KENNEDY

OF MASSACHUSETTS

IN THE SENATE OF THE UNITED STATES

Thursday, June 4, 1959

Mr. KENNEDY. Mr. President, I ask unanimous consent to have printed in the Appendix of the Record a most thoughtful article published in the current issue of Commonweal. In this article Mr. John Bresnan of the Ford Foundation sketches out most effectively the problems which must be resolved in our foreign aid program and the clear opportunities which present themselves to this and other nations of the free world.

There being no objection, the article was ordered to be printed in the REC-ORD, as follows:

FOREIGN AID: FACT AND FANCY

(By John Bresnan)

We are now deep in that season when the richest nation on earth, having studied its finances, assessed the merits of its petitioners, and calculated the prospect of violence should they be refused, determines the scale of its benevolences for the coming year. By summer the representatives of the people will have settled on something on the order of I percent of the national income, and the United States will have a mutual security program for some months more.

It is a familiar process. It will produce a familiar program. But not a successful program.

As it is now constituted, the foreign aid program cannot possibly succeed. With 5 percent of the Federal budget, an assortmnt of civil servants is charged with nothing less than strengthening allied armies and, among the poorer nations of the world, maintaining economic stability, raising standards of living, heading off Communist subversion, promoting democracy, and assuring ourselves and our allies of continued access to essential raw materials. It does not take much familiarity with such matters to bring one to realize that with so little, it is not possible to do so much. We have overrated our foreign aid program—and underrated the need for foreign aid. Some

year we must redress the balance, or events will have passed the program by.

What would a feasible foreign aid program look like? And what would it take to produce it? We shall not know precisely until we have tried, but the experience of the years since World War II has been enough to suggest some answers.

We must, to begin with, end the practice of incorporating in a single program everything from cooperative weapon development with our NATO allies to our annual contribution to the United Nations Children's Fund. Stronger armies and higher living standards are related matters, but they are not at all the same, and legislating for them as if they were has caused misunderstanding at home and mistrust abroad. It has also badly misstated the problem of financing the two. This problem is not how to divide an appropriation between military and economic aid; it is how to determine the independent need for each and where, out of our whole economy, to find the funds to meet them both.

The present U.S. foreign aid program is, of course, predominantly a military aid program. Of the \$3.9 billion originally proposed for next year, \$1.6 billion appears in the major national security section of the President's budget and would go for direct military assistance—planes, tanks, guns—chiefly to nations defined by formal treaty as our allies. Another \$835 million, listed under the head of "economic and technical development" in the international section of the budget, would go to enable 12 of these allies, the poorest, to maintain their large military establishments; known as defense support, this money pays indirectly for their

support, this money pays indirectly for their soldiers' wages, food, and clothing.

Thus a minimum of 62 percent of the President's program would be allocated for military purposes. And if the military aid figure is increased to \$2 billion, as a Presidential study committee has urged it should be, or if Congress reduces the economic aid figure, as it usually does, the military portion of the program would end up being much higher. In the last fiscal year, some 80 percent of the funds obligated or reserved under the mutual security program went for direct military assistance and defense support.

The last administration report on the aid program called military assistance as importannt to U.S. national defense as expenditures for our own forces. The same can be said for defense support funds, and it is time that the Congress and the public began to conisder this assistance along with our national defense needs at budget time.

If our military and paramilitary ald were viewed in this light, it seems likely that we would come to question more seriously the extent to which we are directing this and to some of our poorer allies. Figures on direct military assistance are made public only on a regional basis, not for individual countries, but the defense support allotments indicate where the emphasis has gone in the poorer nations. Almost half these funds went last year to only two nations: Korea and Vietnam. Other large sums went to Nationalist China, Pakistan, Spain, and Turkey. The remainder was distributed among Greece, Iran, Thailand, Laos, Cambodia, and the Philippines.

The primary basis for judging this military aid is, of course, the military capability of the Russian-Chinese bloc, the likelihood of armed attack on these countries, and the role that local armies would be expected to play in their defense. The Draper Committee which is reviewing this matter for the President began its list of preliminary conclusions by stating that "the Communist military threat is greater than ever," and the information on the public record amply supports this judgment. It remains a question, how-

ever, whether it is local armies or the power of the United States that is the main factor in the defense of some of these areas.

The question has special significance because of the international politics that are involved. The Draper Committee itself was in part an administration response to criticisms leveled against military aid to economically underdeveloped countries by eight members of the Senate Foreign Relations Committee. They told the President in a letter last August:

"Overemphasis on military assistance has tended unavoidably to involve the United States in situations in which our aid may have contributed to the maintenance in power of regimes which have lacked broad support within the countries we have assisted. It has helped to create a militaristic image of the United States which is a distortion of our national character. It has distracted attention, energy, and perhaps economic aid from more pressing problems. And, finally, we believe military assistance by its very nature tends to create and then to perpetuate military hierarchies which even in the most well-developed countries may endanger the very values of individual freedom which we seek to safeguard."

Harsh words from the chief Senate supporters of the mutual security program, they may yet have their effect. The Draper committee has defended past arms aid to Asian nations on the Communist periphery on the ground that without it their own direct defenses and our own position beyond our shores would have little substance short of a major nuclear effort. And it has argued that the large forces far beyond the capacity of these countries to maintain need to be supported in Korea, Taiwan, and Vietnam, since they are not even formally at peace with the Communist power they face. But it has also acknowledged that changes and modifications in certain of the military assistance programs can be justified. And it has underlined the importance of bringing these about by stating as its second major judgment that the Communist economic and political threat and capabilities are expanding.

Unfortunately, the changes and modifications are not likely to come about in any substantial degree for quite some time. Certainly there is little public pressure for it. Congress could reduce funds but could not take the constructive steps that would ease the impact of the change on friendly countries and allies. Considerable initiative must come from within the executive branch, and it seems ill-prepared for the effort that would be required.

In any case, there is no blinking the fact that a military aid program of substantial size is going to have to be maintained. And there is no avoiding the corollary that our economic aid will have to be greatly expanded if we are to stand before the peoples of the world as a nation with compassion for the poor as well as mistrust for international communism.

Not only this, but the increased economic aid will have to be offered on a more straightforward basis than is much of our assistance at the present time. One-third of the capital funds we are now making available directly to other countries is offered only on an emergency basis or in accordance with anti-Communist strategy. Much of the \$272 million in special assistance funds being sought by the President for next year is already earmarked for grants-in-aid to Tunisia, Morocco, Libya, and Sudan, Jordan, and West Berlin. And another \$200 million is being sought for contingencies, such as those produced by the Middle East crisis this past year. By comparison, the President is asking for only \$700 million for development loans.

This emphasis on short-run interests in our economic aid program, added to our relatively greater emphasis on military aid in the first place, has obscured the fact that the American people are capable of acting out of a spirit of generosity. In India it has resulted in a certain preference among the public for Russian rather than American assistance. In the Philippines it has moved the Secretary of Foreign Affairs to complain that adherence to democratic principles seems to be a liability so far as getting U.S. economic aid is concerned.

It even has obscured the American people's capacity for generosity from themselves. The view is often expressed in Congress that public support for military aid will carry the economic aid program through, but it is clear by now that this notion has backfired. It is a public asked to think of mutual security in narrow terms, a public urged to approve a foreign aid program out of fear of communism rather than out of a sincere desire to assist needy nations, that falls to see the point of foreign economic assistance.

economic assistance.

It is at least possible that what the American public has not been persuaded to do out of immediate interest, it would be willing to do for a greater purpose. Pope Pius XII, a few months before his death, spoke of economic assistance to the poorer nations as a program which the united voices of conscience and broad interest urge to be undertaken without loss of time. Seeking the American people's support for foreign economic aid on this basis would require raising the level of public discussion substantially above where it has been for the past few years.

Recent discussion has tended to center on such issues as trade versus aid, grants versus loans, hard loans versus soft. It has helped to clarify these issues and so it has been useful, but the issues themselves have been of only secondary importance. Economists and others will long dispute how we might best accomplish our purposes. Only the people, with the help of their political leaders, can decide what their purposes are.

It would have to be clear that U.S. economic aid will not necessarily prevent the spread of communism, maintain the stability of nations, promote democracy, or win friends for the American people, although over the long run it will produce conditions in which all these are more likely to be accomplished than they are at present.

Our aid, by lifting them out of destitution and hopelessness, could bring some people to the point at which revolution would seem possible and desirable for the first time. It could bring them to the point of hoping but, because the rate of improvement of their living standards is bound to be very low, not to the point of much satisfaction.

Our aid would not guarantee communal peace, because many of the poorest nations are also among the newest, and it is much too early to tell whether some of them have the basis for a viable political community. At present some are faced with internal issues, racial or regional, which, it seems, could tear them apart no matter how well-off they might be.

We must not make the mistake, either, of supposing there is any necessary relation between economic growth and democratic political development. Our aid, especially when it is of a spectacular sort, may imply American support of a particular government. But there is only one way to promote democracy as a form of government among the new nations, and that is to practice it more fully at home while seeking to wear down the considerable cultural barriers that stand between us and the people of these nations.

To hope that economic aid will quickly win us friends would be equally naive. The relationship of giver and receiver is never an easy one, and the best we can do is to internationalize much of our increased giving. Apart from drawing out the capital of other countries, chiefly our NATO allies, this would make it easier for others to accept our generosity. It is not necessarily an advantage to have a "made in America" stamp on our every grant and loan.

It will be quite enough, in fact, to look for our economic aid to produce economic That alone is no easy thing, development. and to bring it about in a very large part of the world is certain to require funds on a very large scale, probably over a very long period of time. No one really knows how much or for how long, because there is litle experience to show the way. There have been fewer false starts in sending rockets into orbit than there will be in bringing nations to the point of self-sustained economic growth. Economists estimate conservatively that it may require \$3 to \$4 a year for decades to come.

This is about 1 percent of the annual income of the United States and its European allies, and about half of the total would have to come from the United States alone. That would be at least three times what the United States actually paid out last year, and some \$300 million more than the President requested of Congress this year, for the same purpose. It would amount to less than one-twentieth, however, of what we are spending each year on arms. And it would come to only a portion of the increase that takes place in our national income almost every year.

There is a surfeit of proposals as to how this sum might best be made available to the poorer nations. They need not delay us here. It is more important that we give the discussion of them an air of reality by preparing ourselves to support them with funds. The chief obstacles to a more effective foreign economic aid program are not technical ones at all but deficiencies of the wall. We are not uniformed about the poverty of the greater portion of mankind; we are unmoved by it. How many times has it been pointed out to us that our children are being born to 70 years of life, while theirs are born to only 32? Is it possible that we remain ignorant of the fact that we and the other Atlantic nations, 16 percent of the world's population, are receiving 70 percent of the world's income?

If it is difficult to see what bonds the vast majority of the people of the earth can feel they have with us, it is still more difficult to see how whatever bonds that do exist can grow. Though we often forget it, the disparities between rich and poor tend to grow larger unless great efforts are made to reverse the trend. Even with the considerable redistribution of income among the America people produced by the graduated income tax, great disparities of living standards exist in the United States.

But no such redistribution is taking place among nations, and no advance among the poor can be expected. We in the West are now saving more money per person every year—and investing it in the production of new wealth-than the people of many countries are earning. In fact, the per capita income of parts of eastern and southern Europe, Asia, Africa, and Latin America is no greater today than it was centuries ago, and in some cases it is even lower. The reasons this are not hard to find. The chief fruit of our technological revolution to be exported has been our medical science; fewer children are dying in their first year of life, fewer mothers of childbirth, fewer fathers of disease in their prime. The result is that the poorest nations of the world must find the means of providing for a larger addition to their population each year than we in the United States; their economies must run just to stand where they

How an economically impoverished nation can raise its living standards in this situation is a harsh dilemma. Where the people are so poor to begin with, how can anything be saved for investment? Russia and China have shown one way—to squeeze the savings out of the people in the form of unremitting labor and continued poverty. In non-Com-munist countries, a growing number of non-Catholics see no help but to reduce the number of children who are being born-at the same time that a major effort is made to raise productivity. This view is deplored by the few Catholics who have addressed them-This view is deplored by selves to the problem. They point out that a serious effort has not been made to raise living standards in the face of population increase. But where is the Catholic pressure for the effort?

The serious effort must come, however, And the effort must be sustained, if not by congressional approval of a long-term program, then by the emergence of a climate of American opinion, which is the best guarantor of government action in a democratic society.

It is not surprising that the ordinary Congressman should look for help in addressing the public on this subject. It is a national question on which there must be national leadership of a vigor we have not seen for quite some time. Even that may not be enough. The climate of national opinion is not now receptive to the demands of an effective economic aid program, and it may be beyond the ability of any one man or group of men to change it. We may have to await further calamities abroad before it is timely to make the case. But we will not know whether this is so either until the attempt has been made.

#### The Market for Dairy Products in Schools

EXTENSION OF REMARKS

#### HON. ALEXANDER WILEY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Thursday, June 4, 1959

Mr. WILEY. Mr. President, I am delighted that the Senate yesterday acted to increase the fund for the school lunch program above the amount requested in the 1960 budget.

If finally approved by Congress in the Senate-passed version, the total amount utilizable in this splendid school lunch program will be somewhat over \$153 million.

Over the years, the establishment of this school lunch program in our educational system has offered an increasingly important market for dairy, as well as other farm commodities. Between July 1957 and June 1958, almost 3½ billion half-pints of fluid whole milk and 170 million pounds of butter, cheese, ice cream, and nonfat dry milk solids were distributed to the public, elementary, and secondary schools. According to estimates, an additional one-third billion half-pints of milk were provided in schools serving milk only.

The record, I believe, fully justifies continued support of this program.

Across the Nation, over 12 million boys and girls are now enjoying nourishing

lunches. In my own State of Wisconsin, over 228,000 students are participating, and it is expected that another 20,000 will be added next year.

We recognize, of course, that one of the fundamental problems facing the dairy industry is that of increasing consumption of dairy products. Although surpluses have been reduced, the remaining stockpiles continue to act as an economic millstone around the necks of our dairymen.

The continuation and expansion of this program not only provides a very useful outlet for our surplus dairy and other farm products; also it is making a substantial contribution to better health for the youth of the Nation.

In addition to these benefits today, this program is laying the groundwork for a healthier citizenry for tomorrow. Too, the increased consupmtion of dairy products, for example, will educate these young folks in the desirability of establishing the dairy habit—which will encourage greater consumption of our healty, nutritional, dairy food for the future.

In view of the fact that this is June Dairy Month—in which special activities for increasing consumption of dairy products are being carried on throughout the country—I believe the extension of this school lunch program, involving the utilization of vast quantities of dairy products, is particularly fitting.

The June edition of Agricultural Marketing, published by the U.S. Department of Agriculture, contains an informative article on the significance of the school lunch program; both to schoolchildren and to the farm economy. I ask unanimous consent that this article, entitled "The Market for Dairy Products in Schools," by William S. Hoofnagle and Kenneth E. Anderson, be printed in the Appendix of the Record.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THE MARKET FOR DAIRY PRODUCTS IN SCHOOLS
(By William S. Hoofnagle and Kenneth E. Anderson)

The school lunch program, a growing part of the American educational system, is offering an important market for our Nation's dairy production. It is also establishing, in the very young, good eating habits and a taste for mik and other dairy products that might well carry over into their adult lives.

Between July 1957 and June 1958, slightly under 3½ billion half pints of fluid whole milk and 170 million pounds of butter, cheese, ice cream, and nonfat dry milk solids were delivered to public elementary and secondary schools having a la carte or plate lunch services. It is estimated that an additional one-third billion half pints of whole milk were consumed in schools serving milk only.

These are the figures Agricultural Marketing Service economists came up with after surveying some 500 representative schools with lunch facilities. Projected to include all 60,000 public schools in the United States having lunch services, these statistics indicate the size of the overall school market for dairy as well as other farm food products.

(Not in the sample, but estimated on the basis of an earlier study, were some 19,000 additional schools serving milk only. Public schools having neither lunch nor milk service in 1957-58 numbered approximately 27,000.)

As the school population increases and as the trend toward lunch-at-school continues, more and more food service facilities are being built into new schools and older schools are modernizing their facilities to accommodate lunch programs.

The school market for farm food products is thus expanding in two directions—through a rapidly growing school population and through a broadening of food service facilities. The effects of this expansion will be feit all through the agricultural system, from the producers and processors of fruits and vegetables to the livestock and dairy farmers. The greatest market potential, however, is offered to the dairy industry whose products already account for 45 percent (in terms of wholesale value) of the foods served at public elementary and secondary schools.

Last year, enough fluid milk was distributed at the 60,000 schools having plate and a la carte lunch services to provide 154 half-pint units to every child in attendance.

This consumption of fresh fluid milk was

This consumption of fresh fluid milk was matched by an equally impressive amount of processed dairy products—butter, cheese, ice cream, and nonfat dry milk solids.

Almost 63 million pounds of butter, donated almost entirely from Government stocks, were distributed to school food service facilities last year. This came to about 3 pounds per child—a substantial amount when one stops to consider that for the civilian population as a whole per capita butter consumption averaged only 8.4 pounds in 1958.

Large quantities of cheese also were included in public school menus during 1957-58. Often served in sandwiches and prepared dishes, more than 37 million pounds of cheese, mostly processed, were used. All told, in schools having a lunch service, each child in attendance had available an average of 1.8 pounds of cheese.

Ice cream, always a favorite dessert on any menu, was another popular school lunch item. During the survey period more than 54 million pounds of ice cream went to public school feeding programs. On a per capita basis, 2.5 pounds of ice cream were consumed by the school market.

Although nonfat dry milk solids were used by schools in rather large amounts, only minor quantities were reconstituted for drinking as a beverage. It was used chiefly in food preparation. Between July 1957 and June 1958 about 16 million pounds of nonfat dry milk were delivered to public schools in the United States. Averaged out, this came to 0.1 pound per child.

This then is the current dairy market in schools having feeding facilities. There are, however, within this market wide differences in the quantities of the various dairy products used. These differences show up in a comparison of schools participating in the national school lunch program and those not participating.

For example, lunch program schools had a 75 percent higher per capita milk consumption than schools not under the program. They also used much larger quantities of cheese. But nonparticipating schools used twice as much cottage cheese and half again as much ice cream on a per capita basis as participating schools.

Dairy products moving to both participating and nonpraticipating schools had a wholesale market value of \$267 million.

On a per child basis, \$12.43 worth of dairy products was made available to public schools with food services. Fluid milk, of course, accounted for most of this. Its share came to 88.94. Butter averaged \$1.67; ice cream, 79 cents; cheese, 70 cents; and the average for all other processed items totaled 33 cents.

The value of dairy products delivered to public schools serving lunches was highest in urban elementary schools having more than 300 pupils, in areas where family incomes were less than \$4,000, and in schools participating in the national school lunch program.

Dairy products accounted for almost half (45 cents) of the wholesale value of every dollar's worth of food used by public schools having a lunch service during the 1957-1958 survey year. Fluid whole milk was valued at 32 cents; butter at 6 cents; lee cream, almost 3 cents; and natural and processed cheese, 2½ cents. Nonfat dry milk solids, cream, chocolate drink, cottage cheese, and evaporated milk accounted for the remaining 1½ cents.

The value of dairy products used by schools participating in the national school lunch program averaged 6 cents more per child than in nonparticipating schools having lunch service.

Almost 20 percent of the total value of all dairy products delivered to the school lunch market was directly donated from Federal surplus supplies. Butter accounted for 67 percent of the dairy donations; cheese, 27 percent; and nonfat dry milk solids, 6 percent.

Of the total value of all donated foods, butter accounted for almost 39 percent and other dairy products for 19 percent.

Fluid whole milk still represents a major portion of the value of all dairy products utilized in public schools serving lunches. Approximately \$192 million was spent for fluid milk during the survey period. However, a portion of the cost was borne by the Federal Government.

Purchases of dairy products were made almost exclusively from local processors and wholesalers. Buying practices included the use of competitive bids, placing orders with route salesmen, personal selection, or telephone orders. Small schools generally used the more personal method.

As might be expected, larger schools (those with 300 or more pupils) usually asked for bids. Almost 50 percent of these schools obtained milk products locally through competitive bidding, while only 18 percent of the small schools used this purchasing method.

#### How To Kill Labor Reform

EXTENSION OF REMARKS

## HON. JOHN F. KENNEDY

OF MASSACHUSETTS

IN THE SENATE OF THE UNITED STATES

Thursday, June 4, 1959

Mr. KENNEDY. Mr. President, I ask unanimous consent to have printed in the Appendix of the Record an editorial from the Washington Post and Times-Herald of June 1, 1959, relating to labor-reform legislation.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the Washington Post and Times Herald, June 1, 1959]

How To KILL LABOR REFORM

The opposition of the U.S. Chamber of Commerce and the National Association of Manufacturers to the Kennedy labor reform bill is as shortsighted as the condemnation by the AFL-CIO. Why is it that businessmen and labor leaders seem to be unable to rise above their narrow preoccupations to support labor reform legislation which is unquestionably in the public interest?

The representatives of both labor and management know that neither side is going to get precisely the kind of bill that it deems desirable. Is it then asking too much for

constructive businessmen and decent union leaders to put aside their differences on a matter of national interest?

Without the support of either labor or management the House counterpart of the Kennedy bill is not likely to get out of the Labor Committee despite the 90-1 vote by which the legislation was approved in the Senate. The committee does not plan to try to reconcile the conflicting views of its members until late in June, which means that it will be practically impossible to put a labor bill through the House at this session of Congress in the unlikely event that the committee agrees on one. Such temporizing by the committee is an indication of disgraceful failure to rise above petty political and labor-management squabbles.

We do not like some parts of the Kennedy bill—particularly the sections of the so-called bill of rights which, it seems to us, try to regulate union activities in stifling detail. Furthermore, we should like to see the legislation strengthened to get at the serious abuses of some organizational picketing as well as secondary boycotts. Despite its defects we believe that the measure is a good beginning. The enactment of the Kennedy bill surely would be a vast improvement over the present prospect of yet another round of cynical blame-calling by both labor and management.

#### The Casualties

EXTENSION OF REMARKS

## HON. HARRISON A. WILLIAMS, JR.

OF NEW JERSEY

IN THE SENATE OF THE UNITED STATES

Thursday, June 4, 1959

Mr. WILLIAMS of New Jersey. Mr. President, the Memorial Day holiday which we recently celebrated opened for many of us the outdoor season of the year. Annually at this time we find our Nation's families taking to the highways to enjoy the beauties of the countryside, the seashore trip, and the picnic areas. And this is as it should be. We have provided beautiful highways and superhighways, luxurious eating places, and comfortable picnic areas in abundance to tempt the homebody on to the road. But unfortunately we somehow neglect to adhere to the precautions to insure our own welfare in terms of preventing the horrible disasters that seem to go hand-in-hand with heavy traffic. On all sides we are reminded of this. But I wonder if it really gets throughexcept in such a fearful fashion to those of us who become a name on a casualty list. I was forcefully reminded of this in an article I read about Memorial Day in which it was stated "nearly 300 Americans lost their lives." I submit that we cannot emphasize this subject too much. We need constant reminders. As the article so well puts it:

It is going to take ever-increasing efforts to keep the highway casualties down when there are more cars and more drivers ever appearing to make use of them.

This thoughtful article from the Woodbury Daily Times of June 1 deserves wide attention, I think, and I ask unanimous consent to have it printed in the Appendix of the Record.

was ordered to be printed in the RECORD, as follows:

Memorial Day was a beautiful day and it coaxed many motorists to take some kind of a trip during the weekend, even if he or she had not planned to do so. Considering the number of vehicles and the many drivers guiding them it is perhaps remarkable that there are not more serious accidents to report about after the holiday weekend.

However, when nearly 300 Americans lose their lives over the Memorial Day holiday, we wonder if all this traveling is as good as we think it is. It is foolish to think that Amercans are going to let their good automoble idle in the garage on a wonderful weekend. They have a good car and, generally speaking, they have a good driver, so why waste a fine weekend when they can

go places over excellent highways?

The only difficulty is that too many people have the same feeling at the same time. There is bound to be heavy traffic on nearly every pleasant weekend during the next several months and when a holiday is included it is much worse. It would be too much to expect that any such weekend would come and go without a casualty being reported. Even if all were the most careful of drivers, it is certain that something unusual will occur to cause an accident.

No one can expect to make the casualties of our highways disappear entirely, but we should do our best to seek a reduction of the terrible toll we must pay for our week-end traveling. We are striving to get rid of those who drive when drinking, and those

who disregard the speed limits when and where they see fit.

The big trouble is that the police cannot be everywhere. The average motorist won't report another driver, no matter what he does, unless there is a subsequent accident.

Every year the number of motor vehicles on our highways is growing. We seem to be frantically building new roads to accommodate them, but no matter how many highways we build they always seem to fill up on weekends and holidays. It is going to take ever increasing efforts to keep the highway casualties down when there are more cars and more drivers ever appearing to make use of them.

One thing is certain, we did not make a good showing over this past weekend and there will be experts trying to figure out the reason. What they find as causes will mean very little unless everyone who drives a car will try to be a little more careful on the next holiday weekend. We must become more careful or we will ultimately find our driving greatly restricted.

## The Independent Laboratory and Consultant

EXTENSION OF REMARKS

## HON. JACOB K. JAVITS

OF NEW YORK

IN THE SENATE OF THE UNITED STATES Thursday, June 4, 1959

Mr. JAVITS. Mr. President, I ask unanimous consent to have printed in the Appendix of the Record an address delivered by Dr. Foster D. Snell, of New York City, presented on the occasion of his receiving honorary membership in the American Institute of Chemists, at a dinner sponsored by the New York chapter, January 8, 1959, at New York,

There being no objection, the article N.Y. This address was reprinted in a recent issue of the Chemist magazine.

> There being no objection, the article was ordered to be printed in the RECORD, as follows:

> THE INDEPENDENT CONSULTANT AND INDEPEN-DENT LABORATORY AS A PROFESSIONAL

> > (By Dr. Foster D. Snell)

One may look at the independent laboratories as constituting an industry of which the output is pieces of paper. These range from a simple analytical report to a complex bound research report, or a blueprint of an engineering design. That is the view-point I take in this discussion of the professional opportunities offered by that in-

dustry.

The facetious definition of a consulting chemist is a chemist sitting on a door step waiting for a job. There is an equally facetious one that a chemical engineer is a man who does not know enough chemistry to be a chemist or enough engineering to be an engineer. The famous chemical who coined the latter phrase shortly afterwards became a consulting chemical en-

The industry being discussed may consist of a few dozen laboratories, or a couple of hundred, or about 2,500 across the country, depending on where we place the cutoff point in terms of size. In other words, every city of 25,000 or 50,000 has its own local laboratory. Then there are a considerable number of individual consultants. Cynics even say that every professor of chemistry is also a consultant. I am limiting the definition to laboratories of some size, perhaps about 100, with personnel of 10 or more people each.

The existence of such independent laboratories is purely an American institution, including Canada. There are almost none in

other countries.

A considerable number of the independent laboratories are primarily testing laboratories. Thus, their function is to see that the contractor in highway construction uses the proper mix of concrete, or they serve as intermediary between buyer and seller as to the quality of an item. Others are research organizations which compete with the captive laboratory of a company for its research appropriations. A captive laboratory is owned by and generally serves only one firm. Some captive laboratories compete with the independent laboratories for Government contracts.

Many of the larger independent laboratories are joined together in the American Council of Independent Laboratories, which I define as being a trade association, though some people do not like the term. From a standpoint of laboratory administration, the problems of a research laboratory and a testing laboratory are much the same. Therefore, in that council we share experience on business matters, such as the amount of floor space required per employee or the dollar income per unit area, or the prob-lems of internal and external communica-

There is a good reason why I picked a personnel of 10 as a cutoff point. Any management study comes up with the same answer that the Romans had in their legions. Each person should be directly responsible for no more than 10 people, preferably for less. Therefore, when you get beyond 10 people in a properly organized laboratory, you have multiple groups. Practically speaking, those groups differ in no essential feature from the research or development groups which are the basis of the organization of the captive laboratory. But there is a difference in character. To strike the contrast, the captive laboratory persuades the officers or the board of directors to appropriate annually some sum of money. It may be as little as \$50,000. Perhaps it was Maurice Holland who said that was an absolute minimum and an undesirably low one. From there the sums range up to the multimillions of dollars which are appropriated by the large chemical corporations each year. Whatever chemical corporations each year. Whatever the appropriation, it is then cut up into pieces for individual projects.

The subject of many conferences has been the management of research and how to appraise results. Actually they can only appraised over a considerable period of time, and the rubber yardstick used by the director of research and by top management is not at all the same.

The independent laboratory has basically the same financial structure. There are various appropriations for various projects. the difference being that they come from different sources rather than from a uniform source. But there another difference

Accounting wise, the independent laboratory has all of its costs on each project in such form that one can balance against the results. It must have-for billing purposes. Some captive laboratories do, but many do not. The concept that I am presenting that laboratory operation constitutes an industry is not at all fanciful. I quote from an address of E. Duer Reeves, of Esso Research & Engineering Co., given several years ago:

"I think the day is fast approaching when industrial research will product technology as an industrial product in its own right. As this day approaches, industrial research will become more and more a separate industry creating an important raw material under highly competitive business condi-

"It seems evident to me that as time goes on a greater and greater share of our technology will be provided by independent research organizations not attached to specific industrial concerns. These independent research organizations by competition amongst themselves will establish the competitive market value of various form of technology and our present captive research organizations will remain in business only extent that they can compete with the indeepndent groups and do an even better job. This will tremendously increase our capacity to make new discoverles and provide technical solutions to an ever-broadening field of problems,"

I hold the same opinion. I am trying to be more specific in view of my own expe-rience. In practical terms, the best clients of the consultant and the independent lab-

oratory are the large organizations which have their own laboratories.

The relation of the independent laboratory to laboratories maintained by industry can be simply described as both parallel and analogous to the relation of the independent legal firm to the legal staff of a company. The company furnishes its requirements for professional service with its salaried employees up to a point; beyond that point outside professional services are preferable. This is best established by illustrations.

In the purchase of oils, cottonseed, and many other materials, the price is based on oil content, protein content, free fatty acid, etc. The seller may be unwilling to have the buyer make the analysis and pay on the basis of this analysis. The buyer may be equally averse to having the seller determine the quality of the product being sold. Large commercial laboratories are devoted almost entirely to the furnishing of data in response to such needs.

Firms abroad are making large purchases of chemical materials in the United States. The purchase contracts usually call for the chemical to be sampled at the point of shipment by a specific commercial laboratory and certified to be of the quality specified. Mistakes can occur, such as a shipment of caustic soda grossly contaminated with so-

dium chloride, or a shipment of an organic chemical which contained none of the material specified. The other day we found a shipment of ether which was 90 percent water-soluble. It was ethanol denatured with ether. The purchaser pays the bill for the independent laboratory to protect him. The management of a company recog-

nizes the need for research at a given stage in their development. The company is still small. They do not feel able to invest an initial \$25,000 or more in a research laboratory and equipment. They do not want to set up a payroll of \$25,000 plus for research. And the overhead costs of a small laboratory operation are necessarily much higher in proportion than for a large laboratory. They retain the services of an independent laboratory for 1, 5, or 10 years before the installation of their own research laboratory is justified. Thereafter, the in-dependent laboratory often serves as adviser for a period of years. An association of modest size runs a cooperative program for its membership. It can install a research laboratory. More commonly the funds available for such research are allocated to an independent laboratory.

A large company has no bacteriological department and is not sure that it needs one. A new product which they are bringing out requires bacteriological research and control. An independent laboratory conducts that for months or years. If the field grows with that company, it then installs a bacteriological laboratory. If it does not grow, or the product is abandoned, they have not invested a substantial sum in a laboratory which they no longer need and made the concomitant investment in fitting into their organization personnel which will

now have to be released.

A company, large or small, needs occasional use of specialized equipment. The use is not sufficient to justify the space and investment to own the equipment and the training of personnel to operate it. Samples are sent out. The last I knew, the General Electric Co. had Norma-Hoffman bomb tests on greases done by an independent laboratory. Other large companies con-

tract research, not just testing.

A company with both control and research laboratories has a temporary overload. Rather than to equip for short-term use, such work is sent out. A company has a knotty problem which its personnel have not the experience to solve. It is sent to an independent laboratory known to have spe-cialized knowledge in the field. A company requires ideas for guidance and amplifica-tions of its research program. It calls in a mature person from an independent laboratory to attend its research conferences. There are many other specialized cases.

Reference has been made to parallelism between the chemical and legal professions. At the next stage they approach each other closely. Litigation arises, as it will. Perhaps the matter is a claim for product liability; perhaps it relates to the cause of a fire or explosion; perhaps it is concerned with the allegation that the company is infring-ing a patent or a claim that a competitor is infringing one of theirs. It is the almost universal practice in such cases to use an independent laboratory because of its dissociation from the management of the company. The outside laboratory is remote enough from the problem to get a more disinterested point of view. Courts give more weight to results from the independent lab-

oratory.

Finally we come to the gist of the topic the payoff. How does the professional man fare in the consulting and independent laboratory as compared with his financial return in industry? The Los Alamos scientific laboratories of the University of California have for 12 years collected increasingly comprehensive statistics.

The 1958 survey, off the press only a short time, covers 82,539 nonsupervisory salaries of 353 companies, and 15,586 supervisory salaries of 347 companies. They are not identified by individual or company, but the companies who furnished the statistics are listed as an appendix. The data are broken down into hundreds of tables and graphs, 225 pages of them with 3 tables on many of the pages.

The data are probably slanted a little. They show that in general small organizations pay less than larger organizations and the tendency is surely to miss more of small companies than of the large. Many small organizations with captive laboratories are absent, but I miss only one large organization that I know. So the figures may tend to be a little high.

Approximately two-thirds of those covered are in industry. The balance are in the independent laboratories, the research institutes, or are employed by Atomic Energy Commission contractors, or Government laboratories. oratories. They are broken down to show subdivisions of private industry, sections of the country, laboratories according to the number of employees, and the type of degress the man has. I once figured out that if compensation was the sole objective, a man should get a job with a petroleum company having a laboratory of 50 to 100 employees located in the Mountain States.

The data are broken down by the number of years since a man received his degree and by whether his position is rated as super-visory or nonsupervisory. There are sup-plementary data which are collected by the Sandia Laboratory and also by a Govern-ment contractor. Both check closely with the American Chemical Society surveys for the years in which those are made, but the ACS surveys are not made every year.

I shall give you 10 representative figures to make my point as to how the professional working for the independent laboratory fares as compared with all the other possibilities. The mean of all B.S. and M.S. graduates reported in the 1958 survey in nonsupervisory capacities is used, because it is the largest group and therefore presumably the most valid statistically. The figure is \$693, a synthetic salary for 72,985 people of all ages. Let us see how subdivisions compare with that. The mean for all private industry is \$10 a month more. The mean for AEC contractors is \$21 a month more. The mean for Government laboratories is \$28 a month less. And now here is the payoff figure. The mean for the 1,136 employees in this category classed as consultants is \$20 more, within \$1 of the highest of any of the cate-gories mentioned. That is what the record

Just two more figures. The synthetic salary, similarly derived, of the B.S. and M.S. supervisory capacity has a mean of \$1,008 and as a close check on the other figures I gave, the mean for consultants is \$19 higher. There are my 10 figures. The consultant is at the top of the scale.

One evidence of the recognition of laboratory operation as an industry appeared in The American Institute of Management issued the first management audit rating and independent laboratory in terms of the 10 factors which go to make up management. The laboratory organization was ours and scored over 80 on a scale of 100.

So, in summary, the consultant and the independent laboratory represent an industry, fulfill a genuine need, and compensationwise represent a top scale.

Achievements of Elkdom Are Reflected in the 50th Anniversary of Philipsburg. Pa., Lodge No. 1173, Benevolent and Protective Order of Elks

> EXTENSION OF REMARKS OF

## HON. JAMES E. VAN ZANDT

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES Thursday, June 4, 1959

Mr. VAN ZANDT. Mr. Speaker during the week of June 6 to 13 inclusive, the Philipsburg, Pa., Lodge No. 1173, of the Benevolent and Protective Order of Elks will celebrate its 50th anniversary.

As a member of Elks Lodge No. 386, Altoona, Pa., it is a pleasure to congratulate Philipsburg Lodge No. 1173 on the occasion of the observance of a half century of service to humanity, State, and Nation.

Patriotism and loyalty, combined with brotherly love, have marked the progress of the Philipsburg lodge from its inception in 1909 to the year of its golden anniversary. The principles and ideals of Elkdom have woven themselves into the very fabric of this lodge and have contributed strength and permanence to the life of the entire community.

It is a never-ending source of gratitude and pleasure to observe the deep roots of the Benevolent and Protective Order of Elks. In our large cities one sees massive lodge buildings, perhaps constructed at high cost, expressive of the progress of our organization. But, by the same token, when one turns off the main highways of this Nation and travels along the countryside and in the smaller towns, one finds more humble abodes of Elkdom where fraternalism also takes on a rich meaning within the community. Within the Elks lodge halls of this Nation, whether sumptuous or humble, one finds the existence of a fraternalism which has grown and prospered on the principles of friendship, love, and truth.

The record of Philipsburg Lodge No. 1173 is one of which we can be proud; a record written not by any one man or group of men, but by hundreds of loyal Elks. This represents the very essence of real Americanism—the sum of individual effort. The friendship and brotherhood found in Elkdom have few parallels in life. It typifies America at

The record of the Benevolent and Protective Order of Elks is engraved indelibly on the tablets of our country's history. Among our brothers have been leaders in the outstanding accomplishments of our Nation. It is not strange that the Order of Elks, through the years, has attracted men with innate qualities of leadership. It offers a wide field for useful endeavor. To bring out the best qualities in men of different backgrounds is profoundly and constructively significant in our order.

When the Order of Elks was started approximately 91 years ago, the Golden Rule became its foundation. The eternal truth of this foundation has been proved by the growth and virility of our order.

Fifteen men founded the Elks in New York City on February 16, 1868. Little did the first members know that their idea would grow into a fraternal organization which today has a membership well over 1 million. Out of the good fellowship which characterized the first group of Elks developed a purpose and direction until it became a benevolent and patriotic order.

One of the most inspiring chapters in Elk history is the order's services in the defense of our Nation in two World Wars. In World War I, the Elks War Relief Commission spent more than \$1 million for hospitals and for the rehabilitation of disabled veterans. It helped the Salvation Army and afforded loans to 40,000 veterans, enabling them to receive rehabilitation training.

In World War II, the grand lodge alone spent \$1,500,000 on national defense programs under direction of the Elks National Defense Commission and its successor after Pearl Harbor, the Elks War Commission. Subordinate lodges poured out hundreds of thousands of dollars more in war work.

In recruitment of flying cadets, more than 400 Elks lodges organized and conducted refresher-course schools to qualify for the Air Corps. Impressed by the Elks' flying-cadet program, the Army asked the order to help it recruit 45,000 men for Air Corps ground crews. In a brief period, 97,000 men were obtained. The Navy then asked for help in recruiting flyers, and the Elks responded with a campaign that obtained quick results.

When the Army and Navy desperately needed men for the Corps of Engineers and the Seabees, respectively, they turned the job over to the Elks exclusively. The quota was filled 3 months ahead of schedule.

Elks operated 135 fraternal centers adjacent to training camps and stations where military personnel received refreshments, recreation and entertainment in the traditionally hospitable Elk manner.

At the war's end, the Elks turned to the thousands of veterans in hospitals. Under the national service commission, the order carried on a continuous program of entertainment in hospitals.

Parties, variety shows, and athletic exhibitions are staged. Ambulatory patients are taken on picnics, fishing trips, and to ball games. Elks collect and present to veterans' hospitals each year tons of hides and leather, old clocks, watches, electrical appliances, and other materials used by patients in occupational therapy.

Accenting help to youth, Elks' activities range from sponsoring 1,000 smallfry baseball teams and conducting an annual National Youth Day on May 1 to recognizing the achievements of junior citizens and awarding several hundred college scholarships annually totaling thousands of dollars in value for deserving youngsters.

The Elks National Foundation is a perpetual trust dedicated to philanthropic work. Gifts from individual Elks, from local lodges and from State Elks associations have brought the foundation's assets to approximately \$6 million.

The Elks National Foundation most valuable student contest for the past 23 years has been opening the doors of universities to brilliant students with empty purses who otherwise might have been lost to the country in times when the call for the United States to assume world leadership has been most insistent.

More and more, the warm humanitarianism of the Benevolent and Protective Order of Elks is becoming recognized in its youth and old-age programs that go beyond the social features of the organization.

Resting firmly upon the principles of charity, justice, and brotherly love, it is the mission of Elkdom to build up our country and ourselves.

On the altar of every lodge we find reverently spread the flag of our country. The founders of our order, with hearts full of lofty patriotism and brotherly love, showed the noble purposes to which man's efforts can be directed.

It was with these noble purposes before them that the founders of Philipsburg Lodge No. 1173 came into being 50 years ago. Through the years our brothers of this lodge have taught patriotism as the highest type of civic virtue. They have covered the shoulders of the poor, the weary, and the disheartened. Continually, they have spread the altruistic principles of brotherly love which are the foundation stones of any lasting civilization, and which will ever be the hope and highest destiny of man.

On the occasion of 50 years of achievement as a part of the great sphere of Elkdom, I congratulate the Philipsburg lodge. Through the years its members have sought the noble attainment of relieving human suffering. But beyond that, they have recognized at all times that there is an imperishable spirit in every man which is worthy of earnest development. And always the brother Elks of Philipsburg have been dedicated to the principles of our order, which are the principles of America.

#### Mr. Dulles' Memorial

EXTENSION OF REMARKS OF

# HON. GLENN CUNNINGHAM

OF NEBRASKA

IN THE HOUSE OF REPRESENTATIVES Thursday, June 4, 1959

Mr. CUNNINGHAM. Mr. Speaker, it is difficult to express the deep sense of loss and respect felt by a sorrowing world at the death of our late and beloved Secretary of State, John Foster Dulles. Of the many words of tribute that have attempted to express that feeling. I feel the following editorial from the May 26 edition of the Omaha World-

Herald is outstanding, and I would like to share it with my colleagues:

MR. DULLES' MEMORIAL

The most fitting memorial to the life and work of John Foster Dulles is the fact that on the day he died the world was at peace.

It is not an easy peace. Conceivably it might dissolve overnight into the nuclear catastrophe which Mr. Dulles so courage-ously tried to prevent. Yet peace it is. The gunfire heard tomorrow and reechoing the world around will be that of the military salute over his grave, shots fired in sorrowing tribute to him and not in anger at a warring enemy.

The illness and death of Mr. Dulles have served to focus attention on the free world's strength and weaknesses. They have caused the Americans to take stock, to look at what has prevented the war which several times in the past few years has appeared almost inevitable.

Invariably such discussions come around to two factors.

One is the might of the Strategic Air Command.

The other has been the firm, patient, tireless diplomacy of John Foster Dulles.

SAC's strength is there for all to see. Mr. Dulles' strength was a subtler thing, a matter of mind and spirit, a moral force based on firmly held religious principles. Lesser men were awed by it and some thought him too rigid and unbending. They could not understand such a man.

But even the Russians, the Soviet Communists as Mr. Dufles usually called them, respected him for his fierce adherence to principle. They knew, as all the world knows, that Foster Dulles was completely sincere in his granite resistance to Soviet threats. If the Soviets had been in any doubt about America's willingness to defend itself there might have been, almost certainly would have been, an East-West war.

But it was a first principle with Mr. Dulles that the enemy should know which steps they could not take, which lines they could not cross, without military retaliation by the

United States.

It was Mr. Dulles' firmness, in combination with the mailed fist of the Strategic Air Command, that kept the world from war.

The free world today hopes and prays that an equal firmness will be found in his suc-

#### An Influence Greater Than the Labor Racketeers

EXTENSION OF REMARKS

# HON. JACK WESTLAND

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 4, 1959

Mr. WESTLAND. Mr. Speaker, the Concrete (Wash.) Herald published each Thursday is well known in my congressional district. Its publisher and editor is Charles M. Dwelly, better known as Chuck. His editorials whether they take up one paragraph or a whole column are earnest, straightforward, and fear-

The following editorial, although short and written with tongue-in-cheek is no exception and should strike a responsive cord within all of us:

When a labor leader can threaten Congress with strangulation of the entire country if they dare to pass laws contrary to his ambitions for dictatorship, then the feeble attempts of a small town editorial writer to point out the shame of the situation must surely be wasted space.

This is no feeble attempt, Mr. Speaker. It is a strong, direct and effective editorial that points up a danger to this Nation that must be eliminated.

Without such editorials appearing in the more than 10,000 weekly newspapers across the country, it would be difficult, if not impossible, for the Members of this body to measure public opinion. This great group of newspapers exerts immeasurable influence in the lives of millions of people in small towns and rural areas, and reflects their ideals and purposes.

I am proud there are men in my district and across the Nation, who are fearless and whose influence is greater than a few labor racketeers.

#### Out of Every Day

EXTENSION OF REMARKS

#### HON. GLENN CUNNINGHAM

OF NEBRASKA

IN THE HOUSE OF REPRESENTATIVES Thursday, June 4, 1959

Mr. CUNNINGHAM. Mr. Speaker, under leave to extend my remarks, I wish to include the following editorial from the Omaha World-Herald. I feel there is little that can be added to the wisdom of the President's remarks or to the editorial comment:

OUT OF EVERY DAY

At the Air Force Academy the other day the cadets stood stiffly at attention as the President of the United States walked into their mess hall.

"At ease," said Mr. Eisenhower. And as the young men relaxed, he turned to those with him and with a smile remarked: "I don't like to see men standing there like they're going to take a shot at me." Then he talked to the cadets.

"As an old soldier," he began, "I would like to say a thing or two."

And as an old soldier he did. He spoke of the service academies and their traditions, and of the opportunities which lie before the graduates of this newest of the institutions.

However, it was not as an old soldier but as a warm, friendly human being that he made these closing remarks:

"Make sure you get enjoyment out of every day. Life should be a thing to enjoy. Make sure that your face doesn't grow longer as the day grows older. Go to bed with a smile and remember a very fine day. And with that custom I am quite sure you will end a long, happy, and fruitful life—fruitful to yourself, to your country, and to humanity."

The politicians sometimes scratch their heads in wonder at the vast, continuing popularity of Dwight Elsenhower. But there is really no mystery about it. The people know Mr. Elsenhower to be a kindly man of simple faith. They trust him. They know that in the most elemental sense of the word he is a "good" man.

And, as for the quality of Mr. Elsenhower's leadership, we wonder what better counsel anybody could give in this age of tension than that contained in his simple words to the Air Force cadets.

#### Time for Time Out

EXTENSION OF REMARKS

## HON. HOWARD W. ROBISON

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES
Thursday, June 4, 1959

Mr. ROBISON. Mr. Speaker, earlier today, during the debate on H.R. 3610, the so-called antipollution bill, I made reference to our congressional responsibility to consider the effect of our actions not only on the budget for the forthcoming year but for years to come. Along the same lines, under leave to extend my remarks, I include the following thought-provoking editorial from the Wall Street Journal of May 26, 1959:

TIME FOR TIME OUT

Resisting all appeals to prudence, House Democrats the other day jammed through a wildly extravagant housing bill. It would not only unbalance the Federal budget for the 1960 fiscal year beginning July 1; it would also saddle the Nation with even heavier expenditures in years ahead.

In this future impact of present actions, it seems to us, is the significance of President Elsenhower's effort to get a 1960 balanced budget. The important thing is not simply the state of the Government's books in the one period. It is in reality a question of the long-term direction of the Government and hence of the Nation.

The question is this: Whether the Government is now at last going to turn from its long record of inflationary deficit financing. And, to that end, whether the Government is at last going to get its expenditures—which is to say itself—under control.

Unless the answer is yes, the facts for the future are bleak. Consider what is already known about the trend of Federal spending.

Outlays for the 1959 fiscal year ending the last day of next month will total some \$81 billion. For the 1960 year Mr. Eisenhower wants them held to \$77 billion, but it is doubtful that Congress will hold them to that level even if such monstrosities as the House's housing bill do not become law. In any event, even the proposed \$77 billion spending budget presages a great future growth of spending.

So it is that Federal budget officials, as reported in this newspaper the other day, do not dispute a recent private estimate that spending by 1968 may be between \$87 billion and \$115 billion a year. The lower figure assumes conservative policies; the higher assumes a freer spending attitude in Government.

That is the future trend implicit in present spending. And it is perfectly plain—experience demonstrates it—that each big new increase will contain its own seeds of still further growth. When we get to \$100-bil lion-plus budgets, we will shortly thereafter face \$150 billion and \$200 billion ones; from such levels the leaps become geometric.

It is said by self-styled liberals that warnings of this sort are but scarecrows put up to make a fright of the future. But the fact is that the future is being created right now, and what is being done now—with reckless actions like the housing bill and many other things—points unmistakably to a future of overpowering Government. The Government would dominate the people, and almost certainly such spending would be financed by inflationary deficits, which would ultimately ruin the people.

Still, we are not asking for the moon; we are not saying it is politically possible for the

Government to cut spending drastically and immediately by returning to its proper, limited, constitutional role. What is, however, urgently necessary as a minimum is that there be a breathing spell—that after 30 years of mostly improvident and inflationary Government we must have a period of years of fiscal stability before we permit the politicians to send the Nation on another binge.

That is the true meaning of the much misunderstood, much maligned attempt to balance next year's budget. Even a drunkard with no intention of quitting has to take time out sometimes.

### Let's Get Up to Date

EXTENSION OF REMARKS

# HON. JOSEPH W. BARR

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 4, 1959

Mr. BARR. Mr. Speaker, last night at 6:45 I answered "aye" when my name was called for the passage of the defense appropriation bill. With that vote I committed the people of my district to a Defense Department appropriation of just about \$39 billion. To prepare myself for this vote. I spent approximately 10 hours on the floor of the House listening to the general debate and the debate over the amendments. I took the bill home with me on Monday night and Tuesday night and put in about 2 hours' work each night. So I went into this vote with approximately 14 hours' study under my belt. I also had a few other qualifications to bring to bear on this decision. I hold a master's degree in theoretical economics; I have had 3 years' formal training in accounting; I have been treasurer of five small business corporations; I have been treasurer of several charitable and political organizations. I have spent my life with budgets and financial statements and probably know more about this one field than any other aspect of business. But with this background and all this study, when my name was called to vote I was forced to rely on the word of Congressman Mahon. of Texas, the Democratic chairman of the subcommittee, and Congressman FORD, of Michigan, the Republican minority leader of the subcommittee. These are two of the ablest men I have ever met in this Congress, but I was bitterly disappointed that I had no more valid reason for the "aye" vote that I cast

What was the trouble? Why could not I make an intelligent decision after the hours of study and my years of preparation? Basically, the trouble is that the Defense Department still keeps its books just about the same way that they did during the Civil War. Essentially, they are on a cash bookkeeping system. Any good treasurer or comptroller can make a cash system do just about anything he wants or show anything he wants. It is an antiquated and almost useless method of accounting today.

Andrew Carnegie introduced cost accounting to the United States of America. I honestly believe that the introduction of cost accounting is one of the most important reasons for the industrial growth of this country, because through cost accounting anyone can get a true picture of what any operation will really cost. Under a good cost-accounting system, it is very difficult to conceal the truth or to distort the facts.

The 84th Congress passed a law stating that the President should require all of the 1,220 bureaus and agencies of the Federal Government to submit their budgets on a cost-accounting basis when prepared to do so. So far about 200 bureaus and agencies have complied. Unfortunately, these 200 do not spend much money. The Defense Department, insofar as I can learn, is paying only lipservice to this law and is making no real attempt to get their accounting on a cost basis.

The 85th Congress went even further and passed an expense accrual law. This law would give the Congress a positive control over just how much any agency would spend in any one year. However, there seems to be resistance to this vitally important law in the Appropriations Committee. There is no real attempt there to put this law into effect.

What has been the result of this negligence? When one of the taxpayers in Marion County asks me how much will the Defense Department spend in 1960, the only honest answer that I can give is, "I do not know." We voted them about \$39 billion in new authority. But they had a carryover of \$31 billion which they have not used. Now they can go in two ways. They can live off their inventory and probably spend as little as \$25 to \$30 billion. In other words, they can spend less than we gave them. On the other hand, if they want to use their obligational authority and the Secretary of the Treasury could sell the bonds, they could spend as much as \$70 billion. So when my taxpayers ask me how much is the Defense Department going to spend in 1960, I can only answer, "I do not know-they can spend some place between 30 and 70 billion dollars." This is the most horifying example of bad government that I have encountered in this Congress.

The Constitution of the United States gave to the House of Representatives the power of the purse. We are the ones who spend the taxpayers' money, and we have to go back to the taxpayers every 2 years to give them an accounting. This, in my opinion, is the way it should There is no reason for this Congress to let the executive department of this Nation squander the hard-earned tax dollars of our voters. But I want to warn everyone in my congressional district that unless we force the executive department to bring their accounting system up to date, no Member of Congress will have the facts that he needs to safeguard the tax dollar. That appropriation yesterday amounted to about 50 cents out of every dollar in taxes that will be paid in Marion County, Ind.

I can only hope that it will be spent wisely. But I have found one real crusade. At every opportunity—on every appropriation vote, I am going to be on the floor yelling about the completely out-of-date accounting system used by this Government. The corrective laws are on the books, and I intend to do all in my power to force the President and the executive departments to use them.

#### D-Day 15 Years Ago

EXTENSION OF REMARKS

#### HON. ROMAN C. PUCINSKI

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES
Thursday, June 4, 1959

Mr. PUCINSKI. Mr. Speaker, under leave to extend my remarks in the Record, I include the following: On Saturday, June 6, this Nation will observe the 15th anniversary of one of the most heroic chapters ever written by the Armed Forces of this Nation. It was on this day in 1944, when American troops, in concert with our allies, stormed the Normandy beach and launched the invasion of the European Continent—the day that started the beginning of the end of World War II.

Many great books, articles, and speeches have been written about the heroism of our American soldiers and their leaders. This was indeed a day that the entire free world had waited for in the hope that the horror of World War II would soon come to an end.

As a tribute to the memory of those who made the supreme sacrific during the initial phases of this most difficult and daring invasion, I hope that all Americans will take time from their busy schedules this Saturday to pay homage to these gallant soldiers.

In order to bring full meaning to this day, I am enclosing in the Congressional Record an article written by Don Whitehead, the correspondent for the Associated Press, who personally praticipated in this invasion and prepared his dramatic reports at the time for the entire world to know of the supreme heroism of our soldiers. I am also enclosing an editorial dealing with the 15th anniversary of this great day. Both Mr. Whitehead's penetrating recollection of D-day and the editorial appeared in last Wednesday's editions of the Chicago Sun-Times. The articles follow:

[From the Chicago Sun-Times, June 3, 1959] D-Day: Bravery, Death on "Easy Red Beach"

("The first 6 hours will be the toughest," Don Whitehead, AP correspondent with the 1st Infantry Division, heard an officer say aboard the ship carrying them to Normandy on D-Day—June 6, 1944. And tough those hours were, testing brave men to the utmost. Here, he recreates the drama as he lived it.)

#### (By Don Whitehead)

The first soft layer of dusk had fallen ever drab, war-weary London dropping a veil outside the patched windows of my Chelsea flat. The telephone rang and when

I picked up the receiver I heard Ernie Pyle's voice saying: "Hey, Don, come on over and bring your jitters. I'm lonesome."

I found a crusing taxl which took me through Hyde Park to the Dorchester Hotel where I found Ernie in his room finishing a column.

I told Ernie about a talk I had had that afternoon with Gen. Omar Bradley. "Bradley is certain the casualties won't be as bad as most people think. He's not buying the prediction that we're going to have up to 80 percent of the first waves killed or wounded. He made me feel a lot better."

I drew the blackout curtains and switched on the light and we had a drink of bourbon.

#### PARTY UNTIL DAWN

Later we joined a group of correspondents at the Savoy and made a round of London night spots. Behind the blackout curtains there was music, laughter, and a reckless sort of gaiety that overlaid the tension and the loneliness. Dawn was near when the party broke up.

It seemed I had hardly closed my eyes when the phone rang and a voice ordered me to report with my field equipment at an address near Hyde Park. Somehow I sensed that this was the beginning of the great adventure. When I reached the address, I found Ernie and friends from other campaigns unloading their gear from taxis. It was May 28, 1944.

We loaded into jeeps and were driven from London toward the channel. We spent the night in a dreary temporary camp and then bid each other goodbye. I was taken to Weymouth and realized that I was entering the assembly area for the 1st Infantry Division with whom I had campaigned in Sicily.

#### THE FLEET MOVES

Maj. Gen. Clarence Huebner, the division's commander, greeted me. "We're glad to have you with us, Don," he said.

The hours moved swiftly—troops filed onto the invasion craft packed into the harbor, bells rang, chains clanked, booted feet clumped on steel decks, ship loud-speakers blared commands—and then Gen. Dwight D. Eisenhower made his decision and the great invasion fleet moved into the channel.

Not until we were underway aboard the chaser did I know our destination—the coast of Normandy. Col. George Taylor, commanding the 1st Division's 16th Regiment, unfolded the invasion plan. "The first 6 hours will be the toughest," I heard him say. "That is the period during which we will be weakest. We've got to open the door. Somebody had to lead the way—and if we fail \* \* \* well \* \* \* then the troops behind us will do the job."

#### WADE ASHORE

Then we saw the beach. Easy Red Beach, they called it. Shells exploded in the surf and machinegun bullets whipped up ugly little spouts of water. The roar of naval gunfire engulfed us and there were vicious hisses from shells whipping by our craft.

We moved in with the assault waves toward the jagged barrier of steel rails, barbed wire, concrete blocks, and devices planted by the Germans.

The ramp of our craft lowered. We jumped into the surf and waded ashore, throwing ourselves behind a slight bank of shale where thousands of troops were huddled.

#### GET ME OUT

Many officers were killed before their craft reached the beach. German guns poured a murderous fire on the craft at close range, Machinegun bullets cut down soldiers as they stepped from the ramps of the boats. Units were landed in the wrong places. Squads and companies were landed without leaders and the men milled about in an agony of confusion with no one to tell them what to do other than burrow into holes in the sand. And still they came, plling up on the beach, shoulder to shoulder.

I remember a wounded youth crying, "Oh, God! Please stop the hurt! Get me out \* \* \* get me out!" But there was no one to get him out.

I lay on the beach and thought, "This time we have failed. \* \* \* I wonder when they'll come over that bluff and finish this thing."

But no gray-clad figures came down the

And suddenly I felt a strange sort of peace. The panic and fear were gone. If death had to come, then it must. I climbed out of my hole and began doing what I could to help and to watch the bravest men I have ever known.

[From the Chicago Sun-Times, June 3, 1959]

FIFTEEN YEARS AGO THIS WEEK

Fifteen years ago this week, Dwight D. Eisenhower made a momentous decision. He gave the order that sent American and British forces against Normandy beach. That D-Day of June 6, 1944, is recalled in a reminiscent account by former AP reporter Don Whitehead in our news columns today. Thank God, our men are not being slaughtered anywhere today as they were on the day he describes.

Sometimes World War II seems so far behind us in time that its horrors are only dimly remembered by those who weren't on the battlefront. When President Eisenhower talks of peace he remembers its awful alternative; if war requires sacrifices, peace requires even more.

Today the free nations are engaged in a different kind of Normandy beachhead. Fifteen years have not been long enough to reach agreement with the Russians on the kind of Europe nations dedicated to peace ought to have. It may take another 15 years. It may develop that as long as the Communists rule a large portion of the earth's surface no real agreement can be reached with them. But the nations no longer can regard war as an alternative to peace; as horrible as was World War II, the means of war have so changed that the words of Thomas Jefferson are charged with meaning he never could have understood when he wrote, in 1794, "War is as much a punishment to the punisher as to the sufferer."

Karl von Clausewitz' definition of war no longer applies to the great states: "War is not merely a political act, but also a political instrument, a continuation of political relations, a carrying out of the same by other means."

For the great states the "other means" today are suicidal. The field of conflict has carried over into the economic sphere. Today our beachheads against the enemy are manned by diplomats, economists, and sociologists. They must have the same full support we gave those on the Normandy beachhead if those who died there are not to have died in vain.

#### China and the Olympics

EXTENSION OF REMARKS

# HON. FRANCIS E. DORN

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 4, 1959

Mr. DORN of New York. Mr. Speaker, under leave to extend my remarks in

1

the Record, I include an editorial from the New York Times of May 30, 1959, regarding the expulsion of Nationalist China from the International Olympic Committee. This has been a shameful action and once denounced by our State Department:

#### CHINA AND THE OLYMPICS

In expelling Nationalist China from the International Olympic Committee—and thus eventually from Olympic participation—the committee has yielded to the rawest sort of political blackmail. The action is not only, in the words of our State Department, totally inconsistent with its (the Olympics) nonpolitical tradition. It is cowardly, evasive and shameful. The United States is reported, rather vaguely, to have been opposed to this move. If there is a spark of courage left in our Olympic representatives they will make it clear that this bit of international chicanery was abhorrent, and not maintain their timorous silence.

Red China walked out of the 1956 Olympic games at Melbourne because representatives of Free China were allowed to participate. Red China walked out of the International Committee early this year because Free China—a member for years—continued to be recognized. Now, under the open leadership of Moscow, the Communists have cracked the whip and forced the committee to carry

out their political aims.

In the light of what has happened, the wistful hope that both Red China and Taiwan might eventually participate is obvious nonsense. The Red Chinese do not propose to tolerate that and they have now made it plain that they can bend the International Committee to their will. Similarly the statement of Avery Brundage, president of the committee, that Nationalist China "no longer represents sports in the entire country of China" is unworthy of a forthright American. The Nationalist Chinese were representative enough to participate at Melbourne. And Mr. Brundage knows that no Communist regime, anywhere in the world, truly represents sports unless they are an adjunct to policy and conspiracy.

This is not the first time that the Olympics have been used as an instrument for ignoble ends.—The least we can do is to make it plain that it must be the last, if the Olympics are to survive.

## Address of Hon. John Lesinski Before the U.S. Chamber of Commerce Committee on Business Statistics

EXTENSION OF REMARKS-

#### HON. RALPH J. SCOTT

OF NORTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 4, 1959

Mr. SCOTT. Mr. Speaker, pursuant to permission granted me, I am inserting in the Appendix of the Record the following address given by the Honorable John Lesinski, of Michigan, chairman of the Subcommittee on Census and Government Statistics, before the U.S. Chamber of Commerce Committee on Business Statistics at the Statler-Hilton Hotel in Washington, D.C., on June 3, 1959:

#### BUSINESS STATISTICS

I appreciate very much the cordial invitation that your chairman, Mr. Lester S. Kellogg, has extended to me and members of my staff to meet with your committee at this semiannual meeting of your group to briefly discuss with you the program of our Subcommittee on Census and Government Statistics. Mr. Kellogg's offer for your organizattion to be of assistance in our study of statistical activities in the Federal Government is most welcome. We realize that the cooperation of business and industry and labor groups, as well as the general public, will be necessary in order to achieve full benefits of the subcommittee's program.

Anyone who is interested in the Government's statistical program cannot help being aware of the contributions made by the U.S. Chamber of Commerce. Your work in giving the businessman a better understanding of the Government's program merits special mention. In explaining the desirability of prompt reporting, the chamber has been of inestimable help to the Government and, I might add, to the taxpayers, since prompt reporting reduces costs. Of major importance, however, is your work in reviewing and appraising the Government's statistical program.

Our subcommittee has been most favorably impressed with the accomplishments of the Advisory Council of Federal Reports, which is sponsored by the Chamber of Commerce and other national organizations. This Council, under the able direction of its Executive Secretary, Mr. Russell Schneider, serves most effectively as a two-way means of communication between Government and industry on problems relating to questionnaires and reporting forms and statistics

generally.

I know that some of you have appeared before congressional committees to point out ways of improving the Government's statistical program. This is precisely what our subcommittee is interested in, and I feel that we can be of great assistance to each other.

The Post Office and Civil Service Committee of the House of Representatives has jurisdiction over Bureau of the Census activities and the collection of statistics generally, as well as matters pertaining to the Post Office, the Federal civil service, and manpower utilization throughout the Federal Government. Specific authority for the committee or its subcommittees to conduct investigations and studies is contained in House Resolution 78 of the 86th Congress.

The membership of the Subcommittee on Census and Government Statistics for the 86th Congress consists of Mr. Porter of Oregon, Mr. Shipley of Illinois, Mr. Dulski of New York, Mr. Prokop of Pennsylvania, Mr. Johansen of Michigan, Mr. Cunningham of Nebraska, Mrs. St. George of New York, and myself as chairman. Although the subject of Government statistics in general has been within the scope of the jurisdiction of the committee ever since the Reorganization Act of 1946, only limited efforts have been devoted to this important subject by the committee in the past due to the need for attention to other pressing matters having to do with postal operations and civil service matters.

In describing the plans of our subcommittee, I might go back and underscore a word I have just mentioned. That is "study." This is not a scandal-seeking investigation, with headlines in mind. We are interested in determining if the laws of Congress, with respect to statistical work, are soundly framed and properly administered. Furthermore, we intend to approach this study with a view to reducing the cost to Government of obtaining and processing information where possible and minimizing the burden upon business enterprise and the general public. As useful byproducts of our inquiry, we hope to provide helpful information to you and to those you represent, and to make of ourselves a well-informed body of legislators that can give continuing and intelligent attention to this important subject.

The subcommittee intends its study to be broad in scope. It will include not only those statistical activities which the Federal agencies conduct directly, but also those conducted by outside firms or organizations under contract. It will cover not only those activities which the agency may narrowly define as statistical by its own precepts, but all activities concerned with collecting and compiling information from the public, including, therefore, the demands of the regulatory and administrative agencies. These latter, we have already learned, impose more of a reporting burden upon the business community than the purely statistical agencies.

The subcommittee's study will also include the development of information on the number of employees and the cost involved, in all Federal departments, in the collection, compilation, preparation, and publication of statistical data. This phase, which is already well along, will give us a base from which to measure trends, and to examine the proportion of funds spent for each kind of statistical information. It will also give us a figure representing the total cost within the Government, to contrast with the undoubtedly larger figure representing the cost to the public of filling the Government forms.

One of the specific matters that the subcommittee will consider is the quarterly reporting requirement of the Federal Insurance Contributions Act. The Second Hoover Commission estimated that if the form 941-A were reduced to an annual report, a saving of possibly \$22 million a year might be realized by business enterprises. Like some of the other problems that we are becoming acquainted with, this cannot be resolved by agency action alone, but requires changes in legislation.

Earlier this year our subcommittee held a hearing at which the Director of the Bureau of the Census and his associates discussed the Bureau's plans for taking the 1960 census. The Director discussed some of the important uses that will be made of the results of the 1960 census. He pointed out that the Census Bureau will make full use of modern equipment, including electronic computers, in its 1960 census operation.

In view of the increase in the use of electronic data processing equipment by Government agencies in many phases of the Nation's Government-wide statistical activities, and the committee's interest in the broader subject of how the use of such equipment affects manpower requirements throughout the Government, the subcommittee will make an overall review of the use of such equipment by Government agencies. It is important to stress that periodic reviews should be made to ascertain that reports produced by an electronic data Processing system serve useful purposes. The equipment should not be allowed to become gigantic "paper mills" merely because they can process information at terrific rates of speed. Government officials should be aware of the fact that too much information, if it is not properly coordinated, can be as harmful as too little.

I would like to assure you that we recognize that Government statistics are a vital part of our system of economic and social intelligence, both for public policy formulation and for business planning. We appreciate that some programs may deserve building up, not tearing down. Our overall goal is to make the system better, not necessarily smaller or larger, giving considerable attention to getting the best possible product with the least burden.

To this end, we most cordially solicit your cooperation and that of your fellow organizations, such as the American Society of Association Executives, the National Indus-

trial Council, the National Association of Manufacturers, the American Retail Federation, and others. Specific, carefully considered recommendations, whether pro or con, can be of great help to us. You have access to us at any time by letter. At a later date, after the Congress has adjourned, we expect to hold open hearings at which representatives of business and industry and labor groups will be given an opportunity to testify. These hearings, which may be held in cities other than Washington, will supplement other hearings involving representatives of the Bureau of the Budget, the Bureau of the Census, and other government agencies. I hope that we can all work together to achieve really substantial improvements in this most important aspect of the Government's work.

#### Look at the Budget

EXTENSION OF REMARKS

#### HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 3, 1959

Mr. MULTER. Mr. Speaker, I commend to the attention of our colleagues the following editorial which appeared in the New Republic of June 1, 1959:

LOOK AT THE BUDGET

It is hard for this column to maintain its pose of genteel railiery when it comes to the subject of Eisenhower and education. The fact is our blood pressure mounts on this topic. Let's try not to bat the typewriter keys too vindictively and review what is to us, at any rate, a shameful record.

America's pauperized education was apparent when Elsenhower took office. In fact, none other than Bob Taft, in 1949, got through the Senate a \$300 million general aid bill—which foundered on religious controversy in the House. Eisenhower took office in 1953 and for 2 years Mrs. Oveta Culp Hobby studied the subject. Then she introduced a piddling, preposterous self-help bill that nobody took seriously.

Eisenhower's second, election-year bill rec-

Eisenhower's second, election-year bill recommended \$250 million a year for 5 years. It was a straightforward general-aid measure. The conservative GOP-Dixie coalition blocked it in the House. Eisenhower blamed defeat entirely on the Democrats and campaigned against them on the issue, repeatedly promising to do in 4 years what he had previously wanted to do, he said, in 5.

Yet, with the election over, Eisenhower did not lift a finger for the measure. When it came up in the House in 1957, it lost by 5 votes. All the major GOP leaders voted against it. No word came from the White House. Secretary Folsom (Oveta's successor) quietly quit.

Then came sputnik, October 4, 1957. The administration trembled. The White House fear was that the public might panic. First the administration tried ridicule. Then the President made a gesture of action—he called in Dr. James Killian as special science adviser and urged Federal scientific scholarships. Congress approved the latter in 1957. But not a thing was done for general school construction. Too expensive. "Look at the budget," Eisenhower kept saying.

Today the third Education Secretary, Arthur Flemming, has reverted to the original piddling type of self-help bill—\$100 million a year in loans to needy areas, with nothing at all until 1960, and then under a legal formula so complex as to require either ref-

erendums or constitutional changes in half the States! All told—in view of circumstances at home and abroad—this neglect of education, represented in the current bill, strikes us as perhaps the most typical and the most shameful act of the myopic man in the White House.

This is not the end of it. A year and a half after Killian's appointment he comes forward now with a bright new 16,000 word study, gravely stating in behalf of a ninemember panel of experts that the Nation's investment in education is too little. It should be at least "doubled."

What strikes us most in all this is the simple cheekiness of it. The administration announces that the world is round. What reply is there that is adequate? Let us take a deep breath, then, and merely set down what two others have said. Senator WILLIAM FULBRIGHT, Democrat, of Arkansas, at Columbia University, May 7, noted that the United States is spending about 3 percent of its gross national income on education—the Soviet Union 8 percent. And Dr. Alvin C. Eurich, of the Ford Foundation, back from Russia, stated: "To me, the accomplishments in the field of education which Russia has made in a relatively short time are much more frightening than announcements that come from Russia concerning atomic or hydrogen bombs or guided missiles."

#### The Welfare State, Inflation, and Taxation

EXTENSION OF REMARKS

## HON. FRANK T. BOW

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 4, 1959

Mr. BOW. Mr. Speaker, returns from my ninth annual congressional question-naire are coming to me with anxious messages from constituents who are sick and tired of big government, the welfare state, inflation, and the heavy burden of taxation. One of the most expressive comes from a young mother at Wooster, Ohio, and I offer it as part of my remarks:

WOOSTER, OHIO.
DEAR MR. Bow: I am grateful for the op-

DEAR MR. Bow: I am grateful for the opportunity to give some expression of my opinions. I am a Democrat, but I am beginning to have some serious misgivings about the policies of my own political party,

I am getting sick and tired, fed up to the very limit, on the utter disregard that some Congressmen have for my money. I am well aware of my responsibility for my fellow man, but when it reaches the point that my fellow man can loaf around the house all day and drink beer all night while I go out and work, to supplement my husband's income to send our sons to college, then I am ready to fight.

There may well be a recession in business, and there undoubtedly and obviously are many unemployed. But I am of the firm and unshakable opinion that when a man wants a job, he can find something to do. It may not be the glamorous and high-paying job he had, or wants, but if my children were hungry, I'd haul garbage or scrub floors to feed them. Why in the name of all that is democracy, should I work overtime, night and day, in an office and later doing my washing and ironing at night, so that some man can draw unending dole?

Why should I have to keep my children from going to college so that I can pay more taxes to build a house for some person in Alabama? Or California? I don't want anybody building my house—I want to do it myself, then I know, in my mind and my heart, that I can be justly proud of my accomplishment.

I would far rather triple the amount of Wayne County taxes that I pay, and know that the money not only is spent here, but the way it is spent is decided here.

I am sick and tired of the pleas of farmers, here and across the country, that I should be willing to pay more for my eggs and butter so that they can have more money. Why should I? The shoes for my children cost just as much as for their kids. Why should I buy butter, when for half as much money I can get oleo? Not me, I work so that my family can have a better life, not so some farmer can have a new tractor.

It has reached a point where it is not only disgusting, but frightening as well. There is no reason to work. Those who don't have little less than we who do. Why save and try to invest in stocks when the tax makes it a penalty to be diligent and farshighted?

I say, Representative Bow, cut down on this spend, and spend, and spend. It sounds cruel and heartless and unconcerned, and I really am not that kind of a person, but I say "let those who are willing to work enjoy the fruits of their labor, and let the rest either do without or get busy and work too." This, I assure you, does not include the mother with small children, or the physically unfit. It does mean to me, however, those who are just too darned lazy to shift for themselves.

Commencement Address of Hon. Robert W. Hemphill Before 1959 Graduating Class, Kershaw (S.C.) High School

EXTENSION OF REMARKS

# HON. JOHN L. McMILLAN

OF SOUTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES
Thursday, June 4, 1959

Mr. McMILLAN. Mr. Speaker, under leave to extend my remarks in the RECORD I include a copy of a speech delivered to the Kershaw (S.C.) High School graduating class by my colleague, Hon. ROBERT W. HEMPHILL.

I personally want to congratulate Congressman Hemphill on his fine address and hope that the other Members of Congress will be interested in reading Mr. Hemphill's very informative remarks:

COMMENCEMENT ADDRESS OF HON. ROBERT W. HEMPHILL BEFORE 1959 GRADUATING CLASS, KERSHAW, (S.C.) HIGH SCHOOL

Superintendent Graves, members of the faculty, parents who are justly proud, and last, but far from least, members of the outstanding graduating class of 1959, of Kershaw High School, it is an honor to be on your program. I share with your valedictorian and salutatorian the honors you have accumulated.

In this hour of triumph, I share your pride of a good job well done. You are Mr. and Mrs. America of tomorrow, and I am glad, I am confident. You will, I know, be equal to your responsibilities,

Today you accept the token and symbol of achievement—a diploma. Tomorrow, you accept the responsibilities of mature citizen-

ship—I glory in anticipation of your good works.

Twenty-seven long, but exciting years ago, I stood in your place—thrilled, excited, and uncertain. I can almost hear the valedictorian as he spoke, "We are the children of the depression—this is a red-letter day in our life—we are equal to the task ahead—let us go forward with courage and determination."

About a month ago, along with classmates, I took a silent poll of our class. Scattered to the far corners of the earth, they had made their way—the American way a dominant part of the life of the particular community—a productive life, and a beneficial existence.

A great teacher here—a successful but humble businessman there—a coach—pilot—wife of a mayor—executive—salesman—surgeon—many who know the satisfaction of motherhood and housewife—a cross-section of contribution to the past, present and future of the country. I catalog and judge with pride my class. You will, I am sure, be proud of yours through the years.

I suppose everyone who has talked to you has told you that you have a challenge. Be thankful you have. How meaningless would life be without a thousand challenges—economic—social—political? You can glory in the fact that you face an exciting tomorrow, and that will master your problems.

You will be tempted with a 35 hour week.

You will be tempted with a 35 hour week. You will be told you must spread the work—but you must realize you cannot substitute social desire for efficiency and production. When you spread the work you invite automation. You can not substitute spreading the work for doing the work.

You will be tempted to spread the dollar; you cannot have a wage-price spiral of inflation without losing dollar value.

Ultimately, if not presently, most of the young men here will be called on to give some measure of service in the defense forces of our country. Many of the young ladies will await their return. Those men who join either the National Guard or Reserves, or who enlist for or are drafted into the Army, Navy, Air or Marine Forces, will be told that we are maintaining our forces merely for purposes of peace and defense. Our progressive development in missiles, hydrogen, and space warfare capabilities, are classified as necessary for deterrent or retaliatory purposes. And the remarkable truth is that despite the magnitude of our defense effort and high cost to the American taxpayer, we prepare for war only that we may insure peace. Neither the American people, nor their leaders, have any desire for war, no ambition for any other territory, and no plan or scheme for world conquest. Every American knows this. The sad and real fact is that the world does not.

We have failed to carry our message of peace to the peoples of the world. I do not mean the leaders of our friends or our enemles—they know we want no war. But the peoples of the world have seen us send armies and ammunition around the world—how they must wonder that we speak so softly, while the rattle of our swords may sound of peace to us, but sound of aggression to others.

Today we witness a defense department torn with a fight over which missile we should develop. Some say Nike-Hercules is not adequate, because its range may be limited to 100 miles or less. Millions have been spent on a Bomarc missile yet unproved. While the controversy rages, have we convinced the world we build only for defense?

Why do I speak to this audience in such a manner—why not, oh, why not, my friends, make a regular little address on some moral issue. I will tell you.

You and I are partners in America today, America tomorrow. We must progress and work together.

You have graduated. The preliminary accomplishment of your education has been halled and recognized. You have more supervised education already than Benjamin Franklin, Abe Lincoln, John Paul Jones, and many others. You get news from Paris quicker than your forefathers got it from Lancaster. You have light to dispense the the darkness, heat against the cold, cold against the heat, vitamins, wonder drugs—a thousand wonders to inspire and secure.

Now, my partners in freedom, what is our course?

While we speak of defense, we must not be on the defensive. I do not endorse a program of aggressive warfare—I believe we should be ready. Every athlete knows a ready opponent is hard to surprise, harder to defeat.

We must be aggressive in our demands for peace, freedom, and justice. You and I must defy those who endorse the tyrant, or dictator, because of his friendliness, because that endorsement countless times in the past has caused a people, a nation, to despise us.

There is no such thing as passive resistance to the socialistic trends that threaten our land. Remove the tinsel and the tarnish from any welfare state, and we find slavery, with state bureaucracy the master.

Great Britain tried nationalization of industry—the results were disastrous.

Great Britain tried socialized medicine. Today we find those who want major surgery wait an average of more than 30 days, minor surgery more than 60 days. Yes, it is free, but is it?

No, no, my friends, we do not want a Government as a parent, or guardian. I do not like for my Government to tell me what to do. Neither do you. Three million people are employed by our Government. Do you want them to be your bosses?

Only an aggressive attack against the forces seeking to undermine us can be productive. Year after year a passive America has witnessed the growth of our national indebtedness. It is now authorized at \$288 billion, and we will owe \$12 billion more by July 1, 1959. Common stocks, at inflated prices, are more in demand than Government bonds backed by the full faith and credit of the people of the United States.

Only an aggressive attack on these problems can produce. The time to start reduction of this debt is now. Partners in freedom, this is our task.

A clergyman once walked into a quarry where three men were working in a secluded area. He asked one man what he was doing and received the reply, "I am making little rocks out of big rocks." He asked the second, and received the reply, "Watch and you shall see me reduce this mighty rock to dust." He approached the third, who said pridefully. "I do not accept my job that way—I am helping to build a cathedral."

These vexing problems I have discussed briefly, and many others, challenge every talent of our possession. We cannot, we must not, pursue or adopt any attitude, or any policy, which causes us to stick our heads in the sand. We can neither ignore the facts of life, nor expect any accomplishment if we march out of step. The man or woman who thinks he can keep up by standing still is out of date; in fact, retreating.

Partners of freedom, you and I challenge anyone who advocates a retreat. We are capable, we are eager to meet and conquer the onslaughts of time, the crises of the hour.

We must, and we do, guarantee to your generation, and your children, and their children, a free America, free from socialism, and certainly, most certainly not a welfare state.

I have confidence in you to do your part.

Address Before the Graduating Class, St. Stephen's School, Alexandria, Va., June 3, 1959, by the Honorable Hugh M. Milton II, Under Secretary of the Army

EXTENSION OF REMARKS

## HON. L. MENDEL RIVERS

OF SOUTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 4, 1959

Mr. RIVERS of South Carolina. Mr. Speaker, under leave to extend my remarks in the Appendix of the Record, I include, herewith, a speech made by the distinguished Under Secretary of the Army, the Honorable Hugh M. Milton II, before the graduating class of St. Stephen's Episcopal School for Boys, Alexandria, Va., on June 3, 1959 on the occasion of their graduation:

REMARKS BY THE HONORABLE HUGH M. MILTON II, UNDER SECRETARY OF THE ARMY, BEFORE THE GRADUATING CLASS, ST. STEPHEN'S SCHOOL, ALEXANDRIA, VA., JUNE 3, 1959

Mr. Headmaster, members of the staff and faculty, members of the graduating class, distinguished guests, fathers and mothers, ladies and gentlemen, it is indeed an honor as well as a distinct privilege for me to take part in an activity of this kind, where young men are recognized for their diligence and are graduated into the further opportunities life offers. I am especially proud to be present here because many of the members of the class of 1959 are known personally to me and, also, I happen to be acquainted with one young man especially well. I am not certain that it is best for a father to be in the role of commencement speaker when his son graduates. Such speakers-I think-are supposed to give advice, offer suggestions, and present a challenge. I believe I have been doing this for some time. I could well receive an answer similar to the one received by a doctor whose son called about playing golf. The boy had a bad case of poison ivy on his hands, and the father expressed the opinion that it might be best if the game were delayed a day or two. To this suggestion the young man replied, "Look, Dad, I know you are a doctor, but I don't want your professional opinion. I want your parental permission."

I doubt if I can separate completely my professional opinion from my parental opinion, and I don't think you would want me to, for what I want for my son is what I want for every young man who arrives at such an important occasion as this.

Let's for a moment stop and consider the fact that in a very special sense, a school is a symbol of a promise for the future, because it is dedicated to the preparation of the young people who, in a few years, will be assuming the privileges and obligations of citizenship. As citizens, they will take their places in both the economic and political life of the Nation. The effectiveness with which they do so will depend in large measure on the effectiveness with which they have been prepared and equipped to meet and solve the problems which arise in the life of any individual and of any country.

As a result, the mission which our schools must perform is especially meaningful, and the responsibility they bear is a vital one. In considering their mission, however, it seems to me that there is a great deal of inspiration to be derived from taking into account the achievements which have already been attained.

And, I see here today striking evidence of this recognition and the efforts which have been expended; and the goals which have been sought are indeed extremely worthwhile. It is vital to this Nation that its youth have access to the best education which can be offered.

My friends, we in America can be proud of our schools. But we must not let our justifiable pride become complacency, self-satisfaction, and indifference. I can assure you that in many parts of the world where I have been, the public attitude toward education is one of great interest and attention.

The inescapable fact is that we can no longer afford the comfortable luxury—if indeed we were ever justified in doing so—of assuming that we could rest on our past laurels, or that our continued advance in the sciences and the arts could be expected to occur automatically.

Great as America's intellectual resources unquestionably are, we have no exclusive monopoly on brains. Progress requires intelligence, of course, but it also requires that we apply our intelligence energetically and efficiently.

It is well recognized by all that we are involved in a bitter competition with communism in the political, economic, and military fields. It must be recognized as well that in the field of education, we are also involved in a competition with communism which is equally strenuous—and equally vital.

Therefore, it is most important for me that I speak directly to the graduates. I hope you will listen and I hope you don't finish before I do. I shall also hope that I am not placed in the category of the professor who was asked by the sophomore to get his keys from the deep portion of the swimming pool. The professor did get the keys for the young man and when he gave them to him he asked, "Why of all the people around, was I asked to get the keys?"

"Well, sir," replied the sophomore, "I sat through one of your classes and you can go down deeper, stay longer, and come up drier than anyone I know. So, I figured you would be the best person to get the keys for me."

I said, however, that it was you—the graduates of St. Stephen's—that I wanted to speak to.

You all have spent considerable time preparing for this occasion, and I congratulate you upon your achievements. In a few moments you will be given a diploma which is an attest by this school that you are now ready to move forth into the stream of life. Each of you, I know, feels confident of your ability to do this. Yet, I would ask you to ponder this most important question: What are you going to do with what you have?

This is a commencement exercise. Commencement means a beginning; for you, the beginning of a larger and fuller life. Your success—20, 30, or 40 years from now—depends on what you do with what you now have.

Let's look at what you have. First, what have your parents given you? Sometimes, when young, we are inclined to feel that parents don't know a great deal. We read in Mark Twain's writings that when he left home at an early age he didn't think his father knew very much. When he returned 4 years later, however, he said that he was amazed to see how much "the old man had learned."

You have received a great deal from your parents, and I don't mean just allowances or privileges. One thing you have received is the capacity you possess; physical, mental, spiritual. You are what you see in the mirror primarily because of your heritage. Disregarding the manner in which you have your hair cut—and many parents refuse to accept the responsibility for that—the fact that you have red or blond hair was determined by those 48 chromosomes contributed

by your mother and father. Your skill at basketball, your ability to study, your talent as a musician—all these, and other attributes, come primarily from this heritage of your parents.

You have also received from your parental heritage a good name. The Bible says that a good name is of far greater value than great riches, and how true that is. What do we think of when we hear the name Benedict Arnoid? Or Adolf Hitler? Or George Washington? Or Dwight D. Eisenhower? These are only names, but each name represents the qualities of a man, the ideals for which the man stands, and the way of life which he pursues.

Almost 2,000 years ago there were two men living at approximately the same time; one was a prisoner awaiting trial; the other, a ruler of men. The names of these two men are well known to us today, but we call our sons Paul after the prisoner, and our dogs Nero after the ruler. Each name represents to us the ideals of the man.

Do you realize that many commercial businesses consider their trade names to be worth millions of dollars? What is true for a commercial name is even more true of the name you and I have received from our parents—the name which we carry forth into life and which we pass on to our children and our children's children.

Shakespeare, in the third act of Othello, scene 3, wrote this:

"Good name in man and woman, dear my lord,

Is the immediate jewel of their souls; Who steals my purse steals trash; 'tis something, nothing;

"Twas mine, 'tis his, and has been slave to thousands;

But he that fliches from me my good name Robs me of that which not enriches him, And makes me poor indeed."

You have also received from your parents example and precept. You have been taught how to live meaningful and significant lives; you have been shown the basis of a good home and you know that love for all should be warm and inclusive. You are aware of the pressures that play upon life, and you know how these pressures should be handled. You have been taught about God from childhood, and the life and teachings of our Divine Master have been demonstrated for you in everyday situations. You know, as did Jim, a young newspaper boy who, when asked by a stranger, what house he lived in, replied, "It isn't a house; it's a home."

"And what is the difference?" asked the stranger.

Jim replied, "You see that sun? It shines on a house, but it shines in a home."

Yes, you have lived in a home with the sunshine of love and the affection of your family surrounding you. With the example and precept of your parents to guide you, you are well equipped to travel the presently uncharted scope of your own personal life.

This, and so much more, is what your parents have done for you. They can do little now except continue, insofar as possible, to make available the means by which you may continue your education. They will, however, ever be with you spiritually, if not physically, because you have been endowed by them with a heritage that will live on and on in your life, no matter where you are or what you do.

What are you going to do with it? What you have thus far accomplished is very important, but what you are going to accomplish is of even greater importance.

St. Stephen's assumes a grave responsibility when it places a seal of approval on you young men. From the moment these exercises are complete, you are forever numbered among its alumni. I know that the members of the faculty have not taken this responsibility lightly. A great deal of time

has been spent in selecting the curriculum offered here. It behooves this school, as well as every other institution of learning, to give its students the best education possible. hope that you graduates have profited adequately of the time spent here.

The efforts of a faculty are to impart knowledge which is both an acquaintance with facts as well as an act or state of understanding, and a clear perception of truth. The first of these objectives is accomplished by the teacher in his lectures; the classroom. homework fulfilled, and the examinations taken. You graduates are here because you are considered qualified in this area of knowledge.

Knowledge, however, is more than just facts and figures. This faculty has also tried to help you gain proper attitudes and ideals for future life. They know, and I hope you know, that your happiness in life will be more greatly influenced by these ideals and attitudes than anything else.

The Bible says that "as a man thinketh in his heart, so is he." This, in my simple interpretation, means that no matter how much a man knows, it is what he does that counts. "What you are speaks so loudly I cannot hear what you say," is another way of putting it. How does a man live? What attitude does he have toward other people? To what standards in life does he ascribe? This is what is involved when we speak of a man having noble character, or who possesses personal integrity.

As interested as we are in what you do with the facts and figures acquired here, we are even more interested in the attitude and ideals you take with you. I need only remind you that there is a conflict being waged today which affects every one of us. It is a spiritual conflict, for there is an atheistic, materialistic society which would destroy what we cherish and place all men in a common pot of service to the state, thereby reducing the value of the individual to how much he can produce. This Nation, however, was founded and built upon the principle that there is a God and that, under God, every individual is important. Thus, because we are creatures of a Creator, we are moral beings and know the difference between right and wrong. Knowing this difference, we are obligated to choose the right and reject the wrong. We are free, therefore, and will continue to be free so long as we maintain these things.

"God, who gave us life, gave us liberty," wrote Jefferson. What are you going to do with that freedom? It is easy to give lipservice to such a principle, but intellectual assent is not enough. We must put our complete trust in it, and we must be willing to stake our lives on its continuation.

I am reminded of a story told about a man stretching a wire across Niagara Falls. Another man came along and asked what he was doing.

The first man replied, "I'm going to push wheelbarrow across this wire. Do you think I can do it?"

The second man carefully looked the situation over and said that he thought it could be done.
"Fine." replied the first man. "You can

ride in the wheelbarrow."

"Not I." said the other man as he rapidly walked away.

Here is intellectual assent, but trust is not present. It is not enough for you to go out into life giving intellectual assent to the things upon which this Nation, under God, was founded and which this school, with its excellent faculty, has endeavored to impart to you. Yours is to put your complete trust in and to apply these principles to your everyday life and work.

A man of integrity, a man of character, believes that certain things are right whereever he is or whatever he is doing and he fulfills them. Likewise, he believes certain things are wrong, regardles of the crowd he is with or the circumstances involved, and he does not do them.

There are two classes of people when it comes to character. There are those willing to settle for nothing less than the best and they are willing to pay the price for the best. Then, there are those who settle for the first bargain they find and quality is incidental. Which class are you in?

What are you going to do with what you have? There is no bargain price to success—not the kind of success the world needs today. The asking price is stiff. It includes dedication to ideals, taking the hard knocks in stride, sticking to dull routine, self-denial, hard practice. It is not too easy, but it is worth whatever it costs.

Your parents have given you the best that they can. You go forth with their love, support and aspirations. This school, through its faculty, has proven to you the pressing need for education and has tried to provide you with the education upon which you can build. It has given you knowledge-facts and figures and attitudes and ideals. It has attempted to show you the right way, and it has tried to provide you with the proper motivation to follow that way. The rest is up to you.

It will take a strong desire and a great deal of effort to make a success in life. It must be your desire and it must be your effort, for no one can do it for you. Parents and faculty, friends and associates can only step aside and give you room to move up-ward and onward. I bid you God's blessings and Godspeed on your way.

Address by Preston J. Moore, National Commander, the American Legion, Before the Graduating Class of the FBI Academy at Departmental Auditorium, Washington, D.C., June 3, 1959

EXTENSION OF REMARKS OF

# HON. TOM STEED

OF OKLAHOMA

IN THE HOUSE OF REPRESENTATIVES Thursday, June 4, 1959

Mr. STEED. Mr. Speaker, I am happy to present herewith the text of a speech delivered by National Commander Preston J. Moore, of the American Legion, on the occasion of the graduation exercises of the current class of the Federal Bureau of Investigation Academy.

I feel certain every person will find this speech of great interest. There is great food for thought in these remarks by this outstanding leader of a great war veterans organization. I commend it to all my colleagues as preferred reading.

The speech follows:

AN ADDRESS BY PRESTON J. MOORE, NATIONAL COMMANDER, THE AMERICAN LEGION, BEFORE THE GRADUATING CLASS OF THE FBI ACAD-EMY AT DEPARTMENTAL AUDITORIUM, WASH-INGTON, D.C., JUNE 3, 1959

"Blessed are the peacemakers, for they shall be called children of God."

As law enforcement officers, you gentlemen and your colleagues qualify in a very practical way for this Scriptural tribute. Peacemaking is your purpose. Few men devote their daily labor to a higher one.

So I extend to you today the American Legion's sincere congratulations on two counts: first, on your choice of the peace officer's profession; and secondly, on your completion of a training course that will enable you to better serve your communities and States.

Here in the Academy you have studied the latest theories and techniques of crime detection. As valuable as this knowledge will prove to be, I suggest that you are returning home with something of even greater value -and that is a personal sense of the dedication and standards of excellence which characterize the Federal Bureau of Investigation.

Several weeks ago the founder of the Academy, Director J. Edgar Hoover, completed his 35th year of service in the Bureau. It may be another 35 years before the quality of his work can be assessed and appreciated in its full dimension. He has helped a nation understand what is meant by a government of law. He has built a magnificent investigative force and imbued it with his own zeal for honesty and efficiency. Perhaps even more important, he and his organization have proved that it is possible to wage total war against crime and subversion while at the same time protecting the civil rights of every citizen.

I sometimes think we are sent men like Mr. Hoover to save us from ourselves.

The public mind, as you know very well, is a fickle, unstable thing. Its concern for right and wrong fluctuates between indignation and indifference. We tend to switch our attention from one problem to another with the same ease-and often for the same reason—that we switch TV channels.

Unfortunately, some of the problems we face are the persistent kind that do not fade away when we lose interest in them. I want to discuss with you today certain aspects of two such problems which are related rather closely to your line of duty. You will recall that Communist subver-

sion, in the late forties and early fifties, was the focal point of public opinion. Through the efforts of a comparatively few individuals and organizations-and American Legion was one of them-it was finally exposed and identified as a tremendous threat to our national institutions and individual liberties. The Congress and a number of State legislatures tightened up security laws, there were steps toward barring traitors from sensitive positions in Government and elsewhere-and then the subject pretty much disappeared from public view.

About the only thing we've heard lately concerning our internal defenses against communism has come from the Supreme Court, and the accent in that quarter seems to be on knocking down what was built up.

Yet, as of this moment, there is strong evidence that the agents of the Kremlin are well on the way to capturing a major base of operations 90 miles from the United States. The place is Cuba. The time is much later than most Americans think.

Fidel Castro came out of the hills with the announced purpose of liberating Cuba from the tyranny of Batista. The American people by and large looked upon him as a hero-fighter for freedom who beat big odds. Now, 6 months later, what does Castro's Cuba look like?

The form of government is the same-dictatorship.

The Communist Party, previously outlawed, now enjoys government recognition and encouragement.

The army is peppered with Communists. An ardent Communist commands it. Another has directed the execution of more than 600 Batista henchmen and "enemies of the revolution," as the charge was sometimes

Communists and fellow travelers dominate a number of national labor unions. Known Communists control some of the largest newspapers. In the communications fieldradio and television-and in education at every level, there is active red penetration. History textbooks for use in the schools are to be rewritten, under the guidance of a commission headed by a fellow traveler.

This is not hearsay. It is a boiled down, composite picture of the present situation in Cuba as reported by veteran American news-

men and others on the scene.

How did it happen? The record so far Indicates that in Fidel Castro the red missionaries have found a made-to-order helpmate.

Whether Castro himself is a Communist may prove to be immaterial in the long run. He has said repeatedly that he is not. He also has demonstrated an incredibly naive view of what communism is. Visiting Washington last April, he stated that he had no knowledge of Communists in his government and if there were any, "their influence is

Apparently, the Prime Minister of Cuba is unaware that the Kremlin has laid away many a national leader whose headstones

bear that same epitaph.

In a speech on May 8 Castro described his government as the "model and hope" for other nations of the Americas. So far, only the Communst faithful in those nations have seconded the motion. On May 10 the Secretary General of the Chilean Communist Party said the Castro movement is a big step toward the "inevitable liberation of our countries from the Yankee yoke" and the kind of group with which all Latin-American reds should collaborate. The boss of Cuba's 24,000 Communists during the same week pledged "all backing and sympathy" to the Castro regime.

Perhaps it was mere coincidence that the U.S. Ambassadors serving in 10 South American countries issued a joint state-ment on May 9, warning of "intensified effort by international communism to undermine the unity of the hemisphere." Or perhaps that was the striped-pants way of serving notice that the commies mean to put their Cuban show on the continental road.

What would a Communist Cuba mean to us? It would mean, at least, a massive staging center in our front yard from which Moscow could direct economic and political broadsides against the Americas. It would place an intolerable pressure upon our military defenses in the Caribbean and Panama Canal areas. It would lead inevitably, I believe, to the active commitment of our Armed Forces.

Pray that the power of our Government and of an aroused public opinion will be asserted to head off these eventualities. When the red Chinese threatened to take over a couple of islands half a world away from us, we stood up and were counted. We shouldn't need a Communist gun in our ribs to remind us that Cuba is less than half an hour away.

The other current problem which seems to me to be receiving less than its share of real public concern is a relative newcomer on the national scene. I refer to racketeering—spe-cifically, the high-powered, free-wheeling brand of racketeering that infests vital segments of the organized labor movement.

The nature and scope of it are no secret. For more than 2 years, Senator McClellan's investigating committee has paraded the whole sordid story before the American people. It's a documented story of thievery, extortion, defiance of legal authority, and sustained abuse of the rights of millions of citizens.

Such practices are as old as society. But When they occur on a grand scale and are used openly and successfully as means to personal power and profit, the society itself is in danger of decay.

Senator McClellan declared in the Senate recently that his committee "has barely scratched the surface" of what he termed "the invasion of unionism by thugs and hoodlums." He added: "No doubt the great majority of unions and union leaders are honest and dedicated, but the largest and most powerful union in the country today. the one which is seeking more and more power-power paramount over that of the Government itself-is beyond all doubt corrunt."

He referred, of course, to the Teamsters' Union, headed by Mr. James Hoffa. In a relatively short time this man, Hoffa, has managed to establish himself as one of the Nation's most expendable burdens. His union was kicked out of the joint AFL-CIO federation for refusing to clean house. He. himself, has faced Federal juries on charges of bribery and wire-tapping. According to the McClellan committee counsel, Robert Kennedy, he and his top aides are in touch with every important gangster in the United States.

Recently, Hoffa was reported as threatening a nationwide transport strike if the Congress were to apply the antitrust law against unions. Later, he denied the threat. As a matter of fact, he long ago made it clear that one of his ambitions is to bring about a superalliance of unions in the transportation field; namely, the Teamsters, National Maritime Union, International Longshoremen's and Warehousing Union, and International Longshoremen's Association.

These four organizations combined control the flow of commerce from the gulf to the Great Lakes and from the east coast to Hawaii. As far back as December of 1958. the Senate Internal Security Committeeafter analyzing the implications of such an alliance-stated as follows:

'The alliance constitutes a monopoly in the transportation industry which threatens the economic life of the Nation and which could be employed to strangle the military forces of the Nation in the event of war \* \* Well-trained Communist conspirators have infiltrated longshoremen's unions on both east and west coasts, and have acted as the spearhead of the alliance. \* \* \* The racketeering leaders of the Teamsters Union have displayed an utter lack of concern about the Communist records and activities of dominant officials of the ILWU."

Hoffa has been heard to boast, "I'm boss of an outfit that wins." The trouble is-when he wins, the rest of us lose.

We are told it is impossible to legislate morals or individual responsibility. cerely believe that, sooner or later, the people are going to insist it is both possible and necessary to legislate protection against the

Hoffas of the country.

In terms of public expectations, the two problems I have touched on here present a striking—and sad—similarity. The people of Cuba traded Batista for Castro, and there's very little chance that they improved their lot. The members of the Teamsters swapped Beck for Hoffa, and there's no chance at all for improvement there. Despite this threat of racketeering and gangsterism, I feel that law enforcement agencies, as presently constituted, can adequately take care of the

These developments serve to point up characteristics of the public mind that are important to all of us. Your achievements in law enforcement are influenced greatly by the understanding and attitudes and concerns of the people you serve. I hope you will make it part of your job to inform yourself and others to the end that the public mind may be alert and attuned to reality. We ought to remember that public opinion is not infallible. Given time and the facts, it winds up on target but it often gets there by way of

Robin's Barn. Group opinion is importanta factor to be reckoned with. We can respect it, shape it, and at the same time keep our first reliance on those unchanging principles of human dignity and responsibility which light the way to really important service for our God and our country.

So They Say

EXTENSION OF REMARKS OF

## HON. BYRON G. ROGERS

OF COLORADO

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 4, 1959

Mr. ROGERS of Colorado. Mr. Speaker, I ask unanimous consent to have inserted in the Appendix of the RECORD an editorial that appeared in the Colorado Statesman and written by my good friend Earl Mann who served in World War I and was a member of the Colorado General Assembly for a number of years.

The article is as follows:

SO THEY SAY-WHITE SUPREMACY CRUMBLING (By Lt. Earl Mann)

Indisputably the theory of human rights and liberties being based upon racial lines or lineage, and these liberties being so flagrantly abused throughout the world, we are now witnessing a challenge. The white man's doctrine that black folk were permanently consigned to the task of hewers of wood and carriers of water seems to have aroused the children of Ham to aggressive combat. My personal feeling is: "It's regrettable that the ignominy now being suffered by these United States, in relation to this world crusade for equality of opportunity is the result of the publication being given the subversive activities (not communism) arising from regional traditions."

Our eminent scholar, Hon. W. E. B. Du. Bols is quoted as having said: "Sit no longer blind, Lord God, deaf to our prayers, and dumb to our dumb suffering. Surely Thou, too are not white. O Lord on the bloodless." too, are not white; O Lord, a pale, bloodless,

heartless thing."

The rapid transitions now taking place, and daily recorded must be accepted as proof that the Du Bois prayer has been heard, and that our Common Maker is taking a hand in the effecting of such spiritual and moral adjustments as will prevent further deterioration of the Christian influence among His children.

From abroad, Africa, India, and South Asia, nationalism has forced the Christian church to speed up the process of recognizing native churchmen. Just back from a 2-month tour of African missions Methodist Bishop Gerald Kennedy of Los Angeles, said that the whole future of Christianity in that part of the world depends on the speed and success of the hand-over to native ministers. We have falled in that we have tried to keep too much control by running white missions. We need to train more natives so that the missions can become more of the people. The Christian church must be an indigenous thing, or it will be rejected as a foreign faith.

#### LYNCH LAW

Human beings are socially so barbarous and stupid that they again and again create situations in which there will be misery, horror, and degradation. Mississippians again in their mad struggle to retain a status quo of white supremacy having again staged a historical drama of intimidation, viz, the lynching party. A Negro awaiting trial for the alleged offense of assaulting a white woman was taken from jail, brutally beaten, shot and his body thrown into a river. Subsequently Florida, not to be outdone, lists a nauseating depravity. Four young white men brutally and repeatedly raped a young 18-year-old Negro coed. What degeneracy next?

While we (Americans) boast more churches, chapels, and civic centers than any country in Europe yet we are swayed by the cancer of racial prejudice that transcends the understanding of peoples of the world, including Russia. The Negro of America is, unfortunately, the victim of a vicious and unwholesome condition which arises from the residential ghettos, peculiarly an American institution, to which he is assigned; its boundaries being set by covenants, statute, and simple duress. Happliy Colorado's recent legislative assembly voted to abolish these inequities, granting citizens the right to purchase residential property wherever they pleased, based upon a mutual agreement between seller and purchaser.

The tragedy of the racial picture lies in the fact that while admittedly race problems are an incident of world economics and race relations a code of behavior developing out of the contact and conflict of economic interest of groups identified as racially different, America, although disclaiming sympathy and support of vicious colonialism, none-the-less clings tenaciously to its belief in a related institution—Jim Crow.

This is a diseased century, but America could with its immense material wealth, contribute so much to better human relations. But hypocrisy still being a national virtue, mass production of bigots is the one American industry that seems to thrive in our political framework. While America is to us of great functional importance, we are often baffled in trying to comprehend its strikingly remote and complicated character. Many whites advocate return of the Negro to Africa, although there is in millions of us a high percentage of British, Irish, French, Scandinavian, German and bloods of other lineage, as to make it impossible to determine which dominates the individual. So withal why impose upon an up-and-coming nation of people, Africa, the evils of a white man's civilization? Verily, we say, the price of racial bigotry is tremendous.

#### Public Relations in Agriculture

EXTENSION OF REMARKS

#### HON. OLIN E. TEAGUE

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Monday, May 18, 1959

Mr. TEAGUE of Texas. Mr. Speaker, the 20th annual meeting of the American Cotton Congress was held in Waco during the first week of May this year. The theme of the congress was "20 Years of Change and Progress." One of the foremost speakers at the congress was a close personal friend of mine, Mr. R. D. Lewis, who has been director of the agricultural experiment station, located at College Station, Tex., for a good number of years.

There are few men in Texas who have as much insight and common understanding of the agricultural problem as Mr. Lewis. It is a pleasure for me to be able to insert his speech entitled "Public Relations in Agriculture," given on May 4, 1959:

PUBLIC RELATIONS IN AGRICULTURE

(By R. D. Lewis, director, Texas Agricultural Experiment Station)

Agriculture's greatest need today is understanding. Understanding among those directly engaged in farming and ranching; understanding by those who provide services and materials to the farms and ranches; understanding by those who transport, process and distribute the plant and animal products coming from farms and ranches; and above all, understanding among the great majority of our people who live in towns and cities and who are the principal consumers of the products of our agricultural industries.

As Roy Battles of the National Grange said to experiment station directors in 1957, "Our city friends do not understand us." They do not understand the basic problems of agriculture, nor the complex functions and services of those engaged in agricultural industries. Seemingly it becomes more difficult year by year to gain a reasonable degree of understanding.

Those of us engaged in agricultural endeavors have tended to take for granted that people generally and naturally understand their basic dependence on agriculture for foods and fiber. In recent years we have been rudely awakened—in cotton, for instance, by the advent of synthetics.

American agriculture is thus being forced

American agriculture is thus being forced to become public relations conscious. We now must seek consumer acceptance not only of our products, but of our services, and our policies, and of our true place in the total economy of the Nation and the world.

Through our past national history agriculture has had the sympathy of most nonfarmers. For farmers there was a substantial deposit in the bank of national good will The balance in that account is still large, but dwindling far too rapidly.

Most of the nonfarmers here today are

Most of the nonfarmers here today are only one or two generations away from active farming. This is true for vast numbers of urban families, but becoming less so each year.

The historical public sympathy toward farmers found concrete expression in a long series of preferential legislation, Federal and State

Just a few of the more important congressional actions are cited—the Homestead Act of 1862, the Morrill Act of 1862 creating the land-grant colleges, the Hatch Act of 1887, initiating the vast agricultural research programs in State experiment stations, the Smith-Lever Act of 1914 establishing the cooperative Federal-State extension services, and the Smith-Hughes Act of 1917 providing the basis for an extensive system of teaching vocational agriculture in high schools. In 1917 the basic legislation for the broad system of Federal land banks and associated credit institutions was laid.

With the advent of the New Deal in 1933, and thereafter, we have witnessed a flood of preferential legislation—which essentially brings direct aid—over and above research and education—to individual farmers.

Now millions of farmers and handlers of farm products receive checks directly from the Treasury; for conservation practices, soil building, storage fees, loans on crops, sale of crops, and the like. It was inevitable that nonfarmers began to be critical of such practices, and criticism of this kind will always spill over to affect the research and educational work done for agriculture.

Seldom before have our farm programs been so bitterly embroiled in partisan politics as today. Unprecedented numbers of urban residents, as well as their Congressmen, are taking sides in the farm controversy. And many of them are not friendly to agriculture.

Lest I be misunderstood at this point let me remind you that agriculture has been following a pattern not too different from that of other sectors of the American economy, including industries in general, finance, and labor.

We must, however, conclude that agriculture does have a serious public relations problem and this is a growing problem. Judging from comments made to me by legislators and others, we might even say that agriculture is in the public doghouse.

Imagine for a moment that you live in downtown Dallas, or in Houston. You are an average urban citizen. You are several generations removed from the farm. Your work appears to have no connection with agriculture. Your contact with agriculture is your supermarket, the newspapers and the radio. What are the things about agriculture you would likely hear the most and be irritated about? Your reactions would probably be centered around one or several of nine attitudes derived from these sources. They are listed without prejudice as to their validity:

- 1. High food costs.
- 2. Big farmers are getting rich.
- 3. Heavy cost of farm subsidies from taxes.
  4. Program of planned food shortages in midst of surplus.
- 5. Special favors for agriculture, such as cooperatives, taxes, credit.
- 6. Sprawling and expensive USDA bureauc-
- 7. Agricultural research and education create costly surpluses.
- 8. Disproportionate political power in Congress and State legislatures for rural districts.
  - 9. Agriculture is a declining industry

Let's examine each of these attitudes briefly and look at a few facts and fiction about each one. (I wish I could say that some of these attitudes were limited to urban people.)

1. High food costs: We can say emphatically that this widespread urban attitude is without foundation in fact.

Food is cheap and getting cheaper in terms of how long the industrial worker must work to pay for it. It is cheaper now than before World War II. It is cheaper now than it was in 1932, in terms of how long the worker must work to get his food.

There is no country on the face of the earth today where the workingman spends so small a proportion of his working day earning the food he eats as in America. There is no other country where the workingman has so large a proportion of his working day left to buy the things that make life so pleasant in our homes.

Some of us remember the good old days in 1914, when rib roast was only 20 cents a pound. But it took 48 minutes of labor to earn the money to buy a pound of rib roast then. Today we do it within 20 minutes of labor, or in 40 percent the time it took a generation ago.

Not only do we get our foodstuffs in America with much less time spent earning it, but we eat more and better foodstuffs than ever before in our history and we are enjoying it tremendously. The things that bother most of us in America today is not so much the high cost of living as it is the cost of high living.

Foodstuffs come to the average American at bargain prices because research and education have made it possible for our great agricultural industry to produce in such abundance and so efficiently. If farmers produced as in 1940, the average family in the United States would annually require \$300 to \$400 more for food and fiber.

2. Big farmers are getting rich: In the aggregate, this surely is not true.

Individual farmers, big and small, who know their stuff and have adequate resources are doing okay, in spite of disproportionate rises in costs of purchased supplies and equipment (the cost-price squeeze). Their net incomes in recent years compare reasonably with net incomes of professional workers, skilled workers, and business execu-tives. But we must not permit urbanites to condemn agriculture because successful individuals in it make a satisfactory income. Successful farmers don't stay in the business just because they love it. They operate a big business and must enjoy financial rewards commensurate with their capital investment and managerial input.

3. Heavy cost of farm subsidies from taxes: Currently we hear on our radios that the U.S. Department of Agriculture has \$9 to \$10 billion tied up, or to be tied up, in surplus crops with high storage fees. We hear of price supports, agricultural conservation payments, commodity credit loans, surplus disposals in foreign countries at lower prices than in the domestic markets and the like. Especially when we look at the price tag on our foods do we rebel, even though, as explained before, our foods are comparatively cheap.

As agriculturists we would correctly point out that agriculture is by no means unique

in receiving substantial subsidies. Such a statement, however, is in part the "pot calling the kettle black." 4. Program of planned food shortages in the midst of surplus: We read that the Government in the fore part of 1958 purchased rather substantial sums of butter, cheese, and dried skim milk, acquired with taxpayers money, resulting in keeping the price so high that we couldn't afford to purchase butter in our grocery stores. We are also vaguely aware (remember our citizen still lives in Dallas or Houston) that all the corn

and sorghum stored in steel bins and sealed cribs around the country might make pork a little more plentiful and steaks a little less costly were it not priced into Government storage rather than into feed lots. And we realize, somehow, or other, that our tax dollars help create this situation. We

are not pleased. This typical urban attitude has substan-

tial backing in fact.
5. Special favors for agriculture: This charge is largely true. Agriculture has long been the recipient of special favors-in the form of aid for cooperatives, preferential treatment on taxes, easy credit, irrigation districts, soil conservation districts, electricity and a large variety of related items. Again, it can be vigorously argued that other sectors of the economy likewise have received special favors. That in no way minimizes this attitude held by urban people.

6. Sprawling and expensive USDA bureaucracy: USDA programs and personnel reach into every agricultural county of the country. A good deal of publicity has been directed to this situation in recent years. Some of this criticism spills over onto the agricultural extension personnel stationed in our agricultural counties, even though this service is there to do an educational job and not to direct a Federal farm program.

7. Agricultural research and education create costly surpluses: This charge is unfounded. Research and education create abundance. This is desirable. Unwise price distribution and politically expedient pro-Yet, as Digrams create the surpluses. rector of this State's agricultural experiment station, this statement comes to me repeatedly from influential citizens and legislators, who have not grasped the true causes of the farm problems. An abundance of food and fiber, produced efficiently and merchandised effectively, is the very cornerstone of a strong, dynamic and expand-

ing economy like ours. This can be attained only through the full application of science by each segment of the agricultural in-

We conclude that this urban attitude is without foundation.

8. Disproportionate political power in Congress and State legislatures: The farm bloc in Congress and our legislature exercises political power out of proportion to the numerical strength of farmers. This is true partly because agricultural States have as much voting strength in the Senate as the heavily industrialized States. Many State legislatures are farmer-dominated, even in some States which are predominantly urban in character. Periodic legislative reapportionment rarely recognizes population distribution as between cities and farms. As a consequence, in many States, city governments are severely circumscribed in authority, regulations and revenue. Urban resentment against farmer political domination is multiplying yearly.

9. Agriculture is a declining industry: Our citizen friend in Dallas or Houston hears repeatedly of the fewer numbers of people engaged in agriculture-now about 11 percent of our total work force. He hears that this trend is likely to continue. And when he reads advertisements about, or buys clothing, does he gain the concept that he is indebted to chemistry rather than to

agriculture.

In common with a major proportion of our population he still regards agriculture and farming as being synonymous or equivalent terms.

Too often agriculture is regarded as being limited to the farm and ranch; where less than 11 percent-of the population now live. The great change in efficiency of each farmworkers in producing the prime requirements of food and fiber for all people has freed labor and technology for development in other areas of our national economy. In 1850, 1 farmworker in the United States produced raw materials for 4 people. in 1900 for 7, in 1940 for 11, 1950 for 15.5, and in 1956 for 20.8. But this is only partly due to increased output per worker.

In fact, these figures are misleading, for part of this great change results from a transfer of some farm functions to towns and cities. At an accelerated rate, especially beginning in the 1930's, agriculture, operationally as well as humanly, has in part "gone to town." Thus, now in our food and fiber economy more than two persons are employed off-farm for each one on the Too often, we have divorced or removed these off-the-farm portions of agriculture from the family of agricultural industries. I am convinced that we ourselves have tended to sell agriculture short. At least, we have been too modest or negligent in recognizing and presenting the modern concept of the total agricultural industry. This conference is one of the tangible recognitions of both the "going to town" and the interdependency of the supply-production-processing-distribution segments agriculture.

To show something of the past, present, and future makeup of the agricultural work force in Texas, we have studied and forecast the distribution of the work force in Texas among agricultural and nonagricultural industries:

Percentage distribution of labor force in Texas

	-		
	1940	1957	1970
Suppliers	4	10	12
	34	12	8
	7	18	20
Total in agriculture	45	40	40
	+ 55	60	60

Such an analysis shows us the total agricultural industry tends to require about the same proportion of the total workers, but that with decreasing numbers on the farm there is an accompanying increase of suppliers of materials and services to farmers and ranchers and a marked increase in the processor-distributor group concerned with agricultural products.

Most of us would conclude that our "man in the street" in our big cities has some foundation for at least five of these nine attitudes toward agriculture.

In March of this year Senator CAPEHART outlined in the Congressional Record the four major problems facing this Nation. The farm problem was listed along with the threat of Russian communism, labor problems, and inflation. Truly the farm program has become one of the really big issues in American Government.

#### WHAT TO DO

These confusing and frustrating attitudes and situations in agriculture should actually be a challenge to us. They present opportunity and responsibility. They do suggest nity and responsibility. They do suggest that we have been negligent or inadequate in our own thinking and especially in our communications to others. We have taken too much for granted.

Several avenues of attack on public rclations for agriculture are suggested:

- 1. Correction of the misconceptions that the nonagricultural public has about us; especially let them understand their foods and fibers are not expensive, and producers, processors, and distributors are not rolling in wealth at the expense of food consumers,
- 2. Emphasis on modern agriculture and of the likely agriculture of tomorrow, and of the functions of the various segments of the total agricultural industry in relation to the welfare of consumers. Several have suggested that modern and future agriculture merits a new tag-one that may overcome the popular concept that agriculture and farming are synonymous.
- 3. Clearing up the confusion between politically designed and directed policies relating to the farm problem on the one hand and the necessity for even stronger programs of research and education in agriculture for a productive, prosperous and expanding
- 4. More research and education must be brought to bear on correction of "errors" in our public programs relating to agricul-
- 5. Seek to reverse the rising trend of going to Washington for funds or legislation on State and local problems—in the belief that We must positively accept it costs us less. more responsibility at State and local levels.
- 6. All of us in every segment of agriculture should strive to make our profession one in which we can be justly proud. The dentist is proud of his profession, the lawyer his, the schoolteacher his, and the plumber his. Let's make our farmers proud of their profession. It is truly one of which they should be proud. To do this we must dispel the "poor country cousin" attitude so many still have about agriculture.
- 7. Tell the great story of modern agricul-ture again and again to the general populace. It's dynamic and it's basic. Everybody bene-

Earl Butz, former Assistant Secretary of Agriculture, has defined public relations as (1) living right and (2) getting credit for it.

Through the decades, American good will toward and assistance for agriculture has been tremendous. The net balance in the bank of public good will is still high. But time may run out on us one of these years. We need promptly to mobilize all of our resources back of an effective public relations program.

No New Starts

EXTENSION OF REMARKS

## HON, BYRON G. ROGERS

OF COLORADO

IN THE HOUSE OF REPRESENTATIVES Thursday, June 4, 1959

ROGERS of Colorado. Mr. Speaker, under unanimous consent, I include in the Appendix of the RECORD an excellent speech made by the Governor of Colorado the Honorable Steve McNicholes

The address is as follows: NO NEW STARTS

Distinguished Senators and Congressmen, Honorable Governors, Chairman Butler. Vice-Chairman Loucheim, national committeemen and women. State Democratic chairmen, distinguished guests, ladies and gentlewe are engaged in a novel and farreaching enterprise this weekend. We are taking part in a new development that can help bring new growth and maturity to America's two-party system.

Regionwide meetings have been held before by political parties. But only in the last several years has the purpose of such meetings been to analyze public problems, to study proposals, and to close the conference with recommendations for platform planks on vital topics.

This weekend will witness no oratorical exercises, no snake dance contests, no We are here to win stampede of delegates. the confidence of all the voters by clearly demonstrating that we are willing to probe anxious to understand, and ready to work out and accept new solutions to old and new problems. We are here to find answers to today's problems, and to put those answers to work tomorrow.

I, for one, welcome this strengthening of principle and platform in our party system. To maintain decent competition between the two major parties, I hope that the Republicans copy our new way of finding answers. The "me too" party probably will do it automatically-a habit it first began cultivating following the election of Franklin Delano Roosevelt in 1932.

We should applaud a Californian for ploneering this new type of political conference in the West. We should be thankful that we have a national chairman who recognizes the important role of such conferences as this and does all in his power to make them a success. You know I am referring to the two Pauls-Paul Ziffren and Paul Butler.

The subject matter of this conference has wisely been limited to three major topicsnatural resources, small business and transportation. Each of these is of vital importance to the West, and of equal importance to the rest of the Nation. Each is vitally related to the other.

The three topics are highly suitable for another reason. Each has been the victim of serious mishandling, mismanagement or just plain neglect by the present administration. The administration's approach to each of these topics has clearly demonstrated that Republican leaders are timid when they should be bold—thoughtless when they should be full of ideas—and asleep at the switch when they should be fully cognizant of a new era approaching.

I believe that this is one of those rare times in American history when the general public is far in advance of the present leadership in its understanding of key problems facing the American people. More impor-tant, the public is far in advance of the present administration in its willingness to

move forward aggressively to solve problems both at home and abroad.

I believe the American people feel that they are trapped in an administrative vacuum that is choking America's internal development and shrinking our stature be-fore the rest of the world. This is a serious charge. Let us briefly document the case as it relates to the three topics of this con-

There is a growing awareness of resource use across the land. This awareness is greatest here in the West, because more of the resources are in the West. Fifty years ago enlightened conservationists were concerned with the overuse of our resources. Now many are concerned with nonuse and nondevelopment of our resources.

Our administration seems to be too busy with international problems to devote much time or energy to domestic problems. Proof that an administration can do both quite handily-if it only has the imagination and the courage to invite progress-is very close We have only to look at the years that Democrats occupied the White House to see the difference. Here is a party whose work and decisions on international policy are now chapter headings in the history books-such historic phrases as United Nations Charter, Marshall plan, Truman doctrine, NATO, point 4, Korea and Berlin

Yet, the Democratic Party moved forward on the home front at the same time it was projecting the image of a strong, forthright, square-shooting America across the world. Reclamation and resource development moved forward under the Democrats. America gained postwar recovery under the Democratic party. It looked forward with such vital studies as that produced by the President Truman's Materials Policy Commission also known as the Paley Commission. This commission published the fivevolume landmark report titled "Resources for Freedom"—a title that still can and should guide America's resource policy. Paley Commission foresaw the time when America might join the other have-not nations because of its unwise resource use policies, its skyrocketing population, its huge consumption of raw materials.

Another important resource landmark under the Democratic Party was the President's Water Policy Commission, headed by Morris Cooke, which produced the known and respected work titled "A Water Policy for the

American People."

The meaning of these studies to the West was obvious then. It is even more obvious now, since the present administration has let valuable years roll by while our resource and water policies have simply drifted along on the current of time. The ancient Shake-spearian phrase, "Time is not measured by the clock, but by the intensity of experience,"

was never more appropriate.

I know I do not have to sell this audience on reclamation. We all know that it has triggered the development of the West we know today. It has made the desert bloom and lighted our farms and our cities. It drives the wheels of our industries, and creates jobs and wealth that help support all It is the best investment in the present and the future that any government has ever made in addition to providing huge tax sources to broaden the tax base and lessen individual tax burdens.

In contrast to this progress under Democratic leadership and sponsorship, the Republicans advocate the backward policy of nonew-starts.

What the present administration overlooks is that reclamation is an investment in the Nation's future. And, every day that goes by with reclamation at a standstill means revenue lost, opportunity shunned, the future

It seems that this administration is content to add up the costs of past achievements, ignore the benefits they have brought to the whole Nation, and then warn everyone that such programs cost money. They are looking backward at ledgers when they should be looking forward at blueprints.

These great projects should be carried on our books as self-liquidating assets, as the underpinning of national defense, and as guarantees against future depression.

The virtual elimination of funds for reclamation investigation has relegated new projects to the dead files and thick layers of dust gather year by year on the drafting boards of the Reclamation Bureau.

When he was dedicating Hungry Horse Dam in Montana, Harry Truman told the audience to take a good look at this latest reclamation achievement in concrete and steel. "Because," he said, "if General Eisenhower is elected it will be the last one you'll see in a long, long time." History again proved Harry Truman to be right.

I am not alone in opposing the administra-

tion's no-new-starts reclamation policy.
Don't make the mistake of thinking only one Western Governor is complaining. Just last month, in a meeting at Council Bluffs. Iowa, the Governors of the 10 Missouri River Basin States went on record with a strong resolution condemning the administration's no-new-starts policy. Here are some words from that resolution:

"The 'no-new-starts' policy impairs the economic strength of the entire country by preventing the development of natural resources as an investment in the future welfare and security of the United States as a whole. Full development of the resources of this country is required in the struggle between the free world and the Communistdominated areas of the world \* \* \* and delay in construction of planned projects weakens the economic base of this region and that of the entire Nation \* \* \*."

The general public must be reminded frequently that reclamation is far, far different from most Government-supported programs. Since reclamation was started in 1902, the Government has spent a total of \$7.8 billion on reclamation in the 17 reclamation States. In today's Federal budgets, this does not sound like very much even for a single yearand this expense is spread over a 57-year period.

But the clincher is that \$7.3 billion of this \$7.8 billion is paid back to the Federal Treasury. Putting it differently, only \$500 million of this total is not paid back to the Federal Government. Just one of the many benefits from reclamation justifies this \$500 million expenditure, in my opinion, and that is flood control. This is certainly a Federal problem, since rivers do not respect State lines, and \$500 million is a small investment to avoid the catastrophies in human life and prosperty damage caused all of us by uncontrolled water on the rampage.

It should be obvious why we call reclamation an investment in the future. We need only to point to the thousands of industriesprivate enterprise industries—that power from reclamation projects has made pos-

We should also remember the vast scope of reclamation. The spur to the fantastic industrial and population growth of southern California came from Hoover Dam, hundreds of miles away in Nevada. It can truly be said that in the far western United States the desert can make the seacoast bloom. strongly support the principle of full basin development of all river basins in the Nation.

I have spent much time here speaking on reclamation for a purpose. It deeply affects the 13 Western States represented here. plus 6 others. In all, reclamation is vital to 60 percent of the land area of the old continental United States—to which we can now happily add the great new States of Alaska and Hawaii.

This neglect of reclamation is a blow to the development of the whole Nation. For those of you who like to look at problems such as this from the standpoint of numbers and political action, let me remind you that the reclamation and Missouri Basin States represent 135 electoral votes. And to this we can now add six or seven more electoral votes for Alaska and Hawaii.

In brief, the long end of the country is getting the short end of the stick from these

short-sighted policies.

Almost any phase of America's resources policies of the past 6 years shows the same signs of indifference and deterioration. minerals, we are still stumbling along on a quasi-emergency program. More of our mines are closing every week. Our mine labor force is dispersed now into other lines of work. Reconverting to mineral production, in case of national emergency, would be cumbersome and costly.

Our mineral import-export policy is confusing at a time in history when our trade policies should be clearly drawn for the rest

of the world.

We need a national fuels policy to go with a sound minerals policy. We need to utilize our abundant coal supplies, to supplement other fuels that have a shorter life span and fewer proved reserves. At a time when oil production is spread out throughout the world, and our Nation depends heavily on imported oil, our domestic oil industry is languishing because our import program is in serious imbalance. Commercial produc-tion from our vast oil shale reserves in Colorado, Utah, and Wyoming should be encouraged and developed as one of our Nation's greatest resources.

Our national mineral policy is similar to our national farm policy in that it is the same patchwork collection of inadequate measures designed in a hurry to meet an emergency. We need long-range programs our Nation can run on, not short-term plans

that cause us to hobble, stumble, and limp. During the years 1947 to 1952, Colorado had an average of 153 lead, silver, and zinc mines in operation. Between 1953 and 1958, this number declined to an average of 98. Today, we have only four major mining operations in the whole State of Colorado. And this general situation is true in virtually every State with a mining economy.

We face a national dilemma here. original cure for domestic mining problems was the high protective tariff. Today this policy places us in an untenable position in international affairs. We can't tell the world to follow our lead in developing resources, and then shut them out completely on marketing those resources.

Another proposed cure is to reduce wage levels in our domestic mining industry so we can compete price-wise with foreign minerals. This is not only misguided, but is totally beyond the pale of American traditions and

concepts.

A third approach is to abandon the domestic minerals market to foreign producers, and closing down our own mines. The effect of this on our local, regional, and national economy would be disastrous. It would also be foolhardy from the standpoint of national security.

There is a fourth approach which, I believe, is not only practical but realistic. It lies between the protectionist theory and the free trade philosophy. I refer to a quota production program for the domestic min-

ing industry.

Production could proceed under such system, with a balance struck between both foreign and domestic consumption, and such special measures as stockpilling for defense. This would require great cooperation between the minerals industry and our Federal Government. But it is not a new or radical

The sugar industry has been operating successfully on a quota production basis for many years. And sugar has the same basic problems of export and import.

I believe the West is willing to move ahead on reasonable programs which will put our boom-bust mining industry on a solid foundation. And, America's position in international affairs could be immeasurably

enhanced in the process.

The West has certain problems that are peculiar to it because conditions in the West are so vastly different from other parts of the country. Because of our topography, all of our surface heavy freight transportation consists of trucks that must run on long, expensive highways or freight cars that must run on long, expensive railbeds. We lack the lowest common denominator in freight handling-low-cost waterway transportation.

In other parts of the country, water transportation provides an efficient and cheap means of freight movement. It also is a compelling factor in providing lower rates on other modes of transportation. sult, the other areas enjoy a freight rate advantage that the West cannot match.

For these reasons it is essential to the future of the West that the Federal Government recognize our freight rate problems as unique and give special study and attention to them.

For instance, the West should be given the benefit of our natural advantage of longhauls on a basis of per-ton-mile cost, es-pecially on intraregional transportation. We need to integrate our transportation systems for economy and better service, thus stimulating commerce within our own region and strengthening our transportation ties with

other regions.

In short, transportation should be viewed by the Federal Government as vital to all parts of our society and commerce. Transportation rates should not be set according to artificial and archiac rules laid down to benefit or relieve only one segment of industry in any single part of the Nation.

We, of the West, need and want a fair deal on freight rates, which also is consistent with and in contemplation of the critical problems facing the railroads and truckers themselves. Until we get such a fair deal, we have an automatic ceiling on our industrial and commercial development that holds back economic expansion of the entire United States.

In 1956, Congress passed the Highway Act which affected 41,000 miles of Federal interstate highways. This act created the Highway Trust Fund to finance new highway construction, and Congress raised certain highway user taxes and inaugurated new ones to support this trust fund. For instance, the Federal tax on motor fuel was raised from 2 cents to 3 cents per gallon.

Before this act, Federal money for roads came from the general fund. The Highway Trust Fund marked a distinct change—an improvement—in supporting highways. Congress knew that the highway trust would not be large enough to support construction planned for the years between 1960 and 1968. Congress anticipated that the extra funds needed for construction during this period would have to come from the General Fund-all to be paid back later from the revenues from bigger Federal highway use taxes that will flow into the Highway Trust Fund.

In other words, everyone knew that the ambitious and much-needed highway construction campaign authorized in 1956 could not be paid for on a current basis. The peak construction years would demand more funds than those amounts coming into the highway fund during those peak years. For this reason, the new and increased highway user taxes were to be in effect through 1972-3 years beyond the construction timetable

Highway trust fund receipts during fiscal 1960 are expected to be about \$2.3 billion. Construction expenses for the same period will run to \$3.1 billion.

Now we are at the crossroads. Under the present, geared up road-construction program the highway trust fund will be exhausted by June of 1960. Either additional money must come from the general fund or we must cut back the construction program to match the meager amounts collected in trust fund at that date.

The bottleneck in this mammoth con-

struction job is failure of the administration to follow the plans mapped out by the Congress. The administration does not want to provide the needed money from the general fund. Instead, the administration wants to hike highway user taxes even further-despite the fact that Congress did this in 1956 to finance the new construction.

For instance, the present administration is now asking Congress to tack another 11/2 cents per gallon increase on Federal motor fuel taxes, which, incidentally, is a poor measure of highway use. To give you an idea of how much more this would cost taxpayers, this increase would mean that Coloradans would pay an additional \$9.5 million per year. For Texas, the increase amounts to \$137 million. The crowning injustice is that the Federal Government is now diverting-every year-more than \$1.5 billion of revenue from Federal highway user taxes into nonhighway purposes.
We need some imaginative, creative think-

ing in the planning of these vital programs and a willingness to accept new and dynamic action concepts in executing them. Ramifications of this stop-and-go approach to highway construction range from greater highway fatalities to a slowing down of commerce and industry at a time when we need to give business, industry and employment

full throttle ahead.

It is no political accident that 35 Governors have agreed to oppose the new highway user taxes that the administration wants to add to the motorists' bill. Failure of the administration to plan and act has badly upset plans at the State level and will be disastrous to private industry and employment in critical areas.

This same lack of planning has placed small business in trouble. Lacking time to go into detail about its problems, let me say only that small business has been the victim of the same indifference and inattention and a monument of bankruptcies stand as evi-

dence of this national tragedy.

Let us remember why we are here. We are here to speak for the West in clear, loud We must remember that this is a tones. dramatic new West we are talking about. We are the growing, expanding part of a great Nation. We now can happily boast that resource-rich Alaska and beautiful, productive Hawaii are our sister States in an unwritten economic and political pact.

The West is no longer a poor country cousin. We have markets, as well as re-sources—we have spirit, as well as knowhow-and we have votes, as well as political

The man who is elected President of the United States in 1960 will be guiding the destinies of 25 million more citizens at the end of his term than were on the census rolls at the beginning. The political party that will be chosen by the citizens of this Nation must have this vision and foresight to assure our citizens ample food and clothing, services, schools, jobs, homes, plus autothat have mobiles and the other luxuries become necessities of American life.

The Democratic Party must be ready and

willing to establish programs and policies

designed to develop our resources, encourage mineral development, and expand our sources of raw materials for the benefit of all the people. We must have the optimism that comes from self-confidence, and the courage that comes from faith in America. In short, we must know the needs of the Nation and the ability of the West to fully participate in and meet those needs. We are gathered here this weekend to draw the political biueprints of the West's future, and to forge programs and policies that will insure full participation in a dynamic and peaceful America. We will do our part in fulfilling the destiny of the Democratic Party by bending every human effort to make this Western States' Democratic conference productive and fruitful.

Thank you.

## Richard Nixon: The Ordeal That Made Him

EXTENSION OF REMARKS

#### HON. ROBERT H. MICHEL

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 4, 1959

Mr. MICHEL. Mr. Speaker, under leave to extend my remarks in the Record, I include the following article from Look magazine:

RICHARD NIXON: THE ORDEAL THAT MADE HIM
(By Earl Mazo)

Surprisingly little is known about Richard Milhous Nixon, despite the millions of words that have been written and spoken about him. Complexity of character is not unusual among important public men, but Nixon is singularly complex, a pradoxical combination of qualities that bring to mind Abraham Lincoln, Theodore Roosevelt, Harry Truman, and the late Senator Joseph R. McCarthy.

"I never in my life wanted to be left behind." Nixon says, conceding that he was born ambitious. Ambition is a requisite for success in politics. So are energy, brains, courage, gall, cunning, persuasiveness, the bent for rationalization and compromising, a healthy respect for realities and a rapport with fate and luck. Nixon has them all, plus characteristics that would normally be considered a drag on a politician.

Basically, Nixon is shy and taciturn. He broods, abhors backslapping and gives the appearance of being a friendless "loner," a too-smooth and humorless perfectionist. He is a political craftsman, and his instincts and training as a debater, practically from childhood, make him a persuasive salesman.

He is a fatalist, to the point of believing that whether or not he becomes President will depend more on circumstances than on anything he, his friends or his opponents might do. Although he is the most conscientious campaigner in the Republican Party, he has an aversion to, and actually shudders at the thought of, campaigning. He is a practicing Quaker, believing in the precepts of kindness to one's fellow man; yet, in fighting for votes, he has resorted to malignant innuendo against his opponents. He is a practical man, careful to master details and alternatives; still, he is at his best in a crisis.

That Nixon is often underrated indicates the extent to which he is unknown and misunderstood. At the height of the storm in 1952 over the Nixon fund, for example, practically everybody thought he was

through as Gen. Dwight D. Eisenhower's running mate. The clamor for his scalp became nonpartisan. An hour before the television program on which he was to explain it all, Nixon was notified in secret that the campaign hierarchy—and, by implication, Eisenhower, too—thought he should resign as a candidate for the Vice Presidency. The experts expected his talk to be a funeral oration. Instead, he turned the ordeal to political advantage and gave one of the most noteworthy performances of its kind in American politics.

In 1950, Bernard Brennan and Murray Chotiner, then Nixon's principal political lieutenants, proposed that the new Senator campaign the year around for the Republican Party and for his own Senate seat. Creating a special fund to finance this project was Dana Smith's idea. Smith at that time was treasurer of Nixon's campaign. He was acquainted with arrangements to finance public figures of modest means whose expenses for off-season politicking could not be paid from formal campaign treasuries.

Senator Nixon's gross salary was \$12,500. He was also provided \$2,500, tax free for general expenses, a maximum of \$2,000 for telephone, telegraph, and stationery bills, \$70,000 for a staff, and one round trip home to California per session. He earned a bit more for lectures and after-dinner speeches, but it all could hardly finance his operations. His bill for Christmas cards alone was \$4,237.54.

A special trust account was opened in Smith's name at a Pasadena bank. Audits were scheduled, and an estimated budget of \$16,000 a year was agreed to. An orthodox public appeal for money was felt to be too complicated and unnecessary, so it was decided to solicit the more generous backers of Nixon's campaigns for Congress and the Senate. Donations were invited by telephone, personal contact, and mail.

The type of activities the fund would support were listed as transportation and hotel expenses; air mail and long-distance telephone charges; preparation and dissemination of Nixon's speeches, questionnaires, newsletters, and the like; Christmas cards to campaign workers and contributors; radio and television; advertising and general publicity. Smith assured those he solicited that "nobody is drawing any salary or other compensation out of this, so you can count on it that the money will be effectively used where it will do all of us, including Dick, the most good."

By primary day in June, 1952, response to the appeals was far below expectations. Nixon decided that the regular party fundraising organization had to assume the responsibility if it wanted any more cooperation from him. "I think the time has now come for us to have a shown with Republican finance on obtaining assistance for our program," Nixon wrote Smith on June 9, 1952. He suggested that \$10,000 a year from the southern California organization and \$5,000 from the northern should be requested.

In a confidential reply dated June 11, 1952, Smith complained to Nixon that the Republican leaders in San Francisco had been promising a \$5,000 contribution for 8 months, but "it is apparently more convenient for them to forget about it." Despite these and other collection troubles, Smith suggested that the "fund goal be raised to a minimum of \$20,000 rather than \$15,000, because we know that it is very desirable to step up your activities after this year, as your own reelection year begins to come closer."

At this time, Nixon's chances for the Vice Presidential nomination were far from certain, despite the fact that as early as June 1951, Gov. Thomas E. Dewey had voiced his opinion that Nixon should be

the running mate for Eisenhower. Up until the night he was chosen at the Republican Convention of 1952, Nixon doubted that he would get the nomination.

As a member of the California delegation, Nixon was pledged to vote for California Gov. Earl Warren at the convention, and he did, although it was no secret that he favored Eisenhower. He also liked Senator Robert A. Taft, but he doubted that Taft could win. After Eisenhower's nomination was assured, Herbert Brownell submitted Nixon's name to the General as a possible running mate. Eisenhower agreed the young Senator would be a good choice, Brownell told me, but said that he would leave it to Brownell to get the collective judgment of the leaders of the party. Brownell summoned about two dozen representative Eisenhower leaders to a meeting.

Thomas Dewey, the first powerful Republican figure to propose the nomination of both Eisenhower and Nixon, repeated his belief that Nixon was the right man, and the gathering voted unanimously for Nixon. Stray whispers about the Nixon Fund started soon after the nomination. A couple of California delegates at the Republican National Convention made a project of confiding to strangers that Nixon was despised by fellow Californians, that he double-crossed Governor Warren by favoring Eisenhower for President, and he was being kept by a band of favor-seeking millionaires.

One version of the Nixon story, as heard by Peter Edson, Washington political columnist for Newspaper Enterprises Association, was that Nixon got a supplementary salary of \$20,000 a year from 100 California businessmen, each of whom chipped in \$200. On September 14, after an appearance with Nixon on the television program Meet the Press, Edson asked the Senator about the alleged supplementary salary. The Senator suggested that Edson telephone Dana Smith in Pasadena for details, because Smith ran the fund and knew much more about it.

The next day, Smith gave Edson the general background and specific aspects of the fund, and later that day reviewed the operation again with Leo Katcher of the New York Post, Richard Donovan of the Reporter magazine and Ernest Brashear of the Los Angeles Daily News.

Meanwhile, Nixon had left Washington and arrived in California on September 16. For luck, he began his first stumping tour of the presidential campaign the following evening at Pomona, a community in Los Angeles County where he had started his highly successful campaigns for Congress and the Senate. An enthusiastic rally of 15,000 sent him on his way. All members aboard the Nixon special were gay in anticipation of the campaign ahead. Most of the staff had been through it before. One newcomer to the entourage was William P. Rogers, who later was appointed Attorney General by President Eisenhower.

A messenger from the Republican head-quarters in Los Angeles met the train at a water stop before midnight. He brought word that a "Nixon Fund" story, to be printed in newspapers the next day would cause trouble. Nixon summoned a few advisers to his private car at 1 a.m. Rogers, who hadn't heard of the fund before, said it was his judgment that no impropriety was involved, therefore the facts would neutralize possible criticism. Chotiner, reputed to be supersensitive to things of political importance before they even germinated, was not disturbed either. "Hell, there's nothing to this thing. It's ridiculous," he said.

Because of a 4-hour time lag between the east and west coasts, the Nixon fund story was already stirring political tempers in New York and Washington on Thursday, September, September 18, before Nixon had begun the first full day of his journey. The

New York Post's front page was dominated by the words: "Secret Nixon fund." The story ran under a two-line banner headline that said: "Secret Rich Men's Trust Fund Keeps Nixon in Style Far Beyond His Salary." Peter Edson's column was printed later that day in other newspapers. It was written as a straight news story and lacked the speculative flamboyance that made the New York Post article seem more sensational. The United Press and the Associated Press relayed the substance of both reports to other daily newspapers.

In Washington, excited groups assembled at Republican and Democratic national headquarters. The Democrats, surprised and delighted by a windfall of incalculable value; rushed to the offensive. National Chairman Stephen Mitchell demanded that Elsenhower throw Nixon off the ticket at once or eat his fulsome observations on public morals. The Republicans, fearing a possible scandal, and at the same time hoping to mousetrap the excited Democrats, launched an offensive and a defensive

simultaneously.

General Eisenhower's 18-car campaign train—the "Look Ahead, Neighbor" Special—was passing among the voters of Iowa and Nebraska. In reply to questions concerning the "fund," Press Secretary James Hagerty said, "We never comment on a New York Post story." The General would have nothing to say. The General's staff was saying plenty, however, beyond earshot of the candidate. All day, they held conferences, analyzed reports and weighed the problems of switching vice presidential candidates in mid-campaign.

At strategy meetings the month before, Gov. Sherman Adams, chief of the Eisenhower staff, and Chotiner, the Nixon manager, had formulated a liaison plan to keep the two campaign teams in intimate and constant touch during the final period of electioneering, when a mistake by one of the candidates might be compounded un-wittingly into a disaster by the other. The plan set up direct communications between the respective echelons of the two teams. Thus Eisenhower would deal with Nixon and vice versa; Chotiner would talk with Adams or Senator Fred Seaton; Hagerty and James Bassett, Nixon's press secretary, would discuss press matters. As sometimes happens with the best-laid plans, this one failed in the emergency of September 18, because Elsenhower simply didn't call Nixon, and NIXON didn't call Eisenhower.

Newspapers picked up in the evening along the route of the Nixon Special in California reported that Midwestern audiences were reacting favorably to Eisenhower's charges that the Truman administration's legacies to the Nation were a problem of morality in government, crazy Federal spending and deficits that cheapen our money. A hopedfor statement of the General's unqualified support and faith in Nixon had not materialized. Nothing had been heard from that direction, in fact, except questions and, of course, rumors. The Nixon party might have viewed the General's silence more charftably if it had been privy to a decision of the Elsenhower strategists. The decision was to break the news about the "fund" to the General after his principal speeches so as not to risk upsetting him.

A large and friendly crowd awaited Nixon at Sacramento, the ninth and last stop that Thursday. But he sensed a strangeness in the reception committee of politicians. Instead of elbowing the maneuvering to be first in line, some seemed to heattate when the time came to pose for pictures with the Senator. As his campaign special continued up the valley that night, a gloomy and angry vice presidential candidate sought the solitude of his compartment; and Pat Nixon, blinking back the tears she seldom tolerated,

wondered if any political office was worth the sacrifice of her husband's good name.

A half continent away that night, one important individual on the Eisenhower train had reached a firm conclusion. Republican National Chairman Arthur E. Summerfield had before him a report on the procedure for changing a candidate. In the mass of unoticed resolutions adopted routinely during the rush to adjourn the national convention was one that left the responsibility entirely to the Republican National Committee. If Nixon withdrew, the Republican organization probably would split irretrievably in a fight over naming a successor. Summerfield redoubled his conviction that Nixon should stay.

On Friday, September 19, when the Nixon train reached Chico, Calif., there was a telephone call waiting. It was Senator Seaton, with Eisenhower's first message for his running mate since the "fund" uproar had started. Seaton told Chotiner, then Nixon, that the General was anxious to get to the bottom of this thing. Chotiner asked what more the General required than the Senator's word. Seaton implied that the General might answer that himself in a direct telephone conversation which might be arranged

in the next day or so.

The issue was now a national sensation. Commentators analyzed and speculated; radio and television programs were interpreted for late bulletins. Adlai E. Stevenson announced he would reserve judgment until the Republicans explained how Nixon had used the money; Democratic Chairman Mitchell wondered when the General would cast away his running mate. Senator Taft fiatly approved the Nixon action. But most other Republicans of consequence either crossed their fingers and hoped for the best in silence, or sent Eisenhower and his staff assessments of the situation that showed Nixon had to be dumped or the ticket would lose.

At Eisenhower's direction, Sherman Adams phoned Paul Hoffman, chairman of the advisory committee of Citizens for Eisenhower. "He asked me to begin an immediate investigation of the Nixon fund, to find out if it was clean," Hoffman recollected. Fifty lawyers and accountants were put on the case at once and stayed at it over the week end.

Adams also telephoned Senator William F. Knowland, in Hawaii, to urge him to join the Eisenhower train as quickly as possible. Elsenhower Strategists wanted him on tap as a substitute should Nixon be dropped. The moment Knowland boarded the "Look Ahead, Neighbor" special, however, he became a vigorous backstop for Republican National Chairman Summerfield, until then the only unqualified pro-Nixon voice around Eisenhower.

In California, Dana Smith made public the fund donor list of 76 names and a report on the income—it totaled \$18,235—and disbursements—about the same amount. This bore out what Nixon had been saying, but the impact of the release was lost because Smith gave it out before getting a prearranged signal from Chotiner. Smith's explanation of the improper timing of the release was that two reporters told him they had to meet deadlines—and, ironically, in late, low-circulation editions.

Editorials calling for Nixon's replacement began to appear in some newspapers that supported the Republican ticket. The New York Herald Tribune, Eisenhower's favorite paper and also a Nixon favorite, called the fund ill-advised and suggested that the Callfornia Senator make a formal offer of withdrawal from the ticket, which Eisenhower could accept or reject as he saw fit. For Nixon, this was the hardest blow so far.

On Saturday, September 20, General Eisenhower sent word to the press car of his en-

tourage that he would like to talk to the reporters informally and off the record. He told them he had learned of the Nixon fund on Friday, a day after newspapers printed the original stories, and he was greatly disturbed. He hadn't known Nixon very long, he explained, and still didn't know him well, but the Senator seemed to exemplify the kind of honesty, vigor, and straightforward aggressiveness that he admired. He couldn't believe Nixon would do anything crooked, but Nixon would have to prove it, and convince fairminded people. Then, Eisenhower said, "Of what avail is it for us to carry on this crusade against this business of what has been going on in Washington, if we ourselves aren't as clean as a hound's tooth?

It was obvious that Eisenhower felt that Dana Smith's reports and Nixon's statements on the fund were not enough. When Nixon was told about the Eisenhower statement, he forced a disbelieving smile. Mrs. Nixon, who had held back her resentment for 3 days, wondered to a friend, "Why should we keep

taking this?"

On Sunday, there was a telegram from Harold Stassen, in which he urged Nixon to offer his withdrawal from the ticket. Stassen's was one of several hundred telegrams Nixon got that Sunday. Many urged him not to quit. But, generally, the messages contributed to Nixon's weary despondency. The various inner circles-Nixon's, Eisenhower's, and the Republican National Committee's -talked about a radio-television report. Dewey agreed that Nixon should bare his soul on national television as quickly as possible. Nixon saw a survey that showed the newspapers were 2 to 1 against him. When a message from his mother urging him to have faith was handed to him. Nixon stepped into another room to hide his tears.
On Sunday night, Nixon's staff advisers

On Sunday night, Nixon's staff advisers converged for a full-dress discussion of what to do. Rogers said Nixon had no alternative but to resign if Eisenhower requested it. Chotiner disagreed. He said the general and a lot of people around him knew very little about politics and, if Nixon was dumped, the Republican Party was sure to lose the election. Nixon listened, in silence. He got up once, during a pause in the discussion, and said, as though to himself, "I will not crawl."

The strategy session was interrupted by the long-awaited telephone call from Eisenhower. Nixon told the general the important thing was for the Republicans to win. "I want you to know, if you reach a conclusion either now or any time later that I should get off the tleket, you can be sure that I will immediately respect your judgment and do so," the Senator said. Eisenhower replied, in effect, that he didn't think he should be the one to make that decision. At this, Nixon stiffened, and he said sternly, "There comes a time in a man's life when he has to fish or cut bait." (Actually, his words were stronger.)

At midnight, Adams, Summerfield, and Public Relations Director Robert Humphreys notified Nixon from the Eisenhower train that radio and television time now could be arranged—because three Republican Party organizations had pledged the necessary \$75,000. Nixon broke off his campaign tour and flew to Los Angeles, to prepare.

A national hookup of 64 NBC television stations, 194 CBS radio stations and practically the entire 560-station radio network of the Mutual Broadcasting System was contracted to carry the Nixon speech. The program was scheduled for Tuesday night, from 9:30 to 10 e.s.t. No event in history involving a vice presidential candidate ever got such attention—before and after. For 4 days Nixon was talked and written about much more than the candidates for President. Programs were interrupted for reports that he had collapsed. They were interrupted again for statements that he was in perfect health,

There were predictions that he would stay on the ticket and predictions that he would

get off.

On Monday afternoon, the lawyers and accountants hired by Paul Hoffman sent their reports to Sherman Adams. The study found everything to be legal and in line with what Smith had made public a few days before, except for about \$11,000 deposited in the fund account after Nixon's nomination, and Smith had said that amount would be accounted for as campaign contributions.

Monday was also the day of the Stevenson fund disclosure. An official of a duplicating machine company doing business with the State of Illinois charged that Governor Stevenson personally promoted contributions from private businessmen. Stevenson confirmed it, said it has never been any secret, explained that the money supplemented the salaries of members of his administration who left better paying jobs in private business to serve Illinois. Stevenson insisted that none of the money went to him or to any other elected official, and that there was no question of improper influence, because there was no connection between the contributors and the beneficiaries.

Nevertheless, the word "fund" had been battered into something that sounded sinister, and now Stevenson became a target for the pointed questions, implied charges, and innuendo to which Nxon had been subjected.

Normally, Nixon would work a full week, at least, on a major speech. There was less than 2 days for him to prepare the most important one of his life. He started working on it while flying from Portland to Los Angeles, "I was pretty tired by that time," he recalls. "I tried to sleep, but after dozing a little while, I woke up. I pulled out some United Airlines postcards from the souvenir packet at the seat and made notes. It was not an outline of the broadcast, but of general ideas. That was when the idea came to me to mention the girls' dog, Checkers." Nixon's reference to Checkers was inspired by Franklin D. Roosevelt's masterful use of his dog Fala in a 1944 campaign speech that made the Republicans a national laughing stock.

Shortly before Nixon was to leave for the studio, Sherman Adams telephoned Chotiner to find out, for Eisenhower, what Nixon would say. Chotiner replied he didn't really know; Nixon planned to speak from notes.

"Look, we have to know what is going to be said," Adams insisted.

"Sherm," Chotiner replied, "if you want to know what's going to be said, you do what I'm going to do. You sit in front of a TV set and listen."

About 1 hour before broadcast time, a call came from Governor Dewey in New York. Dewey told Nixon that he had polled the campaign leaders and found that most felt Nixon should resign. "Dewey didn't say that was his own feeling," Nixon recalls. "He said, "I am reporting that the group feels you should. I regret this very much.'" Although Dewey didn't say so flatly, it was implied that Eisenhower agreed with the majority.

"The call was really a blockbuster," Nixon told me. "I sat alone for at least 50 minutes, debating as to what I ought to do. I had tremendous respect for Dewey as a man and for his superb political judgment. The question I had to decide was whether I was justified in putting my judgment above his as well as possibly that of the General himself."

By the time Nixon arrived at the studio, he had decided not to follow the course suggested by the General's advisers, but "to submit the case to the country and let the people decide." He still had no idea how he would conclude his speech.

The program opened with a picture of Senator Nixon's calling card. Then the camera switched to the Senator seated be-

hind a desk. "My fellow Americans, I come before you tonight as a candidate for the vice presidency and as a man whose honesty and integrity have been questioned \* \* I am sure you have read the charge and have heard that I, Senator Nixon, took \$18,000 from a group of my supporters." He went on to say that not one cent of it was for his personal use, but for "political expenses that I did not think should be charged to the tax-payers. \* \* \* "

"I am going at this time to give this television and radio audience a complete financial history; everything I've earned; everything I've spent; everything I owe." After the accounting was given, he admitted he had received one gift after his election: "It was a little cocker-spaniel dog \* \* \* black-and-white spotted. And our little girl, Tricia, the 6-year-old, named it Checkers. And you know, the kids love that dog, and I just want to say this right now, that regardless of what they say about it, we're going to keep it."

He discussed the Stevenson fund and the Alger Hiss case and finally came to the vital question of his resignation from the ticket. "Let me say this: I don't believe that I ought to quit, because I am not a quitter. And, incidentally, Pat is not a quitter." The camera moved to Mrs. Nixon, who sat at the side, her eyes glued to her husband. "After all, her name was Patricia Ryan, and she was born on St. Patrick's Day, and you know the Irish never quit."

When the signal was given that his time was almost up, he didn't see it. Tears streamed down his face as he kept talking to the camera: "Wire and write to the Republican National Committee on whether you think I should stay or get off, and whatever their decision is, I will abide. \* \* \*"
He was off the air, but still talking.

"I'm terribly sorry I ran over," he apologized. "I loused it up. I'm sorry." He made a quick retreat to the dressing room. Outside the studio, a crowd cheered as he and Mrs. Nixon got into their car. At their hotel, he was told, "The telephones are going crazy; everybody's in your corner." Nixon took a call from Darryl Zanuck, who said the telecast was "the most tremendous performance I've ever seen." Only then did Nixon begin to come to life.

In Cleveland, the Eisenhower group had watched, seemingly without drawing breath. Mrs. Eisenhower and several of the men clutched handkerchiefs and dabbed their eyes. The general had a small notebook in his hand. He jabbed at it with a pencil, his eyes never leaving the television screen. When the program ended, he said to Summerfield, "Well, Arthur, you surely got your \$75,000 worth." Eisenhower wired Nixon: "Your presentation was magnificent." Then the general explained that before he would "complete the formulation of a decision, I feel the need of talking to you and would be most appreciative if you could fly to see me at once. Tomorrow night, I shall be at Wheeling, W. Va."

Shortly thereafter, the General's praise grew more lavish. As a warrior, he told an audience, he had never seen courage to surpass that shown by Nixon. But the General didn't get around to telling the audience what it wanted most to hear. "I am not ducking any responsibility," he declared. "I am not going to be swayed by my idea of what will get the most votes. I am going to say: Do I myself believe this man is the kind of man America would like to have for its Vice President?"

The crowd shouted. "We like Drck."

When Nixon got Eisenhower's telegram, expressing the need for face-to-face explanations in Wheeling the next night, his morale dropped again. He wired the General that he intended to resume at once his

campaign tour, which would end Saturday, September 27. "Will be in Washington Sunday, and will be delighted to confer with you at your convenience any time thereafter." Nixon added. This unusual show of independence delighted the Nixon staff and shocked more people than it pleased in the Eisenhower entourage.

Summerfield telephoned to urge that Nixon come to Wheeling, as requested. He was told that Nixon was going to Missoula, Mont., as planned. Nixon would meet Elsenhower only after the General's mind was made up, one way or the other. "Dick is not going to be placed in the position of a little boy coming somewhere to beg for forgiveness," Chotiner said. More calls followed from the Elsenhower train, and finally the General himself sought to reach Nixon. By then, the Senator's party was en route to Missoula.

A news report quoted Dewey as calling the Nixon telecast "a superb statement by a man of shining integrity and great purpose in the service of his country." A telegram from the Republican National Committee reported that 107 of its 138 members were reached in a quick poll, and all voted enthusiastically to keep Nixon on the ticket. There was also a telegram from Harold Stassen: "Congratulations on a superb presentation, Dick, and best wishes always to you and to Pat."

Summerfield called again, relaying Eisenhower's assurance that everything would be all right. Only then did Nixon head for the emotional reunion with his chief. The plane landed at. Wheeling in the late dusk. Chotiner rushed off to find out where Nixon was to go. Then, a lone figure darted up the ramp into the plane and asked. "Where's the boss of this outfit?" A newsman said, "Up there, General." Eisenhower went up to Nixon as he stood helping his wife with her coat. Nixon remembers he was flab-bergasted to see Eisenhower. "What are you bergasted to see Eisenhower. doing here, General? You didn't have to come here to meet us," he said. Eisenhower put his arm around Nixon and said. "I certainly did, Dick. You're my boy." Mrs. Nixon patted her husband and said, "Shall we go?"

Eisenhower and Nixon posed for pictures shaking hands. Then Nixon spotted his senior colleague, Senator Knowland. "It was quite a tense and emotional situation." Knowland recalls. "I said, 'Everything's going to be all right, Drck,' and he came over and said, 'Good old Bill!" The picture of Nixon weeping on Knowland's shoulder was one of the most poignant of the campaign.

The next day—exactly 1 week after the initial uproar—all was peaceful, happy and harmonious in Republican ranks. Nixon had transformed himself into a campaign asset. Newspaper support swung back heavily in his favor. His success sent the Republican campaign soaring, establishing him as a national figure and the best-known, largest-crowd-drawing vice presidential candidate in history. The cocker spaniel Checkers became to some a national hero—and to others a symbol of Madison Avenue sentimentality.

In retrospect, the affair was both good and bad for Nixon. The people who remember it most vividly thought it was horrible. The Democrats and Nixon Republican enemies have kept the embers aglow. Much of the "I-don't-like-Nixon, but-don't know-why" talk stems from the incident. But if it had not been for the immediate impact of that speech, the vice presidential nominee might have been dropped from the ticket, an unprecedented action in American history. And because of the suspicion and dissension such an action would have engendered, the ticket might have lost election. Nixon would have had to bear that stigma for the rest of his political life.

## Love Letter to San Francisco: Where Else for Summit Meeting?

EXTENSION OF REMARKS

#### HON, JOHN F. SHELLEY -

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 4, 1959

Mr. SHELLEY. Mr. Speaker, I am very happy to note a recent article appearing in the San Francisco News, by Andrew Tully, in which he points out the obvious charms of San Francisco and also indicates what a perfect choice our city by the Golden Gate would be if the Foreign Ministers selected San Francisco as the site for a summit meeting, if one is held.

As a native San Franciscan, I am very happy to read remarks such as Mr. Tully's when he describes the people of San Francisco as the "most gently and amiably civilized on the continent."

Mr. Tully has been selected by our San Francisco Chamber of Commerce as "ambassador extraordinary" from the city and county of San Francisco. This is a truly high honor and one which is not given to many citizens of note; however, all San Franciscans recognize that with the charm and beauty of our great metropolis, all visitors become unofficially and by common acclaim, "ambassadors extraordinary" and these are the people and visitors who have carried the charms of our greaty city far and wide. I call the attention of my colleagues to the article following by Andrew Tully, Scripps-Howard staff writer:

[From the San Francisco News, May 7, 1959]
A Love Letter to San Francisco: Where
Else for Big Four?

(By Andrew Tully)

Washington, May 7.—People who know an elegant city when they see one will be pleased to know that the Big Four foreign ministers will consider San Francisco as a site for the summit meeting when they convene in Geneva Monday.

Such people will wonder why there has to be any discussion at all. San Francisco is the obvious choice, and even diplomats

should realize it.

For San Francisco is not so much a city as it is a way of life—a pleasant, relaxed, fun-loving formula for getting the most out

of each day.

People work in San Francisco, but not desperately as in, say, Los Angeles and New York. They work to acquire the where-withal to buy play, to earn the money to pick up checks in some of the finest restaurants in the world.

Apart from its people, who may be the most gently and amiably civilized on the continent. San Francisco is a kind of phys-

ical grandeur.

San Francisco has weather, too. In a few weeks, when most of the rest of the country will be baking in the oven of summer's heat, San Francisco will work and play in the cool of nature's own air conditioning system—the fog.

If diplomats appreciate pretty girls—and who doesn't—San Francisco's feminine population compares favorably with that of Paris and Rome. And there is a special delight in watching the pert secretaries spreading their lunches in Union Square.

San Franciscans are outwardly cynical, in a pleasant cosmopolite way. But they nevertheless are proud of their city—proud of their Bay Bridge, longest in the world and one of the few that goes through a tunnel, proud of their Golden Gate Bridge, longest suspension span in the world, proud of their fine shops.

They are even proud of their earthquakes. Far from sticking a chamber of commerce nose in the sand, San Franciscans boast that the big one in 1906 was the biggest of the century in the Western World.

And in 1957, when there was a much

And in 1957, when there was a much smaller one, the average San Franciscan wept not, but rather went about boasting that the damage was reckoned in millions of dollars.

Our statesmen by now must be sated with conferring in tired old Europe. If they seek inspiration, and surely they need it, they should stop horsing around and buy their plane tickets to San Francisco. They may never go home again.

#### Air Force Academy Graduates First Class on June 3

EXTENSION OF REMARKS

#### HON, J. EDGAR CHENOWETH

OF COLORADO

IN THE HOUSE OF REPRESENTATIVES
Thursday, June 4, 1959

Mr. CHENOWETH. Mr. Speaker, it was my privilege yesterday to attend the graduation exercises of the first class to graduate from the U.S. Air Force Academy at Colorado Springs. It was indeed an inspiring sight to see these 207 young men receive their diplomas, and their commissions in the Air Force. I am confident they will render outstanding service to our Nation, and justify the confidence we have expressed in them.

The graduation address was delivered by Hon. James H. Douglas, Secretary of the Air Force, who was introduced by Maj. Gen. James E. Briggs, Superintendent of the Academy. The presentation of the Air Force commissions was made by Gen. Thomas D. White, Chief of Staff of the Air Force, and the oath of office was given by Maj. Gen. Robert M. Stillman, first commandant of cadets at the Academy.

Secretary Douglas delivered a challenging address to the class of 1959, which I am sure will be of interest to the Members of the House. The address follows:

Members of the Air Force Academy class of 1959, I am honored to have this part in your graduation ceremonies. During the 10 years I have served the Air Force, in uniform and as a civilian, I have had no experience that I shall prize more than this. Your graduation as the first class of our Academy is a splendid event for the Air Force, and for each of you a distinction you will always cherish.

You are the product of long planning and effort. Although proposals to establish our Academy go back more than 30 years, no action was taken until 10 years ago, when the first Secretary of Defense, James Forrestal, appointed a Service Academy Board, with Dr. Robert L. Stearns as Chairman, and President Eisenhower, then at Columbia University, one of the members.

This Board recommended that an Air Force Academy be established. My own introduction to Academy planning took place 6 years ago, when General Harmon, your first Superintendent, described the proposed curriculum to me. The stamp of his imagination and judgment can be read upon it today. Indeed, he exercised these qualities in every phase of the Academy's creation. I wish that General Harmon, General Vandenberg, Secretary Talbott, and Secretary Quarles had lived to see the magnificent result of the project to which they each contributed so much. 'We are grateful to them; and to Generals Mitchell and Arnold and Fairchild; to General Spaatz who is here today; to General Twining, from whom I bring you greetings; and to many more who have given of themselves to realize the Air Force Academy dream.

You have now completed 4 years of rigorous training. Some aspects of Academy discipline have been tedious, I do not doubt; but neither do I doubt that from this discipline you have gained an advantage over most of your contemporaries elsewhere. You have developed physical fitness, and habits of orderliness, that elsewhere are often conspicuous by their absence. You have followed a curriculum designed to provide an understanding and appreciation of man, of his relationships, and of the world in which he lives, along with technical knowledge of military aviation, and training for the responsibilities of leadership that will be yours. I am glad that the Academy curriculum has emphasized the liberal arts and sciences.

The basic general education you have had here is the best possible preparation for mastering the extraordinarily varied problems of the Air Force of the future. Thanks to the Academy's system of small classes with recitation and discussion, rather than lectures, you are on the road to thinking for yourselves—which is far more important for the long pull than any amount of technical knowledge,

The Air Force is proud of its first Academy graduates. I congratulate you upon your diploma and your commission that you will soon receive, and upon the navigator's wings you now wear. I congratulate you also for the part you have played in creating the Academy. You have accepted and adapted great traditions. You have organized student activities.

You were our first representatives in Intercollegiate competition. You will always remember—and so will I—the Academy's first undefeated football team. In short, you have accomplished much, but what you have accomplished up to the present is most significant as preparation for a lifetime of discovery and learning and service.

Gentlemen, you are beginning your careers at an exciting time. Man's achievements in science and technology have created new standards of living for millions of people, and now suggest that in peace these standards might be brought within the reach of all people. But communism, fomented by the Soviet Union, has engulfed China and threatens the world with a new serfdom.

The Communist threat is a combination of great military power, technical and industrial skills, aggressive trade policies, propaganda, and subversive political activity. Soviet communism is materialistic. It is fed by zeal and ambition and fear. It is a menace to our way of life and to the dignity of freemen everywhere.

We have responded to the military threat by a great military effort, an effort that annually accounts for one-tenth of our national product, keeps more than 2½ million persons under arms, and provides extensive military aid to our allies.

Enormous as this effort is, it is essential, for military power is our best assurance of peace today; and in the event of war, it is our only assurance of survival.

Today we have great military power in our forces and those of our allies, and its central feature from a Soviet point of view, you may be sure, is the Strategic Air Command. Today that overall power provides a strong deterrent to any attack upon us or our allies; and we can maintain the deterrent for the future, if we are alert in selecting and developing modern weapons and the forces to employ them, and if we continue to make explicit our determination to meet aggression with force.

Your first concern and mine is our military posture. But we must also recognize that communism seeks control over minds of men, and we must meet this challenge with a confident, articulate faith in our democratic way of life. Our way recognizes the individual's right to think and speak and worship as he believes, and to work as seems of him most likely to bring satisfaction. Although this way of life appears chaotic to regimented Communists, it is the way of freemen, and it has made of these United States a nation productive beyond the dreams of past years, a nation that believes in man's destiny, and a nation increasingly dedicated to preserving the free world.

If we are to play our part in the struggle for the minds of men, we must ourselves understand our American system and we must see that it is better understood everywhere. Our Government is a government of laws, not a government of men. founded upon respect for the individual. Its rules must be like signposts telling where a road will take you, rather than where you must go. As Lincoln said, "The Government should do for the people whatever they need to have done but cannot do for themselves in their individual capacity. The Government can do many things, but it cannot long engage in detailed central planning and control of economic activities without destroying individual freedom.

The goals of our free society are unlimited. We can no more define them, except as general ideals, than a dictator could have forseen or planned the achievements of American life. All our history supports our faith in what our freedoms can yet achieve.

I know that you understand these characteristics of a free society, because you have discussed them in the history, philosophy, economics, and political science courses that have had so important a place in your general education.

You will have opportunities to strengthen the way of freedom in the commands to which you are assigned, both here and

I urge you to lead orientation and current events courses. The more our men understand the principles of free government and our obligations toward the free world, the more is the effectiveness of our Armed Forces increased.

You will serve in many parts of the globe, on air bases which unite the free world. Working with our allies, you will live among people with cultures widely different from ours. In such assignments, each of you becomes an ambassador without portfolio, a one-man demonstration of the kind of people we are. And each of you will have an opportunity to play his part in confronting the challenge of communism with the faith and understanding of freemen.

Now let us look at the Air Force in which you will in a few moments be commissioned by appointment of the President, "by reason of the special trust and confidence" he reposes in you. The heavy and medium bombers of our Strategic Air Command constitute the most powerful striking force the world has ever known. We are about to add to this intercontinental ballistic missiles. Squadrons of the Tactical Air Command are on station in Europe and in the Far East. The Air Defense Command, together with Army, Navy, and Canadian air defense units, guards the North American Continent. Troop carrier squadrons and the Military Air Transport Service contribute to the mobility of our forces and to effective logistic support.

Air Force operations, spanning the free world, play a major role in holding the Communist world in check. Our research and development efforts are directed toward among other things-improving jet engines, better radar, and better communications; toward nuclear propulsion for aircraft; and toward perfection of the great rocket systems that are introducing us to space. Some 4,000 contracts support the effort to keep our defenses effective for tomorrow and for the day after tomorrow. Many skills, including those of our School of Aviation Medicine, combine within our research program to assure man's ability to move deeper into

The supply and maintenance services of the Materiel Command require an inventory of more than a million different items, costing more than \$12 billion. You will appreciate the complexity of the problem of supply for modern aircraft, without reference missiles, radar, and other electronic equipment. when I say that the B-52 has 125 electric motors and 60 miles of wiring.

Training activity makes heavy demands upon Air Force manpower and resources. There are now 850 Air Force special skills

which require special training.

And at the Air University at Maxwell Field, many of our best officers, as faculty and as students, apply themselves through study and discussion, to hammering out strategic and tactical doctrines appropriate to modern technology and to the vital interests of our country.

I have mentioned certain basic activities of our great defense enterprise, as it is in them that you will serve after completing flying training. You and I will always take pride in the Air Force. You are about to become officers of the Air Force; but even more important, you are about to become officers of the United States. Your relationships with the Army and Navy will be much closer than those in the past.

Most of our operational forces are in unified commands; there are few single-service operations. You will find it desirable and valuable to be informed on Army and Navy operations. Much of your careers may be spent on staffs which comprise not only three services, but the services of our allies as well-and in posts where association with the services and with our allies is close and constant.

Days may come when your personal con-tribution to the safety of the United States and the integrity of the free world may seem insignificant, days when you view the rewards of civilian life as almost irrestibly alluring. For those days, let me say this: Never have our Armed Forces had greater need for wise, courageous leadership. experience in providing that leadership commences now as lieutenants, but in the years ahead, for some of you it will carry the responsibilities of four-star generals.

Most of you will find your Air Force careers rewarding. Here let me make a philosophical observation. The pursuit of happiness is an acknowledged American right, but there is little evidence that direct pursuit ends with capture. No, happiness is more susceptible to an indirect approach, way of self-respect and peace of mind, whether these are achieved through creative effort, or through service to one's country or to one's fellow man.

You already know the great satisfaction of service to our country, and today service in defense of the United States has become

service to freemen everywhere. You, as the first graduates of the Academy, may well play a critical role in keeping the history of Western World a history of freemen.

In all that you undertake, I wish you strength and courage, and success, and happiness.

#### The Inside Story

EXTENSION OF REMARKS OF

## HON. A. S. J. CARNAHAN

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES Thursday, June 4, 1959

Mr. CARNAHAN. Mr. Speaker, under permission to extend my remarks in the RECORD, I include the address of Rt. Rev. Angus Dun, given at the 95th commencement exercises of Gallaudet College, Washington, D.C., the only school for the deaf in the United States. The commencement was held on Monday. June 1, 1959:

THE INSIDE STORY

(Address by the Right Reverend Angus Dun, Bishop of Washington (Episcopal), at the 95th commencement exercises of Gallaudet College, Washington, D.C., Monday, June 1, 1959)

I am going to talk to you about the "Inside Story.

A wise man said long ago: "Keep your heart with all diligerice, for out of it are the issues of life." He was saying: "Take good care of the inside of your life, for what happens will come out of the inside."

Another wise person said long ago: "The eye is the lamp of the body. When your eyes are shut you are in darkness. When your eyes are open you are in the light. So if your eye is generous your whole body will be lighted up, but if your eye is selfish, the whole of your body will be dark."

This wise person was saying: "Your inmost way of looking at life will enter into everything you do and meet with in life."

graduation is exciting because a lot of young people are starting off on a journey into an unknown country, the unknown country of the years ahead. You feel the excitement. All of us do. Where will life take you? What will happen to you?

I have called the years ahead an unknown ountry. That is the truth. No one can country. That is the truth. No one can tell whether a beautiful blonde or a capable brunette will come into your life at 27, or whether a nice young chemist or a rather grouchy artist will fall in love with at 28, or whether you will get a job as a printer in New York, or in a laboratory in Ohio, or whether you will have twin boys at 32, or whether business will be good in 1965, or whether your wife will develop can-cer at 48, or whether an atomic bomb will drop on your city in 1978.

Ten years, twenty years, thirty years from now the outside story could be told. Perhaps you will write it in an alumni report in

"Graduated Gallaudet, 1959: teacher of home economics in Wisconsin, 5 years; married Jack Green in 1965; moved to Ohio; had two children; secretary of local club for the deaf; too arthritic to go back to reunion; and so on and so on."

The outside story might be something like that. But that would not give the inside story. And the inside story is even more important than the outside story.

We sometimes fall into thinking that life is made up of the things that happen to people. But the truth is that what happens to people is less than half the story. The more important part of the story is never told until we know what John or Mary did with what happened to him or to her; how they took it, what happened inside of them, and what came out of it for those around them.

There are a lot of people who do not think the inside matters very much. There are many women who take better care of their fingernails or their hair-do's or their figures than of their hearts and minds. There are many men who take more care of their automobiles than they do of their own insides. They are more worried by having a low cash income than they are by being so poor in loving and caring.

I am not saying that the outside does not matter. But the inside matters more.

Surely whether you make a good marriage depends more on whether you are good to live with than whether you are good to look at. Marriage doesn't consist in sitting down and looking at each other for 40 years. And whether you are good to live with depends on what's in your heart and on your inner way of looking at life.

Whether you are good to work with depends partly on whether you do a good job. But whether you do a good job depends greatly on what you are working for. Are you working just for yourself? Or are you working for others, or even for God?

What is at the center of your way of looking at life? Are you in the center? Then you will see everything from the standpoint of how it affects you. And you will probably never know how it affects other people.

I hope life will bring you much good fortune, but not too much; for few can stand too much without growing proud and forgetful of the needs of others. I hope you will be loved greatly by at least a few people. But even more I hope you will learn to love greatly. I know you will meet with failures and disappointments and sorrows. I hope you will have the courage to go on without bitterness or running away from life. I know that all around there will be the fears and prejudices and hatreds of men. I hope there will be peace in your hearts and that you will be makers of peace.

So as you start on your journeys into the unknown country, I wish you goodby and remind you again that the inside story of your-lives will be the most important story.

#### Salute to Israel

EXTENSION OF REMARKS

## HON. JAMES G. FULTON

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES Monday, May 18, 1959

Mr. FULTON. Mr. Speaker, we in America are proud of the wonderful spirit and remarkable progress our friend and neighbor, Israel, has made in her first 11 years.

Not too many years ago, the State of Israel was little more than a dream in the minds of men. A dream of the ancient "Promised Land." Eleven years ago the dreams became a reality, but it was a long and difficult task to make the tiny new state into a "promised land."

We in America have been willing and more than happy to do our part to aid these brave and courageous people in their struggle to create a home and asister democracy of the free world. The hardworking citizens of Israel have done an outstanding job in building their economy and their nation, in spite of difficult circumstances.

Today, Israel stands as a beacon of democracy in a strategic area of the world. Israel has taken her full share of responsibility for the humanitarian ideals of the Western World by admitting the large number of refugees and immigrants to her small area every year, and working for their resettlement.

We salute the hardy people of Israel and wish them well as they progress through their 11th year of achievement. Congratulations and best wishes for continued success are the symbols of the friendship and confidence of the people of America for our good neighbor, Israel.

# Civil Rights in Housing—Quiet Progress Based Upon Understanding

EXTENSION OF REMARKS

## HON. WILLIAM S. MOORHEAD

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES
Thursday, June 4, 1959

Mr. MOORHEAD. Mr. Speaker, in the struggle for civil rights, so often marked by violence in word and action, it is heartening to observe areas of quiet progress designed to foster understanding among men.

Such quiet progress took place in my home city of Pittsburgh Monday when it became the second city in the country to enact a fair housing practices ordinance.

Pittsburgh has won justifiable recognition in recent years as the "City of Renaissance," a place of rebuilding. But progress is not marked alone in works of steel and stone. Men must also move forward in their human relationships.

It is in this respect that Pittsburgh's new law is destined to make an important contribution to the city's progress in human terms. For the new ordinance relies not on stringent punishment or mass police crackdown but upon understanding and conciliation, upon persuasion and education.

On the day the new law went into effect, Mr. Mel Seidenberg, who has been the day-to-day chronicler of Pittsburgh's rebuilding for the Pittsburgh Post-Gazette, wrote a penetrating article recording the city's progress in the field of human relations.

Under leave heretofore granted to extend my remarks in the RECORD, I include the article and I commend it to the Members of the House:

[From the Pittsburgh Post-Gazette, June 1, 1959]

CITY ORDINANCE TO END HOUSING SECREGATION GOES IN EFFECT TODAY—PITTSBURGH BE-COMES SECOND MAJOR TOWN IN UNITED STATES TO BAN DISCRIMINATION IN RESI-DENTIAL RENTING OR PURCHASING

#### (By Mel Seidenberg)

Today Pittsburgh becomes the second city in the United States subject to a law that makes discrimination illegal in the sale or rental of private housing. The first was New York City, which has had a similar law in effect the past year.

The fair housing practices ordinance, as it is officially known, completes for Pittsburgh a cycle of legislation deemed necessary to enforce those provisions of the Federal Constitution and Bill of Rights that guarantee equal rights to minority peoples.

#### SERVED IN PUBLIC PLACES

Since 1939, hotels, theaters, restaurants and other public places in Pittsburgh have been required to serve all people on equal terms under the State's public accommodations law. In 1952-53, the city adopted a law prohibiting job discrimination, and this legislation later was extended to the entire State.

There are State and Federal laws that apply to low-rent public housing, and Federal provisions which technically make "open occupancy" a condition for FHA, VA, and other governmentally assisted housing.

Now in Pittsburgh private housing comes under such regulation, and here is the last and most important step in the expanding national movement, as dramatized by events at Little Rock, Ark., to end racial segregation.

at Little Rock, Ark., to end racial segregation. The residential neighborhood is where basic conflicts among people can be dissolved. One commonly held view is that if people can learn to live harmoniously side-by-side, whatever the color of their skin, a natural breakdown of biased feeling and action will follow in schools, hospitals, places of employment, and other areas of human relations.

#### NOT OVERNIGHT, NOT EASY

But it won't come overnight, and it won't come easily—not without some tension, perhaps some hardship and even some resistance. All agree it will takes years of education to develop full understanding of the need for and inevitability of racial integration.

However, prointegrationists believe, on the basis of past experiences, that an educative process alone cannot accomplish the objective. They feel that legislation itself is the soundest and most effective approach to education.

Conversely, education is the approach being taken by the City Commission on Human Relations, a citizens' body appointed by the mayor and equipped with a full-time staff on the municipal payroll, in its job of administering and enforcing the law.

#### ACQUAINTING ALL WITH TERMS

Through public discussion, meetings and other media, the commission is making every effort to acquaint all property owners, landlords, realtors, and citizens with the terms and provisions of the law. It will continue to do that in the coming year.

This is of prime importance because the fair housing practices law is a new kind of law. It is not a law which seeks to punish offenders with police crackdowns, mass arrests, long prison sentences and other stringent penalties.

It is a law that relies on understanding, on conciliation, on persuasion—one that tries to educate and at the same time bring about voluntary compliance. It is expected to work much the same as the Fair Employment Practices Act.

The FEP law has not eliminated discriminatory acts in employment. But in the 5½ years since it was enacted, it has been the instrument for resolving many complaints without once forcing an alleged violator into court for prosecution.

The housing law, as enacted last December 8, is not aimed at the individual homeowner, but rather at the business of selling and renting homes.

#### REALTORS, BANKERS, BUILDERS

It applies to realtors, mortgage bankers, builders, landlords and others who engage in such business, and to owners of five or more dwelling units. It may also cover the owners of fewer than five units, but only when their transactions are handled through

a real estate agent.

Contrary to common misconception, the law does not say that owners must sell or rent to anyone regardless of race, color, religion or national origin. Landlords will not lose the right to deny apartments for economic or other valid reasons.

What the law does say is that owners cannot refuse to sell or rent solely because the prospective buyer or renter is a Negro, a Jew, Chinese or a Methodist. If a Negro prospect qualifies in every other respect, then he must be given the same opportunity as

any other person to buy or rent.

In other words, it will be illegal for owners to say an apartment or house it unavailable when in fact it is on the market, or to ask biased questions and make discriminatory statements, or use such words as "restricted" in advertisements.

It is recognized that much of this will depend on wise interpretation based on thorough investigation. It also is recognized that the law could be used by some persons to back a personal grievance or dogma.

#### COMPLAINTS PROCESSED

Therefore, as has been true in administration of FEP, all complaints will be carefully processed and analyzed by the Commission on Human Relations.

First, it must determine if there is evidence to indicate an act of discrimination, or if the complaint is unfounded. Under FEP, many complaints never get beyond this initial stage.

If it finds sufficient evidence, the commission conducts an impartial investigation to assemble all facts. If discrimination is found, the commission then tries to remove the cause in closed, confidential meetings with involved parties. These efforts may continue for many months.

If they fail or if an alleged offender fails to cooperate in the conciliatory phase, the commission can order a public hearing and issue appropriate orders. If the orders are ignored, the commission then may ask the city solicitor to take court action. The maximum penalty on convictions is a \$100 fine

or 30 days in jail.

Copies of the fair housing practices ordinance, or specific information regarding it, can be obtained without charge by writing or telephoning: Commission on Human Relations, 518 City-County Building, Pitts-burgh 19, Pa. Telephone: ATlantic 1-3900,

Extension 480.

#### Foreign Trade and Aid: Profit or Peace

EXTENSION OF REMARKS

## HON. JOHN H. DENT

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES Wednesday, May 20, 1959

Mr. DENT. Mr. Speaker, the May 11, 1959, issue of the report-American Investments Abroad—gave a few details on governmental policies which are undermining America's strength in the world, policies which are sold to the public as necessary to build our strength.

Policies of the Federal Government have saddled American industry and workers with so much redtape and expense that other nations have begun to equal us in productivity. Many American industries are closing their American fine plants for their Japanese competoperations and building plants overseas, thus creating employment and greater productivity abroad. Governmental policies are making Americans dependent on foreign factories for some goods which America once produced in greater quantity than all other nations combined. Foreign aid programs, taxing American industries to build rival industries abroad. Even the Soviets have begun to capture some of free-enterprise America's foreign markets.

Governmental programs which encourage or force American business to invest and build abroad instead of in America, coupled with foreign aid which reduces production costs in foreign nations while increasing them in America. have caused a dangerous flight of our gold reserves to foreign countries-and the depreciation of American currency throughout the world.

Yet, in 1959, the two programs which the administration exerts the most effort for are the two which will make matters worse: (1) Continuation of foreign aid and (2) special tax and other benefits for Americans who pull up stakes in America and invest abroad.

On May 3, 1959, the New York Times devoted an entire section to the World Trade Fair to be held at the Coliseum in New York, beginning May 8. The Times said:

Manufacturers and producers of raw materials in North and South America, Europe, Asia, and Africa will compete for a share of the world's wealthiest market, the United States.

The amount of (textile) goods coming into America from abroad seems to be increasing, chiefly because countries that previously did not ship here are stepping up their exports.

In 1958, total imports of cotton goods amounted to 143,290,000 square yards, increase of 16 percent, compared with 1957. And this year there is a rising trend of imports from Hong Kong and Korea.

Both India and Pakistan have received orders from importers here for substantial quantities of sheetings and drills at prices somewhat below those quoted by American manufacturers.

Japan is still by far the largest exporter of cotton goods to the United States. In fabrics alone, the Japanese exports here in 1958 totaling 105,220,000 yards comprised 70 percent of all imports. In addition it is estimated that Japan shipped an additional 130 million yards of cottons in the form of shirts, dresses, and other apparel items.

This year, imports from Japan are expected to be even larger. Japan has negotiated successfully for an increase in its voluntary quota of cottons, shipped to the United

The Japanese have contended that the previous 235 million yard quota in the form of fabrics and apparel is not "realistic" in the light of its growing industry and reciprocal purchases of raw materials.

Last week, it was announced that the quota had been increased, with the consent of the State Department, to about 247 million yards.

One reason for the remarkable growth of the Japanese textile industry is American foreign aid, building in Japan, at American taxpayers' expense, great plants with modern equipment, superior to what American manufacturers can afford, after paying taxes to help finance itors. Another reason is the lower labor costs and taxes in Japan.

The phrase about Japan's "reciprocal purchases of raw materials" is a deception. It implies that, whereas Japan may be capturing our domestic market for finished goods, she is a good customer for our raw materials. What raw materials? Cotton. Japan is using American cotton, because our Governmentunder the agricultural surplus disposal program-is making American cotton available to Japanese manufacturers at prices lower than American manufacturers have to pay for the same cotton. In fact, our Government sells American cotton to Japan-for Japanese currency. which we spend in Japan to stimulate the Japanese economy-for less than what the cotton actually costs the American taxpayers who-under the Government's domestic farm programs-must buy the cotton from American farmers and put it in storage, or dispose of it abroad, in order to keep cotton prices high in America.

But the American State Department approves of an arrangement to import even more Japanese goods, because this arrangement is more "realistic" for

It seems quite impossible for American officialdom to consider, ever, what is realistic for America.

A U.S. Senate subcommittee which studied the problems of the American textile industry-under the chairmanship of Senator John O. Pastore-found that the textile industry is suffering from foreign competition, but said it does not want to change the Government's foreign trade policy.

The Senate subcommittee said:

We do not suggest that our foreign trade policy has been the only cause of the loss of textile jobs, but we do point out that an industry faced with declining job opportunities feels the impact of rising imports more than an industry which is expanding its output and employment.

Thus we recommend that in the administration of our foreign trade program, every effort be made to channel imports into those markets which can most easily absorb production from abroad ...

As a guide to positive action, these remarks from Pastore's committee are, obviously, meaningless. But the attitude they reflect is clear, and significant. What they say, in effect, is: "Let's try to switch some of the unfair foreign competition-unfair, because it is subsidized by American taxpayers-to other American industries, as a possible means of giving the American textile industry a breather, but leave us not change Government policies which are undermining the whole American economy."

This is the personal political weakness that has caused the present condition. New people in public life who are afraid of what someone calls public opinion.

The real public opinion is that of the displaced American worker, his family, his creditors, and soon his local merchants who will have shelves full of foreign goods and streets full of American unemployed.

There is information on other Ameriican industries which are in trouble too. The New York Times said:

American makers of transistor portable radio sets may import Japanese receivers for the first time this year, and sell them here under well-known domestic brand names.

The move would be an application of the old saw: "If you can't beat 'em, join 'em." Domestic producers have watched their share of the market dwindle alarmingly and \* Japanese portables climb more than 200 percent in the last 2 years.

Another Japanese threat to American producers in the near future lies in truly port-

able television sets.

Although portable radios are the only imported products that are actually nosing American electronic home instrument producers out of their own market so far. West Germans and Japanese are penetrating

here with other devices.

Imports are cutting a wide swath in the U.S. market in home furnishings. Domestic carpet producers are becoming increasingly worried about the rising sales here of carpets from Belgium. American mills also are un-easy about the success of carpets made in Japan.

Dinnerware continues to be a thorn in the side of domestic producers, as Japanese, West German, French, and other foreign makers of dishes, cups, and saucers maintain or increase their already substantial share in

the market.

On May 1, 1959, Henry J. Heinz II, U.S. delegate to the United Nations Economic Commission for Europe, meeting at Geneva, told the U.N. Commission that U.S. exports of goods and services to Western Europe totaled \$6,800 million in 1958, a decline of \$1,200 million from 1957; and that U.S. imports from Western Europe totaled \$7,200 million in 1958, an increase of \$300 million over 1957.

Mr. Heinz said:

American consumers are tending to spend an increasing portion of their income on those types of goods which European producers are especially well fitted to supply.

This overall trade development-declining production in America, increasing production in Europe-is, Mr. Heinz told the U.N. gathering, "warmly welcome" to the American Government.

What goods are European producers "especially well fitted to supply" the American market, and why are they well fitted?

A survey published in the June 1, 1959, issue of the U.S. News & World Report provides some answers. Here are excerpts from the survey:

The United States through purchases abroad, has made available \$190 billion in postwar years. Add that sum to the \$107.9 billion in gifts and loans and private investments, and the total becomes \$297.9 billion.

What has the outside world done with its \$297.9 billion? Those dollars have rebuilt industries and cities. They have been used to purchase the latest in American machinery and to acquire the highest skills with which to make industry abroad fully competitive with American industry. At the same time, nations receiving the billions have used \$11 billion to add to their financial reserves in gold and dollars.

This country today finds itself challenged by those it helped.

The American dollar, once a proud cur-rency—the strongest in the world—now is

selling at a discount in terms of some foreign currencies. Rumors in the financial centers of Europe are that the dollar may have to be revalued—depreciated in relation to gold. The dollar scarcity that alarmed planners not many years ago has been turned by U.S. generosity into a superabundance of dollars in Europe.

Gold is flowing away from the United States as some countries turn their immense reserves of dollars into gold. Foreigners at this time hold claims to \$12.7 billion of the 20.3 billions of gold in the U.S. stockpile. If these foreigners ever exercise those claims, this country could find itself in a severe financial squeeze applied by those who enjoyed so much U.S. generosity.

Goods from abroad are coming into the United States to capture more and more markets. The industry that United States spent billions to revive and that U.S. industry helped to teach efficient mass production is able now to undersell its teachers in a grow-

ing number of fields.
In 1958, the industry of West Europe, prostrate 10 years earlier, produced more steel than the United States produced. As many trucks are being produced in Europe as here. Europe's industry last year built 1.9 million new dwellings, or far more than United States. Japan today is producing at double the prewar rate, thanks in part to American aid.

The industry abroad, that American ald dld so much to revive, often is able now to undersell the products of American industry both in this country and outside. Many nations receiving aid from the United States are keeping up their barriers against Ameri-

can products.

So enticing is the prosperity of the world outside the United States that American investors are sending more than \$3 billion of private capital abroad each year for investment. A growing number of American companies are entering the foreign field, often to produce goods not only for markets abroad but for sale back in the United States.

All of this is part of the story of success that has grown from American generosity in postwar years. That generosity, in fact, has been so great that it accounts, in part, for the inflation within United States that is making it more difficult for this country to hold its competitive posit on in the world.

In addition to supplying dollars of aid, the United States has undertaken the principal burden of defense for the non-Commu-nist world. \* \* \* Americans are assuming this burden with no apparent complaint. This country's allies—now strong industrially-are not assuming equal burdens in the defense of the free world.
